DEATH OF APOLLO—The well known smooth-coated St Bernard dog Apollo died on Sunday last at the kennels of the St. Bernard Breeding Club, Montclair Heights, New Jersey, from rupture of a blood vessel. He was imported two years ago, and from the celebrated kennel of Mr. Henry Schumacher in Switzerland. He was exceptionally successful on the show bench, and was also an excellent sire. It is understood that he would have started for the Boston show on the following day. Apollo's remains will be preserved in the American Museum of Natural History in this city.

AMERICAN COURSING CLUB.—St. Louis, March 27. It will be required of all greyhounds running in the races at the third annual meeting of the American Coursing Club to be held at Great Bend, Kansas, Oct. 17 to 22, 1888, to be registered in the "American Coursing Club Register," giving age, color, sex, etc. Dogs 18 months old and under give date of whelping. Registration fee 25 cents each. Secretary will furnish blanks if desired.—Frank K. Doan, Sec'y, 1210 Olive street, St. Louis, Mo.

EASTERN FIELD TRIALS CLUB.—A meeting of the Board of Governors of this club will be held at the office of Mr. F. R. Hitchcock, 44 Broadway, N. Y., April 10, at 3:30 P. M.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ringwood, Jr. By G. O. Taber, Garrettsville, O., for black, white and tan beagle dog, whelped March 26, 1885, by Ringwood out of Birdie.

Daisy Blueboy. By G. O. Taber, Garrettsville, O., for black, white and tan beagle bitch, whelped Aug. 4, 1886, by imported Blueboy out of Flirt (Ringwood—Bush).

Queen Esther. By G. O. Taber, Garrettsville, O., for black, white and tan beagle bitch, whelped Aug. 1, 1886, by Driver (A.K.R. 3538) out of Flirt (A.K.R. 3196).

Belle Bciton. By Seaside Kennels, Bridgeport, Conn., for black, white and tan setter bitch, whelped Dec. 27, 1887, by Rock Belton (Yale Belton—Princess Lily) out of Lady Belton (Yale Belton—Daisy).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Jess—Johnny. H. W. Windram's (Boston, Mass.) Clumber spaniel bitch Jess (Jack—Jill) to F. H. F. Mercer's Johnny (Ben—Joan), Feb. 13.

Persephone—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Persephone (A.K.R. 5632) to their Wacouta Nap (A.K.R. 5435), March 14.

Phædra—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Phædra (A.K.R. 5511) to their Wacouta Nap (A.K.R. 5435), March 10.

Tamora—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Tamora (champion Beau—Boomah) to their Wacouta Nap (A.K.R. 5435), March 19.

Molly—Mike. T. B. Mothersill's (Stratford, Ont.) cocker spaniel bitch Molly (Hector— ——) to Chas. M. Nelles's Mike (Frank—Nellie), March 7.

Judy—Brant. A. H. Almon's (Ottawa, Ont.) cocker spaniel bitch Judy (Bob IV.—Moera) to Chas. M. Nelles's Brant (A.K.R. 5389), March 8.

Frou Frou—Brant.—Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Frou Frou (A.K.R. 5288) to his Brant (A.K.R. 5389), March 7.

Nellie—Silver Shoe. Geo. E. Peet's (Rochester, N. Y.) pug bitch Nellie (A.K.R. 4395) to Midget Pug Kennels' Silver Shoe (A.K.R. 3758), March 7.

Bradford Pet—Silver Shoe. Geo. E. Peet's (Rochester, N. Y.) pug bitch Bradford Pet (A.K.R. 5343) to Midget Pug Kennels' Silver Shoe (A.K.R. 3758), March 19.

Heather Belle—Royal Monarch. A. R. Kyle's (South Norwalk, Conn.) collie bitch Heather Belle (Champagne, E. 11,835—Patient, E. 14,240) to his Royal Monarch (champion Rutland—champion Ruth C.), March 20 and 21.

Jessie—Royal Monarch. L. C. Root's (Stamford, Conn.) collie bitch Jessie to A. R. Kyle's Royal Monarch (champion Rutland—champion Ruth C.), March 30 and 31.

Joan—Royal Duke. J. L. Mott, Jr.'s (James B. Blossom, lessee) (New York city) Gordon setter bitch Joan (champion Turk—Daisy) to W. S. Hammett's champion Royal Duke, March 9 and 10.

Dollie—Don Quixote. J. H. Jewett's (Worcester, Mass.) pointer bitch Dollie (William Tell—Roxy Vera) to Don Quixote Kennels' Don Quixote (A.K.R. 5066), March 25.

Belle—Don Quixote. Gilbert Warren's (Worcester, Mass.) pointer bitch Belle (Prince—Chip) to Don Quixote Kennels' Don Quixote (A.K.R. 5066), March 16

Roxy—Dan. John Bross's (Dexter, Mich.) beagle bitch Roxy (Prince—Spider) to his Dan (champion Rattler—Katie), March 19.

Racy—Prince. John Bross's (Dexter, Mich.) beagle bitch Racy (champion Rattler—Reta) to his Prince (Ringwood—Roxy), March 18.

Belle—Dan. John Bross's (Dexter, Mich.) beagle bitch Belle (Prince—Flora II.) to his Dan (champion Rattler—Katie), March 11.

Dotty—Prince. John Bross's (Dexter, Mich.) beagle bitch Dotty (Dan—Tressa) to his Prince (Ringwood—Roxy), March 22.

Judy—Shamrock. H. S. Reynolds's (Poughkeepsie, N. Y.) Irish terrier bitch Judy (Pluck—Sheila) to W. P. Booth's Shamrock (Siasner—Sheila), Feb. 26.

Naso of Kippen. The following have been bred to Westminster Kennel Club's Naso of Kippen:

Jan. 17—F. H. Hitchcock's (New York) Madge Wildfire.
Feb. 26—Paul Francke's (St. Joseph, Mo.) Countess Trinket.
March 7—Rutherfurd Stuyvesant's (Allamuchy, N. J.) Beatrix.
March 15—Westminster Kennel Club's (Babylon, L. I.) Kate VIII.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Forest Dora. Rosecroft Kennels' English setter bitch Forest Dora (A.K.R. 500), March 23, ten (three dogs), by their Prince Foreman (A.K.R. 5800).

Bonita. Charles M. Nelles's (Brantford, Ont.) cocker spaniel bitch Bonita (A.K.R. 2891), Feb. 22, eight (five dogs), by his Brant (A.K.R. 5389).

Constance. F. M. Bennett's (Cranford, N. J.) beagle bitch Constance (A.K.R. 2912), March 20, five (three dogs), by his Bannerman II. (A.K.R. 2588).

Dido. A. O. McKee's (Woodstock, Ont.) cocker spaniel bitch Dido (Bengal—Rose), March 24, seven (two dogs), by Andrew Laidlaw's Master Shina (Young Obo—champion Shina).

Toodles. Dr. Geo. W. Dixon's (Worcester, Mass.) pug bitch Toodles (A.K.R. 2147), Nov. 18, 1887, two dogs (both dead), by Dr. Surles's Jim.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jessie. Red Irish setter bitch, whelped July 30, 1883, by Elcho out of Noreen, by Oakview Kennels, Philadelphia, Pa., to David O'Connor, Chester, Pa.

Dixie. Solid black cocker spaniel dog (A.K.R. 4465), by William West, Philadelphia, Pa., to Dr. J. T. Wheelock, Waterbury, Vt.

Lillias. White, black and tan fox-terrier bitch, whelped July 6, 1887, by Splauger out of Blemton Lilly, by Clarence Rathboue, Albany, N. Y., to W. S. Applegate, New Albany, Ind.

Resolute—Blemton Arrow whelp. White, liver and tan fox-terrier dog, whelped Sept. 4, 1887, by Resolute out of Blemton Arrow, by Clarence Rathbone, Albany, N. Y., to Geo. R. Read, New York.

Cora Belle. Black, tan and white collie bitch, whelped Dec. 7, 1887, by champion Rutland out of Heather Belle, by A. R. Kyle, South Norwalk, Conn., to F. R. Stephens, South Norwalk, Conn.

Beverwyck Cricket. White, black and tan fox-terrier bitch, whelped Nov. 15, 1886, by Regent Vox out of Blemton Lilly, by Clarence Rathbone, Albany, N. Y., to Frank P. Wright, same place.

Beverwyck Jack. White, black and tan fox-terrier dog, whelped Nov. 15, 1886, by Regent Vox out of Blemton Lilly, by Clarence Rathbone, Albany, N. Y., to W. S. Hull, Grand Rapids, Mich.

My Lady. Black cocker spaniel bitch, whelped July 8, 1887, by Obo II. out of Ladybird, by H. G. Charlesworth, Toronto, Ont., to Chas. M. Nelles, Brantford, Ont.

Tiny Tim. Stone fawn, black points, pug dog, whelped April 25, 1887, by Thunder out of Tautrums, by Chequasset Kennels, Lancaster, Mass., to Wm. E. Ramsay, Lake Charles, La.

Chequasset Ami. Orange tawny and white St. Bernard dog, whelped Nov. 24, 1887, by Hector (A.K.R. 3249) out of Linda (A.K.R. 2552), by Chequasset Kennels, Lancaster, Mass., to Miss E. E. Dana, Morristown, N. J.

Barry. Orange and white St. Bernard dog, whelped June 11, 1887, by Lodi (A.K.R. 3271) out of Theon (A.K.R. 94), by Chequasset Kennels, Lancaster, Mass., to A. H. Pratt, Abington, Mass.

Neumond. Orange and white St. Bernard dog, whelped May 27, 1887, by champion Merchant Prince out of Lys (A.K.R. 5364), by Chequasset Kennels, Lancaster, Mass., to Rev. Chas. F. Kelly, Towanda, Pa.

Nep. White and brindle rough-coated St. Bernard dog, whelped Nov. 19, 1887, by Duke of Lancaster out of Avis (A.K.R. 929), by Chequasset Kennels, Lancaster, Mass., to W. D. Libby, Bennington Furnace, Blair county, Pa.

Nola. White and orange St. Bernard bitch, whelped Nov. 19, 1887, by Duke of Lancaster out of Avis (A.K.R. 929), by Chequasset Kennels, Lancaster, Mass., to P. J. Schlicht, Rochester, N. Y.

Peter. Orange, white markings, rough-coated St. Bernard dog, whelped Oct. 10, 1887, by Lodi (A.K.R. 3271) out of Nun (A.K.R. 24), by Chequasset Kennels, Lancaster, Mass., to John Bell, Belleville, Ont.

Chequasset Argus. Orange and white St. Bernard dog, whelped Nov. 24, 1887, by Hector out of Linda, by Chequasset Kennels, Lancaster, Mass., to L. Buhrman, Cincinnati, O.

Lady Newcastle. Orange, perfect markings, St. Bernard bitch, whelped June, 1887, by Merchant Prince out of Bangle II., by Chequasset Kennels, Lancaster, Mass., to T. H. Hastings, Vulcan, Mich.

Nesso. Brindle and white St. Bernard dog, whelped May 8, 1887, by Duke of Lancaster out of Krön, by Chequasset Kennels, Lancaster, Mass., to W. L. Wallace, Orange, N. J.

Nortier. Orange, white markings St. Bernard dog, whelped June 11, 1887, by Lodi out of Theon, by Chequasset Kennels, Lancaster, Mass., to G. E. Shipley, Brookline, Mass.

Felix and Oxford Nora. White, black and tan fox-terrier dog and bitch, whelped Jan. 30, 1888, by Gerald (A.K.R. 4961) out of Oxford Belle (A.K.R. 4597), by R. S. Ryan, Baltimore, Md., to W. T. Levering, same place.

Bessie. Black and white pointer bitch, whelped June 2, 1887, by Don Quixot (A.K.R. 5166) out of Nell (A.K.R. 1554), by Don Quixote Kennels, Worcester, Mass., to H. F. Littlefield, Quinsigamond, Mass.

Master Shina—Muggins whelp. Black cocker spaniel dog, whelped Dec. 24, 1887, by Master Shina out of Muggins, by Andrew Laidlaw, Woodstock, Ont., to Clarence Bryant, Hartford, Conn.

Garry—Cora whelp. Mahogany tawny and white St. Bernard dog, whelped Jan. 28, 1888, by Garry out of Cora, by Andrew Laidlaw, Woodstock, Ont., to J. E. Thompson, same place.

Banker. White, black and tan beagle dog, whelped 1884, by champion Rattler out of imported Actress, by J. M. Fronefield, Jr., General Wayne, Pa., to H. L. Hayden, Plymouth, Mass.

DEATHS.

Doonholme. Sable collie dog, whelped June 3, 1887 (Bonnie Dunkeld—Bonnie Knowe), owned by McEwen & Gibson, Byron, Ont., March 20, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. S. G. C., Toronto.—I have a setter pup five months old, and about a month ago he lost the use of his hind legs. He recovered for a time, but now he is worse than ever, as he can hardly walk. He does not seem to be in pain—appetite good, and lively in spirits. Would you kindly suggest a remedy. Ans. Give 5 drops of the tincture of nux vomica three times daily and have electricity applied along the spine if possible. Look for worms.

W. B. N., Gardiner, Me.—My Irish setter puppy, now about 12 mos. old, has lately lost his appetite and for the past three days has not eaten anything to speak of. From the time that he was four weeks old up to two months ago I have fed him on scraps from the table, and though he has never had the appetite that other dogs that I have owned have had, he has eaten enough to keep him in good condition. Two months ago I commenced feeding him on dog bread and boiled meal mixed with milk, occasionally scraps from the table. He did not take kindly to that diet and the past few days, as I have said, he will not touch it. Once before he had some trouble with his eyes and now they appear weak and in the morning I find a kind of thick yellowish matter that runs from them, he appears weak and has not his usual life. He has never been confined much in a yard or on the chain and has previous to this never had any sickness. Can you advise any remedy? And do you think that I ought to feed meat? I think that if I should give him 1oz. or 1lb. of meat with his other food he would eat it and leave the rest. Ans. The dog has worms probably. Purge with castor oil, tablespoonful, and follow in 4 hours with 30grs. of powdered areca nut made into a pill with butter or lard. Force this down the throat beyond his control. Feed only milk while treating.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

RANGE AND GALLERY.

BOSTON, March 31.—There was a large attendance of riflemen at Walnut Hill to-day and several good scores were made. Appended are the scores:

BOSTON, March 28.—At the Boston Gun Club tournament at Wellington, to-day, a large number of clays, Peorias and Macomber targets were shot at. The attendance was good from all surrounding clubs, and many fine scores were made. This was the final shoot in the series of nine. It decided the winners for the valuable prizes which have been offered by the club, and contended for upon the grounds of the Boston Gun Club at Wellington, the East Boston Gun Club at East Boston, the Brighton Gun Club at Faneuil and the Reading Gun Club at Reading. The prize winners were decided upon as follows: D. Kirkwood, first; A. F. Adams, second; I. S. Hart, third; C. B. Sanborn and F. Whitcombe, fourth; I. Connel and P. Reading, fifth; F. Norton, G. Eames and E. Jones, sixth; E. Flanders, seventh; W. A. Sanborn, eighth; F. Green and Linn, ninth; A. S. Tuttle and I. H. Wild, tenth. The other events were as follows: 7 clays, Connel first; 7 Peorias, Sanborn first; 5 Macomber targets, Sanborn and Jones first; 7 Peorias, Bond, Reading and Kirkwood first: 10 clays, Sanborn first; 10 Peorias, Bond and Eames first; 5 Macomoers, Nichols first; 3 pair Peorias, Connel first; 7 clays, Nichols, Connel and Sanborn first; 7 Peorias, Sanborn first; 7 straightaway clays, Counel first; 3 pair Peorias, Green first; 5 straightaway Peorias. Hart, Witcomb and Kirkwood first; 5 clays, Hart first; 7 Peorias, Hart, Sanborn and Jones first; In the trappers' and scorers' match the honors were equally divided between Wild, Atkins and Jenkins, which concluded one of the best shoots yet held by the club.

OWENSVILLE, Ind., March 27.—The Owensville Ballard Rifle Team. Five of the members waded through the mud in a drizzling rain to the range to-day; the following are the best scores made:

Jas Montgomery	5	10	8	9	7	7	6	6	7	8—73
Chas Sumners	6	8	6	10	7	2	8	5	10	8—65
W Roberts	7	7	9	3	9	4	6	9	6	5—63
Jno Daugherty	3	10	3	6	4	8	6	5	9	5—60
Jas Daugherty	5	10	5	7	8	5	5	4	5	5—59

Chas. Sumners won medal.

THE INTERNATIONAL SHOOT.—The festival committee of the International Sharpshooters' Union is working hard for the success of the big July shooting festival. It is receiving substantial encouragement from clubs and individuals all over the country and is confident that the affair will probably exceed in magnitude anything of the kind ever attempted out side of the "Tir Federal" of Switzerland. Nearly 40 clubs have already signified their intention of taking part, and as the entries do not close for two months, it is thought all the clubs will join. At a meeting of the committee on Tuesday evening, March 27, Oscar P. Shaller and Albert Hahn were constituted a committee on amusements and Henry W. Wagner was added to the building committee.

NEWARK.—The Roseville Gun Club was organized March 20 and has acquired grounds near the corner of Grove street and South Orange avenue. The first regular shoot will be held on Saturday at 2 P. M. and on every alternate Saturday thereafter. The list of members is as follows: Ira P. Smith, president; George H. Simms, vice-president; David H. Greene, secretary; John H. Fredericks, treasurer; James A. Kitchell, Ebenezer Ryerson, Alfred Whatton, executive committee; Frederick A. Thorn, George Huff, William B. Huff, Starr H. Parsons, William W. Sandford, Joseph Davenport, Wm. M. Davenport, Walter H. Parsons, John Gantz, J. Edson Van Ness, Joseph A. Ryerson and Lewis Condit. All communications should be addressed to David A. Greene, 231 North Second street, Newark, N. J.

WASHINGTON HEIGHTS GUN CLUB.—This club held its annual reception at West End Hall, 226 and 228 West One Hundred and Twenty-fifth street, on Tuesday last, April 3.

PROVIDENCE, March 26.—An announcement that Ira Paine the well-known pistol shot, would shoot 100 shots a day at 100yds. for three consecutive days, with a Smith & Wesson revolver, drew together a fair attendance at the Narragansett Gun Club to-day. His idea was to show, for three days, how experts with the revolver could do very deadly work with that arm against an enemy, and he prossed to show how it could be made most effective. He was to shoot on the first day at a 40in. square target, with a black line, 5in. wide, drawn horizontally; on the second day, at the same target, turned so that the line runs vertically, and on the third day he will shoot at an American standard target, all three to be placed at a distance of 100yds. The first will represent a platoon or company front in a line of battle; the second will represent a single man standing alone, and the third will be the place where a man's heart would be. The distance was carefully measured and found to be a little over 100yds. Each target was nailed to a rest, and at the end of ten shots was taken down and the distance of each shot measured from the center of the black line. These distances were measured by Mr. H. B. Morgan, of the Providence Steam and Gas Pipe Company, Mr. Gould, of Boston, and were overlooked by a large number of those present. The total of the distances from the center, and the average on each ten shots and the total distance and total average is as follows:

Inches.		Inches.	
First string	32 6-16	Seventh string	26 4-16
Second string	34 8-16	Eighth string	50 3-16
Third string	49 2-16	Ninth string	45 13-16
Fourth string	51 2-16	Tenth string	48 11-16
Fifth string	51 8-16		
Sixth string	76 12-16	Total 100 shots	486 5-16

Average per single shot, 4 66-100in.

When the shooting was over and the distances had been measured, Mr. F. E. Bennett, of Boston, being present and watching the shooting, Mr. Paine announced that he was ready to shoot any living man for from $1,000 to $5,000, at from 50 to 100yds., or both, with any standard pistol, and at either Providence or Creedmoor or on any grounds where gentlemen shoot, the match to be shot the third or fourth week in April, or at any time. Mr. Bennett did not reply to this at once, but finally said he would shoot Mr. Paine for $250 a side. This the Chevalier declared he could not bother with, but if any one wanted to shoot he would bet from $50 to $250 that on or before Wednesday his score could not be equalled, or he would shoot 100 shots and bet the same sum that on the next day it could not be beaten. These bets Mr. Bennett made no reply to, but left and caught the train for Boston, accompanied by Mr. Gould. Mr. Paine used a 38-caliber Smith & Wesson's army revolver, 6½in. barrel and standard ammunition, and will use the same each day. The score made today, was made small by the heavy wind and storm.

March 27.—Chevalier Ira Paine continued his trial shoot at military targets on Narragansett Gun Club grounds, South Providence, this afternoon. The vertical target representing a single soldier in the line of action was used, the black center of the target being 5in. in diameter. This took notice of the shots as the target of the day before did of good holding for elevation. Instead of strings of 10 shots it was decided to make them 20. Only 5 targets were used. Mr. Paine said that his proposition for a match was to shoot 500 shots, $1,000 to $5,000 a side and not 100 shots as reported. He would shoot an off-hand match, however, with any one who might come forward and he would be especially pleased to meet the amateurs. The following are the totals by twenties in the shooting:

First string	87 13-16	Fourth string	79 5-16
Second string	130 14-16	Fifth string	85 10-16
Third string	56 5-16		
			439 13-16

Mr. Paine claims he has demonstrated that a revolver can be used accurately at 100yds., which has always been denied by the best military authorities. He also stated that not one bullet in the 200 but the third in the second day's third string would have failed to kill a man at 100yds.

March 28.—There was a large crowd at the grounds of the Narragansett Gun Club to-day to witness the third day's shooting by Chevalier Ira Paine. The target used was the standard and the distance was 100yds., 20 shots were fired at each target and the scores made were in a possible 200 per target: First target, 121, second, 123; third, 144; fourth, 134; fifth, 123; grand total, 651; grand average per shot 6.5. Of these shots 6 were bullseyes and 14 were in the 9-ring, while of the first 10 of the third target showed 3 bulls, 4 9's and 3 8's or a total of 90 out of a possible 100. There was not much wind blowing, but the light was bad, and shifting clouds and blue sky alternated in more or less rapid succession, making the shooting rather bad, but still Mr. Paine made a record that will not soon be equaled.

NEWARK.—Gottfried Snellen, of Our Owns, and John Coppersmith, of the Essex, are conceded to be two of the best gallery shots in this city, met at the Rutgers' range on Tuesday evening, March 27, in the first half of the match for $100 a side. All the prominent marksmen of the various clubs were present, and they were well paid for their trouble, as the match was the best individual contest ever seen in Newark. The shooting was fine on both sides, but Snellen in particular deserves credit for his steady shooting which equals the best score on record; that made by Mr. Dorrler, at Greenville, about three weeks ago. On Snellen's third string he made a score which has never been equaled in a match—120 out of a possible 120. In order to make this score he had to place the 10 shots within a circle of a traction less than 11-16in. in diameter, at fifty. On the seventh string he made within one point of a possible. The full scores in strings of 10 shots each, were as follows: Snellen—116, 116, 120, 113, 117, 116, 119, 115, 117, 115, total, 1,164. Coppersmith—118, 111, 112, 114, 115, 117, 116, 115, 116, 118, total, 1,152. The return match was set to be shot on the Our Owns' range during the next week. In shooting 100-shot scores recently for practice, Mr. Coppersmith made 1,172, comprising 99 shots in the bullseye, while Mr. Snellen has made 1,176 in practice.....Messrs. Dorrler and Walther, of the Zettlers, of New York, are anxious to make a match with any two riflemen in Newark for a gallery match. It is possible that they may be accommodated by Messrs. Coppersmith and Snellen.

THE BULLARD MATCHES. Springfield, Mass., March 31.—*Editor Forest and Stream:* The third competition in Match 4, third series, will be shot May 21, 22, 23, 24, 25, 26. This match is for individual competition for the Bullard champion off-hand marksman's badge, 50 shots and to be won three times before becoming personal property. The conditions will be sent on application to the Bullard Repeating Arms Co., Springfield, Mass. Applications for entries and targets should reach us before May 5, in order that we may make the necessary arrangements to supply all with targets in time for the match. This badge has now been won twice by Mat Gindele, of Cincinnati, O.—BULLARD REPEATING ARMS CO.

WELLINGTON, March 31.—The weather conditions to-day were all that could be desired by the shooters. The attendance was large. In the Merchandise match the following scored points: Moore 19, Scott 17, Shumway, Bond, Grimes and Tyler 15, Phelps, Melcher and Brown 14, C. B. Sanborn, Bowker, Baxter and Nichols 13, Chase and Chapin 12. French, Short, Schaffer and Hammond 11, Snow, Conant, Payson, Bill, Lee, Swift and Frank 10. In the Grimes prize contest Moore was the winner.

A GALLERY MATCH.—The veteran rifleman, Jas. S. Conlin, has started a go-as-you please rifle match at his famous White Elephant rifle range, 1,241 to 1,247 Broadway, opening on Monday, April 2, ending Thursday, April 12, conditions of which are 7 shots, any .22cal. rifle, position, sights and trigger pull any, at the running man target.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NEW YORK SHOOTING GROUND.

Editor Forest and Stream:

In "Bedford's" communication in to-day's issue of FOREST AND STREAM the writer has very ably urged the necessity of a New York shooting ground. That such a want exists "Bedford" very clearly demonstrates; he leaves little to be said on that head. I have heard the feasibility and practicability of such a project spoken of more than once by brother trap-shooters. From a personal experience and knowledge of trap-shooting and its evils (gambling, betting and drinking), I firmly believe that such an enterprise as proposed by "Bedford" could be rendered a source of revenue to its stockholders. There is no doubt in my mind that trap-shooting would be benefited thereby and given an impetus which would place it where it should be, in the front rank of manly sport. What is wanted at the start is a good head, ably backed by an executive board of unquestioned ability and integrity. These, with a good, convenient ground owned or leased by the corporation, with all the latest and most improved traps and apparatus, where liquors were excluded and the fair sex admitted, how could such an enterprise be anything but a success? You may put me down for a charter member, and for one share of

stock at $50 of the New York Shooting Ground. I hope there are enough live shooters in this little town to make such an object successful. BLUE ROCK.

NEW YORK, March 29.

Editor Forest and Stream:

I notice in your issue of March 22, your correspondent "Bedford" says it is proposed to form a stock company to provide a trap-shooting ground in New York or vicinity. He mentions that facilities will be given for artificial target, live-bird and rifle shooting. It will be difficult to find within the distance he mentions (30 minutes from City Hall) a place where such a variety of shooting could be properly given even if specified days should be set apart for each kind. Rifle shooting would hardly hold the interest unless a great number of ranges were provided, the tendency of short-range shooting being to increase the distance, and, perhaps, 1,000 yards range would not be too great. Again, live-pigeon shooting would do away with the artificial targets on the days the form or was practiced. A very limited plot of ground would be necessary for properly conducting practice at "clays" even if three sets of traps were used, a good light, however, being a *sine qua non*.

In the third clause of "Bedford's" letter he states that "all betting or gambling of any kind will be prohibited. It would be hard to decide in a shooter's views what constitutes "betting and gambling." Some declare that a 15-bird match, 25 cents entrance is gambling. The very essence of competition is to have something to compete for. If this something is money, does it constitute gambling? Expert matches, to which the ground is to be partly devoted, have as their objects generally a money consideration, the larger this is the bigger crowd they will draw, and with the mixed assemblages which would patronize the place it would be difficult, if not impossible, to get up prize shoots for anything besides money. Ask the managers of tournaments what will draw a good crowd of shooters better than a big and guaranteed purse. And further, the gentlemen who shoot with the Country Club, Westminster or New York, would not like their broadcloth to be jostled by the cheviot of the Essex, Middlesex, Long Island and others, nor would the latter want the nap worn off their cheviots by the flannel shirts of some others lower down the social scale. If you make a ground other than democratic it is not public and will develop cliques, as "Bedford" would have us believe is the case with clubs. New York city is not a shooting center. The tournament held on the Metropolitan Base Ball grounds a few years ago by the National Gun Association showed this. The management lost money and will never visit the city again. These grounds are singularly well suited to the purpose and easy of access. Small towns east and west furnished nearly all the shooters, hardly a corporal's guard of New York men showing up.

Enthusiastic as is the writer on the subject of shooting, he would not invest a dollar in such a venture with the expectation of seeing it again. It might work for a short time, but too short to warrant such an outlay as would be required, and with the three kinds of shooting there would be too many interests to satisfy riflemen, pigeon shooters and crockery smashers, and, as has been said, the three, though closely allied, conflict greatly in their practice. There is a club, hardly a greater distance from City Hall than "Bedford" mentions, which has tried the experiment of mixed shooting and failed. It is now devoted solely to the demolition of graven images and succeeds admirably. They gamble, if sweepstake shooting for small entries may be designated by so rough a name, and the club provides money prizes, having found them the most satisfactory. Its theory is that, to make a shoot interesting, there must be a consideration, and to prove it experience shows that the largest purses have the greatest number of competitors for them. Admitting that prizes must be given to keep up the interest, we come to the subject of handicapping, which will be necessary to encourage the tyros. How can this be accomplished in a large and mixed assembly? Even in small clubs the handicap question is a tough one, the toughest which, in an experience of nearly twenty years, the writer has tackled.

Your correspondent thinks the best way for gentlemen who wish to improve their shooting, is to join some well managed club, of which there are a number, some of them within an hour of City Hall. The club mentioned above is within that time, with access every 30 minutes. On arrival will be found a comfortable house, well handled traps and a number of shooters, large enough to make it interesting and small enough to make it lively, a most excellent light with practically no back-ground. This club is not the only one which may be reached easily by any one wanting practice, and, if the shooters in the vicinity of the city wish, they can get all the practice needed to make them good shots without investing more than one-tenth what it would cost them to make a public ground, and a voice in the management, which, in the case of a stock company, would be in the few. If "Bedford" will send his address through *Forest and Stream*, the writer will be happy to invite him to try his hand with our club, with the intention of convincing him that facilities now exist for the prosecution of shooting, and that though the club has been in existence for more than seven years, it is not "governed by a clique." OCCASIONAL.

NEW YORK, March 31.

EAST HARTFORD, Conn., March 30.—We have commenced operations for the season of 1888, the first shoot, Fast Day, March 30, shows for itself, and considering the small attendance was fully up to our average; inclosed is score in full. We are making extensive arrangements for our regular State spring tournament, which is to be held Wednesday, April 25, and bids fair to be the most successful ever given by us.

TORONTO, March 27.—The second competition of the West Toronto Junction Gun Club for the Enos James gun, presented through Mr. Chas. Stark, took place at Dan Bleas's grounds today. The following are the scores of the members who were not present at the first shoot. Twenty Canada blackbirds; 3 screened traps; 18yds. rise: Clark 16, W. Davidge 15, F. Brimer 14, W. Brigg 13, W. McDowall 12, B. Wilson 11. The following are the scores in the shoot of the day, same conditions. D. Blea 18, P. Wakefield 18, Clark 17, D. Walton 17, E. D. Eye 15, B. Wilson 15, W. Brigg 15, E. Dollery 15, H. George 14, W. Davidge 14, J. Bailly 13, C. Hinton 12, W. McDowall 12, F. Brimer 9, W. Jones 6. Thos. Sawdon was referee.

CASTLETON, N. Y., March 28.—Castleton Corners Gun Club, 15 Ligowsky clay birds each, at the second monthly shoot, 18yds. rise, Burlingham rules, gold and silver medals: W. Blake 5, J. Dickemann 6, Jerry McGuire 7, H. Housmann 9, A. Mayer 3, J. Schabert 7, C. H. Seehuson 9, A. Vroom 7, F. Mayer 4. Ties on 9 for first at 3 birds, 18yds., won by H. Housmann. Four sweepstake matches followed.

MONTREAL.—The Montreal Gun Club has secured grounds, resembling the famous grounds at Monaco, situated about 200yds. west of the new M. A. A. grounds. It is intended that the club shall be the best and most select in Canada.

THE FOREST AND STREAM CUP.

CONDITIONS FOR THE COMPETITION FOR 1888.

A year ago or more the FOREST AND STREAM placed in the hands of the trap shooters of the country for competitors a valuable and artistic silver cup. It was styled the "FOREST AND STREAM DECORATION DAY TROPHY," and was to be shot for on May 30. There was a generous response on the part of clubs, and the sweepstake prizes, which included the entire receipts from entry fees, were well worth winning. There was a tie for first place and after several arrangements for the disposition of it, an agreement was made by which a check for $50 was sent to each of the two leading clubs and the Trophy remains in the hands of the FOREST AND STREAM.

This year the Trophy is again placed in competition, but with conditions slightly amended in order to give more general satisfaction. In place of a single competition fixed for Decoration Day, it is now proposed to make the winning of place depend upon the aggregate result of three shoots out of a possible five, and to permit the date of shooting the contests to be taken at club pleasure at any announced time during the entire shooting season. The entry fee has been fixed at $10 per team, and the disposition of this fund into three prizes to follow the main honor prize will hold as in last year. The field is open to all. The conditions have been fixed on a broad, simple and liberal basis, and the list of entries should be a long one.

FOREST AND STREAM DECORATION DAY TROPHY.

Manufactured by the Whiting Manufacturing Co. for the FOREST AND STREAM. *Solid silver, height 6¼in., diameter 5¼in., ebony pedestal, height, 5¼in. Value,* $100.

The competition will be open to all gun clubs in the United States which were organized by March 15, 1888.

To be competed for by teams of three club members, each man to shoot at 15 artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $10 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient.

Any target manufactured by the following concerns may be used, viz.: The Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, New York city, agents. No more than one style of target can be used by any one team.

Targets may be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, 5 at a right angle to the right, and 5 at a right ang'e to the left.

Guns of 10, 12 or smaller bore may be used; both barrels permitted. Distance from trap, 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder with 1⅝oz. shot. Gun to be held below the armpit until shooters call "pull."

Prizes to be determined on the aggregate of best 3 in 5 shoots, held between May 15 and Sept. 15, 1888. Each shoot to be held on a ground open to the public and at least 2 weeks' notice of the intended date of each shoot to be sent to the office of FOREST AND STREAM.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

If there are ties, they will be decided according to the rules of class shooting. In case of a tie on highest score the tie must be shot off as directed by FOREST AND STREAM, and the Trophy will be awarded to the team then making highest score. The second prize will be given to the team or teams making the second best score in the match. If two or more teams tie on second best score, the tie must be shot off unless the money be divided by unanimous consent of all interested. The remaining prizes will be awarded in the same manner. Ties will be shot under the same conditions as those of the match.

Points not provided for in these conditions to be governed by the National Gun Association rules.

Entries for the Trophy match must be mailed to the Forest and Stream Publishing Company on or before May 1. The entry of each team must be accompanied with entry fee of $10. The members of each team must be named in the entry blank, and each shooter must be designated by his real name.

Scores must be recorded in ink or indelible pencil on printed blanks which will be furnished, and their correctness certified by the scorer and two officers or other members of the club not contestants and witnesses of the shooting. They must be mailed within twenty-four hours after the completion of the match.

TROPHY POINTS AND NOTES.

Circulars giving full conditions will be mailed on application.

Only the targets named will be allowed, i. e., those made by the following concerns:

Ligowsky Clay-Pigeon Co.
Cleveland Target Co., Atlantic Ammunition Co., agents.
Niagara Flying Target Co.
Target Ball & B. P. Co.

The match is open to clubs in any part of the United States. The FOREST AND STREAM would be glad to see the South and West well represented.

The National Gun Association will govern points not covered by printed conditions.

There are no restrictions as to how the different strings must be shot; i. e., a shooter may shoot all straightaway birds before shooting the others or may alternate.

The one-trap rule does not prevent use of more than one trap, so that two or three may be shooting at the same time, to expedite matters, provided one-trap conditions are preserved.

The N. G. A. rule is that all targets to score must be broken in the air before falling to the ground.

In all cases of dispute the decision of the FOREST AND STREAM will be final.

Members of the team must shoot on the same ground.

One score only to be shot, not the best score selected from a series. The Trophy score may be merged with that of another match if previously announced.

No changes of personnel of teams to be made except in case of death or physical disability.

A second barrel break counts a whole bird.

Money to be sent through regular club channels, with list of team members.

The Trophy is now on exhibition in Mr. Henry C. Squires's show window, at 178 Broadway, New York.

KANSAS CITY, March 22.—There were about 40 sportsmen at the Kansas City Shooting Park, near the Blue, this afternoon, the occasion being the monthly medal shoot of the Independent Gun Club. The sport was somewhat curtailed by the scarcity of pigeons, there being barely enough for the medal shoot and the sweepstake shoot; even then the two were combined. The day was bright, but the wind was just cold enough to be unpleasant. The birds were about an average lot, some of them being rapid "tailers," while others were not much better than "squabs." The scores on the whole were fair. Mr. Fred Maegley made the only clean score of the day, thereby winning the medal and first money in the sweepstake. The conditions of the shooting were as usual. Ten birds each, 3 at 21yds. rise, 3 at 29yds. and 4 at 31yds.; 80yds. boundary. The score of the medal shoot is as follows:

R C VanHorn	1101110011— 6	B Everingham	11010 0019— 5
Carl Guinotte	1111000010— 5	Ezra Bingham	1010 01101— 6
Dr Stark	1010101001— 6	L Kunz	1110110001— 6
W V Rieger	0111010111— 7	F Maegley	1 11111111—10
Ed Bingham	1111010311— 7	Geo Orr	1110100000— 4
Geo Stockwell	1111 01010— 7		

The additional scores in the sweepstake shoot were:

D L McBride	1001000110—4	R D Mize	1110310011—6
Drury Underwood	0111000001—4	C H McBride	01100100 —3
T D Bedford	0111011001—6	G H Parker	0011110110—6
R C Proctor	1000 03100—3	C P Fairman	3111000100—4

In shooting off the tie for second money, W. V. Rieger and George Stockwell tied and divided the money. There was only one bird each for the shoot-off of the tie for third money, and, as only one was shot out, the other contestants decided the tie at five Peoria blackbirds, and Ezra Bingham proved to be the victor, tieing Messrs. Bedford and Parker, but finally shooting them out. The second tie was won by Ezra Bingham.

OTTAWA, March 24.—The St. Hubert's Gun Club held a shoot this afternoon in cold and somewhat windy weather. The first was a team match of 5 men, each captained by Messrs. Thompson and Deslauriers, 15 Ligowsky pigeons each, 18yds. rise. The following were the scores:

Trudeau	12	G White	8
Throop	5	S White	6
Thompson	7	Ed White	7
E King	6	J Deslauriers	10
Dr Martin	8—38	T McLelan	10—41

A second match was then shot at 10 birds each by same team:

Trudeau	9	G White	5
Throop	5	S White	4
Thompson	6	Ed White	4
E King	4	J Deslauriers	6
Dr Martin	7—31	T McLelan	9—28

The ties between Messrs. Trudeau and McLelan were shot off at 3 birds each, 20yds. rise; 2yds. back for each tie: Trudeau 111111—6, McLelan 111110—5. His Excellency, the Governor-General, has promised the club a handsome silver trophy cup, to be competed for every 24th of May, by teams of five men each from any regularly organized gun club in the Dominion. The winning team will be entitled to hold the cup until the next 24th of May, when it will be again put up. The cup will be valued at $100, and arrangements will be made as to prizes going with it. The cup will first be shot for next 24th of May.

THE NEW YORK STATE SHOOT.—Auburn, N. Y., April 2.—*Editor Forest and Stream:* For the first time in the record of the New York State Association the contestants are to be divided into classes according to their averages made at regular club shoots held the preceding season. This gives rise to a number of opinions as to how the classes should be shot. It has been suggested that a handicap of the classes should be shot, viz: The 60 per cent shooting from 18yds. rise, the 70 per cent 20, 80 per cent. 22, and the 90 per cent 24. All ties being shot at the respective distances of the different classes. Another way has also been presented, that of dividing the prizes and having different classes contest for the several different prizes. I think if you could get the opinions of the different clubs of the Association it would assist us materially. It is the wish of the club to give entire satisfaction to all. And there is no doubt but that it will equal if not excel any State shoot since the first annual, both in cash prizes and the quantity and quality of the other prizes.—CHARLES E. KERR, Sec'y Auburn Gun Club.

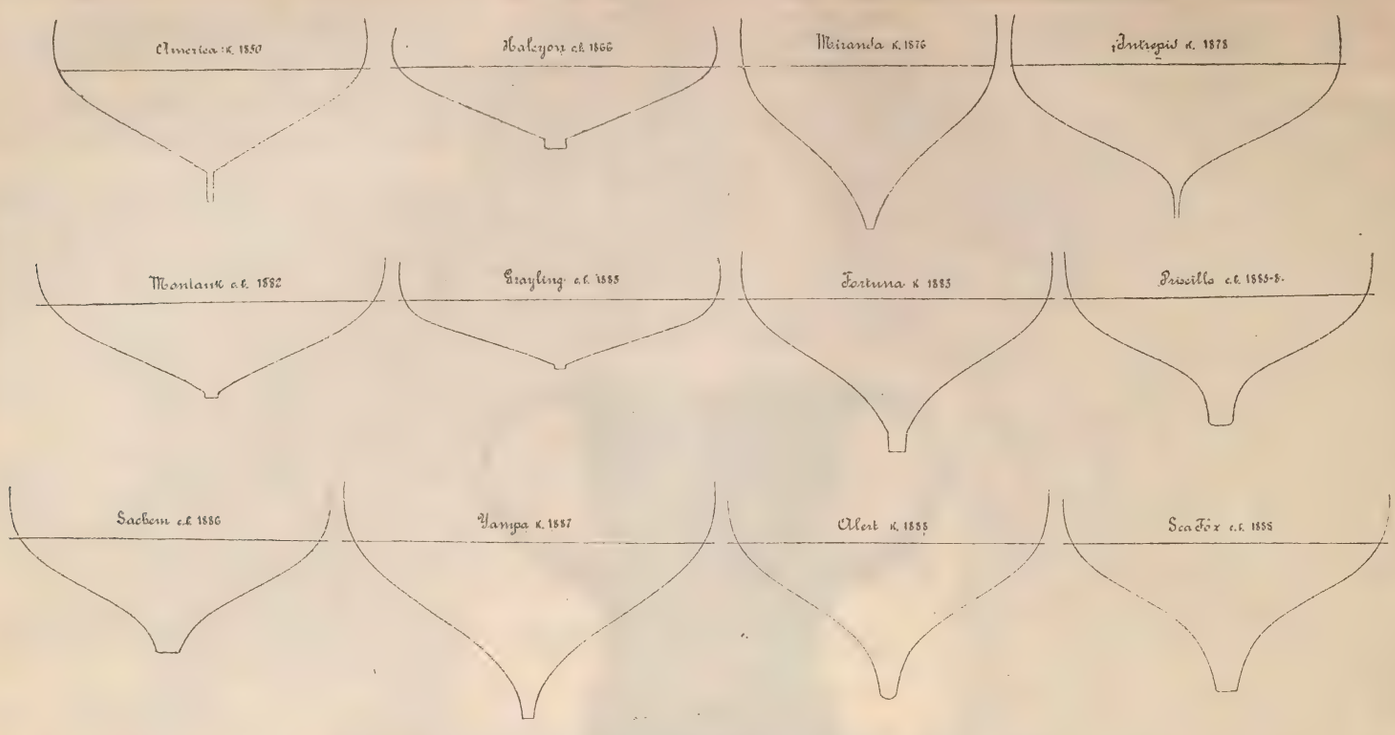
LAFAYETTE, Ind., March 28.—Fred Erb finished to-day the most remarkable shoot ever shot in the city. It was at 500 Cleveland standard targets, on a wager that he could break 475 out of a half thousand. He began Monday and shot 200 targets, using a No. 12 Lefever gun, scoring 196. The targets were sprung at 16yds. On Tuesday he shot 200 at 18yds. with his new No. 10 Lefever, which arrived Monday, again breaking 196. To-day he finished with the new gun, and at the distance shot Tuesday, scoring 98. He used the Peters cartridge, which does away with the crimp. In this remarkable shoot, a portion of which was shot in the rain, he made the fine score of 490.

BOGARDUS VS. IRWIN.—The spring tournament of the Abilene (Kan.) Gun Club will take place on the club grounds April 11 and 12. Targets to be governed by National rules. Live birds by Burlingham rules, except as to gun. Class shooting, three prizes, 50, 30 and 20 per cent. There will be 8 events at Peoria blackbirds and two at live birds. During the tournament the match, between Cap. A. H. Bogardus, champion wing shot of the world and W. T. Irwin, will take place for a purse of $200. Conditions—100 live birds each. Burlingham rules.

TORONTO, March 24.—The following are the scores at 20 birds each made by the members of the Owl Gun Club at their first of six contests for a valuable gun presented by Enos. James & Co., through their agents, Messrs. Chas. Stark & Co., held at Wm. McDowall's grounds to-day: J. Jobbett 18, H. George 15, Wm. Smith 15, W. Felstead 15, J. Townson 15, J. Douglas 14, L. Hawkesworth 14, H. Charles 14, E. W. Sandys 13, J. Rice 11, W. McDowall 11, G. Jones 10, J. St. John 10, A. F. Beatty 9, J. Gould 9.

CARO, Mich., March 30.—Following are the scores made by the Caro Gun Club at 15 Peoria blackbirds: B. F. Harris 4, B. F. Nettleton 3, F. H. Baillie 4, Norman Lester 7, J. R. Mason 10, G. W. Smith 5.

ATHOL, Mass., March 30.—The Athol Rod and Gun Club has reorganized and elected officers as follows: President, Dr. L. F. Talman; Vice-President and Captain, A. L. Pike; Treasurer, C. M. Peirce.



Canoeing.

Address all communications to the Forest and Stream Pub. Co.

AMENDMENTS TO THE CONSTITUTION.

NOTICE is hereby given that the following amendments to the Constitution will be submitted to a vote of the Executive Committee two weeks hereafter. To add after Article IX., an article as follows, to be numbered Article X., and to renumber the remaining articles:

Article X.—New divisions of the A. C. A. may be formed at any time, provided, first, the new Division shall number not less than 100 members in good standing of the A. C. A.; second, the Divisions or Divison from which the new Division is formed shall not be reduced to less than 100 members each. The Division shall be geographically a unit and shall not divide the territory of any existing Division in two parts. Any twenty or more members in good standing residing within 100 miles of a given point may make an application in writing to the Commodore for the formation of a new Division, giving the boundaries proposed, evidence that the above named conditions are complied with, and accompanying their application with the sum of $10 for the expenses of taking the vote. The Commodore shall cause notice of such application to be published in one of the official organs, inviting expression of opinion from members, and shall cause a circular letter to be sent to each member within the proposed boundaries, demanding a vote by letter upon the question of forming the Division. Within thirty days from publication of notice the Commodore shall lay the application, together with the statement of all protests and the result of the vote, before the Executive Committee for their vote thereon, and upon receiving a majority of such votes in favor of the new Division, he shall approve the same and shall give fourteen days' notice in one of the official

MIDSHIP SECTIONS OF REPRESENTATIVE SCHOONERS——1850 TO 1888.

organs of a meeting of the new Division at which it shall proceed to elect officers.

Article VII.—To add to the article describing the duties of Commodore the words; "He shall in October appoint a committee to audit the Secretary-Treasurer's accounts. He shall appoint such other committees as may be necessary to assist in his duties."

Article VIII.—To add to the article describing the duties of Vice-Commodore the words: "He shall in October appoint committees to audit the Purser's account. The Vice-Commodore shall appoint such other committees as may be necessary to assist in their duties." R. W. GIBSON, Com. A. C. A.

TUCKUPS, DUCKERS AND CANOES.

Editor Forest and Stream:

In your issue of March 8 I noticed a communication signed "Squid," and replies thereto in issue of March 29 by "Veritas" and "Twinesharp," respectively.

It appears to me that the "bone of contention," as it were, lies in the fact that hikers, tuckups, duckers, canoes and rowboats are permitted to sail in one and the same race, under the rules of the Montgomery Sailing Club. This rule will not give universal satisfaction, as the Schuylkill River is in places only about 200yds. wide, perhaps even less, and should all the boats enter a race there would not be room for the fifteen or twenty boats to tack about in the narrow stream, and the result will be unavoidable collisions and consequent dissatisfaction.

It is a fact the tuckups (we have about a dozen) would prefer a class of themselves, while the smaller boats (about six or seven, could also have a separate race. This would give each class more room and admit of handling the boats to better advantage.

I do not agree with "Twinesharp" when he says a tuckup can sail five miles to a canoe's two, but I do think he is right in saying the two boats should not race together as a class.

As we are in a position to be progressive it seems like retrograding, when, instead of classing the boats, they are thrown together in one race, irrespective of size or sailing abilities.

Again, referring to "Twinesharp's" article, I trust the Gracie will accept the implied challenge, as it would give the Gracie a chance to establish for herself a bona fide reputation, on even or nearly even terms. This, I think, would prove more satisfactory than defeating a tuckup by means of a time allowance.

NORRISTOWN, Pa. A. B. PARKER.

Editor Forest and Stream:

Not caring to take up valuable space in a discussion as to the relative merits of canoe and tuckup, I would nevertheless like a chance to defend myself. The statement ascribed to me in your last issue, is one that would have been made only by the veriest tyro in boating matters. I hardly think "Veritas" knows me, he must mean some other fellow. If, however, he really does, let him drop me a note and I will explain what really was said, which is entirely different from the foregoing statement, and also make him a proposition. SQUID.

PHILADELPHIA, Pa.

[We will forward any letters addressed to "Squid."]

BRITISH CANOEING IN 1888.

THE Royal Canoe Club has just issued its programme of races, camps, and cruises for 1888, and thereby foreshadows a busy year for the club, and plenty of sport and pastime for those who enjoy canoeing. The chief events are so grouped as to permit members to enjoy the whole of the events of the club at different places without a clash beetwen different classes.

The first group is racing on the Thames at Teddington: April 21, paddling Canadian canoes and sailing (second class); April 28, paddling tandems and four-paddle scratch race.

The second group is sailing races at Hendon Lake: May 19, first class, second class, and Canadian class; May 21, first and second class; May 26, first and second class maneuvering race: June 2, special sailing race (all classes); June 9, first class and second class races; June 16, 3 p. m., £50 challenge cup race.

A camp will also be held at the Lake from June 19 to 22, with scratch racing. After the Hendon sailing the canoes will be carted to the Thames, and a party will be formed to visit the Bourne End Regatta and camp, June 25 and following days.

The third group of R. C. C. races is at Teddington, commencing with camp from July 7 to 16: On the 10th, 11th, and 13th there are paddling races, sailing races, cruiser races, and camping competitions. In these every kind of canoe has its race, and it is expected that some instructive competitions will take place, especially in the race on the 13th, where canoe yawls and Mersey sailing canoes may compete with the smaller regulation canoes. On July 14, from 11 a.m. till 6 p.m., the regatta takes place on Teddington Reach, with twelve races, including sailing, paddling, mixed races, capsize sailing race, Canadian paddling, fours, and tandems.

In order that prizes may be more freely distributed among the competing craft in sailing, it has been made a rule for the season that any competitor who has been at any time challenge cup holder, is only to take a senior flag if he comes in first, the prizes going to the next in order. This also is the case in paddling as to two races.

The novelties introduced to bring out cruising qualities in the boats, and expert handling in the men, are to be found in the following races:

The maneuvering, or man overboard race, in which all the competitors, at a given signal, while sailing on the course, have to heave overboard a half-paddle, and, under sail, maneuver so as to pick up the paddle and then continue the course.

The cruiser paddling race, in which each canoe is to have on board all her outfit of spars, sails, gear, center-plate and rudder, and 60lb. weight, representing an ordinary load of cruising stores.

The two-man crew sailing race, which, of course, insures the canoe being of good bulk and stability, and not a mere racing machine.

The capsize sailing race, in which, at a signal while sailing the course, each canoe is to be capsized, with its sail up, till the mast head flag touches the water; then the sail can be lowered and the canoe righted by the skipper unaided, and the course sailed out. The capsize race is the most important of all. A capsize may happen to any man in any course; and for boat and man to survive a capsize, it is necessary that both should be previously prepared for such work. For instance, a canoe without bulkheads stands but a poor chance even of floating, let alone of being manageable when full of water; whereas, a canoe properly fitted with true watertight bulkheads or cases, not only will not sink, but takes in so little water as to be perfectly manageable after a capsize. So also as to the man, practice is all that is wanted, and the expert, even if capsized unexpectedly by a squall, seldom gets wet above his ankles, and is soon sailing again.

No special appliances will be allowed, such as covering in the canoe, all but a small watertight "bucket" well, which can be emptied out as soon as canoe is uprighted; but the ordinary or standing construction of the canoe, compatible, in the opinion of the committe, with ordinary cruising requirements, will of course, be allowed, the object being to induce perfection in the "hfeboat" qualities of the canoe.

The camping competition is in regard to the most perfect camping equipment, which can be properly stowed and carried in a canoe; and the subject is judged both as to the "kit," its stowage, and the craft in which the cruise is to be taken.

Last season showed a considerable increase in the entries, especially in the sailing races; and if we rightly judge from the barometer of new craft building, the buying and selling of old cracks, and the refitting of those which have not changed hands, and not forgetting the "talked of" new craft, the 1888 season ought indeed to be a good one on all sides. That the prizes are not destined to one or two particular lockers—as to often used to be the case—is now being generally admitted; indeed, the canoes are coming more to a common level of excellence, and the men, especially the young hands, are constantly improving by practice and experience, and thereby meet the old hands on a more even footing. Constant and careful practicing in the canoe is a *sine qua non* to success in canoe sailing. A novice at shooting, swimming, bicycling, steeplechasing, polo, and other sports does not dream of winning at first trial; but we have witnessed many a "canoeing" novice throw up the sport and return to obscurity, simply because the canoe he had bought—and which had won prizes before—did not carry him in to win.

On the whole, with an autumn cruise tacked on the very full programme, the Royal Canoe Club would appear to be entering on a prosperous season.—*London Field.*

AN AMATEUR'S EXPERIENCE.

Editor Forest and Stream:

Having been very busy for the last few weeks I have not answered "Idlemere's" letter. Before I go any further, however, I should like to ask "Idlemere" whether the criticism of my views were given because I agreed with "Deja" in that one point.

Perhaps I might better have said canoe building is beyond the skill of the average amateur carpenters. I have no doubt but that a great many canoes have been built by amateur carpenters which were a credit to them, but it is nonsense to say they were superior (or ever equal) to a professional builder's work. I think it is a good plan to build a canoe yourself rather than be deprived of the pleasures of canoeing. I have in mind now a boat which was built by a gentleman who was skilled in the use of tools—in fact was one of the finest cabinet makers I ever saw. Last winter he built a boat which in the workmanship was perfect, but not knowing the proper way to cut and lay his strakes, she did not hold her shape, and for that reason was rather cranky. Still by weighting her down she sailed on all points very nicely. He would have made her perfect I think, had he known what "Canoe and Boat Building" could have taught him. I am not entirely unacquainted with the use of tools, and might say I have always made my own spars, paddles &c., but will confess that building a first class canoe hull is far beyond me. I might if I had all the tools, time, material and room I needed, make a fairly good boat, but I hardly think I would have egotism enough to place it by the side of Joyner, Bradley, Everson or other good builders, and say: "See how superior in all respects my work is to yours, and I got it all out of a book, too." If we all went on that principle, I'm afraid that at anything the more we studied and practiced, the less we would know. I like a canoe with slight deadrise better than I do one perfectly flat. In "Idlmere's" first question he asks "why a canoe with considerable deadrise is better for such work?"

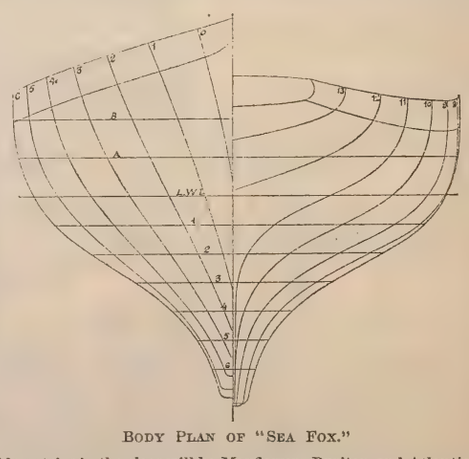
In my other letter I say nothing about "considerable deadrise." I said a "reasonable amount of deadrise." There is a vast difference. In the first place a canoe of that description will turn a great deal easier. Secondly—She will not stick on the rocks, because the bottom not being a right angle from the keel, there is more tendency to slip off than there is in a flat canoe. This can be increased by heeling on the opposite side. If you do not believe this get in a flat-bottomed canoe, run on a snag or rock, and see what trouble you will have in getting off. I remember one time while fishing in a lake in Cortland county (one of the Fulton Chain), I ran on a snag with a wide, flat-bottomed boat. I worked for some time to get off, but as I could not touch bottom with my oar I just kept swinging around. I ended by stripping and going into the water. Thirdly—I do not think a canoe of that description will heel any easier than a flat one. If it does it is merely nominal. I have not noticed it.

"Idlemere's" fourth question is asked in such a way it is hard to answer. I know so little about drafting that I cannot explain. It looks to me as though a flat canoe would draw less water than one with slight deadrise. In my experience it did not. I should say that my last canoe, 14½×30, drew ¼in. less than my flat one. This is only the experience of one person. I do not give it as the experience a whole army of canoeists, but I can but think that a great many will agree with me. GRACIE L.

BINGHAMTON, N. Y., March 22.

PHILADELPHIA C. C.—The annual meeting of the Philadelphia C. C. was held March 26, 1888, officers elected as follows: Com., Sam'l H. Kirkpatrick, A. C. A.; Vice-Com., W. Howard Falkner, A. C. A.; Purser, Dr. Thompson S Westcott, A. C. A. These officers together with Sam'l J. Creswell, Jr., A. C. A., and Francis Thibault form the Board of Directors for the year. The club is thoroughly prepared to enter upon the enjoyment of its new quarters. Several new canoes have been added to the fleet. —T. S. W.

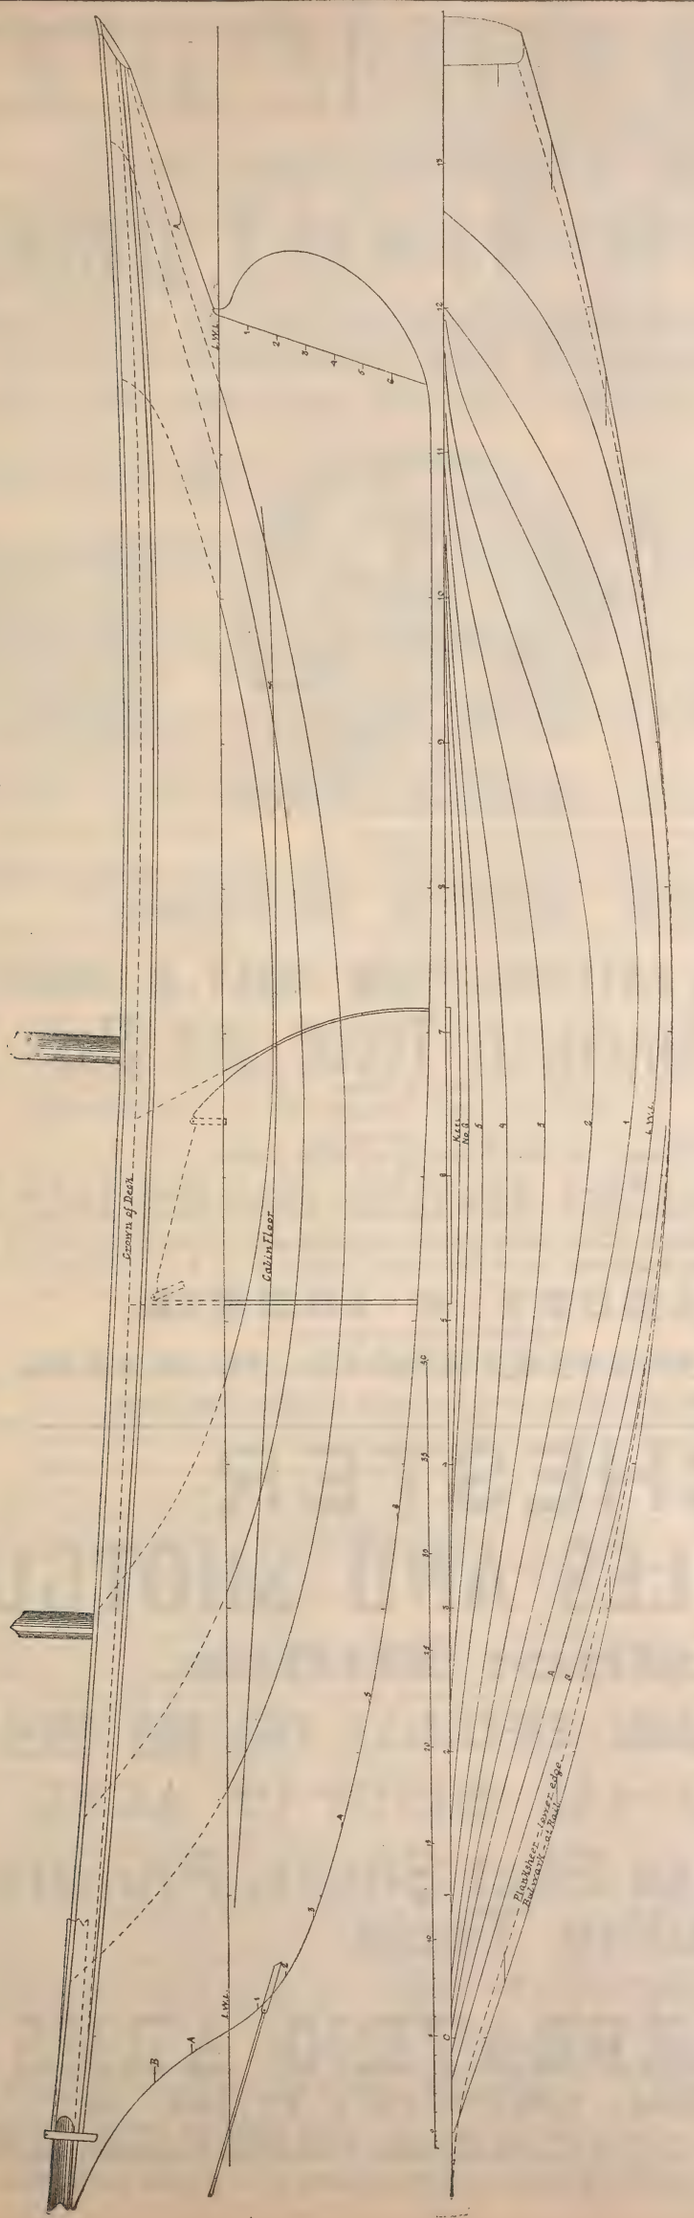
SING SING B. C.—The following officers were elected on March 5: Com., Gen. Ralph Brandreth; Vice-Com., Wm. W. Washburn; Secty, Wm. Henry Rowe; Treas., Joseph Thompson. This club was organized last October and now has 53 active members. It has rented a large boathouse to accommodate canoes, shells and small rowboats; the yachts and larger boats anchor off the club house in ten feet of water. The club is in a very prosperous condition and expects to have great sport the coming season.



ATLANTIC DIVISION MEET.—The date of the meet has been referred to the Executive Committee subject to the approval of Com. Gibson. Two dates have been proposed, June 30 to July 7, and July 14 to 27, or thereabouts.

A. C. A. MEMBERSHIP.—Eastern Division.—B. P. Cheney, Jr., C. P. Cheney, Robert Soutter, of Wellesley, Mass.; H. S. Haskell, Derby Line, Vt.

Yachting.



SEA FOX.

"IT is always the unexpected that happens," but though the probable change of the great single-stickers has been frequently discussed, the man would have been laughed at who last summer would have foretold the change which has taken place with the opening of the present season. When the last season closed nothing seemed more improbable than that the first class would be practically abandoned, and further that we should witness a strong revival of schooner racing; but that is exactly the situation at the present time. The positive declaration is made that Volunteer will not race this year, Mayflower is likely not to do so, Priscilla has changed owners and rigs, and the only possible entries in the class will be Mayflower, Puritan and Atlantic. Under these circumstances there is very little likelihood of much sport, and unless some obliging Briton with more valor than discretion comes into the lists with a 90-footer, with model and dimensions duly certified and registered in good time, it is apt to be many a year before such another quintet comes to the line as raced last season. The lovers of show races need not mourn on this account, however, for though the excitement of an international contest is this year debarred them, there will be spread just as many acres of canvas, on just as many miles of mast and spinaker boom, as in the last three seasons.

BODY PLAN OF "SEA FOX."

To the true racing man mere size is of little account compared with the even matching and skillful handling of the boats; a closely fought race of canoes or 20ft. boats is far more exciting than the average drifting match of the largest classes, but the majority of men who take an interest in yachting look first at the

actual size, and by them at least, as well as the casual spectators, the promised revival will be welcomed eagerly. There are two sides to the question, one a very large and important one, but we will not stop now to discuss whether the class is apt to become permanent and popular, whether it will enlist a sufficient number of men who are both able and willing to pay for a rather expensive sort of sport, whether the boats will be tuned up to the winning pitch that all of Gen. Paine's boats have been kept at, not to mention Sachem, Clara and the other craft that win. It is sufficient that the experiment of reviving schooner racing is to be fairly tried, and in good hands.

During the half dozen years immediately preceding the Puritan-Genesta, races the Seawanhaka Corinthian Y. C. had by hard work afloat and a strict adherence to Corinthian principles put itself at the head as a racing club, its yachts and its sailors were famous abroad as well as at home; and it should be a matter of gratification to every New York yachtsman to know that local interests will be so well represented in the racing of the year, and in such old and tried hands, for of the new craft now preparing three will fly the burgee of the Seawanhaka Corinthian Y. C., and with every prospect of bringing fresh laurels to New York. The smallest of the three is the new steel yacht Katrina, designed by Mr. A. Cary Smith, for Messrs. Auchincloss, now building at City Island to race in Bedouin's and Gracie's class. The next in size is Priscilla, now owned by Mr. Robert Lenox Belknap, an old member of the S. C. Y. C., and though built in 1885 and raced for three seasons she is now undergoing such alterations at Mr. Pipegrass's hands and under the direction of Mr. A. Cary Smith, her designer, that she comes out this year a new boat. The rig has been changed from sloop to schooner, the hull has been changed by the addition of a large keel, the draft has been increased by 18in. and the ballast lowered in the proportion.

The third new yacht is shown in the accompanying drawings from the original designs of the owner, Commodore A. Cass Canfield, of the Seawanhaka C. Y. C. Commodore Canfield made his first essay as a designer in 1884, in the 50ft. cutter Isis, a boat that in spite of a handicap in the shape of heavy construction, has turned out quite a success; but still it is a long step from her to the handsome schooner which will this year carry the commodore's pennant of the Seawanhaka fleet, the Sea Fox, as her designer and owner has named her. Sea Fox is built of mild steel by the Harlan & Hollingsworth Company, of Wilmington, Del., the builders of Mischief, Priscilla, Alva, Susquehanna, Iroquois, Nourmahal and Yampa. Her leading dimensions are given in the following table and are accurate; the dimensions of the other yachts are carefully compiled from the most trustworthy sources and are nearly all correct up to the present season. Of the midship sections shown, Halcyon, Montauk and Grayling are not from actual measurements, the same not being accessible, but they are correct in proportion and sufficiently so in detail to represent each type fairly; the others are from drawings believed in all cases to be accurate.

Sea Fox is a keel-centerboard yacht of the new compromise type, and is, with the exception of Marguerite, Mr. Burgess' new schooner, the most extreme yet built, her draft being 11ft., with a distinctly marked keel of over 3ft. From its old position as chief tenant of the boat and sole reliance to windward, the centerboard has in the Sea Fox retired to the comparatively unimportant place of an auxiliary whose exacting demands for the best space in the boat are only in a measure complied with. Whether these demands are to be still further curtailed in the future by relegating the trunk to a place below the cabin floor is yet to be proved this season, but the Sea Fox bears evidence that the days of a huge centerboard trunk and a capacious galley stove as the main factors in designing and sparring have given way to a better order of things. The steel trough keel will contain 54 tons of lead melted in, with some 4 tons of loose pigs stowed on top, practically all "outside ballast." Her plating is of 5-16in. steel, frames of 2½×2½ steel angles, spaced 22½in., with reverse frames of the same size on each alternate frame, extending in one piece around the bottom of keel and well up each side. The deck beams will be of the same size, and spaced as the frames, with a deck of 2½in. square white pine. The plating will of course extend up to the rail, with tubular stanchions of steel. All the deck work including the rail, will be of teak. The bow-

sprit, a hollow stick, will have one reef of 8ft. The fore shrouds will be fitted with outside channels of steel plate. The 3in. rudder stock will be fitted with a wheel. Below, the after cabin, a good sized room, will be used by the owner; forward of it will be the companion and chart room; then the main cabin, extending to the mainmast. This latter will straddle the after end of the trunk, the whole being boxed in to form a portion of the furniture of the cabin. On the port side will be a short passage, with a stateroom opening on it, the passage turning a little to port, so as to shut off the view and then leading on to the toilet room, steward's pantry and galley. On the starboard side of the trunk are two staterooms for guests. Forward, the space is very well arranged, giving a good forecastle, a separate mess room, a galley the full width of the ship, and rooms for the officers and steward. A special feature is a chart room adjoining the owner's cabin, with ample space for using and stowing charts. The sail plan will be of modern proportions, with short foremast, the position of the masts being shown in the plans. The racing outfit will of course be very complete. The yacht is now nearly ready for launching.

The accompanying midship sections are of value as showing plainly the modern progress in design, the first, America, being built of wood, with a keel sided but 6in., by Mr. Geo. Steers, in 1850, a typical keel craft of that era. Of the centerboard boats Halcyon, 1866, also a wooden craft and with all ballast inside like America, is a very good example, while Montauk, 1882, and Grayling, 1883, both wooden yachts with inside lead, modeled by Mr. Phillip Ellsworth, show the latest and most successful development of the peculiarly American type of yacht. During this period, from 1864 to 1883, the fastest American yachts were all centerboard craft of shoal or moderate draft, the keel being the exception, but the progress abroad during the same time is well shown by Miranda, built of wood on their improved system by Harvey & Pryor, at Wivenhoe, England, in 1876. Miranda had but 18 tons of ballast outside, but as shown was a deep keel craft of moderate beam. Intrepid, designed by Mr. A. Cary Smith in 1878, a wooden keel boat with no outside ballast, a cruising boat that has since won a world-wide reputation, marked the gradual improvement of the keel in America, being followed by Fortuna, by the same designer, in 1883. Fortuna, built of wood, had a keel large for those days, of 18 tons. She has made a success as a racer and cruiser, having crossed the Atlantic and visited the West Indies. Designed for speed, she has made a good record on the side of the keels, though now out-built and out-ballasted by the newer boats.

Still another step in the change is very distinctly marked in Sachem, built in 1886 from Mr. Burgess's designs, a keel vessel with 45 tons outside, and in addition a large centerboard. Less pronounced than her were Priscilla, sloop, 1885, and Iroquois, schooner, 1886, the latter designed by Mr. Smith for cruising only, though now in the racing ranks, but she has been succeeded by Yampa, a keel boat of 110ft. l.w.l., 27ft. beam and 15ft. draft, with 95 tons in her keel, while Priscilla is now of the form shown, with a positive keel in which is all her ballast. The latest development of the keel is shown in Yampa and the new cruiser Alert, designed by Mr. Henry Bryant, a wooden vessel with heavy keel of lead, while the compromise craft which was represented but two years since by Sachem with 8ft. 6in. draft, now finds its latest embodiment in such craft as Sea Fox, with 11ft. draft and the board reduced in size. With such a fleet afloat as Sea Fox, Priscilla, Sachem, Grayling, Marguerite, Montauk, Fortuna, Mohican, Gitana, Iroquois, Resolute, Palmer, and Troubadour, there will be no lack of the finest marine spectacles, and better yet of keen and exciting racing through the entire season.

EURYBIA—Sloop, built by John Munm for Mr. N. D. Lawton, was launched at Bay Ridge on March 31.

HORIZONTAL KEELS—Exmouth, Eng., March 20.—*Editor Forest and Stream:* Could your correspondent "X" be induced to publish in your columns a diagram with full details of the flat plate he proposed for Thistle's keel. I am rather interested in the idea as I remember something of the sort was tried in 1853 by Mansfield of Teignmouth, Devon (Eng.), on the 35-ton cutter Lady Bird, built by him for R. Cary Esq., of Torre Abbey. In her case the plates were two in number, and as far as my recollection serves me were of Muntz metal and fixed close to the garboards, one on each side, but the experiment was not a success and they were taken off, but the vessel herself was not distinguished for speed, and her name was rather an unhappy one, as she was familiarly known as the Lazy bird. If I interpret "X" correctly the plate he proposes is to be at the bottom of keel and its cross section would be like an inverted T. I can understand this answering well enough when the keel is parallel to the waterline, but in cases of great rocker or great drag I should fancy the head resistance would be very large, the flat of the plate being at such a coarse angle to water plane. —HENRY E. BAYLY.

SEAWANHAKA C. Y. C.—The next lecture will be delivered on April 7 by Mr Gilbert H. Wilson, of Wilson & Griffin; the subject being "Sails; How to Make Them and How to Treat Them." The latest additions to the club models are one of Yampa, presented by Mr. Chapin; a handsome model of Gracie, presented by Mr. Earle, and a model of Madge, presented by Mr. Watson. The latter is as fine a specimen of model-making as has ever been seen here, the finish being simply perfect. Vice-Com. Center has now at the club house a model of Medusa, by Mr. Grahn, the bottom being very neatly sheathed with thin copper in sheets, laid with fine copper nails.

CRUISING.—Wanderer, schr., Mr. G. W. Weld, sailed on March 15 from Barbados for Port Spain, Trinidad ... Montauk, schr., Mr. J. R. Brooks, arrived at New York on March 24.... Yampa, schr., Mr. C. W. Chapin, is now at the Erie Basin, South Brooklyn, where she will lie until she sails for England.... Intrepid, schr., Mr. Lloyd Phœnix, arrived at New York on March 30, having left Gibraltar on Feb. 29 and the Canary Islands on March 7. She left New York on June 8 of last year, and has cruised about European ports ever since.

NEW JERSEY Y. C.—Officers, 1888: Com., Edwin A. Stevens, cutter Isis; Vice-Com., Frederick Beltz, sloop Wayward; Treas., Charles J. Rogers; Rec. Sec'y, Wm. E. Kinzey; Corr. Sec'y, Geo. E. Gartland; Fin. Sec'y, John D. Goetschius; Meas., John Ortley. Trustees—Edward W. Ketcham, Theophilus Butts, Henry F. Ogden, James B. Scott and James Bell. Regatta Committee—John Curtin, Wm. E. Kinzey and Richard Outwater.

CYTHERA.—Nothing has been heard of Cythera since she left New York. The City of Berlin reports a yawl-rigged vessel bound east on March 25, 900 miles west of Fastnet Light, but had it by any possibility been the missing yacht she should have been reported before this.

ECLIPSE Y. C.—Officers, 1888: Com., Peter Krumeich; Vice-Com., D. Shea; Rear-Com., T. J. Hume; Sec'y, Wm. C. Mulker; Treas., Edw. Hammer; Meas., Henry Hofe. Regatta Committee—Jos. Stroebel, Chairman; Jas. Gorton, Geo. Chase, H. M. Hume.

NONA.—This little cutter, designed and owned by Mr. E. Brady Wendell, of Detroit, was hauled up on Nov. 25 and launched on March 20, the first yacht in commission on the Lakes this season.

THE FISHERMAN'S RACE.—The starters in the fisherman's race at Boston to-day will be the McManus, Phillips, Roulette, Babson and Merritt.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. K., Columbus, Neb.—We know of no dreibhunds in this country. There are smooth and rough collies, and either will do the work you want with a little training.

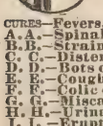
C. W., Flatbush, L. I.—You do not give breed of dog, and it is impossible for us to determine whether he is a pointer, setter, spaniel or terrier, as each of these breed has a representative of that name.

A. B. K., Troy, N. Y.—We have no record of Flora except that she won first at Syracuse in 1879. She was exhibited by O. C. Potter of that city, the entry stating that "pedigree would be given if requested."

J. N. D., Halifax, N. S.—Will you kindly inform me where I can purchase the Beaverkill trout fly mentioned by C. F. Orvis in yours of the 15th inst. and oblige? Ans.—You can get it from Mr. Orvis, Manchester, Vt., or otherfly makers.

H. B., Flatbush, N. Y.—Will you please inform me through FOREST AND STREAM whether wild ducks can be killed on the Hudson River after April 1. Ans. Except in Chautauqua county ducks may be killed in New York State up to May 1.

J. W., Detroit, Mich.—Will you please inform me if "Fur, Fin and Feather," which is advertised in your list of publications for sale, embraces the latest game laws of the various States which have been enacted and now in force? Ans. Yes; it purports to and we believe does.



S. H. B., Saratoga, N. Y.—It is not at all likely that you could go to the Adirondacks and trap enough fur to pay expenses. You would do much better probably in Maine. You would very likely do still better in Canada somewhere near the line between Maine and the Province of Quebec.

W. R. D., Burlington, N. J.—Have been obliged to give up business on account of health, and want to find a pleasant town where there is some trout fishing near. Do not want extra fine sport, but want brook fishing where there is some walking. Don't want to go into the wilderness. Can you suggest such a place? Ans. Try Newton, Sussex county, N. J.; Scranton, Mauch Chunk, or Lackawaxen, Pa.

FIVE BOYS.—A party of boys between the ages of fifteen and eighteen desire to know a few places they can go to fish, not very far from the city, during the spring and summer season. Will you kindly let us know, through your valuable paper, also what kind of bait is used for the fish in the places which you name? Ans. If the boys will write again and tell us whether they want fresh or salt-water fishing, trout, codfish, perch, eels or porgies, we will try to put them in the right place and tell them about the baits.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

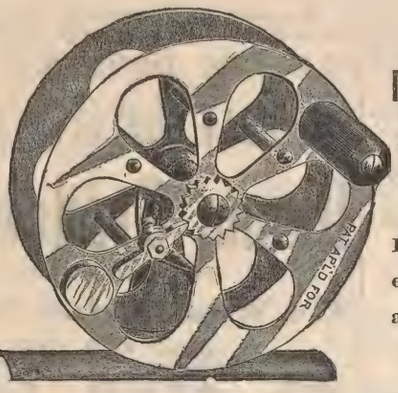
A. G. SPALDING & BROS.,

MANUFACTURERS OF AND DEALERS IN

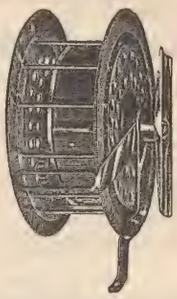
FISHING TACKLE OF A HIGH GRADE.



Our Specialties in Fishing Tackle include all of the best ideas that have been originated for the past three years.

Our aim is to carry the finest and most improved line of tackle for the use of anglers that can be made.

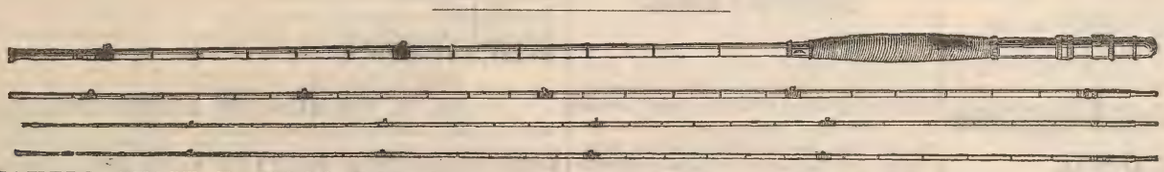
The Bray Fly Book



Is without question the finest and most perfect Fly Book ever put on the market.

The Gogebic Reel.

The great sale of the Gogebic Reel proves it to be for a moderate priced Reel a very superior article.



Improved Automatic Reel.

The Reel for fine fishing which all anglers are coming to is the **Automatic.**

Anchor Brand Snelled Hooks.

The great variation in the price of Silk Worm Gut enables a manufacturer of Snelled Hooks to make these goods at almost any price a dealer cares to pay. They can do this by simply grading the quality of Gut used. The result is that the market is full of a very inferior lot of Snelled Hooks, which no Angler would use if he knew that he could procure better. Many Snelled Hooks are sold all complete for a price less than good Gut alone could be bought for. We believe that it is as essential to have a well tied Hook on good Gut as it is to have a good Line or Rod, and for this reason and to maintain a high quality of goods, are putting up a grade of Harrison's First Quality Hooks, tied on the best Marana Gut, and which are very much superior to the regular goods on the market, and will call them our "Anchor Brand." Each package will bear a Trade Mark of an Anchor, with the words "Anchor Brand." We believe that Anglers will willingly pay a slight addition in price when they understand that they are getting the very best in the market, and we hope for their encouragement in our efforts to maintain a high quality of goods for their use.

THE MAYELL SPLIT BAMBOO ROD for a moderate priced Split Bamboo is the best we have yet seen, and is guaranteed to be absolutely perfect in every respect. It is mounted with the improved shouldered or swelled end German Silver Ferrule Milled, German Silver Solid Reel Seat The maker's name is on each rod, and we can recommend it to be a thoroughly first-class Rod. The prices and styles are as follows:

FLY RODS.

		Each.
No. 24.	9½ft. 3-piece, extra tip, weight 5 to 6½ oz., in grooved wood form	$15 00
" 25.	10ft long, 3 pieces, extra tip, weight 7 to 7½ oz., in grooved wood form or bamboo tip case and partition bag	15 00
" 26.	10½ft. long, 3 pieces, extra tip, weight 7½ to 8 oz., in grooved wood form or bamboo tip case or partition bag	15 00
" 27.	11ft., 3-piece, extra tip, grooved wood form, 7½ to 8½ oz.	15 00
" 28.	11½ft., 3-piece, extra tip, grooved wood form, 8 to 10 oz.	15 00

BLACK BASS RODS.

		Each.
No. 35.	"Forest and Stream," 3-piece, 2 tips, length 8½ft., weight 9 oz., solid metal reel seat above the hand, fine raised tie guide in wood grooved form.	$15 00
" 36.	"St. Lawrence," 3 pieces, 2 tips, length 10ft., weight, 11oz., solid metal reel seat above the hand, fine raised tie guides in wood grooved form.	15 00
" 37.	"McGinniss," 3 pieces, 2 tips, length 11ft., weight 12oz., solid metal reel seat above the hand, fine raised tie guides, in grooved wood form...	15 00
" 38.	"The Henshall," 3 pieces, 2 tips, length 8½ft., weight 9 oz., solid metal reel seat above hand, fine raised guides in grooved wood form.....	15 00

We can unreservedly commend the book.—*Nation*, N. Y.

FLY-RODS AND FLY-TACKLE.

SUGGESTIONS AS TO THEIR MANUFACTURE AND USE.

By HENRY P. WELLS.

Illustrated. Square 8vo, Cloth, Illuminated, $2.50.

Of great value. It will take its place as a standard authority. We cannot commend it too highly.—FOREST AND STREAM, N. Y.

Professional as well as amateur rod and tackle makers will find this work invaluable. It contains a vast amount of information not to be found in any other work.—*Fishing Gazette*, London.

This handsome book ought to delight fishermen, who will read every page and call for more.—*N. Y. Herald.*

A book without which every sportsman's library is incomplete.—*American Field*, Chicago.

The author has earned the gratitude of anglers, whose name is legion.—*American Angler*, N. Y.

II.

A complete treatise by an exert.—*Saturday Evening Gazette*, Boston.

The American Salmon-Fisherman.

By HENRY P. WELLS,

Author of "Fly-Rods and Fly-Tackle." With Illustrations and a Map. Square 8vo, cloth, $1.

It gives a vast amount of information both as to the best fishing localities and the best methods of taking fish.—*Boston Traveler.*

Mr. Wells speaks with an authority which will scarcely be questioned. Above all he is the salmon-fisher *par excellence.*—*N. Y. Sun.*

A careful study of the book would go some way toward making a man a complete angler for the salmon.—*Saturday Review*, London.

The Audubon Magazine BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

Yacht and Boat Builders, etc.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.

BY ORDER OF THE MORTGAGEES.

MESSRS. COX & KING ARE FAVORED with instructions to sell by auction at their offices, 5 Suffolk street, Pall Mall, London, on Wednesday, April 11 1888, at 3 o'clock precisely, the very desirable and first-class cruising steam yacht **OSSIAN, of 147 Tons Y. M.,** together with all her very complete and valuable outfit, including spars, sails, boats, anchors and chain cables, steam windlass, cabin furniture and all usual and necessary stores. The vessel is in the very best possible condition in all respects and very amply found; has recently been entirely refitted and the accommodation most conveniently arranged, including spacious deck saloon. Is an extremely powerful vessel for her tonnage, and especially suitable for foreign cruising and to make the passage across the Atlantic, and therefore well worth the attention of any American yachtsman desirous of obtaining a steam vessel of about 150 tons yacht measurement. Plans, particulars, photographs and conditions of sale may be obtained from the auctioneers as above. Telegraphic address, "DERAT, LONDON."
Scott's Code Used.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1031, Quebec City, Canada.

FOR SALE.—FIRST CLASS NEW FLUSH-decked iron steam yacht, 130ft. long, handsomely fitted, schooner rigged; speed 17 miles per hour. Steam vessel circular. SAMUEL HOLMES, 120 Front st., New York. feb9,3mo

THE YACHT CLUB ARGENTINO IS INTERested in small centerboard yachts up to about 40ft. long, to follow up what has already been ordered. Builders so disposed can send photographs, plans and specifications to the President, Yacht Club Argentino, 10 Bolsa, Buenos Ayres, South America.

For Sale.

Trout Farm For Sale.

A farm of 325 acres in Hampshire County, Mass., five miles from Amherst and 1½ miles from nearest railroad station. Has three ponds of some 4 acres, well stocked with trout, and contains and controls 2 miles of the finest trout brooks in the State. Game, preserved for several years, is abundant, and shooting excellent; 250 acres are covered with heavy timber of chestnut, pine, hemlock and yellow pine. The improvements consist of a pretty cottage of 11 rooms, suitably furnished, piazzas, a good barn and outhouses, icehouse; a noble spring of cold, pure water is carried through the house and barn. The buildings are in perfect repair. The land is 220 to 900ft. above tide water. Extensive and fine views on and from it. Cool and healthy and will make a delightful residence, independent of its fishing and shooting advantages. Apply to

mch22,3t WALCOTT HAMLIN, Amherst, Mass.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imrie, 18 Jesse street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

ANSWERS TO CORRESPONDENTS.

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

INTEREST IN THE PARK.

FROM Maine to Montana and from Minnesota to Florida requests have come to us for copies of the FOREST AND STREAM petition, praying Congress to pass Senate Bill 288, and so to protect the National Park. The signers of the petitions number thousands, and each mail brings us requests for blanks from people whom we never heard of before, and who perhaps until this subject came up never heard of us. Every one has heard of the National Park, however; every one knows that it is a wonderland, unequalled for majesty, for beauty and for strangeness. In urging its preservation, one set of men may be influenced by one consideration and another by some different one, but they are united on this main point—the Park must be preserved, This feeling is universal. It is only necessary to let the fact of the existence of the petition be known to secure signatures.

In stating that we would publish the names of signers we promised to undertake a much more formidable task than we supposed. We have already received vastly more names than we imagined would come in in this short time, and the publication of this long list must of necessity be spread out over several weeks.

Some of the newspapers have already rendered valuable aid in circulating these petitions, and they can still do a great deal to help on the good work. We shall welcome their assistance. It is not necessary to urge people to sign, but it is important to let them know that the fate of the Yellowstone Park is now hanging in the balance.

The future of this grand national possession must be a matter of interest to every patriotic American, and each one who feels a pride in his country will wish to see it preserved uninjured to this nation for all time.

This very widespread interest, to which public expression is now for the first time given, is encouraging. It does not at all surprise us, for on this subject we have had our finger on the public pulse for some years, and understand very well how the people feel about it; but to those who have not watched the matter carefully this expression of feeling will be startling. From all quarters of the land petitions are being sent to members of Congress, by clubs, associations and individuals. The signers, too, are the most intelligent and substantial of our citizens, people of the highest standing in the communities where they reside. Such names cannot fail to have an influence when presented to Representatives, and can hardly fail to prepare the way for a speedy and favorable consideration of the bill when it is reported from the Committee on Public Lands. It is of great importance that all who are interested in the bill should in every way aid its passage through the House. A personal letter from a constituent to his Representative will often carry great weight, and each one of our readers who is watching the progress of this bill is urged to acquaint his Representative with his feelings about the measure. It is believed that only a concerted effort is required to carry the bill through the House in triumph.

The bill has gone in due course to the House of Representatives, where it was referred to the Committee on Public Lands, and in this committee was turned over to General Joseph Wheeler, of Alabama. This gentleman is well known as a brave soldier, a gentleman of cultivation, and of broad and liberal ideas. He has given some attention to the question of the National Park, and is impressed with the necessity of legislation for its preservation and protection. The measure will no doubt receive prompt consideration at his hands, and we hope for a speedy and favorable report from the Committee on Public Lands. When the bill comes before the House, it is hoped that the Committee will seize every opportunity of securing recognition for it, and endeavor to have it acted on at once.

The Yellowstone Park bill passed the Senate very nearly as it was reported from the Committee on Territories. One important amendment was made, however. This was striking out the word "willful" in the eighth section, making the clause read, "the violation of any regulation made and published by the Secretary of the Interior * * * is hereby declared to be an offense," etc. The introduction of "willful" before the word violation nullified the provision of the section, and as Senator Vest remarked, violates all the principles of law in quasi criminal proceedings. It deals with intentions, which cannot be proved, and would be a most serious bar to prosecutions under this section. The change is one which we have often urged in this and other bills.

THE DOG BREEDERS' CLUB.

BY FAR the most important event of the week of the Boston dog show was the founding of a Dog Breeders' Club. The idea of establishing such a club at this time seems to have originated with Dr. J. Frank Perry, the well-known authority on canine diseases. At all events he was the first to move in the matter.

Without taking the public into his confidence, he communicated with fifty well-known breeders, setting forth his views of the case. The responses to his letters were prompt and overwhelmingly in favor of forming such a club. In fact, it seemed as if breeders had only been waiting for some one to take the initiative, and were now all eager to hold up the founder's hands. The practical unanimity of those from whom he heard encouraged "Ashmont" to continue his efforts. He called a meeting at the Boston show, and in an admirable speech, which we print elsewhere, outlined what he believed should be the policy of the new club. At this meeting, and at the show wherever breeders talked over the matter, the sentiments expressed were almost without exception in its favor.

It seems strange that no club of this kind should ever have been established before, and that breeders as a class have never organized for protection. Many of them are men who have large sums of money invested in live stock, and it would seem only natural that they should wish to have their property protected, yet they have never taken any united action for the assertion of their rights. The clue to this seeming indifference may no doubt be in the jealousies which too often exist, and in the fact that rings and cliques whose seemingly divergent interests kept them apart have been far too common in the dog world. It is time that these petty feelings were laid aside, and that breeders should care for their own interests. If they will not do this, no one can be expected to do it for them.

In his speech Dr. Perry has touched on some of the possibilities of the club, but to our mind these are more far-reaching than he has hinted at. The power which the new club may acquire under judicious management is simply incalculable. It will hold the dog interests of America in the hollow of its hand, and can do with them what it pleases. And yet, since the question is one of self-interest, it is reasonably certain that all its actions will be for the general good.

In this as in every other association, the success of the club will depend on the wisdom and intelligence of the governing body. If their rule shall be wise, firm and far-seeing the club will prosper and grow strong, until it will be the greatest power ever known in dog matters in this country. But if it shall be weak, vacillating, devoted too much to good fellowship and too little to the improvement of the dog, the club's membership will fall away, and its influence will depart.

We have confidence in the success of this club, for from what we can learn of its composition it promises to be very strong. It is formed on lines which we have often advocated, and we cannot help thinking that it is to this association that we must look for the raising of dog matters to a higher standard in this country than they have ever held. The National Breeders' Club may be a great power for good.

SNAP SHOTS.

A CONDITION of things is reported to exist on Long Island near New York which certainly calls for action on the part of the Long Island game protector. The Rockaway Rod and Gun Club control six miles of territory between Jamaica Bay and the ocean, the land being posted according to law. This land and that adjoining it is daily overrun by gunners, said to come mainly from New York and Brooklyn, who slaughter the song birds now on their spring migration from the south. Not the slightest regard is paid to the law—highholders, robins, meadowlarks, song birds generally and small snipe are killed here every day and in the most open manner. The principal day for this shooting is Sunday, when the woods and fields are overrun with a horde of city gunners who destroy everything that has feathers. These law breakers pay no attention to the signs of the club warning off gunners and trespassers except that occasionally they use them as targets and shoot them down. Efforts have been made by the Rockaway club to induce the local constable to do his duty in the matter of protecting their property, but he makes no arrests, and it is freely asserted that he fears violence at the hands of the shooters. This is a shameful condition of things, and the Long Island game protector ought to do what is necessary in the matter without delay. The abominable killing of migrating song birds was checked last year, and it is a shame that it should have broken out again this spring.

The old Audubon place at 155th street, near Twelfth avenue, for many years the home of the naturalist and the house in which he died, is to be sold at auction one week from to-day. The spot is one of the loveliest on New York Island, and it is one of the few localities still remaining in the city which the noise, dust and confusion of business have not yet invaded. It is rather sad to see the old place sold and to think that the purchaser will perhaps tear down the homestead, about which cluster so many associations, and cut the land up into building lots.

The text of the Ontario game law, recently enacted, which we print in another column, will interest all those who belong to clubs located in that Province. We called attention a week or two since to the fact that by the text of this bill as first introduced the rights of such club members seemed to be seriously threatened. The law as it stands, however, works no injustice to Americans, and many of its provisions are excellent.

The unusual pressure upon our columns by the publication of the names of the signers of Yellowstone Park petitions, and by our report of the Boston dog show, obliges us to leave over to our next issue our usual "Rock Climber" letter and a considerable amount of other interesting matter.

The Sportsman Tourist.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

SALMON FISHING ON THE GRAND CASCAPEDIA.

MY friend M. sends me under date of Sept. 20, 1887, this account of his salmon fishing trip on the Cascapedia:

I can hardly do less, since you afforded me the opportunity for so much pleasure, than write and tell you somewhat in detail how we made the trip and what fortune befel us.

Mr. B. and I left Boston on the night train over the Boston & Lowell and Central Vermont railways. We reached Montreal in due time, and after breakfast at the Windsor, drove to the old fellow's whose name you gave me. His stock of salmon flies was not very large, perhaps because it was toward the close of the season, and they were not over well tied. He had no flies tied to small hooks. We bought some of him, and then went to Costen's, where each of us got a rod, line, reel and gaff, some dark flies, large and small, together with necessary duplicates. After dinner we had a drive part way round the mountain and out to Lachine, and so back along the river to the city and to the hotel in time to get our traps ready for the Quebec boat. At the hotel, just before leaving, a gentleman came to me, and putting out his hand, asked if "this is Mr. M." Behold our friend Perkins whom I had known at Yale, instead of some unknown Perkins whose acquaintance I had yet to make. Our trio were comfortably put aboard the steamer, with all their impedimenta, and had a beautiful night for the trip down the St. Lawrence. In the morning B. was a trifle under the weather, so Perkins and I sallied out together to fill out what was lacking in our kit and to purchase a few green groceries. Small flies were not to be found of the desired patterns in either Montreal or Quebec, though I managed to get a few dark-fairys in Montreal.

Next day we took the Intercolonial for Dalhousie, and had for company an old salmon fisherman who had been on the Cascapedia the week before, Mr. A. F. Light, C. E., government engineer of railways for the Province of Quebec. He proved a very interesting companion. When we got on board the Admiral in the evening we learned that the Governor-General had telegraphed to have the boat wait for him. He had been to Mitis to meet a son who was coming out from England. The next morning it was announced that "His Excellency" would probably not be at Dalhousie before half past nine or ten, and we improved the time by visiting the salmon-freezing establishment. The proprietor had made a glass case and in it placed, for the Governor-General to see as he passed through, ten salmon, whose united weight was 480lbs. It was a magnificent sight, and you may well imagine roused our enthusiasm to begin the sport. Shortly after 11 o'clock the Governor-General came on board and we got under way. He was very polite, and said that before saying anything else, he wished to apologize to our party for delaying it, but that it was really not altogether his fault. I introduced B. and Perkins, and we chatted pleasantly with him until we reached the mouth of the river. Peter, Alfred and Aleck Barter, Peter's boy, Hamilton, John Willett and Tom (I've forgotten his other name) were waiting for us with their canoes, and had been since early morning. Perkins stepped into Peter's canoe, B. into Alfred and Tom's, while I, who came last, had Aleck Barter and John Willett, and so we divided off through our stay.

I enjoyed the voyage up the river exceedingly. I have canoed a good many hundred miles, but I never saw such poling as the men on the Cascapedia do. We had a first rate supper, a happy augury of other good meals to come, and turned in to the music of pattering rain. Before morning it cleared and was as cold as Greenland; but the first day at Woodman's (Sunday) was the warmest of all, 90° I think, in spite of the chilly promise of the early morning. After a sufficient length of time had elapsed after our dinner to make it safe to stir without bursting, we went through the woods to the Governor's camp to return a pair of rubber leggings which he had loaned Perkins the day before. Our exalted friend was not at home. On the way back we met Captains H. and S. of his aides, whom the Governor-General had sent to offer us a day's fishing on his waters, if we tired of ours.

When Monday morning came we were afield early—before breakfast. B., as he was to leave us on Wednesday, took what the guides thought was the "best chance" at the salmon pool. Perkins went up the stream, and I fished the pool at Woodman's from end to end. As each canoe came to the landing on this first morning, I am confident that each one of us expected that the others must have taken a big salmon, basing our exspectations partly on the proverbial luck of greenhorns, partly on the fancied superiority of the other fellow's guides, and partly on the imagination that as each one knew he had had no luck, the others must have had better. We did get a good many trout in one place or another, notably in the basin below Woodman's of the little stream which drives the saw mill just above the point where it falls into the river. There B. and I pulled out many on Monday afternoon, and B. got a good string on Tuesday, so with what we all took he had a fine box of trout to take home with him Wednesday. I had the best trout fishing at the mouth of Trout Brook, though there was a large raft of cedar sleepers right in foont of it, and no large fish rose to my flies. The water in the river was very low and as clear as crystal. Whenever we poled across the big pool at Woodman's, as many as ten or a dozen big salmon would lazily wag their way to one side or the other of our course to our intense disgust, as we thought it was all there, only we could not get it. When, too, we whipped the river through the quick water at Woodman's, or down at the Salmon Pool, the heavy "chunk" of an unseen salmon as he fell into the water, or the perfect sight of a thirty or forty-pound beast as he raised himself partly or wholly out of the water to poke fun at us, made us only too sensible of our aggravating situation.

Wednesday morning early B. left us, and we missed his genial companionship very much, and Perkins and I fished on. It was rainy nearly all day on Wednesday, but did not rain heavily. In the evening I went with Aleck and John down to Alfred's, where there was to be a party. Peter and his boy went down also, for word had come that Alfred had brought up a stranger from the ferry when he left B. in the morning. The stranger proved to be a Mr. B., of Montreal, son of a business friend of ours, and whose brother I had known. The party was not very numerously besought (as the Swedes say), and word was brought during the early evening of the death of Peter Barter's wife's sister. I left between 9 and 10. On the way up stream, while going up close to the bank on the right, a mist cloud suddenly rolled along the port gunwale like a young cyclone, and wet my whole left side, besides throwing a lot of spray over my specs. Aleck, as soon as he could pull himself together, and John, who heard the rumpus, "allowed" that we had struck a salmon, who, like ourselves, was poling up the shallow water, and Aleck assured us that the fish walloped his tail over the edge of the canoe just back of my arm. So much for a real and rather unusual *rencontre.*

All day Thursday it rained very hard. My head turned itself, for some reason unknown, into a barometer, and with fidelity recorded an unusually great depression of the atmosphere in a regular snapping headache. Perkins was to leave in the morning and wanted to pay his respects to the Marquis before he went, so we headed up to New Derreen. My head was too bad for me to think of enjoying a call, so, when we reached the Governor's camp, I asked Perkins to go up alone, and, with his own, present my respects. That scheme did not work, however, for Capt. S. came down to the landing and persuaded me to come and take a cup of tea, which Lady Lansdowne poured. It was very good, too, and did much to cure my headache; so much so that after a heavy shower had passed over, and I had taken leave of Lady Lansdowne and her niece (Capt. S.'s wife), I was ready to accept the invitation of Capt. S. and Capt. H. to try their trout fishing above the camp. I passed Perkins who had gone on ahead coming down again, for it had begun to rain once more, and he wanted to get home and pack.

We dropped the killick at the head of the long reach of dead water, where there was quite a current. In the course of a few minutes my Leonard rod was bending under the weight of a big trout, and I began to think of bringing him to the landing, when, by jolly! flies and casting line all went free, and it was a good leader too. It was so dark and rainy that I veneured what I otherwise dislike, a double leader, and it served me well. Three or four big fish broke loose close up to the boat, but when the next big one pulled out the line, I made the boys put for the shore, as if it were a salmon, and after a good play we landed him, no longer alone, but with a good-sized mate on the stretcher. In the course of an hour or so I took 16 or 18 nice trout, and then we paddled down to supper, past the Princeton Pool, where you took your 36-pounder, and in spite of the darkness made our home landing in safety. It rained all night, and the river rose perhaps 3 or 4in. Perkins left early the next morning, and just as he left called out, "I hope you'll get a salmon before night. I'll bet you will!" and I was a widow. All day the rain continued to fall. I rested the pools all day. After supper, I neared the kitchen door where the guides were seated, and seeing that they were not averse to going out, said, "Well, we can't catch anything here." We went up to the head of the pool. Two canoes with two Boston men were on Mr. Barnes's side, one near the head of the pool, and one opposite the big rock, right in front of Woodman's.

At the then stage of the water, two rocks were partly out of the water. Looking down stream there was a bit of still water at a point where two ripples joined. After one drop, I sent the fly—a little silver-doctor—into that angle. A good trout followed the shortening line to the landing net. At the next cast I thought I saw an eddy from a rise, and after waiting a minute or two threw back to the same spot. Something touched the fly. Was it a trout or a salmon? Probably the former, as I had about given up all thoughts of a salmon. But, then, it did not feel to me quite like a trout. I looked to my reel to see that all was clear, and, as luck would have it, found the line had taken a loop over the handle. I cleared it and payed out a few inches with my hand. In less than a second the reel was singing like mad, while clear across the river a fish leaped fair out of the water. The word came then: "Take up your killick, John, and hold her where she is." A cedar sleeper had lodged across one of the rocks, and as I reeled in and brought the salmon back again, it was an even chance whether he would not in some way get the line foul of the sleeper or even try to jump over it. He was courteous enough to allow me to let him down the current without touching the sleeper, and the men put the canoe up close to the shore, where I had a good chance to draw him out of the current. Several times as I brought him near the canoe he turned and made a rush. It was almost too dark to see the leader and try to gaff him, but finally, after getting the quarry between the canoe and the shore and dropping him down to a little below the stern, Alec, from the beach, sent the gaff home, and John rapped him over the nose with the long flat stone which Aleck had, with some premonition, placed in the boat, and the tragedy was over. Night dropped the curtain, and I had killed my first salmon. I felt much pleased, you may be sure. The salmon was a fresh-run fish, and weighed a few ounces over 12lbs., as bright as silver and very fat.

Next morning, Saturday, we went down directly after breakfast to the salmon pool. After pulling in a fair-sized trout, I was somewhat astonished to see a grilse go sailing through the air with my fly in its mouth, and no less grieved to discover shortly afterward that my line was coming back to me free. I had never seen a grilse before. The guides were really crestfallen at this turn of bad luck. But when we had dropped a little, and another trout had come to the landing net as the forerunner of still another salmon, a second grilse soared out of the water, as though that were the only proper way for a grilse to take the fly. He was a merry little fellow, and jumped in all six times before he gave in. It proved to be a regular little butter ball, and weighed just 4lbs. Of course I felt pretty well content with a salmon and a grilse to send home by the Monday boat. Sunday was a rather lonesome day. The guides went home, and a perfect stillness and quietness reigned. On Monday morning I sent the salmon down to Peter, and he and Mr. B. put them aboard the steamer. The fish reached their destination in prime condition on the fellowing Wednesday afternoon.

Encouraged by the success of Friday evening and Saturday morning, I fished diligently on Monday and Tuesday, but not a salmon rose, although there were two lying just above the quick water at the head of the pool at Woodman's. I did discover a fine trout hole some distance above this on Monday afternoon, at a point where a very tiny stream fell into the river, and got a splendid string of trout out of it, over forty in all, including two or three that would weigh over two pounds each. On Tuesday I supplemented the catch with enough to make up a good box to take home. Wednesday morning was fine and clear. After the farewells to the Woodman household, we dropped down the river to Peter Barter's, where Alfred was waiting with his horse and a borrowed buggy. We had not gone over 150yds. when Alfred drove into a rut in the road and broke a spring. It was quickly decided to return me and my traps to the canoe, and that Alfred should take the horse and ford the river, borrow another wagon of his brother-in-law, and meet me at the ferry. I really saved time by this maneuver, besides having a very pleasant glide down the river.

On the way home my precious box of trout got left over at Nashua, but by some good fortune it followed me closely, and was sent up to the house about 8:30. I had had the box repacked at St. John, and the fish were perfectly fresh, and created quite a sensation in our family, one surpassed only by the arrival of the salmon two days before. Now, my friend, I am afraid you got in detail more than you bargained for, but as it was you who sent me up to the beautiful Cascapedia, and made my outing such a very pleasant one, you must at least accept my renewed thanks in large measure, and forgive the weariness which the reading of the historiette must cause you. M.

A SNOWSHOE TRAMP.

Editor Forest and Stream:

In putting up some snowshoes to-day, for which I trust I shall have no further use until next winter, I was reminded of a letter received from John Danforth some time ago, in which he tells of a walk he took on snowshoes in January.

The letter is dated Chesam, Canada, and says: "On Tuesday morning I put on my snowshoes at Camp Caribou (Parmachenee Lake, Maine) at 7 A. M., and in nine hours I had traveled to this place, a distance of thirty miles. There is a winter road, but as there is no travel on it, I did not follow it, but took a straight shoot over mountains and through swamps, and came out within half a mile of my destination. The day was bad for the work, as it snowed all day and of course loaded my shoes. About noon I came by chance across the lone Indian of the Magalloway, Archie Annand, and we built a fire and made our tea in the same pot. Archie was swearing mad because some wandering Frenchmen had been to one of his camps and burned all of his wood. Archie got there very late one cold night and had some trouble in getting warm."

A snowshoe tramp of thirty miles in nine hours during a snowstorm is a good, healthy, blood-churning walk, particularly when the thirty miles includes crossing the Boundary Mountains between Maine and Canada. In a later letter Danforth said the snowshoeing was excellent about his camp in March, as there had been no rain in northwestern Maine to make a crust. During a second trip to Canada Danforth said he saw hundreds of acres of deer yards and dozens of deer. About my own house the snowshoeing has not been as good this winter as last, when it was prime. In writing of winter in April I use the present tense because we still have banks of snow six feet high. The snow has been so light that it was like walking on feathers, or there has been such a hard crust that snowshoes were safer indoors than out. A. N. C.

GLENS FALLS, N. Y.

THE OLD, OLD STORY.—Seneca, Mo., March 16.—*Editor Forest and Stream:* We have been having some fine weather for duck shooting, and some of the sportsmen have been putting in the time along Grand River, which is only thirty minutes' ride from this place on the train. We can take the train here at 8 o'clock in the morning, and half an hour later be at the river, where the ducks are plentiful at times. Yesterday one man killed 17 in two shots, and only lost one. The same party has been killing from 25 to 60 in one day's shooting. In the evening, when the shooters would come home, they would come over to the store and tell me all about what they had done, and as I am rather inclined to like shooting, their duck stories set me wild for a day's shooting on the rivers. I say rivers, as Neosho and Spring rivers come together there, and then it is called Grand River. On Thursday morning last Walker and the writer put off for the train, bound for the river, loaded down with shells, expecting to kill more ducks than we could bring back to the tank. The train was on time for once. We boarded her, and in a short time she pulled up at the tank near the river. We were off at once, and in a few minutes we were slipping along the river in search of the thousands of ducks reported to be on the rivers. But, alas, we were one day too late; just the writer's luck on such hunts. Most of the ducks were out in the fields, or gone on their journey north, for we saw but few. We first went down Grand River, and not having any success, we came back and went up the Neosho, and there we met with hard luck. We had discovered about fifteen ducks in a slough, and as they were very scare, we took great precaution, sneaking on them so as to get a good shot while they were on the water, and had picked a good place for the wing shot, and were waiting for them to get in range, so we could make a sweeping shot. When Walker said "Now is our time," and we were just raising our guns to our shoulders, when bang went another man's gun from just below us. Now our only chance was to get them as they flew. We made good shots, killing one with each barrel. Our friend only got two. He had walked so near them before he saw them that he did not have time to wait, as they saw him as soon as he did them. If he had waited half a minute longer we would have killed at least six ducks, as Walker had six covered with his gun and I had three that were sure mine. This ended our duck shooting for the day, as this bunch was all we saw up that river. We turned again down Grand River, but did not find any ducks, then came back to the tank, and took the 6 o'clock train for home rather discouraged with our luck.—F.

Natural History.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the Forest and Stream's *petition blanks. They are sent free.*

AQUATIC TURKEYS.

To him who in the love of nature holds
Communion with her visible forms, she speaks
A various language.

SOME years since my friend K. and myself bundled our traps into a skiff and pulled up the placid Iowa nine or ten miles to a lonely spot just at the mouth of a clear, bright sparkling little brook, "which to the sleeping woods all night singeth a quiet tune," and whose bank on the upper side, in conjunction with that of the river, formed a grand spot for a camp. Reaching this beautiful spot we soon had everything ashore; the tent was soon up and the coffeepot on the fire. We had come for fish and got them, catching the largest at night on the lines stretched across the river.

One bright warm afternoon a day or two after our arrival, my friend was asleep in the tent and I was taking my siesta under the trees, when my attention was attracted by the low clucking of a hen turkey on the opposite side of the stream some little distance above me. Quietly getting on my feet and running noiselessly through the bushes about 50yds. up the stream, I came in sight of her. She was standing on the edge of the bank of the river, here some 100yds. wide, and evidently trying to get her brood together, preparatory to some other move. What it was I did not long remain in ignorance of.

In a few moments she rose and flew slowly over the stream to my side, reaching the bank not far from where I was hid. As soon as she alighted she began calling loudly, and immediately some twelve or fourteen little yellow turkeys, apparently but a few days out of the shell, ran swiftly down the sloping bank and boldly took to the water. They paddled vigorously and made good headway, apparently swimming with ease. I was much astonished at this proceeding, as it was something undreamed of in my philosophy, and as the little swimmers approached the shore, on which the mother bird stood, clucking in a very satisfied way, my curiosity and eagerness got the better of my caution, and I exposed myself.

Instantly, and with a cry of alarm, the hen fled back to the initial shore. The chicks turned bravely about to go back, but they had by this time reached the strongest part of the current, and after a few struggles, some six or seven of them gave it up, and floated helplessly with the stream.

Going at once to the boat, I called K., we put off, and picked up the little mariners. At our approach they struggled very hard to get away, but were soon compelled to desist, and when gathered in lay quietly in the bottom of our craft. After drying them as well as we could, we ferried them over to their mamma, who was all this time a deeply interested spectator of the proceedings. Meantime, the rest of the brood had safely reached the starting point and disappeared. When we reached the bank, we handed the captives out carefully, and they, standing not on the order of their going, went at once, and for all I know fell victims, at some later day, to my "old trusty." Dupont.

Kellogg, Iowa.

THE CHIPMUNK.

AMONG the American species of ground squirrels, one of the most common and interesting is the chipping or striped squirrel, called ohiohin or dormouse, and hackee or chipmunk throughout New England and the Middle States. It is a very pretty little creature, being brownish-gray above, with five longitudinal black stripes, and two yellowish-white ones along the back; the under surface is white; the length of the head and surface is white; the length of the head and body is about six and a half inches; the tail, with the fur, four and a half. It lives in holes in the earth, and is usually seen on the ground, or on rocks, fences, and stumps, and is hence called the ground squirrel. It is frequently seen in the villages around the farms and gardens and even running along the fences of the streets. It is not swift, but is lively and playful, and though careful not to be allowed a very close approach, it will come out of its hole and look at a person, and often pursue its avocations without being disturbed by his presence.

In the autumn, this creature may be seen around the fields of Indian corn, and in the walnut and chestnut woods, filling his ample cheek-pouches, and carrying off his store to his granaries. He is able to carry four hickory nuts at a time, two being held in his cheek pouches, the third in his mouth and the fourth with his fore-paws. His hole is generally placed near the roots of trees, or in a decayed stump, or among a heap of rocks, or in a bank of earth, amid the forests or fields from which he draws his supplies. Sometimes his retreats have two or three openings; it usually descends perpendicularly at first, then it rises with one or two windings, and at last, at about the distance of eight or ten feet, terminates in a chamber lined with grass, leaves and moss, amid which the animal sleeps. Three or four usually occupy the place together. There are several side-galleries, where the stores of wheat, corn, acorns, grass seeds, hazelnuts, walnuts or chestnuts, according to the productions of the locality, are deposited. They are exceedingly provident, continuing to add to their supplies until forced into their nests by the severeness of the weather. Often their stores are much beyond the necessities of the winter. The chipmunk hibernates in these retreats and becomes somewhat sluggish, but does not approach the torpidity of the marmot. In the spring the young, four or five in number, are produced, and beautiful little creatures they are when first led forth by the mother.

The chipmunk rarely climbs trees, unless to escape pursuit, or perhaps to obtain food. His voice is a sharp chip, often changed into a gurgling sound when the animal escapes into his retreats. At other times his chip becomes a sort of song, in which several chipmunks in different parts of the woods seem to answer one another, and thus fill the forests with a kind of a merry chorus.

He does no harm upon the farm, the garden, or the orchard; if he ventures into the grain fields it is only as a wanderer. Nor is he included in the sportsman's list of game, being permitted to be passed by unharmed, and even the dog rarely gives a bark and seldom has a chance to get a bite, owing to the smartness of the chipmunk in always keeping near a retreat and his admirable quickness in reaching it. Yet his life is one of unceasing peril. The woods that he occupies are the haunts of hawks, owls, foxes, wildcats, minks and weasels, all ready to pounce upon him. He never peeps from his retreat but with the fear that any of these are on the watch and ready to seize him. Carlos Shelton.

BIRDS AT A GOVERNMENT POST.

DAVIDS' ISLAND, New York Harbor, March 16.—*Editor Forest and Stream:* Possibly a few bird notes from this little island may not prove uninteresting although they be as limited as the field of observation itself. Never before have I been confined to a patch of two hundred acres in which to indulge my love for the observation of birds and their habits. Last year, and in fact for some years past, Boston and its suburbs have been my stamping grounds, and rich fields they were, a fact that makes my present barren surroundings, speaking in a bird sense, the harder to bear. There is one bright spot, however, and I congratulate myself that I have seen here what I never dreamed of looking for in New England, namely a kingfisher (*C. alcyon*) as a winter resident. On December 10, one perched upon the railing surrounding the government coal dock, and allowed me to approach within twenty feet without manifesting the least uneasiness. Just back of him was a coal shed from which came a noise that only coal shovelers can make, but he paid no heed, and it was not until the steam launch Hamilton blew its whistle under his very bill that he took flight, springing his rattle defiantly the while. I claim him as a resident, for I saw him or one of his cousins, in the same place on January 27, and again in another part of the island in February.

As a boy I hunted meadow larks (*S. magna*) on the Mohawk flats, but never saw them later than Dec. 1, which is equally true of my Massachusetts observations. Here on Dec. 13 I put up a flock of at least fifty, and have seen them occasionally throughout the entire winter. I feared that the storm of the first of this week might have exterminated them, but a trip yesterday to the only part of the island that in any way resembles a meadow was rewarded by the sight of several larks, apparently as lusty and vigorous as ever. Have our game birds in New Jersey and this State fared as well?

My first spring tramp in the field last year was on Feb. 20, in the vicinity of Concord, Mass. Bluebirds (*S. sialis*) and robins (*T. migratorius*) were abundant, and a week later song sparrows (*M. melodia*) came in numbers. This year to date I have not seen a single bluebird with his patch of "earth and sky." Is my domain too small to tempt him? The first robin appeared last Tuesday in the midst of a tempest, and seemed thoroughly disgusted with himself for coming then. From the 25th of February I have watched and listened for the song sparrows, but not until the 10th of this month was I rewarded. I heard his note in the wood pile, and approaching, saw him sitting on the topmost log facing the sun, swelling his throat and singing the story of his southern sojourn, and to a sympathetic listener, I can assure you. Birds know those who love them, and he allowed, without evident distrust, a near approach. I adopted him at once as a comrade, although his coat was not of blue, and three days later I gave him a soldier's burial with the honors of war. The blizzard came, and on Tuesday morning last I found Master Melodia in a snowdrift with his sweet song frozen in his throat. I mourned him sincerely and hated to think how many of his race must have likewise perished.

One somber-coated bird I have seen many times, but at too great a distance to accurately describe. It is new to me, and I trust I may yet scrape acquaintance.

Edward Clark.

EASTER'S COURIERS.

OUTSIDE the domains of those feathered poachers, the sparrows, Easter this year ushers in with the first real springtide the songsters who have spent their winter in Southern climes, the truly veracious messengers of the season of renewed life and efflorescene.

Robins and blackbirds are the avant couriers of the migratory throng, and their piping notes will soon awaken the lifeless trees into buds and vari-colored raiment of odorous blossoms, paying a genuine Easter tribute to resurrected foliage and fruitage. Flocks of crows are now beginning to haunt the lofty crags and ridges bordering New York habitations, and are prospecting with a view of constructing their curious nests from pillage of farm house and garden, beyond the reach of the sportsman's bullet or the ken of the farmer.

Small numbers of robins, white-bellied swallows, the hungry and practical kingfisher, the penetrating woodpecker, cedar birds, red-winged blackbirds and cow bunting chirp occasionally to get their pipes in tune and break the silence of the long-slumbering forests. The chickadees, kinglets, snowbirds, pine finches, linnets and nuthatches, whose tough coats were not thick enough for the trying winter's severities, come whistling from the South, plethoric of joy and song at regaining once more their summer roaming grounds. They are begining to mate, and will soon begin housekeeping in their summer villas.

Some of them, with fidelity to marital vows that would startle the social life of Chicago, especially the conjugal oriole, robin and pewee, return with the identical spouse they journeyed with southward when the chill of last November foretold the approach of an unprecedented winter of blasts and blizzards. The fox-sparrows, who are gypsies of the feathered tribe, never remaining here long, will soon hasten northward to peal forth their tributes of song in the land of fugitive boodlers and gorgeous auroras. Part way on their course they will be attended by tree sparrows, pine finches, grosbeaks and butcher-birds, the latter the only songsters valiant enough to resent the oppressions and aggressiveness of those vociferous bullies—the English sparrows.

And pretty soon, when the leaves begin to clothe the forests, and the air is balmy and mild, and one feels the joy of living to be a luxury past description, partridges, quails, bluejays and the game birds of the woods will make the morning and the noonday vocal with every kind of song. Then will come the marauders and ruffians of the sky, hawks, and in the mountainous Alleghenies, eagles, vigilant for prey and plunder, to be followed by hooting owls and the croakers of the night that tell of summer, with its good and its evil omens, of birds as well as of men, gaudy of plumage, but "prone to evil as the sparks are to fly upward." Allen Norton Leet.

Roadrunner and Rattlesnake.—Rioville, March 26.—*Editor Forest and Stream:* I have long been an interested reader of Forest and Stream, but I have never seen any one attempt to describe the habits of the little roadrunner or Californian peacock. These are the names that it goes by in this country; I do not know any other name for it. This little fellow has a very cute way of destroying rattlesnakes. He will find one asleep and he will gather cactus and lay them in a ring around his snakeship. When the snake rouses himself from his mid-day nap he is corralled. Now, he has no opening by which he can get out, so he tries to crawl over the cactus and is pricked; this, he thinks, is more of an imposition than a joke, so he makes an angry strike, and, of course, he gets the worst of it. Now his anger is at boiling heat and he strikes at anything, himself included, and he soon perishes from the evil work of the little roadrunner. I do not think that the roadrunner eats the snake, he eats mice, scorpions and the like. So much for the little roadrunner. I hope he may get the credit he deserves.—B. F. Bonelli. [The roadrunner is also called paisano, chapparal cock and ground cuckoo. His Latin name is *Geococcyx californianus.*]

Albino Chipmunk.—Montreal, April 5.—*Editor Forest and Stream:* I inclose photograph of an albino chipmunk killed near Huntington, a place on the River Chateauguay, not far from the boundary line. The animal is of a dingy white all over; the stripes on its back can be traced, the color being slightly dark where they occur.—W. H. R.

Butchered to Make a Trap-Shooters' Holiday.—Detroit, Mich., April 4.—*Editor Forest and Stream:* Can you tell us where the clouds of pigeons have gone that used to fly on the borders of the island lakes during the spring and fall months, making it nearly dark as they passed over?—.50-95.

Game Bag and Gun.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the Forest and Stream's *petition blanks. They are sent free.*

ONTARIO GAME LAW.

WE print below the full text of the bill amending the act for the protection of game and fur-bearing animals, passed at the recent session of the Ontario Legislature:

1. Section 1 of the act for the protection of game and fur-bearing animals is hereby amended by omitting therefrom the words "deer, elk, moose, reindeer or caribou, between the 15th day of December and the 15th day of October," and inserted instead thereof the words following: "Deer, elk, moose, reindeer or caribou, between the 20th day of November and the 15th day of October; but the period hereinbefore limited shall not, as to moose, elk, reindeer or caribou, apply before or until the 15th day of October, 1895, and no moose, elk, reindeer or caribou shall be hunted, taken or killed between the 1st day of April, 1888, and the 15th day of October, 1895."

2. Section 7 of the said act is hereby amended by adding after the word "act," where it lastly occurs in sa d section, the words "and where no other penalty therefor is by this act provided."

3. The said act is hereby further amended by addi g thereto the following as sections 16, 17, 18, 19, 20 and 21 of the said act:

No person shall at any time prior to the year 1895 hunt, take or kill any deer, unless such person has been actually resident and domiciled within the Province of Ontario or within the Province of Quebec for a period of at least three months next before the said time, and any person offending against this section shall be liable to a fine not exceeding $20, nor less than $10, with costs of prosecution, for each animal so hunted, taken or killed, and in default of immediate payment of said fine and costs shall be liable to be imprisoned in the common jail of the county or district wherein the offense was committed for a period not exceeding ten months: Provided always that this section shall not apply to any person who, being a shareholder of or in an incorporated company, hunts, kills or takes on the lands of such company any of the animals mentioned in this section: Provided, moreover, that this section shall not apply to any person in any year for which he has obtained from the Commissioner of Crown Lands a permit to hunt, take or kill any of the animals in this section mentioned, and the Commissioner of Crown Lands is hereby authorized to grant and issue such a permit upon payment therefor of $10 for each year during which the same is to be in force, and upon being satisfied that the person applying for the permit may be relied upon to observe and comply with the other provisions of this act.

No one person shall, during any one year prior to the year 1895, kill or take alive more than five deer, and no two persons hunting together or from one camp or place of residence, or forming or being what is commonly known as a hunting party shall, in any one year prior to the year 1895, kill or take alive more than twelve deer, and any person offending against this section shall be liable to a fine not exceeding $20, nor less than $5, with costs of the prosecution for each deer beyond or exceeding the number so permitted to be killed or taken as aforesaid, and in default of immediate payment of such fine and costs shall be liable to be imprisoned in the common jail of the county or district within which the offense was committed for a period not exceeding three months.

Where, under this act, any person has been convicted of an offense against any of the provisions of this act, such person, in default of the immediate payment of any fine or costs imposed upon him or for which he had been adjudged to be liable in respect or because of such offense, shall be liable and may be adjudged to be imprisoned in the common jail of the county or district in which the offense was committed for a period not exceeding three months.

On the trial of any complaint, proceeding, matter or question under this act, the person opposing or defending, or who is charged with any offence against or under any of the provisions of this act, shall be competent and compellable to give evidence in or with respect to such complaint, proceeding, matter or question.

A conviction or order made in any matter arising under this act, either originally or on appeal, shall not be quashed for want of form.

All prosecutions under this act may be brought and heard before any of her Majesty's justices of the peace in and for the county and district where the penalty was incurred, or the offence was committed, or wrong done, and in cities, towns and incorporated villages in which there is a police magistrate, before such police magistrate; and save where otherwise provided by this section the procedure shall be governed by "the act respecting summary convictions before justices of the peace and appeals to general sessions."

The Old Men in New Hampshire.—At an entertainment recently held here selections were read from "Uncle Lisha's Shop" and "Nessmuk's Poems," which gave general satisfaction.—R. S. F. (Laconia, N. H.).

YELLOWSTONE PARK PETITION.

TO those pessimists who believe that the present generation of Americans has no enthusiasm for anything beyond the pursuit of the almighty dollar the popular interest manifested in the fate of the Yellowstone National Park bill now in the hands of the Public Lands Committee of the House of Representatives, must be something like a revelation.

We have returns already from over twenty States, aggregating thousands of signatures, but to enable one to attach due weight to these figures it must be borne in mind that those who have signed are only those who have had the opportunity to do so. Those who get the petitions seek to secure only such names as are likely to influence their representatives in Congress. Our correspondence shows a general and widespread sympathy with the objects of the petition, amounting almost to enthusiasm, and while perhaps not 4 per cent. of the petitioners have any reasonable prospect of visiting the Park themselves, there is so universal a sentiment in favor of preserving the wondrous region of the Yellowstone as a national park and saving its forests and little remnant of game from destruction that if the bill were in danger of defeat for any selfish ends, it would call forth an indignant protest that would re-echo from the Atlantic to the Pacific. The signatures published below are only a fraction of those received during the week, and our promise to publish the names of the petitioners from week to week is one likely to call for special provisions for its fulfillment.

The bill has already passed the Senate without a dissentient vote, but neither that fact nor the fact that so much pressure has already been brought to bear on Congress should tempt to any cessation of activity. Let it be remembered that the bill under consideration (Senate bill 283), has no politics in it, that it is not designed to benefit any one set of men at the expense of the general community, and that the community is not likely to be ostentatious in its expressions of gratitude to Congress for doing that which it was its bounden duty to do. Let it be further remembered that this is the third time the bill, having passed the Senate, has been submitted to Congress, and that on the two previous occasions it was allowed to die a natural death in committee, without even being brought to a vote, and it will be seen that the people have reason enough to try the effect of wearying Congress by their importunity, at least to such an extent as to arouse their Representatives to a recognition of the fact that the nation is very much in earnest on the subject.

The region for which Senator Vest's bill makes provision is one of mountain and forest, of geysers, of cañons, of petrified trees and boiling springs—in fact, of such an accumulation of wonders, of grandeur and sublimity as is not to be found concentrated in any other spot of earth. Americans are proud of this region, they feel the same pride in its possession that they feel in Niagara. They are not merely animated by the idea that they may want to visit it themselves, but they feel a natural gratification in the knowledge that they possess such a region of unparalleled natural wonders. They know, too, that in the absence of proper protection the region will be thrown open to the speculator, its forests destroyed and its natural wonders severally appropriated for private gain, and everywhere the patriotic sentiment prevails that to sacrifice this region to private gain would be no less folly than sacrilege.

The Yellowstone region constitutes a national park worthy the greatest nation on earth, and the American people are bent on maintaining it intact.

PRINCETON, N. J., April 6.—*Editor Forest and Stream:* The petition you sent me some four days ago was duly received. I concluded that it was my duty to do all in my power to aid the cause. I have been quite surprised to find the ready response there has been made on all sides. Every one wants the Park saved and if an expression of public opinion can do any good, Senate bill 283 will be passed. If I can be of use in any other way in regard to this work let me know and I shall be happy to do all in my power.—JO. B. GESNER.

HOLLAND, Mich., April 4.—*Editor Forest and Stream:* I am heartily in favor of protecting the beauties which nature has so abundantly lavished upon the Yellowstone region. If I can in any way aid your purpose please let me know.—M. G. MANTING.

MANORVILLE, N. Y., April 6.—*Editor Forest and Stream:* Your petitions received for the protection of the National Park, with thanks for the same. I inclose names, which could be multiplied indefinitely. Every one around here is in favor of protection for the Park.—THOS. COLES.

HYDE PARK, N.Y., April 6.—*Editor Forest and Stream:* Your Yellowstone papers meet my views first, last and all the time.—CAPT. CLAYTON.

STOCKBRIDGE, Mass., April 5.—*Editor Forest and Stream:* This is duplicate list of names forwarded to Frank Rockwell, Esq., by to-day's mail. Could have secured many more names but for extremely rainy weather. To show the general feeling about this matter I would say that all persons who saw the petition signed it without an exception.—T. S. HEATH.

GLENS FALLS, N. Y., April 6.—*Editor Forest and Stream:* I could have obtained the signature of every man in town, but thought a short petition would stand a better show of being read than a long one.—A. N. CHENEY.

INTERESTED persons are very properly circulating a petition in our city in support of the pending Congressional bill for the enlargement of the Yellowstone National Park and the protection of the forests, game and natural wonders within its limits. It has passed the Senate and now goes to the House.—*Lockport Daily Journal.*

PETITIONS are being circulated in the different States for signatures praying Congress to pass some measure for the protection of the Yellowstone National Park. If that Park of natural wonders is worth being a national park it is certainly worth protecting, that the great treasures which nature has stored up there as evidences of the majesty and greatness of the Creator may be enjoyed by those who may be able to look on them.—*Beaver (Pa.) Daily Argus.*

LOWELL, Mich., April 5.—*Editor Forest and Stream:* Inclosed find list of names for the Park protection. I send it direct to you and you can forward the same to Washington to Congressman Ford after copying these names. Everybody signed it here that saw the petition, and we all praise your noble efforts in this move.—C. D. P.

CHICAGO, April 6.—*Editor Forest and Stream:* Please send me four or five blanks for circulation in another club. It seems an anomaly that so much pressure is necessary to procure the passage of a simple bill which, practically, no one is opposed to, and which every one knowing the facts favors. Our State Sportsman's Convention assembles here June 11, and they will act if not too late.—E. N. H.

NOVEL SHOOTING ON THE MEADOWS.—Augusta, Ga., April 4.—*Editor Forest and Stream:* Last Saturday was the last day of the open season on game in this county. The river was up to the freshet mark, and when it is at this stage the large farms below the city are partly covered by water. I put on my wading boots in the afternoon and left for these fields to try my luck on perchance a duck or one of the long-legged plover which usually play around the fields at this stage of the water. I had a peculiar experience. In following up some plover routed by my dog, I saw something in the water to my left which I thought was a duck. The water in the field was about 8in. deep, and the object I saw rolled over into the deep water of a ditch and was for a while lost to sight. After waiting awhile, it came swimming up the ditch where I was standing, and as it came near enough I shot it, and had the pleasure of bringing to bag a German carp weighing 7¼lbs. I then pursued the birds, and had gone but a short way before I saw another in the field, the water being about 8in. deep. I also killed this one, which weighed 7¼lbs. I thus had 15lbs. of fish, and started for home. On the way I killed a few snipe. This was, to me, a strange hunt, and I doubt whether any one else ever had a similar experience. The carp had, perhaps, come from some private pond which had been broken or overflowed.—J. M. W.

THE AUGUSTA (GA.) GUN CLUB.—Augusta, Ga., April 4.—*Editor Forest and Stream:* It affords me pleasure to inform the sporting world through your paper that the Augusta Gun Club is determined to protect the game of this county, and for their benefit I inclose you a copy of the petition for incorporation: "Georgia, Richmond County—To the Superior Court of said county.—Your petitioners, James J. Dicks, William H. Harrison, Jr., Robert J. Potter and Diedrich Sancken, pray an order incorporating them, their associates and successors, under the name of the Augusta Gun Club, for twenty years, with a capital stock, to be actually paid in, of five hundred dollars, increasable up to five thousand dollars, with no personal liability on stockholders fully paid up. The objects of said club are the promotion of skill with the shotgun and the protection of game in said county, wherein it proposes to conduct its operations. Petitioners pray the grant of all corporate powers necessary to effectuate the purposes of said organization, and in particular, power in said club to act as prosecutor on prosecutions for violations of laws now or hereafter passed for the protection of game in said county, and power to acquire, hold and use real estate for a practice or shooting ground. —Salem Dutcher, Attorney for Petitioners."—J. M. W.

HORNELL GUN AND GAME PROTECTIVE ASSOCIATION.—Hornellsville, N. Y., March 31.—*Editor Forest and Stream:* At the annual meeting of the Hornell Gun and Game Protective Association, held March 28, the following officers were elected for the ensuing year: S. H. Crane, President; John Griffin, Vice-President; Wm. Rewalt, Jr., Treasurer; S. H. Brown, Secretary. Our association has thirty members in good standing, and about fifteen honorary members. A committee has been appointed to select from among the farmers all those who will aid us in game and fish protection. In this way we hope to increase the list of honorary members into the hundreds, and then the cunning game and fish violators will be at the mercy of the association unless they choose to respect the law. Our association was organized and incorporated in 1886. During this time we have met a great deal of opposition, but we feel encouraged with the prospects as they loom up this spring. The people generally indorse our principles, and many have expressed a desire to join and aid us, both in active and honorary membership.—S. H. BROWN, Secretary.

GEESE ON LONG ISLAND.—Greenport, L. I., April 3.—The wild geese are now flying in numerous flocks over these bays, and a party of gunners have gone down Peconic Bay to Gardiner's Island in search of them and will probably have good success. There must be good shooting for them now at Montauk.—ISAAC MCLELLAN.

A SHAMEFUL PIECE OF BUSINESS.—Two or three weeks ago a tame doe escaped from the grounds of Mr. Colt, in Hartford, Conn., and for some days was to be seen feeding on the meadows near the little station of Rock Hill. Such a beautiful creature at large there naturally created no little interest, but no one was found to kill her until Thursday, when a well-known Glastonbury man, president of the rod and gun club of that place, crossed the river in a boat and shot her and took her to Hudson Alger's hotel in South Glastonbury for exhibition. The doe would soon have given birth to twin fawns. Her meat is unfit for venison, and the sight of the pretty creature, shot for sport, has led to much criticism of the act. It was probably a hasty performance and is no doubt regretted now by the man who shot the pretty doe, but regret will not restore life to the dead deer, and that is what people must remember who are so quick to use firearms for the pleasure of killing something. The wanton cruelty of this performance deserves stronger condemnation than we like to print in these columns, and each reader must be left to characterize it for himself. It is evident that missionaries are needed in Glastonbury.

MASSACHUSETTS WOODCOCK LAW.—The Committee on Fisheries and Game, of the Massachusetts House of Representatives, recommend the adoption of the proposed change in the woodcock law by which the season shall open Sept. 1, or at the same time as the ruffed grouse season. The bill which they have drafted if adopted would make section one of chapter 276 of the laws of 1886 read as follows: Sec. 1. Whoever takes or kills a pinnated grouse, at any time, or a woodcock, between the first day of December and the first day of September, or a ruffed grouse, commonly called partridge, between the first day of December and the first day of September, or a quail, between the first day of January and the fifteenth day of October, or a wood or summer duck, black duck, or teal, or any of the so-called duck species, between the fifteenth day of April and the first day of September, shall be punished by a fine of twenty dollars for every bird so taken or killed.

SPRING IN NEW HAMPSHIRE.—Laconia, N. H., April 2.—*Editor Forest and Stream:* We have had a long hard winter; the snow came early and still covers the ground. Very little hunting has been done on account of the great depth of snow. Our lakes are still covered with very thick ice, and trout fishing has been better than for years. Several fishermen that I know have caught over fifty each, several of which weighed from 5lbs. to 8lbs., but the majority average about 2lbs. or 3lbs.; they are mostly caught by bobbing, while a few are taken on set lines with live bait.—R. S. F.

RETURNING WATERFOWL.—Laconia, N. H., April 2.—A flock of thirty-eight geese alighted in the mouth of the river Saturday morning, March 31, but a small army of gunners soon put them to flight.—R. S. F.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

TROUT DAY.

THE weather on Monday morning, April 2, was better than the average first of April weather on Long Island, still the wind from the snowbanks, which were left in many places, was chilly. The most of the fishing was done on the waters of the different clubs, and very little on those few streams still left open to the public. On the North Shore some good fish were taken from Shoe-Swamp Brook, near Locust Valley, and also in the Nissequogue, at Smithtown. On the South Side quite a number of anglers visited the once famous Massapequa Lake, by permission of the Brooklyn Water Works Company, which now controls it, but the fishing has been overdone, and is now very poor. A few rods were scattered along the different streams as far down as Patchogue, and the success was varying. At the South Side Club the fishing is always good, and is confined to members for the first two weeks, after which invited guests are permitted. The splendid ponds of the Oxford Club, near Patchogue, afford no fishing yet, having only been stocked last year.

At Fulton Market the display of trout was fair but not so extensive in regard to specimens from different localities, as in former years. Commissioner Blackford did not attempt to make a big display, yet it was very good and attracted many notable anglers and fishculturists. The features of the show were the large brown trout of 5½ and 6¼lbs., from W. L. Gilbert's ponds at Plymouth, Mass., they were large, but not as handsome as some 2-pounders of the same species, from the New York hatchery at Caledonia.

The South Side Club sent live rainbow trout, one of which weighed 6lbs., and loomed up big in the glass tank. From the hatchery at Cold Spring Harbor came eggs of rainbow trout and landlocked salmon, fry of lake trout and whitefish, and baby brook trout with two heads. James Annin, Jr., of Caledonia, N. Y., sent brook trout, as did Mr. Gilbert. A carp of 27lbs., from the Government ponds at Washington, occupied a prominent place. Wild Canada trout were selling at fifty cents per pound, Long Island trout at twice that figure, while the live trout sold for $1.50. We regretted to see many trout not more than 4 or 5in. in length, all over the market.

The fishing during the latter part of last week was better, and some large fish were taken. The largest one of which we have heard was captured by Mr. William Floyd-Jones, in his private stream below Lake Massapequa. It weighed 3lbs. 4½oz., an extraordinary size for Long Island. This stream is very short and the tide rises the full length of it, to the dam of the lake, so that at high tide the water is brackish. We see but few rods on the cars this season, as compared with former years, and the railway conductors say that they have noticed the same thing. This week the weather is better and there have been several fine days.

AN ANGLER'S RHYME.

I WROTE you, last Easter, a welcome to spring,
When I opened my window, and heard the birds sing,
But alas! by the movable feasts of the Church,
The poor bluebirds this year are quite left in the lurch!

I have seen one stray robin around the back door,
Looking lonesome, like "Oliver asking for more,"
And a blue bird's reported, but then I must say,
That the neighbor who spoke of it, thought 'twas a jay!

I have heard but one bird song, and that from the kitchen,
And its notes were more piercing and clear than bewitching.
For they came from a bantam, who nearly got froze
In a lively March blizzard, which crippled his toes.

The snow still lies deep on the valleys and hills,
And no voices are heard from the "murmuring rills,"
For the brooks in their fetters of ice are still bound.
And all nature is sleeping in silence profound.

Yet the daylight grows longer, the skies are more warm,
And brighter the sunshine that follows the storm.
While we trust the old promise, through ages proved sure,
That seedtime and harvest shall ever endure.

Though the rods in their closet still rest on the shelf,
With the fly-books beside them, well stored with their pelf,
The day will soon come, when their spring we shall feel,
And our ears shall rejoice in the click of the reel.

Old winter, good bye! please be off with your train,
Let us greet gentle spring with a welcome again.
When our feet by the brookside may wander at will,
While each leap of the trout to our heart sends a thrill.

When the song of the birds shall enliven the hours,
And our eyes shall be blessed by the smile of the flowers,
While we wend our way home, as the daylight fades out,
With our hearts full of joy and our creels full of trout.

New Hampshire, April 1. Von W.

A PISCATORIAL ROUND-UP.—III.

MONDAY night as we sat about the fire on shore we suddenly resolved to make sail for Deseronto, get our mail and go on to Hay Bay. Man proposes and the wind, or the lack of it, disposes, when one is on a sailing yacht.

Everything was put aboard in short order and we said farewell to our good friends Messrs. Palmer, Foster and Bruson, who had shown us every attention and kindness; sails were hoisted and we moved slowly down the bay under a light breeze which terminated in a dead calm two miles from our starting place. When we turned in the sails were so idle that Mr. Rantz would have protested, had he been on board, but when we were awakened in the morning we were at Deseronto dock. We kept twenty bass of the catch of the day before hoping to send them home from here, and after breakfasting at the Empress Hotel, Mr. Jamieson took our fish, sent them across Lake Ontario to Oswego on a tug and they reached home in good order. After breakfast there was a fair wind for our sail to Hay Bay, and the day was a delightful one. We met the Saxon a few miles below Deseronto, and hoisting the British flag we gave her a salute from the gun on the deck of the Zaidee. I noticed some fishermen rowing in shore as though they were making for a fishing camp which we could see, and told Joe to get into his skiff and row ashore and if possible get a whitefish for our dinner. Joe came back with a whitefish of 7¼lbs. caught that morning, and for which he paid twenty-five cents. We made the entrance to Hay Bay and got well within Thompson's point when the wind died out and left us to whistle and scratch the mast in vain. Byington with one of the men and the cooking outfit put out in a skiff for Codfish Island in the bay, and after puttering along in the yacht for a mile, Cleveland and I followed in Joe's skiff. Half an hour after we landed the yacht dropped anchor opposite the island. Codfish Island is an Indian burying place, or rather it was, and the remains of Indian sarcophagi are thickly scattered over the island. The tombs have been broken open and torn more or less to bits by relic hunters, but one can form a very correct idea of how they were made. A shallow circular or oval shaped depression in the ground—in some instances they looked natural depressions and in others they seem to have been dug—was paved with rough, broken stones, and the indications were that this paving was neatly and smoothly done considering the nature of the material used. The body or bodies were placed in the paved basin, with perhaps some of this world's goods, and over all was a cover of broken stones similar to those in the bottom. These stone-paved basins that remain are in size from six to fifteen or more feet in diameter. The larger ones may have been for a chief or possibly for a family, only I should imagine from the construction that they were not disturbed by the Indians after completion. The rock bottom and cover seemed to be lime rock. Did the Indians know that the sarcophagus of the Greeks was a limestone, used for making coffins because it quickly consumed the flesh of bodies placed therein?

Our dinner in the Indian cemetery did not consist of "funeral bak'd meats," nor did the spirits of departed red men interfere with ours. In my school days I was one of a party of young men who thought the Hoffman House was the only place in the great city of New York where a Spanish mackerel was properly cooked; and while maturer years have shown me how little I really do know, I venture to say that Catfish Island, Hay Bay, is perhaps not the best place in the world, but it is an excellent place to broil a whitefish, if the whitefish is perfectly fresh. Byington proposed to fish about the island for bass, and after dinner Cleveland and I started down the bay with mascalonge spoons whirling behind the skiff. The tackle as furnished by the boatman for this kind of fishing consists of two short poles projecting from either side of the skiff at right angles, with a bell at the extremity of the pole, and a line without a reel. A simple tinkle of the bell means that your spoon has struck grass or weeds; but a fire alarm on the bell while the pole is bending as though struck by a Kansas cyclone, means a bite of a fish. We did not get beyond the bite stage, so I cannot tell how a Hay Bay mascalonge does act at close quarters, but I imagine a big one gives the angler a swipe with its tail, upsets the boat and gets away. Joe's bells were in such perfect tune that we used his poles and left our trolling rods in their cases. A little way from Catfish Island we came to a horse ferry across the bay; we had seen them in the Bay of Quinte, but this one was wrecked while we watched it and it was more interesting. At one end of the ferry boat is a wheel operated by horse power (there is an illustration of one of these boats in the *Harper's Magazine* for March), after the manner of a threshing machine. The conveyance to be ferried is driven on board and the ferry horse mounts the power and begins to climb; but on the occasion referred to the horse had been climbing only long enough to get the boat out into the bay when something went wrong, and the boat drifted ashore on some rocks.

We met another skiff with anglers trolling, and were informed that no mascalonge had been taken since the Saturday before, because the "water was in bloom." If all water would arrange to bloom in the spring it would be a convenience to fishermen. There is no sense in its floricultural arrangements; it blooms in June in some places, in August in others, in October in Hay Bay, and when one fishes for yellow perch through the ice it blooms in January. In brief, the "blooming or working of the water" is conveniently at hand, to be hauled in by the heels by native residents near all waters, to account for the fish not biting. Hay Bay water, however, looks as though it might be a perennial bloomer; it is a mass of water weeds, seeds and grasses at its upper end, and one's line has to be constantly cleaned of weeds or "bloom." Pike (*E. lucius*) are annoyingly present, for no one seems to care for them on the hook or on the table. There was a steam yacht anchored in the bay, having on board a party of sportsmen who combined fishing with duck shooting. The marshes about the head of the bay are preserved, and shooting is permitted on alternate days by the club in control, for which privilege one dollar per day is charged for each gun. Our yacht came down the bay at nightfall and anchored, but Cleveland and I slept at Spencer's, a house of entertainment near the shore, where we found Dr. Reese, of Albany, and his brother, who had caught one mascalonge of about 18lbs. during their stay. Mr. Spencer has a comfortable house for anglers or gunners, and he is in charge of the shooting grounds and issues shooting permits. The next morning as we rowed out to the yacht for breakfast, which we had on what I believe is an island in the bay, the fog was so thick that we could not see a dozen boat lengths in any direction, but the guns were booming on the marshes, as it was a shooting day.

We trolled faithfully all day without a strike from a mascalonge; met Gen. Davies, of New York, on the water, who, the week before, had taken the largest "masko"—as the natives call them—of the season at Hay Bay, the fish weighing 35lbs.; saw Dr. Reese's skiff take a small mascalonge near the ferry, where the water is comparatively clear, and at dusk came up with the yacht near Catfish Island. Mr. Byington had been very successful with the bass, and denounced "masko" trolling as a waste of time. The moon was bright and there was a fair breeze, and we concluded to take a small bite on board and sail for Davy's Island, a summer resort nearly opposite Stone Mills (Glenora), and get a late supper. As we rounded Thompson's Point the breeze was fresher and the sail to the island was delightful under the nearly full moon. We found that the people on the island had packed bag and baggage for a move to Napanee, the winter quarters, but enough was unpacked to get us supper and make a bed for Cleveland and me in the parlor, into which we turned at a late hour fairly well tired.

In the morning we were awakened by a wet and muddy spaniel which cavorted around the room and over the bed, leaving muddy tracks on everything he touched. I said, "Confound the dog! Where did he come from with all the doors shut?" I jumped out of bed in a brisk and chipper manner to put him out, but as I went toward him with menace in the tone of my voice, he sat placidly down on his haunches and showed me a fine set of teeth, upper and lower. I have seen dogs do that sort of thing in fun, and again, I have seen them do it when they had no intention whatever of being funny, and I suddenly discovered that my night shirt did not come quite to the floor, and that it was of thin material instead of chain mail; that my feet and ankles were shockingly bare for purposes of interviewing a dog to which I had never been introduced, and I said: "Cleveland, instead of a spaniel this dog is a boarhound, and not an old smoothbore, either; I vote to let him stay, as it is foggy outside."

"Boarhound, thunder! I hope you are not afraid of that little puppy." Cleveland jumped out of bed with the same haste that I got in, and started for the dog with a "just-watch-me" air. Then he stopped. "Why, he is a regular mastiff and altogether too big to be turned out until we get our clothes on."

"Yes, I discovered that it makes a difference how you approach him; from the rear he is a spaniel, but his front elevation is that of a Durham bull. When I get my shoes on I propose to kick the spaniel end of him plumb across the bay, if you will attend to his front end."

Byington loomed up in the fog and finally admitted that he put the dog into our room to call us. Cleveland said his only fear was that the dog would jump on the piano and ruin it, and I confessed that I had hoped he would jump inside of the piano and that the cover would fall on him and break his neck. There was a fishermen's camp on the island, and we waited breakfast for the boats to come in from the nets with whitefish. When we had finished breakfast the fog had lifted and a breeze came up. Byington said he would take a skiff with Captain Bill and sail to the head of Amherst Island, and try bass grounds that he had fished earlier in the season; and Cleveland and I tried the bay back of the island, still hoping for a mascalonge. We caught a lot of pike in the bay, but no "maskos," and came in for an early dinner, after which we sailed to overtake B. We went into the upper gap, but found nothing of Byington until we got opposite Bath, when he was discovered on the dock, and he reported that he had not had a single bass bite on grounds where in summer he had caught them in large numbers.

After supper at Bath, we concluded to take a moonlight sail to Kingston, where we expected to arrive soon after midnight. Before midnight we turned in with the yacht becalmed only a few miles from Bath. I was awakened by something that sounded like the centerboard striking a reef, but which I located as the lifting and falling of the boom in a heavy swell. I dressed and went on deck. Capt. Bill made the darkness luminous at times by sulphurous remarks addressed to Eugene, who was in the rearmost of the three skiffs, rowing to keep them from being smashed under the overhang as the yacht rose and fell. We were in the big gap eight miles from Kingston; there was a heavy swell, but no wind, and the fog was thick enough to spread on bread. Had it not been for the fog it would have been daybreak, and I called Cleveland and asked him what he thought of trying to make Kingston in Joe's skiff. As C. was game for the proposal, we called Joe and arranged with Byington that we were to be found at the British-American in Kingston, or at Boxton Harbor, depending upon the wind. We found some trouble in getting into the skiff, for first it would be about 6ft. below the deck of the yacht and next 6ft. above it. With a pocket compass on my knee, we set out to emulate the example of Lover's amusing character Barney O'Reirdon, the Navigator, by stearing a "nor'-aist coorse." We were thrown out a little at first because Cleveland insisted upon steering by a blue flame, thought to have been seen dancing around Capt. Bill's head (Capt. Bill had predicted the night before that if we attempted to make Kingston we would get stuck in the gap in a dead calm) instead of by the compass. In about two hours' time the fog lifted, and we found ourselves just off of Kingston prison or penitentiary. A breeze came with the sun and soon we were at the hotel and at breakfast.

After breakfast we left our luggage to be taken up by the yacht, and in the skiff, with a spanking breeze, started for Boxton Harbor, in the St. Lawrence. We made a quick passage and put out mascalonge spoons in water that was clearer than in Hay Bay, but several hours' trolling produced but a single bite of a supposed mascalonge. The yacht came in and dropped anchor before we were satisfied with the fishing, and when we did get enough we went aboard and lunched, while she cut the water in the direction of Clayton. We had an hour at Clayton to re-pack, and took train to Utica. On the train we met Messrs. Harry Southgate, LeGrand Cramer and George Bird, who had just returned from a trip up the Rideau Canal, where they had fishing of a gilt-edged order. We spent the night in Utica and the next afternoon were at home, having had fishing that we could think about all winter.

In conclusion I wish to say that we attributed the large number of large bass, for we caught no small ones, in the Bay of Quinte that we fished, to the water being warmer there than elsewhere in the bay, or even in Lake Ontario, and that this caused the bass to gather in hordes. Around Amherst Island, as I have already stated, Mr. Byington did not find a bass in waters that afford good fishing in August.

Last July, 1887, Mr. Byington again went over places we visited the previous October, and wrote me: "I was determined to ascertain more certainly about the bass fishing at this time of year up the Bay of Quinte, and I tried our entire grounds up as far as the dock above Northport. I fished all available, and all our old points, with good weather and good bait, and the result was three small bass. I do not believe the bass will turn up until the last of September. You will remember that we several times discussed the question of running into Picton, and going across country to East and West lakes. When I returned to Clayton from my trip just concluded, I learned that a gentleman had been up there with the usual last year's luck, and brought back a large quantity of very large bass. So it seems they can be had there." In September of this year, when Mr. Cleveland and I were fishing elsewhere, Mr. Jamieson telegraphed from Deseronto that the bass were again in the bay in numbers and size as we had found them the year before. If one strikes the fishing when the bass are present, as we found them in the Bay of Quinte, he will find a black bass paradise. We found only the small-mouth bass, and the only drawback to such fishing is that one cannot dispose of a tithe of the catch. May it be many a year before the bass are fished out of Bay of Quinte as they have been from other waters.

N. B.—Since I finished the above I looked up Capt. Beardslee's article entitled "Hay Bay," in Forest and Stream Oct. 14, 1886, and I find that the sketch map which accompanied that article shows all the places referred to above. A. N. Cheney.

Glens Falls, N. Y.

A Happy Fisherman.—The following account of a well known angler in Washington, D. C., from the Pittsburgh *Chronicle*, might serve as a text for a long chapter on the subject of contentment in life and to illustrate the vanity of the pursuit of riches, and show how little a man really needs in this life if he boils down his fancied wants to his actual necessities. We have not space for such a chapter, but those who wish further specimens of simple life are referred to Diogenes, Timon of Athens, King Lear, *et al.*, for examples and opinions on this subject. The *Chronicle* says: "There are few tastes so inveterate and tenacious as that which makes a life-long angler of a man. There is in Washington City an old man who was considered forty years ago the best fisherman in Clermont county, Ohio, who never did anything in early days but fish, and being a quaint philosopher withal, attracted many able men to his company. He was taken to Washington during the war times by an Ohio official, and put in one of the departments, but the charms of the Potomac river far outweighed the advantages of his salary, and he soon took refuge at the Great Falls of that river, built a shanty there, and there he lives to-day, occasionally dropping in at Washington, where parties interested in him recruit his slender purse. He lives on twenty cents a day, and is hale and hearty and absolutely satisfied that he has chosen the wisest life and that the greater portion of the world fools away its energies in vain pursuits. He is in his way as interesting as Thoreau. The name of this old angler is George E. Dyer; he adds to his name 'L. F.,' which is presumed to stand for Lone Fisherman, and numbers among his friends several Senators and members of the Cabinet. He says he has not been a success as a financier, but claims to have led a happy life, and speaks with benevolent pathos of those who fuss and fret about worldly gain."

Nets Damaged.—Greenport, L. I., April 3.—The fyke fishermen in these waters have had great losses with their traps, owing to the late blizzard snowstorms; and more especially from the high winds, which badly tore up and washed ashore their nets.—Isaac McLellan.

WILLIAM F. WHITCHER.

WE regret to announce the death of Mr. W. F. Whitcher, late Commissioner of Fisheries of Canada, Commodore of the Ottawa Canoe Club, and a valued correspondent of FOREST AND STREAM. Mr. Whitcher entered the service of the old province of Canada in 1846, and managed the fisheries business, then a branch of the Crown lands department, up to the confederation of the provinces in 1867. When the department of marine and fisheries was organized he became commissioner of fisheries, which position he held until three years ago when he was retired. No man in the Dominion better understood the fisheries questions than he, nor were there many salmon anglers equal to him in skill.

During the sittings of the Fishery Commission at Halifax he rendered invaluable service to the British Commissioners, and had a great deal to do in preparing the Canadian case. He was also present in Washington when the Fishery Treaty was negotiated. He was especially fond of canoeing and had acquired an immense fund of information on subjects relating to the fish and game resources of the Dominion. He was also a ready and forcible writer as well as a man of great industry and perserverance; and to the information collected and arranged by him for the use of the government at the Halifax fisheries commission the success of Canada's cause before that tribunal was largely due. His death is therefore a loss to the whole country. When appointing men to represent Canada at the Fisheries exhibition held in London a few years ago, the Dominion government ignored Mr. Whitcher, who was the commissioner of fisheries. Sometime afterward Mr. Whitcher wrote a letter to FOREST AND STREAM in which he proved pretty conclusively that the government's expenditure upon fish breeding, as then conducted, was a waste of money, as that service was barren of results. Although in saying this Mr. Whitcher simply repeated statements made by Sir Alexander Campbell in British Columbia. Mr. McLelan, the then minister of marine and fisheries, was so enraged that he suspended Mr. Whitcher from duty, and subsequently superannuated him. It is believed by many that the sense of the injustice to which he believed he had been subjected preyed upon Mr. Whitcher's mind and aggravated his illness.

While on a hunting and fishing trip in the Northwest, some years ago, he was severely injured while riding on a hand-car, and his death, on April 2 at his home in Ottawa, was attributed to that. A post-mortem examination of the body was held, when it was ascertained that he had died from the effects of a cancerous formation in the stomach. Mr. Whitcher requested shortly before his death, that a post-mortem should be held in the interest of medical science.

Mr. Whitcher was fifty-nine years old in August last. He was an enthusiastic sportsman, and was never happier than when pursuing the sports in which he took such a lively interest. He had one son, the late Mr. William Whitcher, C. E., and one daughter, the late Mrs. Bruce. Mrs. Whitcher survives to mourn his loss. His father was an officer in the Royal Navy, who afterward settled in Canada. Mr. Whitcher was a man of kindly disposition and generous impulses, and will greatly be missed by a large circle of friends

TACKLE.

Editor Forest and Stream:

Under this heading in your issue of April 5 "H. P. U." asks if the automatic reel can be used for minnow casting. I do not know what the manufacturer or Messrs. Spalding & Bros., who sell this reel, would reply to this, but as it seems to ask for a response from some one acquainted with and who has used the reel, I would volunteer an opinion. I have used one of these reels for the past three years, and while at first prejudiced against it, as many other anglers who are now using it had been, I consider it for fly-fishing, skittering and trolling the finest reel that I have ever used, and if I could not procure another I would not part with the one I have for any consideration. My experience, however, leads me to think that the reel was never intended for minnow casting any more than an ordinary click reel is, as in this style of fishing it is necessary to have a free-running spool, which the automatic reel has not. For all other styles of fishing than this and salt-water fishing I am that satisfied with it that I would use no other, as I can honestly say that I have taken more pleasure in fishing since I procured a perfect automatic reel than I ever did before and use lighter tackle.

My tackle for all fishing except minnow casting, and I fish for all kinds of fresh-water fish except salmon, is a 10½ft. split-bamboo rod, weighing 7¾oz., an automatic reel and silk line, and my score book records bass as large as 4¼lbs. and pickerel up to 7¼lbs. Where I have done minnow casting I use a rod known as the FOREST AND STREAM pattern, 8¾ft. long and weighing 10½oz., and an ordinary double multiplying reel.

AN ANGLER FOR FIFTEEN SUMMERS.

MR. PAGE BEFORE THE SENATORS.

MR. GEORGE SHEPARD PAGE, of New York city, whose valuable pioneer work in behalf of fishculture and the distribution of food fishes dates back twenty years or more, and is known to everybody, gave a very unique display of fish and flowers at the Senate restaurant in Washington on Friday and Saturday April 6-7, which attracted much attention, and convinced the national legislators that their appropriations for the U. S. Fisheries Commission had been put to good practical use. The exhibition, which was a novelty to residents of the capital, resembled in its conspicuous features the annual spring opening at Fulton Market. The process of fish hatching was intelligently shown, and eggs and fry in numerous stages of development and growth were exhibited. There were 20,000 brook trout fry 10 days old, 500 lake trout fry 6 weeks old, 1,000 rainbow trout eggs bursting out momentarily into life, and one and two year old trout weighing a pound. The tanks included specimens of grown rainbow trout from California, grayling from Clark's hatchery in Michigan, whitefish (*Coregonus*) from Michigan, lake trout (*S. namaycush*), Loch Leven trout, brown trout, and *fario* from Great Britain, besides some beautiful specimens of the triple-tailed Japanese gold fish, the king-i-yo.

The flowers and plants were represented by palms, roses, arbutus, jonquils and other early blooms of spring, which were distributed as favors with lavish generosity by Mr. Page, whose personal expenditure must have been very considerable. Invitations were especially extended to Senators and Representatives and the chief officials of the Agricultural Department and the Fisheries Commission, but all visitors were cordially received and welcomed. Rangeley Lake trout, which had been caught through the ice, rainbow trout, Eastern brook trout, and other varieties of fish, as well as terrapin, were served at the tables of the restaurant by Mr. Page's direction, so that all could sample and appreciate.

Senators Frye and Sawyer, Commissioner Colman, Medical Director Baxter, U.S.A., Prof. C. V. Riley, and many other Senators and men of distinction, were most interested observers and admirers of the display. Mr. Page found a valuable coadjutor in his brother, N. F. Page, who is one of Commissioner McDonald's chief assistants.

In its entirety and its significance, the exhibit was essentially the outcome of the early efforts of Mr. Page in 1868, who was at that time and for eleven years at intervals, subsequently, president or vice-president of the Rangeley Club organization, so widely known among anglers. Mr. Page's big 30in. trout appeared conspicuously as a representative of those famous waters of Maine, and astonished all beholders. As an expression of what has been done already, and an earnest of what may be still further accomplished in the future, the aggregate display was most convincing and gratifying, and Mr. Page must feel a sense of recompense in the satisfaction he has in having been prompted to thus honor the U. S. Fish Commission and illustrate its valuable work, and present arguments so tangible and potent that they cannot be gainsaid. CHARLES HALLOCK.

WASHINGTON, April 7.

PROTECTION FOR RICHMOND CO., N. Y.

THE following is the full text of Assembly bill No. 150, introduced by Mr. Cromwell—read twice, and, by unanimous consent, ordered to a third reading and printed—ordered, when printed, to be committed to the committee on game laws, retaining its place on the order of third reading, entitled an act for the better protection of fish in the waters of Richmond county:

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. From and after the passage of this act it shall not be lawful, by day or by night, to put, place, draw, or in any manner use any purse net, pound, weir or other device except hook and line for the capture of menhaden or other fish in the waters of Raritan Bay within the jurisdiction of the State of New York and limits of Richmond county; nor in any arm, bay, river, haven, creek, basin, sound or kill thereof. But this act shall not be deemed to prohibit the use of fykes as now allowed by law in accordance with such regulations as the Board of Supervisors may have declared, or may hereafter declare.

Sec. 2. Any person or persons offending against the provisions of this act shall be deemed guilty of a misdemeanor and in addition thereto shall be liable to a penalty of one hundred dollars or thirty days' imprisonment, or both, as the court may determine. The money collected under this act shall be divided equally between the poor fund of the county and the person or persons making the complaint.

Sec. 3. All acts or parts of acts inconsistent with this act are hereby repealed.

Sec. 4. This act shall take effect immediately.

This excellent bill will, if it becomes a law, preserve the waters of Staten Island Sound, the Kills and a great portion of New York and Prince's Bay. These are the great fishing grounds of thousands of anglers, and should be protected from the devastation of pound and purse nets. The fykes are an old institution and are left undisturbed. We hope it will become a law.

FLORIDA FISHING.—Greenport, L. I., April 3.—*Editor Forest and Stream:* I have just received a letter from my good angling cousin, S. C. Clarke, of Marietta, Ga., from which I make a short extract: "I returned from Florida Feb. 13, having found the weather there for most of the time cold and damp. I think the sun did not shine more than one-third of the time at Halifax Inlet, where I was located, and as in winter the good fish will only bite on some sunshiny days, I had but few fishing days. Still I killed about 500lbs. of fish with rod and reel, but no very large ones; a sting-ray of 20lbs. was, I think, my heaviest fish. As to tarpon, which is now the ambition of the New York anglers to capture, there were none around, as yet, in these waters. Further south some very large ones have been killed by anglers from the North. A man should be strong and vigorous, as well as skilled, to tackle such a furious monster with any chance of success, and his rod, reel, line and hook of the very best—and with all these appliances he might kill one out of four that he hooked. So, I fear it is too late in the day for you or I."—ISAAC MCLELLAN.

ILLEGAL FISHING IN THE MOHAWK.—Cohoes, N. Y., April 2.—*Editor Forest and Stream:* I write to you to ask what can be done to stop the illegal fishing that is done here in the Mohawk River? The poachers begin to spear and haul seines as soon as the river opens in the spring and they keep it up till it closes in the fall. Large bass and pike are often caught with marks of the spear on them. In the early part of the fishing season the fishing is good, but by the first of August most all the fish have been netted. I have tried to get the local authorities to do something but cannot. I cannot do anything myself for I am a cripple with rheumatism and can't even fish. I hope you can see some way to remedy this.—W. J. WESTOVER. [First make sure that you can catch some persons violating the law and then send for a State game protector. The protector for your district is Seymour C. Armstrong, Weavertown, Warren county. If he cannot or will not come, write to Mathew Kennedy, of Hudson, and he will attend to the matter.]

A CORRECTION.—*Editor Forest and Stream:* In Mr. Orvis's last article the following passage quoted from one of his unnamed correspondents appears: "I do not know whether what is known as the Nottingham style of angling is practiced in the States and Canada; and thinking you might like to read what has recently been written on the subject, I beg to forward for your acceptance as a present Mr. Martin's book. As Mr. Martin is an uneducated man and quite incapable of writing such a book I am inclined to believe that he supplied only the notes while Mr. Marston, proprietor of the *Fishing Gazette*, was the chief author." In reference to this allow me to state that Mr. Martin, though certainly not a literary man, is far from uneducated. He has observed closely, can think clearly and expresses himself simply and to the purpose; furthermore, I know Mr. Marston did not write a word of the book. Mr. Marston was a novice in the Nottingham style of fishing at the time the book was written, and he placed the MSS. in my hands for revision and correction, paying me liberally for the work. I punctuated, recast and edited the book, but supplied no original matter; the book is Mr. Martin's work. The "Trent Otter" is the first and only book on that delightful style of bait-fishing, which, by the way, I hope to yet introduce to the American angler.—J. HARRINGTON KEENE (Cossayuna, N. Y.).

THE BOUNTY ON SEALS.—The Committee of Fisheries and Game of the Massachusetts House of Representatives to whom was recommitted the bill of fixing a bounty on seals recommend a new draft of this bill. It will be remembered that in the previous bill it was provided that the bounties should be paid by the State, and that the Finance Committee of the House to whom the bill was referred reported it adversely. The new draft of the bill reads as follows: Sec. 1. Any person who shall kill any seal within the limits of this Commonwealth, and shall under oath produce satisfactory evidence thereof, together with the tail of the seal killed, to the clerk of the city or town within whose limits the seal was killed, shall receive from the clerk of such city or town a certificate thereof stating the fact; and upon filing the said certificate with the city or town treasurer, such person shall be paid out of the treasury of such city or town the sum of one dollar for each and every seal so killed. Sec. 2. Any city or town paying money under the provisions of this act, shall be reimbursed therefor, annually, from the treasury of the county in which such city or town is located. Sec. 3. This act shall take effect upon its passage.

THE MENHADEN QUESTION.

Editor Forest and Stream:

"Big Reel" says the bays are the natural spawning places of the menhaden, which is a mistake, for they leave our coast full of spawn in November and December, and come back without spawn in the spring, showing that they spawn in the open sea during the winter. Mr. Eugene G. Blackford made a public statement to the same effect, a few years ago, and his attention being called to its inaccuracy, he investigated, and when he found he was wrong, acknowledged his mistake. The present U. S. Fish Commissioner, Col. McDonald, has fallen into the same error, on which he has built an argument which has been used by the Rod and Reel Association against the menhaden fishermen, and also lately by the FOREST AND STREAM, all of which is wrong, for it rests on a false premise. Col. McDonald's attention has been called to the subject, and he is to make an investigation on his own account.

"Big Reel" makes a statement in regard to Spanish mackerel which carries its own refutation, for men don't give away twenty-five fish worth a dollar each, and don't make oil and guano from fish worth twenty-five cents a pound. Fresh fish, as they come from the water, are worth about one-half of one cent per pound to render into oil and guano. Mr. Martin says he is the champion of hook and line fishing, which is his right, and I am the champion of fin fishing, and believe that fishermen have the right to utilize improved methods of reaping the products of the sea the same as other men utilize other improvements of the age, and if he is right, it is in order to strike down any improvement that one may think interferes with their profit or pleasure. The hook and line is only one step forward from the barbarous spear. He also says, "My aim is and has been to avoid misstatements, and to so write as neither to mislead, misinform nor mystify such of your readers as may not have directed their attention especially to the subject of conservation of the Atlantic food fisheries. I write by the record, and with that I am content." All of which has been my desire and intention, and if Mr. Martin had been more familiar with the subject under consideration it would have made his task easier, for I am bound to say he has not yet produced any evidence to make his position good.

Mr. George Palmer, with others, asked the Massachusetts Legislature last winter for a law restricting trap and pound fishing, and after he and his friends had stated their case to the committee they gave them leave to withdraw. During the hearing Mr. Palmer stated that there was poor hook and line fishing, which was disproved by the Wood's Holl man; and I will state for the benefit of Mr. Martin, if he does not know it, that sea bass since 1881 have been plenty on the Atlantic coast from the Delaware to Cape Cod. Before 1881 they had been scarce for about thirty years, but since their return have been so plenty as often to be a drug on the market. Mr. Palmer in his address stated that when Christ invited the fishermen to leave their nets and come with Him and be fishers of men, they accepted, and never since then has a Christian been a net fisherman. Notwithstanding the fact that afterward the same fishermen under the direction of Christ himself made the greatest catch of fish with a net that we have a record of in the Bible. Mr. Palmer's facts and conclusions in regard to fish are as wide of the actual facts as his scripture quotation. Mr. Martin says we appropriate the menhaden yield almost bodily, which I deny by producing G. Brown Goode as authority, who says where we destroy one, predaceous animals destroy one hundred million; which, if true, and I think it is, should set the whole matter at rest.

The trouble with Mr. Martin, when he quotes me in regard to menhaden off shore, is that he don't understand our business. For days together when fish are at sea they don't come near the surface of the water, then again there is often a rough sea, windy weather, thick fogs, which prevents open sea fishing, while in rivers and protected places on the coast it is easy to prosecute our industry which, if by law we could not use, would destroy the balance necessary for the profitable prosecution of our business. I assume that Mr. Martin thinks we could profitably carry on our business if we were not allowed to fish within one-half mile of the coast.

I am quoted as saying that menhaden is the bait or food of most every fish in the sea, which is true in the sense I state it. The mackerel fleet use large quantities for bait, and if one hundred barrels of menhaden is fed to them, is it bait or food. No one will contend that mackerel ever stay in the vicinity of live menhaden for the purpose of feeding on them. Twenty-five years ago 100,000 barrels of menhaden were fed to mackerel by the mackerel fleet. Bank and shore fishermen who fish for halibut, cod and haddock, use

large quantities of menhaden, neither of which are ever seen in company feeding on live menhaden. If they consume yearly five thousand barrels of that fish by having it fed to them by the fishermen, is it food or bait? Probably the West Island Club fed to the striped bass last season more than one hundred barrels of menhaden, and it is dollars to cents that not a striped bass east of Montauk was caught with a menhaden in its stomach that it caught alive.

We know, and can prove, that there is not a single food fish on our whole coast that keeps company with and feeds on the menhaden for its daily food, but we also know, and have seen, many instances of wholesale slaughter of menhaden by bluefish, which usually happens when they are on their way south in October and November. The fishermen tell of miles of water red as blood with fragments of menhaden floating on the water, how the bluefish act like mad dogs, jumping out and swiftly darting through the water. The slaughter don't usually last long, a day or so, and then the menhaden are gone.

Mr. Martin is right when he says "Inquiry into the Decrease of Food Fishes" always appears on books published by U. S. Fish Commission, but is that argument? It seems curious to have a man give a title of a book as a reason for the passage of a law, when the men who are in charge of the Commission which publishes the book are on record as saying the law should not pass. When the U. S. Fish Commission was established the scup, or porgie, had all at once nearly disappeared from the southern coast of New England and from its harbors, rivers and bays, and a great cry went up that the trap men had destroyed them, and word went forth to extinguish them by law. Prof. Spencer F. Baird was at that time favorable to their restriction, and a determined effort was made in Rhode Island and Massachusetts to pass laws to that effect, but they failed of consummation in both States. We at that time gave testimony to prove that in Roger Williams's time they were a common fish, that they left our waters before a trap or pound was thought of, and probably would come back, as they did in the year 1800, without notice or warning, but our adversaries would not be convinced and had us on the run, and without question would have succeeded in passing a law to suit themselves, but for the return of the scup themselves during 1870, in quantities to suit every one, and most of our opponents became of our way of thinking. I would recommend Mr. Martin to read Mr. Baird's statement on the above facts, as they appear in the record of the Halifax Commission.

I could go on and give personal reminiscences of every fish that inhabits our waters from Cape Cod to the Delaware, and, as it would seem, their unreasonable fluctuations which one would hardly believe unless he knew the truth from personal observation; for instance, the appearance during the summer of 1886 of a herring, which was a stranger in these waters. They come in countless numbers and locate on our coasts, in our rivers, harbors, and bays, stay four or five months and then disappear. The brigantine, or bullseye-mackerel, has been absent from our coast for about 50 years. It made its appearance last season in quantities large enough to give every inhabitant of the United States several meals each. Can any man give a reasonable theory why they left or why they come back? The purse seine argument don't come in, for they left before it was used to catch mackerel. I am informed that the West Island Club, at Seconnet Point, caught less than 50 striped bass during the season of 1886, and between seven and eight hundred during the season of 1887. Plenty of large striped bass never would have come back, as they did on a long reach of our coast, during 1887, if the theory which has been advanced was correct, that their scarcity before 1887 was caused by their destruction by traps, pounds, shore seines, and the purse seine destruction of menhaden, which is claimed to be their food. The cause of fluctuations like the above, which is the rule of all sea fish, is not man with his feeble appliances.

D. T. CHURCH.

TIVERTON, R. I.

THE NEW HAMPSHIRE HATCHERY.—We are informed that Governor Sawyer has placed a sufficient sum at the disposal of Col. Hodge to build a new hatchery to replace the one recently burned. As the Legislature had adjourned for two years it was feared that the work would be interrupted for more than this one season. This action by the Governor shows that he appreciates the labors of the Fish Commission, and relieves the commissioners of all suspense. Col. Hodge will visit the hatchery at Cold Spring Harbor, N. Y., before building.

The Kennel.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FIXTURES.

DOG SHOWS.

April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 23 to 27.—Second annual bench show of the Baltimore Kennel Club, Baltimore, Md. Frank Hall, Manager.

April 24 to 27.—International bench show of dogs of the Cincinnati Sportsman's Club, Cincinnati, Ohio. Geo. H. Hill, Supt.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6104.**

COMPLIMENT TO A JUDGE.—The Rensselaer Kennel Club, of Troy, at a special meeting held March 30, 1888, adopted the following: Resolved, That it is the sense of the management of this club that Mr. C. H. Mason, of New York city, discharged the perplexing duties imposed upon him as judge at the inaugural bench show in this city, March 20, 21 and 22, in a manner highly satisfactory in every respect to the managers and to the friends and patrons of the organization. Possessed of a wide and intelligent knowledge of dogs of all classes; capable, as though intuitively, of grasping the salient favorable points of a dog and at the same time detecting at a glance objectionable features; exercising fair and impartial judgment in arriving at a conclusion relative to the merits of an animal judged, and allowing himself in no way to be influenced by fear or favor; polite and courteous in his personal relations with exhibitors, though firm and decided in maintaining a position once assumed—it is the sense of this Board of Managers that a vote of thanks should be, and is hereby, tendered Mr. Chas. H. Mason, and that the same be conveyed to him through the proper officers of this club.—H. B. THOMAS, President; A. M. IDE, Secretary.

THE BOSTON DOG SHOW.

THE dog show of the New England Kennel Club held at Boston last week, taken as a whole, was fully up to that of last year, except perhaps, in its financial results. The rain on Thursday afternoon caused a falling off in the attendance, and consequently there will not be quite so large a balance on the credit side of the books as resulted last year. The attendance up to this time was very good indeed, and had the rain not interfered there is no doubt that the gate receipts would have been the best in the history of the club.

There were 1054 entries, 15 more than last year. In some of the classes the quality was superior to that of any previous show which we have attended, while two or three classes were not quite up to the mark. Mr. Tallman handled the show very well, but would have done better in some respects if he had been given a sufficient number of attendants. The lack of help was particularly noticeable during the judging, as it took a long time to bring the dogs into the ring.

Much of this trouble, however, was owing to the fact that the very bad practice of benching dogs of different classes together was indulged in to an extent that we have never seen equalled. Managers, especially of large shows, will probably in the course of time learn that this plan is not only costly and inconvenient to themselves, but that the public are sufferers as well. We understand that New York will next year institute a thorough reform in this respect, and we hope to see every show in the country follow the example. Aside from this the management was excellent. The benching and judging was done by Spratts Patent in their usual good style. Dr. Al. Watts was veterinarian. The proverbial hospitality of the members of the club added not a little to the attraction of the show. On Tuesday evening a complimentary dinner was given to a large number of guests, and it is needless to say that everything in connection therewith passed off in the most satisfactory manner.

Through the courtesy of the judges we are enabled to lay before our readers some of the reasons that influenced the decisions, and we have no doubt that they will be read with absorbing interest by all. In some instances we are compelled to disagree with the decisions rendered. We do this very reluctantly and perform the disagreeable task with anything but pleasure.

Following is a list of the judges and the classes assigned to them: Chas. H. Mason, New York, mastiffs, Great Danes and Ulmers, Newfoundlands, deerhounds, greyhounds, dachshunde, spaniels, collies, poodles, Italian greyhounds, Mexican hairless, Airedale terriers and miscellaneous over 25 lbs. Miss Annie H. Whitney, Lancaster, Mass., St. Bernards and pugs. Dr. William Jarvis, Claremont, N. H., pointers, English and Gordon setters. Wm. Dunphy, Peekskill, N. Y., Irish setters. N. Elmore, Granby, Conn., beagles, basset hounds and foxhounds. Edward Lever, Philadelphia, Pa., bulldogs, bull, Scotch, Irish, Bedlington, Dandie Dinmont, Skye, Welsh, Yorkshire, black and tan and toy terriers, toy spaniels and miscellaneous under 25 lbs. Thos. Dawson, New York, fox-terriers. J. P. Barnard, Jr., Boston, Mass., round-headed bull and terriers. Mr. Mason, as usual, handled his classes well, and we heard but few complaints that his decisions were not entirely satisfactory. To those who were not quite satisfied, we recommend a careful perusal of his comments upon the different animals that came before him.

Miss Whitney also gave very general satisfaction, and performed her task in a very praiseworthy manner. She labored under a very great disadvantage, while judging the St. Bernards, owing to the smallness of the ring. At least 20 more of those magnificent animals were shown than were ever before brought together in this country, and a grand lot they were. The judging ring was not half large enough, and how Miss Whitney ever managed to get through the classes with so few mistakes is a wonder. There was no opportunity to see the dogs move, except that an occasional glimpse could be had of an animal that by chance was not hidden in the crowd. Had the judge been given proper opportunity for a careful examination, we have no doubt that Kastlehorn, the winner in the open dog class for rough-coats, would have been one or two pegs lower on the list. He has a fair head and is quite stylish in appearance. He is too short in back, is not good behind, has small feet and carries his tail too high. We thought him about good enough for third place. Scotch Bonivard II., winner of equal second, we thought should have been first. He showed the best head in the class, with a trifle more depth in head and muzzle he would be about perfect in this respect. He was shown too thin, but is every inch a St. Bernard. It was rather a close thing between the winner of first and Visp II., given equal second. We rather preferred the latter, as he is just about as good as Kastlehorn in all important points, and is the better mover. So far as we could see Miss Whitney handled the remainder of her classes, including the pugs, in an excellent manner.

Dr. Jarvis, we are very sorry to say, did not handle his classes at all well. We believe him to be a good judge of an Irish setter, but his decisions in the English and Gordon setter classes show that he is not at home with these breeds, while most of his awards in the pointer classes were simply inexcusable, and winners as well as losers were nearly unanimous in condemning the decisions. The pointer classes were not so full as last year, but aside from the Graphic kennels, which were not shown, the quality was equal to that of last year behind those dogs. In the open large dog class, John Lewis led in Nick of Tell and landed him a winner. This dog is a big strong animal with lots of bone and good feet. Slasher, commended, was about the best in the class. He had no bad faults, which is more than can be said of the others. Next to him old Bang, placed third, was about as good as any. Sachem, given second, was worth V. H. C., while third should have gone to Colly, H. C., a fair dog, not quite straight enough in front and a bit too straight behind. The corresponding bitch class would have been placed nearer right had the judge begun at the other end. Devon Nell, commended, was about the best in the class, with Portland Lilly V. H. C., close up for second, and Bell Randolph third. Fly, H. C., was good enough for the three letters, while Devonshire Queen, third, should have been content with two. Rosa Croxteth, second, would have been lucky with two letters. Daisy Ranger we did not find in her stall, but we remember her as better than some of the others. Nearly all of the class were well known. In the open class for small dogs, Brake, shown too thin, was rightly placed first. Ned B., given V. H. C., was much the best of the remainder, while Sir Anthony, unnoticed, was a good third. Spot Dash, also unnoticed, was the next in order of merit. Don Quixote, placed second, has gone off and was not in condition. V.H.C. would have been about right for him. Rapid Bang, H. C., would not have disgraced the three letters. He is rather a nice little dog, and the best mover in the class. In the bitch class, first went to Bonanza, an easy winner. Katisha, unnoticed, was the second best, with not much to choose between Belle of Maine, third, and Ethel, V.H.C., for third place. Jane, second, has not improved on her puppy form, and V. H. C. was enough for her. Daisy, commended, and Brunette, H. C., were both entitled to more than they received. Donald's Best should have received one if not two letters. This was a very good class. The puppies were nothing extra.

The English setters were fully up to those of last year in quality. In the champion dog class, Royal Albert was placed over Rockingham. This decision we cannot indorse, our reasons have often been given. In the open dog class, first was given to Dad Wilson, a dog of some quality with good legs and feet. Except in color, he is nearly the type of the Irish setter, although we doubt that with the proper coat Dr. Jarvis would place him very high up in the Irish class, as he is too flat ribbed, leggy and lathy and lacking in substance. Roger, placed third, was the best in the class, with Gus, Bondhu perhaps second, although Phil Warwick, H. C., crowded him very closely. Count Petrel and Leroy, both V. H. C., Royal Kent, C. and Draco, H. C., were all better than the winner. In the bitch class, first went to Mr. Crawford's recently imported Blue Nell. She is a sweet little bitch, and just about good enough for second place. She is somewhat deficient in stop, and her ears are not quite right. She is also throaty, and a trifle long in loin, her hocks are carried too close together and consequently she is not an easy mover. She is a taking looking bitch, with good shoulders, chest, fore legs and feet, and when put in condition, will undoubtedly do a lot of winning. The class was fairly good, as it looked in the ring, but as we failed to find several of them when we visited their stalls, we will not attempt further criticism except to say that the three winners appeared to be the best in the lot, with Haphazzard a good bit ahead. The puppies we did not compare as we could find only a portion of them. With the exception of placing Little Boy over Beaumont, the awards in the Gordon classes were perhaps as well made as was possible. This decision is all wrong even in a class for black and tans, and much more so in a class for Gordons.

In Irish setters, Mr. Dunphy selected the small dogs for the honors. While we cannot quite agree with him as to the relative worth of some of the dogs, we must admit that he stuck to the type that he fancies, and that he gave us no bad ones among the winners. Kenmore was deservedly first. Chip, placed second, is a nice little dog, worth third or V.H.C. in almost any class. We thought Banker, V. H. C., good for second, with Larry S., also V. H. C., just a little ahead of Chip, although the former showed lack of grooming. In the bitch class we liked Lulu II. about as well as any, although there was not much to choose between the winners.

Mr. Elmore did very well indeed with his classes, and succeeded in placing them about right. We thought that he had not done justice to Royal Krueger, but an examination showed that he was all off. He was tucked up, bad in coat, and did not carry himself at all well. The foxhounds were much better than we often see, and had the judge given all of the commended dogs the three letters each we should not have found fault.

Mr. Lever also handled his classes very nicely. The bulldogs were a better lot than are often seen together. The same may be said of the Irish terriers. The Skyes were also very well represented. In the bitch class of the latter breed, by some misunderstanding, Kirkella was taken from the ring before the judge had decided upon her merits She is a capital specimen of the drop-eared variety, of fair length and good coat. She is too large, otherwise she was much the best in the class. Yorkshires were a numerous class, but nearly all of them were off in coat. Bradford Harry, the winner in the dog class is a good specimen with much better coat and color than we are accustomed to see at our shows. Nothing new showed up that was above the average in the other classes assigned to Mr. Lever.

Mr. Dawson placed the fox-terriers about right, except that Luke, placed third, is enough better in head and expression to just about beat Reckoner, the winner of second, notwithstanding the latter has a trifle the best of it in loin. The only wire-haired dog shown is not good enough for a first prize winner. Second place was plenty good enough for him. Mr. Barnard handled the "round-headed bull and terriers" in a masterly manner, at least we concluded that he must have done so, as we heard not a single growl at his decisions. This class was made for the benefit of local owners, and it is scarcely necessary to state that Stonehenge gives no standard whereby they are to be judged. They were a very miscellaneous looking lot, not nearly good enough to compete in the regular classes, and not quite bad enough for the pit. Until fanciers of the breed can give us something better in the way of looks and show some approach to uniformity in type, we should advise all bench show committees to have nothing to do with them in the future. Following are the comments of the judges upon their several classes, except those of Miss Whitney and Mr. Dawson, which, having reached us too late for this issue, will appear next week:

MASTIFFS.

This was the best, and I believe the largest, class ever seen in an American show. Dogs that would have been good enough for first prize a few years ago were sent out of the ring without a card; the marked progress that has been made, and made recently, reflects credit on breeders and importers. Probably no writer has more persistently condemned the awarding of prizes to long-faced, leggy yellow dogs than I have since 1881. If I have ever missed an opportunity to have a hack at them in my reports I am unaware of it, and Boston's splendid exhibit is proof sufficient that the fiddle-faced brigade must retire in favor of the mastiff proper. Beset by erroneous and conflicting awards, by trashy reports and unreliable effusions from the pens of men who, until about a year ago, had never seen a mastiff, the American breeder has indeed had to travel a rugged road, but to his credit be it said, he has kept right on, and undaunted and determined to overcome all obstacles has made commendable progress. It is safe to say that the old English mastiff in this country is no longer a disgrace to his brethren across the water. While taking notes I availed myself of the occasion to speak with a number of mastiff breeders, and very few believe in the type of dog that was winning six or seven years ago. They have evidently been studying the points and characteristics of the breed, and have made up their minds to produce a different and better looking dog. Even the reporter of the Chicago Letter Press, and he it is that is responsible for the idiotic decision in favor of Nevison over Creole, at Pittsburgh, 1883, was telling it up and down the show that Ilford Caution "is the right type." In view of this rapid march of progress, which is largely due to the position assumed and held by FOREST AND STREAM, you, Mr. Editor, will readily judge of my feelings when this excellent class was brought before me. Champion dogs were, of course, the first called out, and as the owner of Minting and Ilford Caution preferred to win with the latter, Minting was not brought into the ring, although he was on hand to take care of the specials. Caution was in tip-top condition, in fact I never saw him looking better. This is the dog that when first shown at Boston was ridiculed by bagman judges and incompetent reporters. By some mysterious process he has been transformed into a good dog, and all because your humble servant awarded him first prize at the Fanciers' Show over Homer and others and in his report said he was a good one. The best thing that ever happened for the mastiff interests of this country was the importation of Ilford Caution. Which of our mastiff breeders had ever seen a mastiff head before they saw his? It is doubtful if a better stud dog than Ilford Caution ever breathed, and if he lives and is bred to good-looking and purely-bred bitches, I shall expect to find in him a second Rajah. Lady Clare, of Pittsburgh notoriety, was alone in the champion class for bitches. I gave her the special for the best mastiff bitch in the show. Mr. H. Goodman gave her hc. in a poor class. "Doctors differ," etc. She was bred to Minting some time ago, but did not prove in whelp. Her owners are young in the dog business, and if they keep on will learn a thing or two about breeding large dogs. There were fifteen entries in the open class for dogs, and although I failed to find anything of superlative merit, the whole class was level and a vast improvement on any I had previously seen in this country. Ilford Coroner, a rare-bred one, was first, but very closely pressed by Sears's Monarch, who has filled out and shows marked improvement on his puppy form. My notes on this young dog, taken twelve months ago, were as follows: "Skull promising. Muzzle should have greater width. Eyes a shade too light in color. Ears a trifle large. Neck, chest, back, loin and quarters all fairly

good. Hocks should be more bent. Forelegs should be straight and have more bone. Feet of the right sort. Stands rather low at the shoulders in proportion to height of quarters. Good coat and skin. A puppy of fair size and more than average merit. He will do to show again, but must keep clear of the cracks." This is substantially correct, although the dog to-day stands straighter in front and has grown more than I anticipated. He came within a hair's breadth of beating Coroner, whose neat ears, better eyes and greater character just landed him a winner. There is lots of room for difference of opinion in regard to the merits of these dogs. Ranged on my side will be the advocates of character rather than size. Coroner looks to be the better bred dog, and I shall expect him to prove the better sire. A full report of him appeared after the New York show. Third prize went to Crown Prince (a poached name, Mr. Moore), a rather promising puppy by Ilford Caution. He has the same defect that The Shah had, viz., a domed skull, very well in a bloodhound or Irish setter, but not what we want in the mastiff. He has short, blunt face of fair volume, but is cut away too much just in front of the eyes, and has plenty of ear. The light Crown Prince face markings do not add to his appearance, and his condition at present is not good. Still, he is a good puppy, perhaps the best I have seen in America, and if all goes well with him he will be heard from next spring. Benjamin Franklin and Thor, vhc., would either of them have been been able to win firsts a few years back. Benjamin, who is a son of the grand-headed Orlando, is not very strong in head properties, and his defects are inherited from his dam, whose breeding is not fashionable to say the least of it. He is too long and light in muzzle; ears should be darker and better carried; rather light in bone; too straight behind; good in middle; of average size. Thor is light in eye color, shallow in muzzle and lacking in wrinkle. He is also too long before the eyes, light in bone in proportion to his great bulk of body, and deficient in true character. He has a good neck and a grand wide chest. Possibly his dam, Duchess of Counaught, is responsible for his heavy and light colored ears. I would advise breeders to keep away from her, notwithstanding the fact that her sire was that truly formed little fluke, Colonel. The Manchester dog never sired a good one, and we need not go far to learn why. I gave Major the hc. card, and the only one. His defects are: Flat cheeks, light eyes and ears, straight behind, defective hocks, lightness in bone, coat too long and coarse, a trifle leggy. Many of our judges would have distributed at least a half dozen more cards in this class, but I am anxious to have breeders kept to type, and to the right type, and none but undesirable results would accrue from lavish distribution of notices. It seems to have become the fashion to give nearly every exhibitor a card, just to "sweeten them" and have them say you are a "good sort." When a dog gets a card let him be deserving of it. What earthly good can come of awarding reckless commendation to such dogs as were noticed at Philadelphia, for instance? Bitches numbered sixteen, with Duchess and Lady Beatrice well ahead of the class. Both are by Ilford Caution, and a full description of them can be found in your New York report. Lady Beatrice is a trifle better in muzzle and smaller in ear than Duchess, but defective forelegs beat her. Linden Duchess, third prize, is a new one. Muzzle too long and lacking in volume; skull also too small; eyes should be of darker hue; loin should be deeper, but has plenty of width; not quite straight in front; light in bone; fair length of body, good coat and color. A bitch of average size. Lady Florence, vhc., has a well-formed skull, but it is much too small for a bitch of her inches. Muzzle too light in every direction. Light in bone. Forehead flat and well wrinkled. (Did you see what the Chicago Letter Press said a fortnight ago? Somebody's mastiff was not a good one because it had "a flat head." Whitford was hardly a match for the present "staff," although he and the poacher would score about equal for jaw and character.) Well, Lady Florence has a flat head, neat black ears and good body. Her age is not given in the catalogue, but she is an undersized bitch. Annette, hc., has pig eyes and a very bad expression. Her head is not flat, as it should be, and it lacks in volume, as does also her muzzle. Her fairly good body, legs and feet won her the card. Of the eleven dog puppies shown, Crown Prince, third in the open class, was an easy winner, although a number of persons preferred the second prize, Bruce. I am quite certain that if both dogs live, Crown Prince will be by far the better mastiff. Bruce has not a badly-formed head, although the stop should be deeper and eyebrows more prominent. His ears are badly carried, and he lacks wrinkle. In body, more especially loin, he is good and strong, his hindlegs and hocks are well formed, and he moves freely. Lack of true mastiff character is his most prominent defect, and it will always beat him when he meets good company. He looks more like a Boss than a Debonair puppy, and has the pot-ornament look of the former. Lord Raglan II., third prize, is a fairly good one, but will never make a brilliant record. Skull of average formation. Muzzle lacking in width and in depth. Ears light in color and not quite close to the head; their formation, too, is not correct. Color of eyes a couple of shades too light. Too straight behind. Body, legs and feet much above average. Head rather small in proportion to bulk of body, and someweat smutty in color. Ilford Prince and Buff of Killingly are defective in head properties. Bitch puppies were not a good class, and as none had the right type of head I withheld first prize and gave second to Mollie, a good bodied one with nice coat and color. Defects: Muzzle too long and pointed; it should be deeper and wider. Skull of fairly good formation, but too small in proportion to size of body. Ears large, badly set, not well carried and rather light in color. Light in bone. Not quite straight in front, but may improve. Tail too fine; there is a twist in it. Lady Carl, little inferior to Mollie, and with almost exactly the same defects, was second. Mr. Wade's Ethel, by Orlando, and Mr. Moore's Alta, by Ilford Caution, were absent.

DEERHOUNDS.

The only new one in these classes is Highland Lassie, second prize in the open class for bitches. Like all of Mr. Thayer's dogs she shows good breeding and is a very useful looking bitch. Lack of condition was her prominent failing. She has good head, plenty of length of neck, capacious chest and good feet. Loin should be more arched; forelegs are not very well set and I would like to see more bone, especially about the knees. Robber Chieftain, Bran and Chieftain represented champion dogs and Chieftain won well, although his son, Robber Chieftain, is a most promising youngster, and with his sire out of the way can beat all the others. Lorna II., Wanda and Ramona formed a splendid class of champion bitches. Wanda, out of condition, came very near being defeated on this occasion by Ramona, who is a splendid young bitch. Wanda's better head and expression just saved her from what would have been her first defeat in this country. Mr. Thayer showed Ramona for all she was worth and Heald allowed Wanda to show herself. Highland Laddie, Duncan and Dunrobin were first, second and third in the open dog class and in bitches it was Theodora, Highland Lassie and Thora in the order named. I have criticised and recriticised these dogs until your readers must know them by heart. With the exception of Dunrobin all are owned by Mr. Thayer, who made a splendid entry of nineteen, a lot that any man might feel proud of. Olga, hc. in the open bitch class, is too masculine in head, not quite right about the eyes, rather large in ears, flat in ribs, not as strong as she might have been in loin, straight behind, not quite straight in front and a trifle soft in coat. She stands on good feet. Mr. Thayer, as usual, took all specials. There were twenty-five entries in these classes, the best lot ever seen together in an American show.

GREYHOUNDS.

There were nineteen entries in these classes and the quality better than I have seen this year. Old Memnon did not care to tackle Balkis in the champion class for dogs, and so the sturdy son of Clyto had a walk-over. Both are winners in the field as well as on the bench. No need for me to paint the lily or gild fine gold and so I pass without further notice these well known ornaments of the leash. Lancashire Witch, beautiful as ever, for "a Lancashire lass is hard to surpass," had the next class to herself and probably scared away competition. Of the nine entries in the open class for dogs, Royce was much the best. He is a trifle coarse in head, in fact lacks quality all through, is not quite clean in neck, although it is of good length, is a trifle wide in front and heavy in shoulders and might be better in hocks and finer in tail. His eyes and expression are not quite the thing. His redeeming qualities are good chest, strong back, fairly good loin, powerful quarters and good legs and feet, essentials which invariably tell a tale when a dog is put to his proper avocation. Peacock, second prize, was second last year. I should have placed him first but for his straight and rather light hind parts. He has better head and neck than the winner and is somewhat cleaner in the shoulders, but he lacks power in the right place and I would wager almost any sum that he is a soft one. Midnight, third prize, pressed Peacock very closely for second place. He is not first-class before the eyes, is a trifle heavy in neck, wide through the shoulders and straight behind and he travels with his hocks too near together. He is a hardy looking sort and would probably lead Peacock from the slips and outstay him as well. Milo, vhc., is a white and black puppy by Memnon out of Hawthorne Bell. He has his dam's rather soft expression and is very straight behind. Statesman, hc., is a dog of good hard color, coarse in head, straight behind and too short from hips to hocks. He is heavy in shoulder. Scott, c., is coarse in head, light in eyes, heavy in shoulders and light behind in proportion to size of forend. In bitches it was Cassandra first and the rest nowhere. She is still rather light from the short ribs back, but is a beautiful bitch and gave Lancashire Witch a close rub for the special for best greyhound in the show. Widow in Weeds, second prize, is a useful looking bitch. She lacks length before the eyes, might be better in ears, is rather wide in front and not as neat in shoulders as I would like to see her. Has good neck, fairly good chest and back and strong quarters. Nellie Belle, unnoticed, is a wretched weed. Life is too short to permit of one's calling attention to the hundred or more defects that are to be found in such an animal. Bad all over, color and appetite excepted; that covers the case. Highland Laddie, a rather promising sapling by Balkis ex Cassandra, won very easily from Milo, who was vhc. in the open class for dogs. Laddie should have won at New York. He promises well both in body and limbs and has far better head and back than the average. His sister, Highland Lassie, was away ahead of her only opponent in the corresponding class for bitches. She is not so good in body or limbs as her kennel companion, but may be heard from again. Straying Away, second prize, is terribly defective in back ribs and she cannot possibly be fast. Like her dam, Stealing Away, she has a plain head and by no means the best of shoulders.

NEWFOUNDLANDS.

As usual a wretchedly bad lot. Miro, who is well known, was first in dogs, and New York Lass, described in my Philadelphia report, first in bitches. Rover, second prize in the dog class, would have been first but for his curly coat. He has plenty of size, better head than the average, and stands on sound limbs. I withheld all other prizes. It does not do to encourage the breeding of mongrels.

SPANIELS.

These classes were well filled and the quality, excepting in the Irish water and Clumber, was of a high order, in fact, taken altogether, they were probably the best lot ever seen together in this country. Jess was the only one in the Irish water spaniel class worth a card and she is a long way removed from high class form, having light eyes, moderate head, not very strong body, second-rate topknot, short ears, and only a fair coat. Don and Beauty are mongrels.

Clumbers, as usual, were a wretchedly bad lot. Darby, second prize in the dog, would not be noticed in a good class. I withheld first prize for want of merit, and but for the fact that a good Clumber has never yet been exhibited in the States I would have turned the whole lot of them out of the ring. I was mindful of the fact that breeders have often been told that these dogs were typical; that they would win in good company, and, that their sire, Johnny, was the equal of any of the typical English dogs. It is very hard on those who have spent hundreds of dollars on long-legged monstrosities to find that they have been imposed on and that their time and money have been wasted. All things taken into consideration, I thought it best to award second prizes to the pick of the lot, Darby, Jess and Romp II., and they can consider themselves lucky dogs. I would not give ten dollars for the three of them. Darby is very leggy, flat-sided, tucked up, light in bone, bad behind, very defective in muzzle, skull and in ears, a bad mover, in fact not a show dog. Jess is fairly good in body and decidedly better in muzzle than Darby, but her skull is all wrong, eyes light, expression not correct, ears not of good formation, hocks not quite right, feather scanty and of course she is leggy. Who ever saw a Clumber in America that was not as leggy as a giraffe? Bess II. and Romp II. are of the same type as Darby and Jess. It makes my heart ache to judge these animals after having seen such beautiful specimens as Nabob, Lapis, a number shown by the Duke of Portland, Mr. Arkwright's typical dogs, and many others. Why, gentlemen, a good Clumber could almost stand underneath the dogs you are showing.

Field spaniels were about the best lot that has been shown in America, still there is a lack of uniformity of type and lots of room for improvement. Bob, coarse in head, and Critic, also defective in head properties, were the only champions shown. Neither could beat a good one. Newton Abbot Darkie, an excellent specimen, was an easy winner in the open class for dogs, with Newton Abbot Lord a good second. Both have been fully described in FOREST AND STREAM. Newton Abbot Skipper, a new one, was third. He is a recently imported addition to Mr. Oldham's strong kennel, and while not quite first-class, will soon win his way to the champion class. His head is not what it should be. It is not a Sussex head or a head as seen in Zulu and other prominent winners in the field class, neither is it a cocker head, but a combination of all three. He has a nasty light eye, his worst defect, and is minus the beautiful set of ear seen in his kennel companion, Darkie. He stands straighter in front than the average, is not quite A1 in feet, and his pasterns especially would be improved by more bone. His body is well built, he has fair length and moves well. Condition will improve his coat and lower him. Jerry, vhc., is defective in muzzle, his ears are rather short, and he is leggy and light in bone. While his coat is flat, it is not good, being too short. His body is his best point; he deserved his card, although he is far away from the high class form shown by the first prize winner. Single Sin, vhc., has a cocker head, and his ears and cheeks are defective. He is also soft and woolly in coat. In bitches, Newton Abbot Jubilee, notwithstanding her pig snout, was away ahead of the class, and Lady Abbot, who is very defective in head, was second best, but might have exchanged places with Bridford Ruby, had she been shown in good condition. Bridford Gladys, a very long and low bitch, with shallow body and wretchedly bad forelegs, was vhc. I have criticised these dogs on so many previous occasions that further allusion to them is unnecessary.

Cockers were a splendid lot. Obo II. did not turn up for competition in the champion class for dogs, leaving Brant and Doc to fight out the battle. Brant won, but it was condition that took him to the front. His skull has thickened considerably, causing his weak muzzle to look lighter and snipier than ever, and he is not nearly as good as he was when he made his debut at Buffalo last year. Doc was light in flesh and his coat all out of condition. What a pity that men should throw prizes away when they have them at their mercy. The lovely Miss Obo II. was peerless in the champion class. I have seen her looking much better. Jersey, that should have been first at New York, was first in a strong open class of dogs and repeated in the puppy class. His defects are: Slight fullness below the eyes, muzzle not quite clean near nose, expression not quite right, forelegs not perfectly straight, elbows not just right, coat open and softer than I like. He has good skull, well set cars, compact and stout body, fair strength of limbs, good set and carriage of stern, and is a gay mover. Bell had him in tip-top shape and the result was never in doubt. Ned Obo, who is well-known, was second, with Baby Obo, a new one to me, third. Like Ned Obo, he is underhung—a bad fault in a spaniel—cheeks a trifle full, muzzle below the eyes not quite clean, ears set a trifle high, sturdy body, excellent quarters, the best of legs and feet, much too small, shows much character, and carries himself very gaily. Rabbi, vhc., is heavy in skull, very wide and shallow in muzzle and bad below the eyes. He is slightly underhung and not first-rate in set of ears; body, coat and limbs decidedly better than average. Bo, hc., has field spaniel head, ears set too high, short coat and is leggy. Don E., hc., is too heavy and wide in skull, and not quite clean below the eyes; ears set rather high, muzzle not deep enough, leggy, good body and coat, fairly good legs and feet. Black Graff, hc., is not as deep and clean in muzzle as he should be, has light eyes, not straight in front, ears might be better set; coat not first-class, excepting feather; body should be stouter. Bitches were also a good class, and Chloe W., who has greatly improved on her puppy form, just won from Kapiolani, a fair young bitch that was first in the puppy class. Chloe is well known to the readers of this paper. Kapiolani is good in skull and in coat, and much better than average in body, legs and feet. Her eyebrows are excellent; muzzle should be deeper, and cleaner below the eyes; eyes too light in color; expression not quite right; body would be improved by more depth, but will doubtless improve; ears would be better if set lower and further back; she is probably at her best. Cloudy, third prize, is fairly good in skull; muzzle weak; is slightly underhung; has light eyes, poor expression, good ears, fairly good body, excellent legs and feet, stifles and hocks not quite right, coat not free of curliness; a useful-looking bitch. Widow Cliquot, snipy, light in bone, deficient in carriage of ears, rather light in eyes, a trifle high on the legs and out of coat, was vhc. Her handler spent the best part of the time in the ring pulling her lips down, but it was quite unnecessary to call my attention to the fact that she is snipy. Dolly Obo, hc., is underhung, has ears set too high, is not quite right in muzzle or straight in front, and her coat is too woolly and curly. Beatrice W., hc., is not clean in muzzle, and is rather light in eyes, and out at the elbows. Bessie W., vhc., is defective below and before the eyes, and is light in bone. Busy, hc., is full in cheeks, snipy, rather light in eyes, and not very good in coat; great bone is her strong point. I did not take any notes on Frank Obo, third prize in the puppy class. The rest of the winners in these classes were placed in the open classes, and have been fully described. I gave the special for best cocker to Miss Obo II. In my opinion she is in points the best cocker in America. Jersey was the runner-up.

DACHSHUNDE.

This class is always poorly represented. I withheld first prize in the dog class and awarded second to Oto, flat in skull, not well tapered in muzzle, tight in skin and not first-rate in crook. Boniface, hc., is very defective in head. Skull flat, with a deep furrow running up center as far as occiput. Muzzle short and not well tapered. Ears set high, much too short and not well carried. Front teeth not level. Body only moderate. Loin flat. Limbs much too light and knuckles and crook defective. Coat not of good quality. Skin tight throughout. Lena L., fully described in my Buffalo report, was first again here in the bitch class. Bergina K., second prize, would have been first, but for her parti-colored nose and bad hindquarters. Judy, third prize, and out of condition as usual, is well known to your readers.

COLLIES.

The class was well filled and the quality throughout excellent. Dublin Scot, in superb condition, represented champion dogs. Rather heavy in head and shoulders, full in eyes and a trifle straight behind, he is a beautiful dog, and his importation to this country is a great boon to breeders, as he is undoubtedly one of the best stud dogs ever seen on a show bench. What old Eclipse has done for the breed in England, Dublin Scot is doing in America; his get are to the front in nearly all of our best shows. I placed his son Scotilla over him for the special for best collie, but it is a very close thing between them. Scot has the best of it in size, bone, loin, and in coat slightly. Scotilla leads in head, ears, eyes, shoulders, and in bend of stifles and hocks, and is more lithe and workmanlike. Both are grand dogs. Flurry II., another clinker, was first in the champion bitch class, and in the open class for dogs Roslyn, a puppy by Dublin Scot, won well, repeated in the dog puppy class and later in the day took the special for best puppy. He is a good all-round youngster, and if the distemper does not get away with him I shall expect to hear from him again. Strephon, who shows the true character of the Eclipse family, was second, and Scotson, with his right ear still erect, third. He was in superb coat and it is a thousand pities that he has a ring tail and a prick ear. But for these defects he would be a very hard dog to beat. If Scotland Yet, vhc., has not had one of his ears (the right) let down, I am a poor judge of faked ears, that is all. He has poor expression, and his coat at present is a trifle soft. Rutland Jock, vhc., has the soft coat of the Rutland dogs, and he is round in skull and heavy in head. He has a number of English winnings to his credit, but it will take a better than he to win at Boston. Hornpipe Bruce, hc., is rather coarse in head, bad in expression, soft in coat and straight behind. Rutledge, c., is defective in head and expression, rather soft in coat, and his ears are not sufficiently erect. I thought Flurry III. much the best of the eighteen bitches shown, and it took me but a few moments to place her at the head of the class. Rather on the small size, with beautiful head and expression, good coat, body and limbs, she is a lovely young bitch. Glen Rosa, second prize, is not the equal of Flurry III. either in head or body, and is, I think, at her best. She shows character and good breeding. Her prominent defect is a slack back. Spoiled Miss, third prize, was heavy in whelp and moved slovenly or would have been second. Clifton Maid, vhc., has thickened in head, and her condition was bad. Highland Belle, vhc., was first in the puppy class last year. She is still rather soft in coat, and her head has grown coarse. These bitches are well known, and it is useless my taking your valuable space to criticise them. Flora, vhc., has fairly good head, but carries her ears badly, is out at elbows, soft in coat and is not quite straight in front. In body and brush she will do. Miss Tempest, vhc., has poor expression, is too full in muzzle (near the nose) and her coat is very soft. I understand she was sent out here with a great blast of trumpets to sweep the boards. She is not a good one. Sweet Royal, hc., is very deficient in shoulders, a trifle too strong in head, soft in

coat and gets her brush up. Still she shows much character, and if carefully mated should throw good looking puppies. Rutland Maid, c., has gone off. Glen, c., is plain in head, light in bone, short in coat and has drop ears; still she shows good breeding. Royal Monarch, second in dog puppies, is coarse in head and soft in coat. Hornpipe Hero, third prize in the same class, is heavy in head, light in eyes, heavy in ears and has round eyes. In other respects, excepting carriage of ears, he will do. First in bitch puppies went to Hornpipe Bessie, a very promising puppy by Kilmarnock Bruce out of Lassie B. She is rather soft in coat and too small, and this is about all that can be said against her at present. Hebe of Nessel Down, hc., was not on the bench when I called for my notes. Smooth-coats, with the exception of Lady Bird, were a poor lot. The winners were described in your New York report.

POODLES.

Not a good class. Friday, defective in head, rather short in ear, not first-class in expression, not strong enough in body, nor close enough in curl, was first, and Cocoa, who has the same defects, was second. The rest of the class were worthless curs. In bitches, first was withheld, and I gave second to Dinah, plain in head, short in ear and very open and woolly in coat.

ITALIAN GREYHOUNDS.

This class was very much better than is usually seen at our shows and I divided it for dogs and bitches. Among the former Miss E. M. Van Buren's Cupid, the best male specimen I have seen in America, won. He is not deep enough in chest, nor perfect in hindquarters, but age will bring him down some. He was far away the best. Dandelion, second prize, is of poor color and his stilty appearance is against him. Romeo, vhc., is too large by pounds and so is his kennel companion Lillie, first in bitches. Both are well built. Zephyr, second prize, is crooked in front and not truly built, neither is her action lofty as should be. The best of the lot would not score higher than c. in competition with a Molly or a Bankside Daisy.

AIREDALE TERRIERS.

Pin, first at New York, was first again on this occasion. Nelson, second prize, is too large, heavier in ear than he should be, and softer and longer in coat than I like. Tramp, third prize, is coarse in head and very defective in hind parts. He stands fairly well in front and his coat will do. Dick and Rattler are all wrong in coat.

MISCELLANEOUS OVER 25LBS.

A bad lot, with Sir Lucifer, whose coat I don't quite like, an easy winner. Jack Dempsey, a whippet with bad ears and coarse tail, was second, and Fritz, a poor Dalmatian, coarse in head and not clean in markings, third.

CHARLES H. MASON.

POINTERS.

In champion pointers, large dogs, Beaufort and Graphic were the only entries, the latter was absent, and the well-known Beaufort had a walk-over. He also won special for best pointer in the show. Mealy, the only entry in the large champion pointer bitch class, did not show. In the open class Nick of Tell was first, Sachem second and Bang third. The winner is a large dog of good form, good chest, legs and feet, faulty in ear, a little light in loin, but he is a young dog and will no doubt improve with age. Sachem, the winner of second, was closely pressed for the place by Bang. While the latter is better in head, Sachem is better in other respects and has a better tail. William Tell, vhc., is too lumbersome all through, even for a heavy-weight pointer, and was shown too fat. In the open bitch class Belle Randolph was first, Rosa Croxteth second and Devonshire Countess third. Although the winner is a trifle wide in head and throaty, still I thought her all through better than any in the class. Rosa Croxteth was bad in legs, feet and head. Devonshire Countess was fully as faulty in head as the two before her and has a bad tail, heavy shoulders, is wide in front and out at the knees. The well-known Donald was alone in the small champion dog class and was awarded the prize, while Juno S. held the same place in the bitch class. In the light-weight open dog class Brake, a very handsome lemon and white dog with lots of quality, was first, a very easy winner, and when age improves him in loin and flank will take a lot of beating. The winner of second, Don Quixote, is a stylish dog, bad in skull and out at the elbows. Naso Boy was light-limbed, lacked stop and is bad behind. In the bitch class Bonanza, a handsome daughter of Beaufort and Zuba, was first, Jane second and Belle of Maine third. In the puppy class Tam O'Shanter, Black Crook and Donald Faust were first, second and third respectively, while Bessie, White Fawn and Clytie had the same places among the bitches. I don't think either class contained future champions.

ENGLISH SETTERS.

Champion dogs contained five entries, Plantagenet, Rockingham, Royal Prince II., Royal Albert and Foreman, the latter not for competition. The pride of place was a hot race between Rockingham and Royal Albert, the latter winning. While there is little to choose between them, yet that little is, I think, in favor of the latter. He has not so much lumber as Rockingham, yet has plenty of bone and muscle; his chest is deeper and of better shape, not so wide up at the shoulders. Rockingham has a cleaner, longer skull, and is clean at the angle of eye and muzzle. Albert, although he has not so much lumber, still measures more around the chest and loin. Both were well shown. In the bitch class the well-known Cora of Wetheral was alone and won. In the open dog class the winner turned up in Dad Wilson, with Gus Bondhu second and Roger third, and Count Petrel and Leroy both vhc. The winner, although out of coat and feather and thin in flesh, which made him look a little slack in loin, still had good points enough to easily carry him to the front. In head, chest, shoulders, legs and feet a grand one, full of quality and style. It will take a hot one to beat him when in the best of form. He also won special for the best English setter in the open classes. The winner of second is well known and has no very serious defects. Roger, third, is short in head and ear. Count Petrel, vhc., had a better head, but stood very badly on his front feet, which were bad, and he was not good in chest, loin or shoulders. In the open bitch class, Blue Nell won first, Haphazard second and Saddle Bags third. The winner is new, I believe, to the American show bench, but will hold her own among the best. The second and third are a beautiful brace of bitches, own sisters, I believe. The class was a good one. In the puppy class, dogs, Bow Bondhu was first, Royal Victor second and Dan third, while Queen was first, New York Beauty second and Gypsy Queen third in bitches. Gretchen was too thick and round in chest, or she would have had a place.

GORDON SETTERS.

In champion Gordons the well-known Royal Duke was first, and in the bitch class Roxie beat Heather Lass. In the open dog class Little Boy was first, Beaumont second and Markland Ranger third. In coat, color and style the winner is far ahead of Beaumont, and while he is a little thick between the eyes, still is fully as good in legs and feet. Markland Ranger, third, is nearer the vhc. dog than winner of second. In the bitch class Vic had an easy win. She was shown a little fat, but had lots of Gordon character. New York Belle was second and Becky Sharp third. Among the puppies, Ned first and an unnamed second, Becky Sharp third in the open class, won in the bitch puppy class over Victoria II., second, and Daisy D. third. The Gordons were better than is usually seen.

WM. JARVIS.

IRISH SETTERS.

The Irish setters as compared with the classes usually seen at our best shows were only middling. There was no entry in the champion dog class. In the bitch class the well known Molly Bawn was the only one entered. She is a very handsome animal and is about as good as she looks, I think her to be a grand bitch and she easily captured the special for the best in the show of either sex. The contest for this prize soon narrowed down to Molly and Kenmore, the winner in the open dog class, and it did not take me long to decide it, Kenmore is a nice little dog of good type and color, with a good head. He is not quite straight on his forelegs and stands just a trifle out at elbows, otherwise he is good and had no trouble in winning the special for the best dog. I gave second in the dog class to the well known Chip. He is a very taking looking, fairly good all-round useful little dog. Trojan Rory O'More I thought just about the next best and placed him third. He has a nice head with good ears, is fairly good in body and of proper color. He is somewhat light in bone and is too straight behind. I gave four vhc. cards to fairly good dogs, some of them close to Chip and Rory, but not quite up to their mark. I gave three hc. cards and a commended to dogs that have some merit, sufficient I thought to entitle them to the honor. The remainder of the class was poor. The bitches were better than the dogs. The three winners gave me no little trouble to decide between them, each is better in some respects than either of the others, while all have faults that will prevent their winning when in first class company. After a careful examination I selected Molly for first place. She is a very handsome typical bitch with a good head. She is of good color and is quite fair in body, quarters and hindlegs, her forelegs are poor and she is bad in feet; I gave second to Lulu II., a very taking looking bitch but with not enough substance. I liked Hazelnut III. with the exception of her too heavy head, better than any in the class, she is strongly made, has plenty of bone and has a "wear and tear" appearance that I like. Had she a typical head I should have placed her first. The others in the class that received notice were a trifle more deserving than those of the dog class. The winning dog puppies were a fair lot. I gave first to King Pin, a very symmetrical dog with a good head and capital legs and feet. He is much too light in color but will undoubtedly improve in this respect. Don, winner of second, is quite a fair young dog but is too heavy in head and generally coarse to develop into a good old one. I gave third to Ko Ko, just a fair puppy. He will probably beat Don next year but will hardly be able to beat a good one. I gave hc. to two rather moderate specimens, the remainder of the dogs were a poor lot. The bitches were much better than the dogs. Flora, winner of first, is a very typical Irish setter and bids fair to grow into a fine specimen. Her litter sister Jennie, but little behind her, made a very good second, while Maggie, winner of third, is fully the equal of these two with the exception of coat and color. These three were so much superior to the others that I gave hc. only to two just fair specimens. None of the others were worthy notice.

WM. DUNPHY.

BEAGLES.

There were thirty-five entries in the beagle classes, and there were few absent. The quality was good. In champion dogs Fitz Hugh Lee won over Little Duke, excelling him in head—having better hung and longer ears. In champion bitches three fine ones entered the ring, champion Lou winning, excelling champion Bonnie in skull and muzzle. May Belle II. was also a little off in muzzle. Both champion Bonnie and May Belle II. are hard to beat. The well-known Twinkle was absent. In the open class for dogs first went to Frank, who beat Bugler in muzzle and coat. Bugler, second, had a sweeter expression than Racer, Jr., winner of third, and excelling his strongest competitor, Royal Krueger, only a little. Royal Krueger was slightly deficient in muzzle and skull; his eyes seemed larger than the eye-lids, and the iris was partly covered by lid. He did not seem to be disposed to show himself to advantage, and I doubt if he was well, for soon after judging I tried to get him up in stall, but he would not stand up unless made. The open class for bitches was a strong one. Snider, one of the best bitches I have ever seen, winning first over Mystic, excelling her in muzzle, skull, coat and legs. Mystic won second over Elf, being her superior in chest and eyes. In the puppy class for dogs there was only one entry, Dandy Jim, but he was good and was awarded first. In the bitches Elf was placed first over Fay, second, being better in loin and muzzle. Fay was better in skull and ear than Daisy, winner of third.

BASSET HOUNDS.

Bertrand, first, had more dewlap than Copette, winner of second place. They were a fine pair.

FOXHOUNDS.

There were fifteen entries in the dog class. First was won by Hunter, he having a little the best chest, but there was little choice between him and Drive, who was second, and placed over Pride of Hornell, a fine hound, but somewhat throaty, and as the standard of points does not allow the slightest throatiness many good ones got only a c. Well worthy of mention were the four black foxhounds Niger, Darkie, Blackie and Bessie, entered only for exhibition, by W. H. White, of Stonington, Mass., and they attracted a great deal of attention. The bitch class had no entry for competition.

N. ELMORE.

BULLDOGS.

The champion dogs were a very good class of three, Robinson Crusoe, the winner, is well known. In bitches Britomartis had another easy win, I also gave her the special for best bulldog or bitch in the show. In open dogs over 45lbs., Lion, lately imported, won easily. He is a very good specimen with grand body, legs and feet, chop and wrinkle good. His faults are, rather too round in skull, ears set on a trifle too low. Second went to The Moor, who has a nice head with good skull, but is wrong in body, being too high on the leg and flat-sided. Third went to Quasimodo, who is too narrow in skull, stop fair, ears good, body fair, but was shown too thin. Smile, vhc., has terrier body and legs; head fair. In bitches Josephine had a walk-over. King Cole, Jr., was alone in the small dog class; he is the best small-sized bulldog I have ever seen. In bitches under 35lbs. I felt justified in withholding first. Juanita, to whom I gave second, is very faulty in formation of lower jaw, not being underhung more than a quarter of an inch. Beatrice, also entered in this class, has a Dudley nose and light eye, for which I left her unnoticed. I gave third to Attossa, much too narrow in skull and pinched in muzzle. In bitch puppies I gave first to Sappho, just a fair specimen.

BULL-TERRIERS.

Jubilee, looking well, had an easy win in the champion dog class over Silver, who is lacking in bone and substance. In champion bitches, Maggie May had a walk over. In dogs over 25lbs., Young Count won handily from Young Royal Prince, who is much too thick in head. Body, legs and feet good. Third was withheld for want of merit. Royal Dandy, hc., is just a fair specimen. Large size bitches was an extra good class. Royal Rose, a new importation, was first. She is a good bitch, the only fault I could find with her is being slightly out at elbows. Marguerita, a good second, is a sweet little bitch, but should be shown in the light-weight class. She has good head and eye; body, legs and feet extra good; tail a bit coarse. She is the best American-bred bull-terrier I have yet seen. Duchess of York, third, is also a good one; skull and eye extra good. She was shown rather too fat. She has a butterfly nose, which will improve in time. Countess, vhc., is a bit underhung, otherwise is a pretty fair one. Light-weight dogs brought out another new face in Rusher. He is rather too much on the white English terrier order. Banjo pressed him rather close for first. His eye is rather too round; otherwise he is a good one. Third was withheld. Spider, c., is just a fair one. In bitches, Black Eye is not a show bull-terrier; I withheld the prize. In dog puppies there was nothing above the average. Bitch puppies brought out a new face, Starlight. She is very good in body, legs and feet; eye good and head fair.

SCOTCH TERRIERS.

In dogs Lowrie Dunbar was alone; he has a capital head, good eye, very good body, legs and feet; coat would be better if a little harder. I also gave him the special for the best Scotch terrier in the show. In bitches first went to Rosie, very good in coat but not straight in front. Perth, second, is a fair specimen.

IRISH TERRIERS

were out in full force, nineteen entries, which is the largest entry of this game breed ever made in America. The quality was very good. Dennis, first, is quite a smart terrier, with good hard coat and correct color, and is built on racing lines, with good head and eye. Evictor, second, is rather too cobby for an Irish terrier, but has good color and good coat, with a natural drop-ear, head rather short. Third, Breda Jim, is too large; coat fair, ears badly carried. Old Garryowen, showing age, his mouth partly gone, was vhc. In bitches Breda Tiny had an easy win. She is quite a good bitch of the right sort and of correct size. Second went to Poppy III., a fair terrier, but she has white on the breast. Sheila, third, shows age. Gypsey Girl, equal third, is just a fair specimen. Puppies were a poor lot.

DANDIE DINMONT TERRIERS.

In the dog class Border Clinker was alone; he is a dog of the correct type, with a good coat. Bitches had three entries. Pansy was an easy winner, although handicapped by being heavy in whelp; she has a grand head with well domed skull, body very good. Lady Wallace, second, is rather too flat in skull, has a nice eye and good coat. Third went to Pride of Leader; head too short, skull flat, body fair, coat too soft.

BEDLINGTON TERRIERS.

Tynesider II. had a walkover in the champion class. In the open class for dogs or bitches Domino had an easy win. Blue Bell, second, is too flat in skull; coat fair.

BLACK AND TAN TERRIERS.

Vortex won handily; he is a very fair specimen. Desdemona, second, is good in coat, color and markings; eye too prominent. Sir Wallace, third, is thick in skull.

SKYE TERRIERS.

In the dog class I gave Jim first. He is beginning to show age, and was closely pressed for first place by Gladstone Boy, who has a good head and coat. Claymore, third, is a very fair drop-eared specimen with good coat of the right texture. In bitches there were six entries, a very good class. Susie, first, is quite a nice terrier of correct size with good coat. Bessie, second, is a fair one. Kirkalla, a new face, was taken from the ring by her handler before I had time to thoroughly look her over, which was an injustice to both judge and exhibitor. Meg, hc., is too short in back.

YORKSHIRE TERRIERS.

In dogs 5lbs. and over the winner, Bradford Harry, is the best one I have seen in this country, and should do a lot of good at stud if bred to the right sort of bitches. Yorkshire Ben was a good second. Jingo, third, is too light in color, coat fair. Sandy, equal third, is also too light in color. In bitches Dolly, first, has very nice coat, color too light. Floss, second, good head, coat and color fair. In dogs under 5lbs. I gave Armande first; he has nice color and coat. The bitches were a fair lot.

TOY TERRIERS

had eight entries. Nothing extra turned up in this class.

KING CHARLES SPANIELS.

Milwaukee Charlie was the only entry in the champion class and was in good form. In open dogs, Prince, first, is a nice colored one with good eyes and skull; he was an easy first. Charlie, second, is too large and curly in coat. In bitches, Dolly, looking well, had a walk-over.

BLENHEIM SPANIELS.

Exeter Earl, a fair specimen, was first in the dog class. In bitches, Exeter Beauty, a very good one, was alone.

PRINCE CHARLES, RUBY OR JAPANESE SPANIELS.

I gave first to a very nice Prince Charlie, second and third to two Japanese spaniels of good quality.

WELSH TERRIERS

brought out two entries. First went to Which; she is better in head and eye than the dog, who was second.

MISCELLANEOUS UNDER 25LBS.

I gave first to Dandy, a nice white English terrier, Halifax Joe was a good second. Third went to Tootsie, a very good Chinese crested dog, and equal third to a Maltese terrier.

EDWARD LEVER.

Following are the corrections of last week's list of awards:

In deerhound bitches J. E. Thayer's Lorna Secunda was very high com. In champion English setter dogs Rockingham was reserve. In open class Count Petrel was very high com.; in bitches A. M. Tucker's Daisy Bondhu was com. instead of Lou Gladstone. In collie dogs Roslyn was first and Strephon second. In Irish terrier dogs W. A. Dupee's Badger was com. In Bedlington terrier bitches G. Bell's Blue Bell was second. In Skye terrier bitches G. Sanderson's Floss was com.; in dog puppies first was withheld and J. C. Stevenson's Mack was second. In Yorkshire terrier bitches C. N. Symond's Flo was very high com. In pug dogs Mrs. J. E. Barker's Carl and G. A. Jones's Smut were high com.

ADDITIONAL AWARDS.

GORDON SETTERS.—CHAMPION—*Dog:* W. S. Hammett's Royal Duke. *Bitch:* H. F. Smith's Roxie.—OPEN—*Dogs:* 1st, Dr. S. G. Dixon's Little Boy. 2d, E. H. Morris's Beaumont; 3d, Mt. Pleasant Kennels' Ranger. Very high com. and com., Dr. W. H. Tillinghast's Mont and Fred. High com., C. H. Leonard's Dash. *Bitches:* 1st, J. L. Wells's Vic; 2d, E. H. Morris's New York Belle; 3d, J. L. Campbell's Becky Sharp. Very high com., G. W. Browne's Jessica and J. W. E. Clarke's Countess of Devonshire. High com., A. M. Tucker's Diana and T. Dean's Josephine. Com., A. H. Aldrich's Heather Clytie.—PUPPIES—*Dogs:* 1st, W. S. Hammett's Ned; 2d, G. F. Bond's unnamed. *Bitches:* 1st, J. L. Campbell's Becky Sharp; 2d, G. D. Holbrook's Victoria II.; 3d, Claire-Reeta Kennels' Daisy D.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Jess; 2d and 3d, withheld.

CLUMBER SPANIELS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, withheld; 2d, W. G. Young's Darby. *Bitches:* 1st, withheld; 2d, H. W. Windram's Jess; 3d, withheld. *Puppies:* 1st, withheld; 2d and 3d, H. W. Windram's Romp II. and Bess II.

FIELD SPANIELS.—CHAMPION—*Dog:* W. O. Partridge's Rob. *Bitch:* W. O. Partridge's Critic.—OPEN—*Dogs:* 1st, 2d and 3d, E. M. Oldham's Newton Abbot Darkie, Newton Abbot Lord and Newton Abbot Skipper. Very high com., E. S. Bird's Single Sin and W. H. Moseley's Jerry. *Bitches:* 1st and 2d, E. M. Oldham's Newton Abbot Jubilee and Lady Abbot; 3d, E. H. Morris' Bradford Ruby. High com., A. Laidlaw's Bradford Gladys.

COCKER SPANIELS.—BLACK OR LIVER.—CHAMPION—*Dog:* Brant Cocker Kennels' Brant. *Bitch:* J. P. Willey's Miss Obo II.—OPEN—*Dogs:* 1st G. Bell's Jersey; 2d, Fay & Baxter's Ned Obo; 3d, J. P. Willey's Baby Obo. Very high com., S. R. Hemmingway's Rabbi. High com., G. A. Woodman's Bo, A. B. Claflin's Don E., H. G. Charlesworth's Black Graft and J. P. Willey's Sancho. *Bitches:* 1st, J. P. Willey's Chloe W.; 2d, Fay & Baxter's Kapiolani; 3d, W. H. Walton's Cloudy. Very high com., J. P. Willey's Bessie W. and Fay & Baxter's Widow Cliquot. High com., J. P. Willey's Beatrice, Brant Cocker Kennels' Busy and S. R. Bird's Dolly Obo.—ANY OTHER COLOR.—CHAMPION—Brant

Cocker Kennels' Little Red Rover.—OPEN—*Dogs:* 1st, A. Laidlaw's Robin; 2d, withheld. *Bitches:* 1st, G. Bell's Vermilion; 2d, E. S. Bird's Lady of Learning; 3d, A. Laidlaw's The Blonde.—PUPPIES—*Dogs:* 1st, G. Bell's Jersey; 2d, S. R. Hemmingway's Rabbi; 3d and high com., W. L. Dearborn's Frank Obo and Jennie Obo. Very high com., Fay & Baxter's President. High com., E. M. Oldham's Newton Abbot Farmer. *Bitches:* 1st, Fay & Baxter's Kapiolani; 2d, withheld.

BEAGLES.—CHAMPION—*Dog:* W. S. Clark's Fitzhugh Lee. *Bitch:* W. S. Diffenderffer's Lou.—OPEN—*Dogs:* 1st, A. Parry's Frank; 2d, Mrs. Carl E. White's Bugler; 3d, Irvington Kennels' Racer, Jr. Very high com., Mrs. J. O. Fellows's Royal Krueger and Mrs. Carl E. White's Bannerboy II. High com., Irvington Kennels' Leader, A. Stephens's Little Ned II., G. Laick's Laick's Rattler and Associated Fanciers' Little Prince. Com., C. F. Harris's Dandy Jim and F. P. Quinsby's Sport. *Bitches:* 1st and 2d, South Paris Beagle Club's Snider and Mystic; 3d and very high com., Associated Fanciers' Elf and Fay. Very high com. and com., W. S. Clark's Norah and Quecnie. Com., Mrs. Carl E. White's Bijou and E. C. Tarr's Lady J.—PUPPIES—*Dogs:* 1st, C. F. Harris's Dandy Jim. *Bitches:* 1st and 2d, Associated Fanciers' Elf and Fay; 3d, C. F. Harris's Daisey.

BASSET HOUNDS.—1st and 2d, C. B. Gilbert's Bertrand and Cosette.

FOXHOUNDS.—*Dogs:* 1st, J. P. Taylor's Hunter; 2d, A. M. Gerry's Drive; 3d, C. W. Robinson's Pride of Hornell. Com., W. P. Walley's Max, C. E. Stone's Spot, F. Laird's Jumbo, C. A. Holt's Dash, J. McBrien's Spot and F. Wenz's Zip. *Bitches:* withheld.

YORKSHIRE TERRIERS.—UNDER 5LBS.—*Dogs:* 1st, 2d and 3d, E. P. Carlton's Jim, Armande and Floss. Very high com., P. Cassidy's Prince. High com., Mrs. Wm. Appleton, Jr.'s, Dandy. Com., J. Priest's Teddy. *Bitches:* 1st, P. Cassidy's Lady; 2d and 3d, E. P. Camille and Roxy. Very high com., C. N. Symonds's Little Sister. Com., G. B. Foss's Bells and J. Priest's Gip.—PUPPIES—*Dogs:* 1st, J. F. Murray's Bloss.

TOY TERRIERS.—1st, J. P. Barnard's Princess; 2d, Mrs. Dr. H. R. Surle's Ben Butler; 3d and very high com., Miss Abbie B. Hall's Mollie and Tasso. Com., J. Walter's Jumbo.

PUGS.—*Bitches:* 1st and 2d, Dr. M. H. Cryer's Vesta and Myrtle; 3d, G. W. Fisher's Tra-La-La. Very high com. and high com., Forest City Kennels' Almah and Juliet. High com., Miss Lillie B. Souther's Belle. Com., Mrs. J. F. Campbell's Judy.—PUPPIES—*Dogs:* 1st, J. H. Shepherd's Sir George; 2d, G. Bell's unnamed. *Bitches:* 1st, Dr. M. H. Cryer's Sallie.

KING CHARLES SPANIELS.—CHAMPION—*Dog:* F. B. Fay's Milwaukee Charlie. *Bitch:* No entry.—OPEN—*Dogs:* 1st, Dr. A. Hodges's Prince; 2d, J. R. Gildersleve's Charlie; 3d, withheld. Very high com., F. B. Lucy's Max. High com., R. Russell's Tasso. *Bitches:* 1st, F. B. Fay's Dolly; 2d, withheld; 3d, G. M. Smith's Beauty. Very high com., A. E. Proctor's Gipsey.—PUPPIES—*Dogs:* 1st, A. E. Proctor's Prince; 2d, withheld.

BLENHEIM SPANIELS.—*Dogs:* 1st, F. B. Fay's Exeter Earl; 2d, E. Bradford's Blen. *Bitches:* 1st, F. B. Fay's Exeter Beauty.

PRINCE CHARLES, RUBY AND JAPANESE SPANIELS.—1st, M. Windram's Josie; 2d, 3d and very high com., J. Cunningham's Frank, Charlie and Billy. High com., E. Bradford's Spot.

ITALIAN GREYHOUNDS.—*Dogs:* 1st, Miss Ethel M. Van Buren's Cupid; 2d, Mrs. Dr. H. R. Surles's Dandelion. Very high com., Mrs. Annie M. Kramer's Romeo. *Bitches:* 1st, Mrs. Annie M. Kramer's Lillie; 2d, Mrs. Dr. H. R. Surles's Zephyr.

MEXICAN HAIRLESS.—1st, withheld; 2d, Dr. C. Faulkner's Peppo.

AIREDALE TERRIERS.—1st, P. Lawrence's Pin; 2d, H. S. Hunnewell's Nelson; 3d, H. Dwight's Tramp.

WELSH TERRIERS.—1st and 2d, P. Lawrence's Which and Tother.

MISCELLANEOUS.—OVER 25LBS.—1st, W. Wade's Sir Lucifer; 2d, C. O. Breed's Jack Dempsey; 3d, W. J. Emerson's Fritz.—UNDER 25LBS.—1st, Dr. J. H. Sweet's Dandy; equal 2d, Mrs. E. Warriner's Bijou and J. P. Barnard's Halifax Joe II.; 3d, F. Dunlap's Tootsie. Very high com., J. Conway's Beauty. Com., J. Munroe's Beauty.

SPECIAL PRIZES.

MASTIFFS.—Kennel, E. H. Moore; stud dog, Ilford Caution; best, Minting; puppy, Crown Prince. American Mastiff Club prizes: Best, Minting; bitch, Lady Clare; stud dog, Ilford Caution.

ST. BERNARDS.—Kennel rough-coated, Hospice Kennels; smooth-coated, the same; best smooth-coated, Leila; puppy, Myrtle.

NEWFOUNDLANDS.—Best, Miro.

DEERHOUNDS.—Kennel, Hillside Kennels; best, Chieftain; stud dog, the same.

GREYHOUNDS.—Brace puppies sired by Balkis, Highland Laddie and Highland Lassie; stud dog, Balkis.

POINTERS.—Kennel, Clifton Kennels; best, Beaufort; stud dog, the same.

ENGLISH SETTERS.—Kennel, Blackstone Kennels; best (two), Royal Albert; stud dog, Foreman; puppy, Queen.

IRISH SETTERS.—Kennel, Fort Orange Kennels; best, Molly Bawn; dog, Kenmore; stud dog, C. F. Kenerson's Tim; puppy, Flora.

GORDON SETTERS.—Best, Royal Duke; brace, E. H. Morris's Beaumont and New York Belle; stud dog, Royal Duke; puppy, Becky Sharp.

SPANIELS.—Best Irish water, Jess; kennel Clumbers, H. W. Windram: best, Jess; bitch (two), the same; kennel field spaniels, E. M. Oldham: best, Newton Abbot Darkie; stud dog, the same; brace, the same, with Newton Abbot Jubilee; kennel cockers, J. F. Willey; best, Miss Obo II.; puppy (two), Jersey.

BEAGLES.—Kennel, Mrs. Carl E. White; best, Lou; bitch, the same; stud dog, Little Duke; puppy, Dandy Jim.

HOUNDS.—Best basset hound, Bertrand; dachshund, Lenah; foxhound, Hunter; puppy, H. Taylor's Andy.

COLLIES.—Kennel, Chestnut Hill Kennels: best, Scotilla; stud dog, Dublin Scot; puppy, Roslyn.

POODLES.—Best, Friday.

BULLDOGS.—Kennel, Hillside Kennels; best, Britomartis; stud dog, Tippoo.

TERRIERS.—Bull: Kennel, F. F. Dole; stud dog, Young Royal Prince; puppy, Starlight. Fox: Kennel, Hillside Kennels; best, Richmond Dazzle; dog, Raby Mixer; American-bred puppy, Raby Chance. Best Scotch, Lowrie Dunbar; Irish, Dennis; Dandie Dinmont, dog, Border Clinker; bitch, Pansy. Yorkshire: Kennel, E. P. Carlton; best, Bradford Harry; stud dog, Armande.

PUGS.—Kennel, Dr. M. H. Cryer; best, Dude; American-bred, the same; stud dog, Othello.

TOY SPANIELS.—Best King Charles, Milwaukee Charlie; Blenheim, Exeter Beauty.

CINCINNATI DOG SHOW.

CINCINNATI, April 6.—*Editor Forest and Stream:* I am glad to inform you that the show to be held here April 24, 25, 26 and 27, promises to be a magnificent success. Our citizens are taking great interest in the matter and are contributing valuable special prizes and making entries. The building selected is one of the very best stone front buildings in the city, and located as it is right in the heart of the business center of the city, the attendance will be very large. The club had to rent the building from the middle of March until May 1 in order to secure it for the four days on which to hold the show, and prompt notice was given to the press as soon as possible of the dates agreed upon. Entries close April 17. Major J. M. Taylor will judge setters, pointers, beagles and foxhounds. Mr. J. F. Kirk, of Toronto, will judge all other classes. We have entries from New York, Cleveland, Columbus, Pittsburgh, Chicago, Milwaukee, St. Louis, Indianapolis, Detroit, Memphis and from a large number of smaller cities and places. As this show is given under the rules of the American Kennel Club, a winning made here will be of some value to the successful exhibitor. The champion classes for mastiffs, rough St. Bernards and smooth St. Bernards will be divided by sex. A special prize of $25 will be given for the best kennel of six terriers, Skye, Scotch and Dandie Dinmont, together or separately; $25 for the best twelve foxhounds and $25 for largest and best collection of any one breed, also an oil painting, value $150, for the best four mastiffs. All the above to be owned by one exhibitor. Entries received at noon, April 19, will be accepted. The following named express companies will return free over their respective lines all dogs on which they received full express rates in coming to the Cincinnati bench show, viz.: Adams, B. & O., American, United States and Wells, Fargo & Co.

GEO. H. HILL, Supt.

A DOG BREEDERS' CLUB.

ALL breeders of dogs are cordially invited to membership in the National Club now formed. The requisites are that the applicant should be a breeder of dogs, and of good moral character. All who join before May 1 will be admitted as charter members, and the membership fee will not be exacted of them. That must be paid by all who join after the date fixed. The club at this writing, although in its infancy, has a membership of nearly eighty, and it is rapidly increasing. It is earnestly hoped that all desirous of advancing the interests of breeders will send in their applications at once to H. W. Huntington, 148 South Eighth street, Brooklyn, E. D., New York.

The first meeting of the new National Kennel Club, to be composed solely of breeders, was held at a late hour on Tuesday night, April 3, in Mechanic's Building, Boston. Mr. Jean Grosvenor was chosen chairman, and Dr. Perry secretary. The latter defined what he considered the policy of the new club as follows:

Gentlemen, some one must make the first move in the matter before us, and having been instrumental in calling you together, I trust you will not consider it unbecoming in me to assume that duty.

A few weeks ago, after consulting with a number of prominent breeders, we decided to make an effort to establish what we long had felt was needed in this country, a club of individuals, the same to be made up of men who could lay claim to the title of breeders. The privilege of attending any other bench show than this at Boston was denied me, and my anxiety to be present at the first meeting influenced my course, and I hurriedly communicated with some 50 breeders. While personally knowing many others, I was unfortunate in not being able to obtain their addresses, and having so little time before me I was forced to limit my correspondence to the number stated.

I make this explanation as an apology to those who have not received a formal invitation to take part in the organization of this club.

As I have said, I wrote to some fifty breeders, expecting to receive twenty-five or thirty favorable replies, instead of which thirty-seven of those gentlemen responded promptly, and authorized me to constitute them members of the proposed National Club. But one—only one—among all to whom I wrote declined to join us for the reason he could not indorse our movement. Two, if I remember aright, were so engrossed in business they could not render us any assistance, and therefore felt they ought not to become members of a club, for which there was so much to do.

Several desired to know more of the policy of our club, the rules, regulations, etc., which would govern us, and a few others contemplated being in Boston to-day and therefore delayed their decision until now. A small number only have failed to reply to my letters. You must with me feel much surprised at this so generally favorable expression on the part of the breeders whose opinions have been sought. It surely proves the pressing necessity of a club such as we have laid the foundation for. To those gentlemen who desired to know more of our policy, etc., I could make no very satisfactory reply, for it would have been presumptious in me to have attempted to anticipate the club's movements. I could speak only for myself and say that I should never advocate or sustain any measure which could not be approved by every honest breeder, and I felt certain that every other member of the club would be influenced by the same spirit. One gentleman to whom I wrote and for whom I have the highest respect, replied much as follows:

"I am always willing to do all in my power, at any time, to advance the interest of breeding the best dogs possible in this country. I am already a member of several of the kennel clubs in this section. Now, if you think the National Dog Club, which you desire to form, can be done among prominent breeders, and can be worked in harmony with the other clubs, put me down as a member, but I don't care to get into any association that will be clashing one with the other. A higher standard for the canine race is what is wanted, and if this way stated by you will do it I shall be much pleased."

In substance I wrote this gentleman: "I hope you will join us without imposing any conditions. I should be among the first to fight against interference with other clubs unless the interests of those for whom I was working actually demanded it. The National Club should start free from prejudice, and also without allegiance to any other clique or club. It should be absolutely independent. It certainly should not interest itself in every petty discussion, but should be characterized by the same dignity and fairness which appears in every order made up of *men*. In a word, where other clubs are interested with us we should give them our hearty support, whenever we can do so consistently with our own sense of right. If it appears to us right and proper to take issue and oppose even a popular movement which we feel to be incompatible with the best interests of breeders, then, of course, as men we must act up to our convictions. The representative breeders of America are, I think, capable of judging for themselves what is right and proper, and to expect them to dance when clubs pull the string is simply an absurdity. I really do not see why we should ever interfere with others. I am so placed I cannot say more than I have, as I am but one among the many, and can promise simply what my own line of conduct shall be."

In my circular letter sent out to breeders I invited an expression of their views as to what the policy, etc., of a national club should be. I will here say that when I entered into this movement I was determined to have it succeed if possible. I felt that if a general invitation was issued through the sportsmen's press, we should come together entirely unprepared for organization. There would be endless discussion on unimportant matters, the doubts of a few, perhaps, to dissipate, and not impossibly some wrangling to be indulged. For that reason I felt it better that the number meeting in the first instance be reasonably small. At that time it also seemed best that the club proper be limited—say to twenty-five or thirty members—and that once the club was formed, to extend the membership and take in all reputable breeders in America would next be in order. But beyond the number stated, all other members to be associate members.

Some of those gentlemen to whom I first wrote—substantially as I have said—disagreed with me, and stated that in their opinion the membership should be unlimited. To such expression I gave due regard and modified my circular letters somewhat.

It would occupy too much of your time were I to read the letters which I have received from the gentlemen who now form this club. All agree that the time has come when breeders should act for themselves, and have that influence in the government of affairs—with which they are so closely identified—which clearly belongs to them. I find on the question of limiting the membership of the club there is a difference of opinion. Some object to it while others favor it. Among the reasons which the former give the most pronounced is, that in such a limitation there would be raised a suspicion that our movement was a partisan one, and in the interest of some clique. Here is a point for us to weigh with exceeding care. There is not the slightest foundation for such a belief, and not the faintest suspicion of selfishness or unfairness must shadow our movements. If there is the slightest possibility of it, then we must make our membership unlimited. I think you will decide that that, considering all things, is the wisest course. Here let me say that the question of limitation was only raised because it appeared to me that a club of many working members would be unwieldy, and considering the fact that much business must be transacted by correspondence. The vote of a small number of individuals could be quickly secured, but if the number was large, much delay must ensue.

If, as has been suggested, we appoint a limited executive committee—a governing board—and empower it to act for us, then there seems no reason why our club should not welcome to membership every reputable breeder who cares to join.

Before choosing this executive commitee, we must decide upon the number of which it should be composed. I think you will sustain me when I say that breeders of every important class should have a representative on that committee. That will raise the number to at least eleven. It would be better, of course, if all the members of the committee were within easy distance of each other, that they might hold frequent meetings. Yet I do not recognize the imperative need of this. Our associates at a distance must not be slighted, and they should have their full share of the offices.

Sagely says one correspondent: "Let every member of the club have a vote on the membership of this committee."

An important question to be considered is that of annual dues. All I think will agree, that they should be made as small as compatible with our interests. Some breeders can afford greater expenditures than others. We ought, in justice, to fix the dues so that none will find it a hardship to pay them.

There is in this connection one point to which I beg to draw your attention. The secretary of such a club as ours, when fully formed, must necessarily have many duties. He should, I think, be paid a sum which will enable him to employ an assistant. This sum need not be large, possibly no more than three hundred dollars a year. While yet the club is in its infancy, perhaps this sum need not be appropriated. If we fix the membership fee at $5 and make the annual dues the same amount, none would, I think, complain. And if our club grew in members as it surely ought to do, then we should soon be on a sound financial basis. One breeder writes: "I would suggest that some fund be created for the purpose of giving prizes; this would give it strength, and I would be willing to contribute $50 either for one year or five years. If that is too high, say $25." This idea is certainly a good one. Such a fund should be created. Subscriptions to it should, however, be made purely voluntary. Were we to have them otherwise, we should be imposing a hardship on some of our associates, who could ill afford to pay more than their yearly dues. We shall be grateful to those members of the club who give "out of their hearts," but there will be no distinction made between them and the poorest among us.

The work before us to do this evening appears then to be to decide, among others, the following questions:

By what name shall our club be known if not as the "National Kennel Club?"
What shall be the membership fee?
What shall be the annual dues?
Shall our membership be limited or unlimited?
What officers shall the club have?
Shall we choose an executive board and empower it to make rules and regulations, and represent us?
Of how many members shall that committee be composed?
How shall they be chosen?
To elect our first officers (the same to be subject to the indorsement of the absent members of the club).

If it be decided that the officers be chosen by ballot, I would suggest, that before that is taken, all present who are not members, and who will join us, come forward, add their names to the list, and then take part in the election.

Considering that so many members of this club are absent, and that they should have a voice in our proceedings, it would seem better to delay the election of our executive committee, and let the same be balloted for by letter. Suc committee should be very carefully selected, and if will be even necessary to confer with those to whom the offices are to be tendered to make sure that they will accept the same. We want the best and most active men in the club in those places.

It would appear best to appoint a nominating committee to recommend to the club the most valuable men for the executive committee. Their report can be handed to the secretary, and he can forward a copy to every member. In that way the committee can be chosen at leisure and with due care.

I trust that all understand that the existence of this club is not problematical. It is already formed. Each gentleman whose name is on the list, and there are now fifty, has authorized me to place it there and constitute him a member. If from any misfortune our wheels are blocked this evening, all matters which should by reason of convenience be considered here to-night, will be at once decided by correspondence. The National Club, or one made up of American breeders, be its name what it may, now actually exists, and will live.

In behalf of its members, I bid all breeders welcome to our council, and crave their advice and assistance in the work which we have undertaken in our own interests, in their interests and in the interests of our dogs.

I feel impelled to say a few words as to what our relations will be with the American Kennel Club.

Perhaps it is but natural for some to think that we are starting in opposition to it. Whoever has that idea should abandon it at once. Why should we not be a support to it? Both clubs are working for identically the same ends. Their ways may not be our ways. They may be open to criticism—who is not? That we have the same end in view should be sufficient to guarantee good fellowship. I feel sure that you will permit me to say to the American Kennel Club, We are not only ready and willing, but anxious to aid all your laudable efforts. We will labor with you if you desire it. If you do not, then there will be no quarrel between us. In our own ways we will go on with the work before us, each happy in the consciousness of doing what we feel to be our duty.

As for local clubs, again our interests are all the same, and therefore there is little danger of our being at variance with them. Certainly we cannot interfere with them, but if occasion arises, and we can take council together, may it not be for the benefit of both? There is reason to believe that the idea is entertained by some that one object of the new club is to hold bench shows. There is little or no foundation for this. I can imagine such a thing possible, but do not consider it at all likely, and, in any event, such an undertaking is a long way off. No, gentlemen of "ye local clubs," we cannot interfere with you. There may be times when we shall look upon some subjects differently; if so, we shall always be ready to convince or be convinced.

Members of the National Club, let us organize to-night! There is work before us, but let us feel our way carefully. Once we put on the harness we can pick up the broken threads, and where we find a snarl in the skein, help untangle it. Individual members should, one and all, feel sufficient interest to report failings which can be remedied wherever found. If I learn that there is a man selling mastiff pups represented to be sired by my old and faithful friend Hero, who has been dead two years, I shall make a report of the fact to our executive committee. That body will, I am sure, point out to that man in a quiet way his error, and bid him sin no more. If he "takes heed," then all is well; but if he does not, then, without doubt his methods will be given that publicity which they richly deserve. Men who juggle the dates when their pups were whelped to keep them in the "infant class," will be pointed out the "straight and narrow way," and urged to return to it. We shall have no right to dictate what judge should be chosen in any given instance, but if we select those whom

we believe to be the six best judges in America in their departments, and we give expression to our belief, we can then have no cause to complain, and surely bench show committees will thank us for our assistance. If the spirit of economy possesses any body of men with whom we are thrown, to that degree that our just winnings are withheld, or, "if we ask for bread and are given a stone," we have our executive committee to appeal to, who will no doubt try to coax the wanderers back into the fold from which they have strayed. And so we shall raise up for ourselves powerful and sympathetic friends, ever ready to listen to our grievances, and to argue or fight for us as the need is manifest.

We must not forget that we have a duty beyond that which immediately concerns ourselves. The public are to be protected when their interests and ours meet. All know that there are some individuals who have no claim whatever to the title of breeder, and yet usurp the same. This class have done much to disgrace our fraternity. They stop at nothing to effect a sale—manufacturing pedigrees and lying without hesitation when it suits their purpose. Many an innocent purchaser has been wronged by these swindlers, and yet in the present condition of things there is no redress for them unless it be through the law, always slow and unsatisfactory. The sportsmen's press, to its infinite credit be it said, has done all it could to defeat these disreputable dealers. It has refused to admit their advertisements and thereby afforded much protection. And yet it is not complete. Our club can go further and place these tricksters in their true light before the public.

Our executive committee will be an impartial jury to which breeders and public alike can appeal. Not infrequently when no fault exists, yet do misunderstandings sometimes arise, and the purchaser thinks he has been wronged, although he has no rightful cause for complaint. How easily these little affairs can be adjusted all must readily appreciate.

No one can anticipate the work which our club will have to do. We may find but little for it, and yet there appears to be much to engage its attention.

One correspondent says: "We shall have a fierce and powerful opposition to cope against." I do not believe that—no right-minded man will oppose us in undertaking to do what is clearly our duty. Who is there who presumes to sit in judgment on the breeders of America? Surely, if there are any who, prompted by jealousy or malice, desire to cross swords with us, they will not have far to go to find us.

Gentlemen, the duty which I assumed is now done. A club of breeders has been formed, and I go into the ranks to aid you all I can. It is to be hoped that each and every one will bring as many into the club as they can. The larger it is the more powerful, and the greater good it can accomplish.

One of our most esteemed associates has given us a sentiment—The greatest good for the greatest numbers—clean records—no axes ground here—freedom and independence. Let this then be our motto. Guided by principle and swayed only by reason, we shall certainly succeed in our purpose.

It is a delicate subject which I encroach upon—the right of free speech—and yet I feel impelled to express the earnest hope that if there is one among us who feels inclined to criticise the conduct of any other club he will conquer that disposition. If there is any other which has been unfortunate and we can see wherein it is at fault, let us profit by this experience. Much more will be expected of us since we can now see where perhaps they were forced to grope blindly. Let us have a firm foundation, and do not let us build on the weaknesses of others. Am I wrong to ask that we enter upon our new work charitably disposed, at peace, and with good will toward all.

It was then voted that the membership of the club be unlimited, and that all respectable breeders be invited to join.

The membership fee was fixed at $5, and the yearly dues made the same. A committee was then appointed to nominate officers and transact other business which must necessarily be considered before the organization of the club can be completed.

The meeting then adjourned.

SPANIEL FIELD TRIALS.

Editor Forest and Stream:

We have field trials for setters and pointers, coursing for greyhounds and collie trials, but no test of the best family of all, the spaniel. And why? Is there cogent reason why this should be?

Many spaniel men are in favor of a trial in the field, among them the secretary of the Spaniel Club, Mr. Wilmerding, yet no one takes the initiative. That step should be taken by the American Spaniel Club, a club organized for the improvement and to guard the interests of the several breeds of sporting spaniels. No one can deny that they have improved spaniels for exhibition purposes, but are they also advanced in field merit? Is the champion cocker of to-day at all similar in corporeal structure to his ancestor of ten years ago? Instead of being a cobby, active little fellow, abundantly able to work without fatigue, he partakes more of the dachshund, the longer and lower he is being in his favor. I mention cockers as they have been "improved" beyond all bounds. But would this state of things have been had trials in the field been in vogue? The show type could never have won from the shorter-bodied, leggier dogs, and the "long and low" fanatic would not have ventured to stray too far from the field trial winning type in breeding show dogs. Witness pointers and setters. There are not two types of them, a field trial and a show ring. Our principal winners in these breeds on the bench are good in the field, and our trial winners can many of them win in the ring. This plainly evidences the value of field trials.

Now let us hear from the spaniel men on this vitally important subject, and let us do our utmost to wake up the executive of the Spaniel Club by means of the columns of the FOREST AND STREAM. Let it be a discussion of field trials, not of "Spaniels for Bench and Field." QUESTER.

GORDON SETTERS.—*Editor Forest and Stream:* After reading with some degree of astonishment the reports of recent bench shows, and after the barking of the canine judges and reporters, I was inclined to imitate my four-legged friends of good breeding and wait for a show of teeth, or in other words, defeat, but seeing Dr. Dixon's letter respecting Little Boy, I reluctantly answer his remarks by saying that it is just possible for a dog with such style to take the eye of the judge and win when young and before gunshy was marked upon his expression and a true Gordon like champion Beaumont was not here for judges to compare. Although Royal Duke is certainly not a pure bred Gordon, yet he does not show so much of the Irish taint as Little Boy, but these, with all the other black and tans I have seen in America, lack Gordon character—the fire and hunt and lively carriage which make them even preferable to the pointer for many purposes, and which must tell greatly in their favor for American sport. Besides, they invariably have too long, or what in England is termed "teapot" sterns, and the usual marks of breeding, such as dewlap, developement of occiput, haw and the old bloodhound distinction are generally absent. With all due deference I would suggest that it is not in the interest of Gordon setters, or any other breed, to speak of the judges as the doctor does and of some exhibitors as "a crowd directly interested in Royal Duke," nor is it right to say that sportsmen agree that a gunshy black and tan like Little Boy is "the light-weight Gordon of the country." True Gordons should not be light but good workman-like animals, combining the good qualities of the English and Irish setters, but free from their faults, and in short, pure Gordons are a combination of color, beauty and utility, and when properly tried, they will soon take the place they merit. Before concluding, allow me to thank the gentlemen of the kennel press for the courtesy they have shown me and for their kind advice, but I would just tell the writer who in reporting the winning of first by my Newfoundland New York Lass saying she is not a good one, that he is wrong, and the American dogs are not as bad as he would have it. He seems to forget that she is but a pup, and like all my dogs, has suffered from a long voyage, change of climate and bad weather. Perhaps when they and their owner get climatized, something more will be heard of the "English dogs."—EDWIN H. MORRIS (Morrisville, N. Y., April 2).

NEW ST. BERNARDS.—I have imported the rough-coated St. Bernard bitch Gemma I., whelped Dec. 3, 1883. She is litter sister to the late champion Swiss Beda and is the dam of champion Barry II., Eiger and Leah. She stands 72 centimetres (28in.), plump, is white with rich mahogany patches; has a splendid coat and a model head. She is a first-class specimen in every respect. With her came a son of hers, Alpine Chief, and a daughter, Alpine Maid, whelped April 4, 1884. They are by Red Boy (Kondor—Cora, both registered in the Swiss Stud Book). Alpine Chief is a most promising pup; he stands 31in. high, has a beautifully marked head and a wonderful coat. He is rather light in color, lemon with white markings, but this is offset by his other good qualities. His pasterns are somewhat weak, but exercise and development will no doubt get him all right. Alpine Maid is a nice symmetrically built puppy, white with lemon patches and a very pleasant expression. She stands almost as tall as her dam and has her splendid coat. This trio of new-comers made their *début* at Boston, and considering that they were eighteen days coming, gave an excellent account of themselves.—K. E. HOPF (Arlington, N. J.).

EASTERN COURSING CLUB.—New York, April 7.—*Editor Forest and Stream:* The gentlemen who will constitute the Eastern Coursing Club, are desirous of renting the privilege of 100 to 200 acres of land, rather sandy and quite free from woods, within 50 miles of Brooklyn, on Long Island, for the purpose of planting English—Belgian hares and jack rabbits. The lessor must agree to post the land and protect the hares from being hunted, trapped or killed. The club will be formed as soon as the privilege can be obtained. —H. W. HUNTINGTON.

KENMORE DISQUALIFIED.—New York, April 8.—*Editor Forest and Stream:* At a meeting of the Bench Show Committee of the W. K. C., held April 5, 1888, the Irish setter Kenmore was disqualified for being entered in puppy class while over age, and P. H. Foster and Thos. J. Farley are hereby suspended under Rule 22 for fraudulently entering the said Kenmore in violation of Rule 2.—F. R. HITCHCOCK, Sec. W. K. C.

BALTIMORE DOG SHOW.—The Baltimore Kennel Club will hold a dog show at Baltimore, Md., April 24 to 27.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

D., Montreal.—Six months old setter dog, just received from kennels, fair condition, very good appetite, bowels open, but nose hot. His skin on belly, especially under forefeet, inflamed, causing him to scratch continually. Ans. Keep up treatment adopted and rub sulphur ointment gently into skin once daily. Stop arsenic after two weeks.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

RANGE AND GALLERY.

CHERRYFIELD, Me., March 31.—Cherryfield Rifle Club scores shot with open sights off-hand, and snowing quite thick. Match at Hinman target, 200yds: J. A. Wilson 76, E. A. Guptill 74, W. M. Eaton 74, P. B. Guptill 66.

BOSTON, April 4.—At Russell's shooting gallery, this evening, Mr. Fred E. Bennett made what is, perhaps, the unprecedented score of 100 points in a possible 100 with a revolver. The weapon used was a .44-cal. Smith & Wesson army revolver, Russian model, the same with which he has hitherto made some remarkable scores. The distance was 30yds., position off-hand. The target was of the standard American pattern, with bullseye 4in. in diameter. Inside of this, and encircling the exact center, is a white ring 1.68 (or about 1 11-16) inches in diameter. Into this little ring the marksman put eight shots, and the other two of the string of 10 cut this ring. A shot in this ring, or cutting the edge of it from the outside, counts 10. Before shooting this perfect score Mr. Bennett had visited Conlin's gallery in New York, where he made 72 out of 72 possible points with a .44-cal. revolver, making the best 12yds. score on record, Ira Paine and Geo. Bird having previously tied on 71. Mr. Bennett now holds the following records: Best 10-shot score of 97 out of 100 points at 50yds; best 10-shot score of 100 out of 100 points at 50yds., standard American target; best 6-shot record in Massachusetts Rifle Association at 12yds., 72 out of 72 points, and best run of consecutive bullseyes at 50yds., the number being 37. The Chevalier Ira Paine was promptly heard from about the Bennett score, which he was inclined to query. He said: "Bennett was offered $1,000 to duplicate my score, but he never saw fit to attempt the task. I don't believe he is sincere in the matter of shooting with me, although I am very anxious to have him do so. I will shoot either or both of them a match for from $1,000 a side upward, 100 shots, at the regulation American target, at 50yds. distance, .44-cal. Smith & Wesson revolver, or the revolver of any other reliable firearms company. I want to shoot against the better marksman of the Bennett brothers, and whether he is Willy or Freddy, I invite both to go out and decide that question at the Walnut Hill range before accepting my challenge. If they prefer, I will shoot against both of them together, each to fire 50 shots, or shoot half the match."

GARDNER, Mass., April 5.—At the last regular meet of the Gardner Rifle Club at Hackmatack Range, the Standard American target was used. The shooting was off-hand, 200yds. The results of the two strings shot were as follows: G. C. Goodale 168, W. C. Loveland 162, F. B. Edgell 160, G. F. Ellsworth 160, C. N. Edgell 150.

BOSTON, April 7.—The high wind to-day made it hard work for the riflemen at Walnut Hill to reach high records. The spring meeting of the Massachusetts Association will be held May 30 and 31 and June 1 and 2, and a valuable list of prizes will be offered for competition. The scores:

Revolver match, 50yds.—J. L. Fowle 88, J. B. Fellows 87, W. Charles 86, H. Hawley 84, F. Marden 79, W. S. Hill 75, A. Newton 65.

Revolver match, 30yds.—J. L. Fowle 81, H. Severance 79, W. S. Hill 70.

Rest match, 200yds.—B. G. Barker 101, G. Gleason 100, H. M. Walker 100, S. Ham 97, B. Howland 96, J. Cutts 95, W. H. Mann 94, S. Martin 93, C. Harlow 93, L. R. Avay 90, H. T. Dudley 80, M. I. Hart 85.

Off-hand decimal match, 200yds.—G. F. Ellsworth 80, S. Gardner 76, D. L. Chase 72, S. Munson (mil.) 63.

THE ARMY SCORES.

THE long delayed general order announcing the results of the rifle practice of 1887 makes a very gratifying showing. The Department of the Platte keeps the place they gained last year, only now they are much further in the advance of the remainder of the army. The Department of the East, in its individual practice, is second, with a handsome showing, but the scarcity of skirmish ranges at the sea coasts lowered their record in that respect. All the other departments, except Arizona, are well over 91 in their individual figure and well over 60 in the general result. Arizona is a long way behind, both in its showing, as indicated by the figure of merit and in the proportion of men advanced to the longer ranges, or in other words the amount of instruction received at the different distances about one-half of their strength fixed at 600yds., about 3½ per cent. at 800 and 1,000yds.

Among the regiments the lead is taken by the Third Artillery (105.06), which reaches about the same result as the Third Infantry, the leaders of the previous season. The best company is F, Twenty-first Infantry (131.11), which therefore wins the Nevada trophy. Comparisons with the work of previous seasons show:

Year.	Sharpshooters.	Marksmen.	Figure of merit. Individual.	Figure of merit. Skirmish.	Figure of merit. General.	No. firing at 200yds.	Percent. of this No. advance to- 500 yards.	Percent. of this No. advance to- 600 yards.	Percent. of this No. advance to- 1,000 yards.
1883..	.....	4,834	56.15	.....	.....	20,052	59.6	26.7	...
1884..	849	7,081	55.75	.....	.....	22,6 9	69.8	40.1	3.8
1885..	1,510	9,247	81.94	27.93	54.93	19,036	85.0	57.9	9.0
1886..	1,350	9,974	90.42	28.71	59.56	17,371	92.8	69.8	9.2
1887..	1,492	11,705	96.74	34.97	65.86	17,957	96.8	77.4	9.9

In the first two of the foregoing years the firing extended over the whole twelve months, and men who had been discharged before the close of the season were included in the returns; in 1885 the season was but four months long and only the men firing during that time were enumerated, which accounts for the reduction in the number firing that year at 200yds. This table, especially the latter part, shows the continued advancement of the army, and room for further instruction, especially at 600yds. and ranges beyond. Only about three-fourths of the army has had practice at 600yds., and but one-tenth at 1,000yds. Further efforts it is urged, should be directed to securing more instruction at 600yds., the ordinary battle range. The tabular statements show:

CONSOLIDATED ANNUAL RETURN OF RIFLE AND CARBINE FIRING OF THE U. S. ARMY FOR 1887.

Department and Division.	Number firing at 200yds.	Per cent. of this number advanced to the longer ranges. 500 yds.	600 yds.	800 yds.	1,000 yds.

The full official table contains the names of 103 other sharpshooters whose percentage was between 90 and 92.

WORCESTER, Mass., April 5.—To-day being Fast Day in Massachusetts the Worcester Rifle Association arranged to have a meet at Broad Meadow Range. During the day members of the Gardner Rifle Club, of Gardner, Mass., were present and entertained by the local club. The standard American target was used, distance 200yds, shooting off-hand, each man shot two strings with a possible score of 100:

White	79 80—159	Fuller	74 72—146
C N Edgell	80 78—158	Crabtree	74 70—144
G C Goodell	82 75—157	Taylor	73 68—141
F Nichols	80 76—156	Knowlton	70 67—137
F B Edgell	78 77—155	Rice	63 60—123
Thomas	76 75—151		

With Military Rifle.

Lieut J Earley ..... 66 65—131 Maj E. R. Shumway.. 63 66—129

HAVERHILL, Mass., April 5.—There was a large attendance at Riverside Range, including detachments from the City Guards and Sons of Veterans. The morning was fine with a variable wind, and the afternoon rainy; 200yds., off-hand, standard target. The badge match, 10 shots, possible 100: H. Tuck 80, W. D. Palmer 75, J. Brown 73, E. Brown 72, J. Busfield 72, J. P. M. Green 67, A. Edgerly 62. H. Tuck won the gold, and E. Brown the silver by handicap. Record match, best scores, 10 shots, possible 100: H. Tuck 84, A. Edgerly 80, J. Busfield 78, J. F. Brown 72, J. P. M. Green 64, E. P. Coggswell 62, E. Brown 60.

BOSTON, April 5.—Walnut Hill range was visited to-day (Fast Day) by the largest number of riflemen that have faced its targets for months. It was estimated that at least 150 marksmen, including many militiamen, were at the range during the day, and the competition was lively from the opening hour until dusk. The records in the various matches are appended:

Rest Match, 200yds.—J. M. Eames 101, H. T. Dudley 100, M. Jameson 98, N. Knight 97, A. C. Thompson 96, D. T. Howe 94, F. D. Hart 92, A. T. Newton 81.

Militia Creedmoor Match, 200yds., 10 shots, possible 50.—W. O. Burnite 48, R. Washington 44, A. H. Wright 43, C. H. Eastman 43, A. McCarthy 42, W. H. Ames 42, F. W. Fowle 42, H. N. Coun 41, M. G. Withum 41, W. Day 41, J. Durward 40, A. Moore 40, J. Healey 40, W. H. Miles 40, A. Walker 40, H. Johnson 39, B. L. Trull 39, M. Austin 39, J. Hood 38, F. W. Frank 38, R. W. Gilbert 37, M. H. Williams 37, H. H. Davis 37, J. M. Deloreia 37, W. A. Parker 37, H. Miller 36, M. S. Martin 36, G. H. Naso 36, N. E. Tenney 35, F. S. Howes 35. C. J. Sargent 34, W. A. Mitchell 34, W. J. Lockhart 32, H. F. Baker 32, G. B. Longfellow 31, M. Jackson 30, A. M. Long 30.

Victory Medal Match, 200yds.—G. F. Ellsworth 84, S. O. Gardner 82, A. Law 75, B. G. Warren 74, C. Towne 69, G. Fuller 65, W. Brown 64.

Revolver Match, 50yds.—J. B. Fellows 87, M. Howard 84, A. Loring 82, B. Marden 76, L. Bartlett 82, J. L. Fowle 76.

Revolver Match, 30yds.—J. L. Fowle 85, W. S. Hill 80, L. Bartlett 79, F. James 69, A. C. Newton 65.

Off-Hand Decimal Match, 200yds.—W. Charles 84, W. O. Burnite (mil.) 83, A. Loring 82, A. Law 78, H. Hawley 77, L. P. Ames 75, D. L. Chase 74. C. H. Eastman 74. C. Towne 73, A. Barns 71, L. Hiland 71, F. D. Hart 71, A. S. Martin 71, A. W. Long 69, C. L. Davis 66, W. H. Shafer 66, M. Jackson 66, B. Gardner 60.

NEW BEDFORD, April 7.—The Massachusetts fireman have made gallery shooting a great fad, and each engine house has a gallery in some safe nook or corner. Visits to and fro are now in order, and teams make merry under the excuse. Independent Hose Company No. 1, of Waltham, 10 men, arrived here to-night, and are the guests of C. Howland Engine Company No. 4. After filling up with good things the firemen engaged in a rifle match. The score, 10 shots per man: C. Bowland Company—W. A. Gibbs 45, J. Backus 47, J. Donaghy 42, D. D. Briggs 42, E. S. Gilbert 43, C. Wing 44, C. Card 35, R. W. Snow 38; 337. Waltham Company—E. A. Emerson 40, F. W. Walker 37, J. Clough 40, F. Clarke 41, D. F. Hussin 42, G. W. Penn 40, J. Flood 41, M. Nethercote 41; 322.

HARTFORD, April 7.—The Franklin Rifle Club held their regular monthly shoot to-day. The wind was exceedingly strong and variable, and scores consequently low.

Medal Match.

F K Rand	9	7	7	5	4	9	6	6	6	7—66
D S Seymour	6	8	7	6	8	10	10	10	7	5—77
H M Pope	8	9	8	8	6	9	4	5	5	9—71
E C Henn	7	9	9	4	5	5	8	7	7	4—65
T H Britten	8	7	7	9	5	6	3	6	3	5—59
E R Beach	4	3	4	9	4	6	3	5	3	8—40
W W Tucker	5	6	6	10	6	6	7	7	8	6—67

Medal was won by Seymour. Half dollars for best single shots, won by Seymour and Tucker, measuring 1.1 and 1.5in. respectively.

Record Match.

F H Britten	7	6	3	9	5	7	6	4	8	7—62
E C Henn	7	9	9	4	5	5	8	7	7	4—65
H M Pope	4	8	6	8	10	8	9	8	8	6—75
F K Rand	6	4	9	6	9	8	4	10	6	9—71
D S Seymour	8	10	10	10	7	5	8	10	7	8—83
S J Lyon	6	9	10	8	9	7	6	7	6	7—75

The record match is a three-months' match, and this was the closing shoot. It is won by the member making the best percentage of improvement. All scores shot to count.

OWENSVILLE, Ind., April 3.—The Owensville Ballard Rifle Team, Hinman target, 200yds. off-hand: J. Montgomery 70, Jas. Daugherty 66, W. Roberts 63, G. Witler 61, John Daugherty 57.

EASTER MONDAY MATCHES.—The third rifle match between the Scarboro' and Highland Creek rifle teams was shot at Agincourt on Monday, April 2, resulting in a victory for Scarboro' of 31 points....A rifle match between the Orillia and Midland associations was shot on April 2 on the Orillia range, and resulted in an easy victory for the Orillia team by 140 points.

CHICOPEE, April 2.—The Maynard Rifle Club made the following scores at their range at the Falls, to-day, with the Hinman target, at 300yds., off-hand: Clark 85, Gassner 82, Dodge 81, Engle 75.

HAMILTON, Ont., March 30.—A match took place at the Victoria Rifle Club ranges to-day between two teams of 3 men each. J. R. Adams, who won the championship at the annual matches of the 13th Battalion, made the excellent score of 92 points, 7 shots at each range.

NEWARK, N. J., April 3.—The double match shoot between G. Snellen, of Our Own Rifle Club, and John Coppersmith, of the Essex Club, was concluded to-night, and the record stands: Snellen—115, 110, 117, 107, 113, 114, 110, 116, 116, 114; total, 1,132; first match, 1,164; grand total, 2,296. Coppersmith—111, 114, 113, 111, 110, 106, 110, 112, 114, 113; total, 1,114; first match, 1,152; grand total, 2,266.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

A PIGEON SHOOT IN HAVANA.

THIS Sunday (March 18) I went to see a pigeon shoot advertised in the Havana papers to take place from 7 to 12 A. M. on the grounds of the club Almendares, situated in the suburbs of this city. Before going I felt some regrets for not having my gun with me here, for I anticipated great fun and good sport. When I arrived the shooting had begun, and I must try to give you an idea of it, as it will amuse you to know how affairs of this kind are arranged here. Imagine a race track of ¼ of a mile with a high board fence, and inside, between the track and fence, a kind of a railing with large openings. In the center of the field, inclosed by the inside railing, was a pile of baskets containing all kinds of birds, doves, black and reed birds, etc. The genius of the affair was a master of mimics, to judge by the way he argued and carried on a conversation with his patrons he reminded me of the hero of the following verses:

"Oh! I am the cook and the captain bold,
And the mate of the Nancy brig;
And the bo'sun tight, and the midshipmite,
And the crew of the captain's gig."

This man was trapper, scorer, referee, crier, etc., and the shooters were few and scattered in different points along the fence. Only one at a time shot at the score, as often as he liked, paying for every shot fired. The others on the boundary fence also paid for the shots fired at the birds missed at the score. The man who had so many duties to perform also carried a private account with every man who snapped at a flecing bird. In case of "hit" or "miss" by the outsiders, the man would call to the successful, crediting him or debiting him in his imaginary account. The way the birds were thrown up was very economical, taking in consideration the necessary outlay for traps, etc., but it does not work so economically in the end, because a bird pitched up at 4yds. from the gun is an easy target. The shooter and trapper stood facing each other at four or five paces, the latter holding a bird, girated on one foot, making at the same time several feints to deceive the former as to the direction he was going to give to the bird, his actions being somewhat similar to those of the pitcher in a base ball game. At last the poor bird was thrown up with great force, presenting an easy target in its efforts to stop with outspread wings the impulse given by trapper. Nevertheless I saw many birds shot at twice at the score and as many times more by each of the scattered gunners, escape unhurt.

At first I thought all the birds were doves, such as I have shot in the United States; but the trapper did not confine himself to them alone, sandwiching now and then a reed or blackbird, the latter giving a larger average of "kills" than the pigeons. Whenever a man shot a bird at these close ranges they clapped their hands with great vehemence. The way of holding the gun at the score was pretty good, but there were no rules of any sort, no program, no score (except the mental one kept by the trapper with his customers). I did not inquire deeply into this matter, because I did not care to bother the shooters, and having left my "cedula" (papers) at home, did not wish to make myself very conspicuous, and so be exposed to the greedy policy which arrests people not provided with "cedulas," and then claims some money in exchange for their freedom. While I was looking on, two men came in a cab, one of them carrying a beautiful English hammerless gun, but his poor show at the score spoiled the impression his fine gun made on me

The shooting was very reckless, several times the shot showered pretty lively around me. There were very few spectators for a free show. I counted fifteen, and these left before the affair was over and so did I. There were no guns to hire. The report of the guns was very light, but the smoke produced by them showed that they did not burn wood powder. You know what they say in this country: "*Palvora poca y municion vasta la boca.*" ("Save the powder and waste the shot.") The "kills" were not very clean; the birds falling crippled and exhausted were chased and captured out of the boundary line. I noticed that the flight of many was painful and slow. Taking into consideration the poor condition of the birds, the close range and the clumsy way of throwing them up, I wondered that any of them escaped at all. J. M. G.

CANADIAN TRAP NOTES.

OTTAWA, March 29.—The Ottawa Gun Club held a shoot this afternoon, the club turning up in good numbers and several visitors lending a hand. The first event was a match at 10 clay-pigeons each between Messrs. Sam Cassidy and S. Morrison, the latter gentleman winning by one bird, the only one hit out of the 20. The club match at 15 Ligowsky pigeons each was then shot, Messrs. Thompson, Throop, T. McLean and Dr. Martin, of the St. Huberts Gun Club, shooting by invitation: H. Street 13, T. McLean 13, A. Throop 12, B. Thompson 11, A. Stewart 10, R. Bothwell 10, Manuel 9, E. Smith 9, J. Stewart 8, Tracey 8, Dr. Martin 7, G. Lang 6, H. Baldwin 6, Dr. McPhee 5.

TORONTO, March 30.—The blackbird shoot at McDowall's to-day was a decided success. The shooting commenced at 9 A. M. and was kept up until dark. Considering the stormy weather the sport was good. Messrs. Charles and Walker did some fine work, the former breaking 42 out of 44 and the latter 42 out of 46. The following are the winners: Ten Peoria birds—W. Paul first, D. Blea second, R. Charles third and J. A. Walker fourth. Fifteen Peoria blackbirds—R. Charles first, W. Alexander second, W. Walton third, J. A. Walker fourth and P. Wakefield fifth. Double rise at 10 birds—A. Ellis first, R. Charles second and J. A. Walker third.

MONTREAL, March 30.—The Dominion Gun Club was out in force to-day, when the Morris cup was shot for the first time. The cup will be won by the man making the best average score in 4 matches. The conditions are 20 Peoria blackbirds, the distance a handicap, the scratch men shooting at 22yds. rise. Better weather could hardly be got for shooting, although early in the afternoon the wind was a little on the strong side. Some of the shooting was splendid, notably that of Messrs. Trotter and Wallace, the former gentleman breaking his first 15 straight. He, however, had 4yds. advantage of Mr. Wallace, who made the fine score of 17. There were 14 entries. Mr. Cameron acted as referee. The 4 leading scores:

C H Wallace (22)	01111100111111111111—17
Jno Allen (18)	10101000110100100101—9
L T Trotter (18)	11111111111111101110—18
F Emond (22)	11000101110111001101—12

Then there were 2 sweepstakes shot, the first at 9 birds. Trotter winning first, Emond second, Robertson third, and Aubin fourth. Sweep at 5 pair double birds followed, and Emond again landed first and Henrichson second.

TORONTO.—The following are the scores made by the members of the Owl Gun Club at their second shoot for gun presented by Enos, James & Co., at 20 birds: W. Pearson 17, A. Alexander 19, C. Kemp 14, W. McDowall 15, H. Roberts 18, H. George 15, A. Ellis 17, W. Paul 15, R. Charles 16, J. Douglass 17, J. Townson 12, J. Jobbott 12, C. B. Harrison 12, J. C. Unwin 15, J. R. Gould 15. They shot their second string and scored as below. A. Alexander doing remarkably well, breaking 39 out of 40, and H. Roberts 36: W. Pearson 17, A. Alexander 20, C. Kemp 18, S. Longbottom 10, H. Roberts 18, A. Ellis 15, C. B. Harrison 15, J. C. Unwin 10.

BRANTFORD, March 31.—A great deal of local interest was excited by a shooting match between James Cook, of Paris, and H. T. Westbrook, of this place, on the farm of the latter, about two miles from Brantford, yesterday. The match was at 25 pigeons, 21yds. rise, Dominion rules, for $100 a side. The shooting of Westbrook was the best ever seen here, his killing 17 out of his first 18 birds being excellent shooting. Having made some bets that he would kill 20 out of 25, he kept on until he reached that score on the 23d bird. The following is the score:

Westb'k	1110111111111111101101—20
Cook	1100010111110100101O—11

OTTAWA, April 2.—The St. Huberts and Ottawa gun clubs shot a match to-day, 12 men a side, at 15 Ligowsky clay-pigeons each man; Alex. Jaques, referee. The older club proved a little too strong for their opponents, but the shooting was not up to the usual standard. St. Huberts scored 108 and the Ottawas 89.

HAMILTON, March 30.—The Wildfowlers' Gun Club held an interesting series of matches to-day. The weather was decidedly disagreeable, but still some good scores were made. J. Bowron shot in all the contests, five of them, tieing for first in three with an unbroken score, winning one with 11 out of 12, missing his first bird, and getting second in another with 11 out of 12, missing his last. Shooting off one of the ties he broke 5 straight and thus scored 44 out of 46. Another competitor who distinguished himself was E. Hunt, who captured 35 out of 39, with T. L. Stephens running him close with 33 out of 39. Following are the scores in the 12-blackbird competition at 18yds. rise: J. Bowron 11, C. Hunt 10, T. L. Stephens 10, J. Pett 9, G. Hore 9, Wm. Smith 8.

Second sweep, 12 blackbirds: C. Hunt 12, J. Bowron 11, J. Pett 11, G. Hore 11, G. Brant 10, T. L. Stephens 10, Wm. Smith 8, Jamieson 5.

In the 5-blackbird competition, also at 18yds. rise, the winners were: No. 1—J. L. Bowron and T. L. Stephens. No. 2—Class shooting: Bowron first and Stephens second. No. 3—J. Bowron, G. Hore and Wm. Hunt.

TORONTO, April 5.—An interesting shooting match took place at McDowall's grounds to-day. The shoot was at 25 clay-pigeons from five traps at 18yds. rise for a stake of $25 a side. The following is the score: J. Moore 15, H. Roberts 18.

FAST DAY TRAP SHOOTING.

THE regular April holiday has come to be a sort of opening day among the gun clubs and of the many enjoying it, a few scores are appended:

WELLINGTON, April, 5.—Some 70 gentlemen, members of the Wellington and other gun clubs, were present. The day was a perfect one for shooting till about 3 o'clock, when a drizzling rain set in. Still, the sport was continued for two hours longer. The winners in the various events follow: Six pigeons, Lang; six pigeons, Lang; six blue rocks, Steele, Lang, Brown and Melcher; six blue rocks, Swift; three pair pigeons, Law; six pigeons, Tucker and Bancroft; three pair pigeons, Moore; six blue rocks, Bond; six blue rocks, Perry, Bond and Sanborn; six pigeons, Lewis; three pair pigeons, Snow, Bond, Steele and Frost; six blue rocks, F. Swift, Steele and Snow; six blue rocks, Perry, Brown, French and Sanborn; six pigeons, French, F. Swift and Snow; six blue rocks, Stanton, Melcher and Moore; six blue rocks, Chase and Snow; three pair pigeons, Grimes; six blue rocks, Tucker; three pair pigeons, Snow; six blue rocks, Stanton, Sanbora and French; six pigeons, H. Swift, Sanborn and Chase; three pair pigeons, Perry and Grimes; six pigeons, Grimes, Snow, Chase and Sanborn; six blue rocks, Perry, Moore and De Rochmont; six pigeons, French; six pigeons, H. Swift; six blue rocks, Snow; six pigeons, Snow and Perry.

WALTHAM, April 5.—Members of the Crescent Gun Club assembled at their club house at the foot of Prospect hill, to-day, and shot four matches, 5 clay pigeons and 5 blue rocks being used in each match. The birds were sent straightaway, right and left. C. Sewell winning first money in the first three, and E. Hildreth in the fourth.

BRIGHTON GUN CLUB.—The club held its second shoot of the merchandise series on Fast Day afternoon at its grounds at Faneuil. The scores made in the merchandise prizes also counted for the Rivett diamond medal, won at the last shoot by J. O'Connell. O'Connell and J. Coyle were tied, but in the shoot-off the former was the victor. He has now won the medal twice and J. Coyle once. The scores and events were as follows: Ten blue rocks, J. Coyle; 10 clays, Marr and O'Connell; 5 bats, J. Coyle; 3 pairs bats and blue rocks, J. Coyle and C'Connell; 7 Peorias, O'Connell. Merchandise match, 10 blue rocks, 10 clay pigeons and 5 bats: J. Coyle 17, O'Connell 17, Breivogel 9, Horrigan 9.

EAST BOSTON GUN CLUB.—A large number of shooters assembled at the range of the East Boston Gun Club on Fast Day, and some very creditable scores were made. The winners, with 18 events, were: 5 clays, Payson; 5 Peorias, Whitcomb; 5 clays, F. Norton; 5 Peorias, Hargrave; 3 pairs Peorias, F. Norton; 5 clays, Payson; 5 Macombers, Grew and Kirkwood; 5 Peorias, Pete; 3 pairs clays, Sampson; 5 clays, F. Norton; 5 Peorias, Kirkwood: 5 straightaway clays, Payson and Jones; 5 straightaway Peorias, Buck; 5 Peorias, Payson, Pete and Kirkwood; 5 clays, Pete and Kirkwood; 3 pairs clays, Pete and Payson; 5 Macombers, Kirkwood; 5 Peorias, Hargrave and Kirkwood.

READING, April 5.—The members of the Reading Gun Club held their Fast Day shoot on the new grounds near the depot. Sweepstake shooting was the order of the day, 26 events being decided. In the championship match J. G. Eames defeated A. S. Tuttle by a score of 42 to 35. Conditions: 50 Peoria birds, 16yds.

WORCESTER, Mass., April 5.—The Worcester Sportsmen's Club had a tournament to-day at Coal Mine Brook range. The rain in the afternoon interfered somewhat with the pleasure of the occasion, still every one apparently was having a good time. There were guests present from Boston, Marlborough, Clinton, Leominster in this State, and from Norwich, Conn. During the day attention was attracted to the following events: Six clay-pigeons, Rugg and Bowdish: 6 blue rocks, Perry; 10 clays, Smith and Gilman; 4 pairs clays, Russell; 7 blue rocks, Yearington, Eager, Rugg and Dean; 20 clays, Dickey, Davis and Russell; 9 clays, Harvey, Burr, Wheeler, Whittaker and Nichols; 6 blue rocks, Smith and Davis; 7 clays, Eager, Yerrington and Smith; 6 blue rocks, Russel; two-men team match, 6 clays per man, Sampson, of Clinton, and Bowdish; 4 pairs blue rocks, Davis; 10 clays, Holden and Yorrington; 10 clays, Wheeler and Dickey; 4 pairs clays, Smith; 5 clays, Smith and Russell; 7 clays, Dickey, Davis and Wheeler; 9 clays, Wheeler; 7 straightaway blue rocks, Wheeler and Swan.

ALGONQUIN VS. WASHINGTON HEIGHTS.—The Algonquins, whose stronghold is within the mountainous regions of Weehawken, N. J., sustained on April 5 a well concerted attack from the shooting dwellers of Washington Heights, New York city. The latter were gloriously repulsed with great slaughter of pigeons, and lost the return match as shown in the appended score. The cherished jewelled gold cup will now serve for the libations of the Sachem of the Algonquins, while the chief of the defeated tribe will have to rest content with a beer glass. Never in the memory of the hoariest-headed Indian on the grounds was a match shot in such weather. When the rain stopped pouring a deluge the fog would close upon the combatants so that from the score one could hardly discern the birds as they escaped from the traps. The pigeons were a fair lot, but could not fly very well in the pouring rain, so that there were quite a number of duffers. A hogshead (more or less) of clam chowder was consumed in a twinkling and a wagon load of fixings, liquid and solid, went the way of all perishable things. Altogether they had a fine time of it.

Algonquins.		Washington Heights.	
Radzinsky	7½	Glasser	6
Dunseith	6½	Gerlach	1
Brenner	8½	Roe	6
Lordly	7	Russell	6½
Van Schaick	7	Fountain	7
Meyer	7	Hunt	6½
Fox	5	Terwilliger	3
Kuhnast	6	Harrison	8½
Gordon	7	Disbrow	9
Bradley	4	Kepler	2½
Simpson	6	Dux	3
Greener	3	Sauer	6
Greenwall	3 —76½	Davison	4 —70

The match was shot at five traps, birds killed with second barrel to count one-half, 50yds. boundary. The last four men of each team had to shoot at 8 birds only, as they unfortunately ran short of the full number.—BIG INJUN.

DENVER, Col., April 3.—The prize pigeon shoot this afternoon between Dr. Carver and Victoria Kennicutt, of this city, 100 birds a side for $2,000, resulted in a draw. Carver hit 90 and missed 8, Kennicutt the same.

CLEVELAND, March 29.—Several of the members of the Kirtland club, which includes in its membership some of the best clay pigeon shots in Cleveland, held a practice shoot out on its range this afternoon, 25 single blue rocks at 18yds. rise. The scores are as follows:

Prechtel	1101101111111101011111110—20
Wooden	1101111010000101111111110—18
Townsend	0100110111111011001101001—15
Phillippson	1010011101101011101011110—16
Rooth	0101011011011100110000010—13

LAFAYETTE, Ind.—Mr. Fred Erb, Jr., is backed to break 475 targets out of a possible 500, from three traps, National rules. Mr. Erb is to shoot 100 targets each day, commencing April 3, for five consecutive days. Mr. Erb and Mr. Graham shoot two matches April 18 and 20, at 100 live birds, Monaco rules, on the base ball grounds at Lafayette.

METAL TARGET.—Another flying target has been invented and placed upon the market. This is a two-part tin pigeon. It is made in two parts, which are guaranteed to separate when hit, and it can be used many times.

MISSOURI ASSOCIATION.—The eleventh annual tournament and convention of the Missouri State Sportsmen's Association takes place in St. Louis, under the auspices of the Excelsior Gun Club, May 15, 16, 17, 18 and 19.

SAN FRANCISCO, March 24.—The Eureka Gun Club held its first meeting at Bird's point, Alameda, this afternoon. The weather was favorable for the guns. Colonel Kellogg carried off the honors for the club trophy by killing eleven of his twelve birds. Several freeze-out matches were arranged, in which Schwerin, Golcher, Ingalls and Pixley won the honors and the coin. W. L. Eyre judged all the events.

Following is a list of the prizes which will be competed for by the members of the Eureka Gun Club during the present season: First prize, one pair of linked gold and platina diamond sleeve-buttons; second prize, one pair pearl opera-glasses; third prize, Colts new lightning magazine 22-caliber rifle; fourth prize, fine split bamboo fishing-rod; fifth prize, 250 standard shotgun cartridges; sixth prize, bottle (one pound) fine extract; seventh prize, $2,000 accident insurance policy for one year in the Travelers Insurance Company. All prizes will be awarded at the end of the season on the basis of the total of the three best scores of each member during the season, the highest taking the first prize, and so on in regular order, with the exception of prize seven, which will go to the member scoring the lowest average on any three shoots.

CLEVELAND, March 29.—The Cleveland Gun Club range was the scene of a closely contested match this afternoon, the occasion being the monthly contest for the club's handsome badge. The tournament began at 2:30 and continued almost until nightfall when it was found that Will Roberts had won not only the privilege of wearing the club badge for the coming month, but had come out of two of the three sweepstake shoots with first honors. The contest was 25 birds, 15 singles and 5 doubles, at 18yds. rise. The birds were sprung from 5 traps. The club scores are as follows:

G F Wheal	0110111111110111—12	10 00 11 11 11—7—19
W Tamblyn	1010110111001111—10	10 11 00 10 11—6—16
E South	1111110100111111—12	11 11 10 11 10—8—20
H Lee	1111111101111111—14	11 10 11 10 00—6—20
F Walls	1001111111111010—11	01 00 00 10 11—4—15

S O Jones	0110101111111001—10	10 10 00 00 10—3—13
	Visitor.	
A Forester	0111110111111110—12	10 01 11 10 10—6—18

The second was a sweepstake for two purses, at five pairs of Peoria blackbirds. The scores are: H. Lee 6, Roberts 6, E. South 8, Wheal 9, Bassett 6, Tamblyn 8, Forrester 6. First purse, Wheal; second, South and Tamblyn.

The conditions of the next contest were 9 single standard birds at 18yds., and resulted as follows: E. South 7, Bassett 4, Wheal 6, Roberts 8, Tamblyn 6, Lee 7, Forrester 6, Smith 6. First purse, Roberts; second, South and Lee.

The conditions in the fourth match were similar. The results are as follows: South 8, Lee 4, Forrester 7, Roberts 8, Jones 5, Wheal 6, Bassett 8, L. C. Smith 8, J, Moser 5. Smith, Roberts and Bassett shot off a tie, Roberts breaking three and his competitors two each.

CLUB ELECTIONS.—The Athens, (Pa.) Gun Club has elected the following officers for the year 1888: President, Frank Fuller; Secretary and Treasurer, W. K. Park; Committee, E. W. Davis, N. J. Knaresboro, F. Sherman. The club was first organized in 1882, and has been kept up by a few members ever since, while as many as six different clubs in the same part of the country have stopped shooting altogether. The club holds its annual shoot on May 30. * * * * At the annual meeting of the South Side Gun Club, at Newark, N. J., the following officers were re-elected: Charles Le Roy, President; Lemuel Thomas, Vice President; Asa Whitehead, Secretary; E. M. Carrington Treasurer; R. H. Breintnall, W. R. Hobart, Oswald von Lengerke, E. L. Phillips, J. R. Burnet, Executive Committee; Isaac H. Terrill, Manager. The roll shows a membership of forty-seven, and the treasurer's report a good cash balance.

WINCHENDON, Mass., April 6.—The Winchendon Gun Club have elected officers for the ensuing year as follows: President, E. M. Whitney; Vice-President, Dr. J. G. Henry; Secretary and treasurer, F. F. Hopgood; Directors, F. E. Mann, F. F. Hopgood, H. J. Lawrence, J. Sutherland and A. H. Felch. The Club champion badge now held by Dr. Henry will be contested for this season, the same as last. The regular weekly meet of the club will begin on the club grounds on Wednesday April 18.

AUBURN VS. SYRACUSE.—The following score was made at the grounds of the Onondaga Gun Club in Syracuse on April 7, and is the result of the third and "rubber" match between the Auburn Gun Club and the Onondoga Gun Club of Syracuse. The first match, shot at Auburn, resulted in a victory for the home team with a score of 164 to 150. Syracuse took the second on her own grounds with a score of 132 to 130, a severe snow storm greatly interfering with good shooting. The final match gives the Auburn Gun Club the championship. The Auburn Gun Club has the honor of administering to Syracuse the only defeats she has ever sustained, while Syracuse has beaten Auburn the only match our team has lost.

BROOKLYN, April 7.—The adjourned monthly shoot of the Fountain Gun Club took place to-day at Woodlawn Park. This being the sixth shoot for the monthly cup prizes offered by the members, only the star shooters competed. M. J. Kearney carried off the honors by killing seven straight birds and winning the cup.

EATON, Pa., April 3.—In a $200 pigeon match to-day between William Bercaw of Easton and James Smith of Hackettstown, fifteen birds each. Bercaw killed fourteen and Smith thirteen. In a similar match between George Givens, Easton, and George Vleit, Hackettstown, N. J., for $200, twelve birds each, Givens killed eleven and Vleit ten.

SPRINGFIELD, N. J., April 2.—Union Gun Club, fourth regular monthly badge and prize shoot, 19 entries. 25 blue rocks, 3 traps, 18yds. rise: E. Miller 24, J. M. Roll 21, F. Duncan 10, Wolf 12, A. Sickley 16, L. T. Terry 12, Geo. Pudney 13, H. Lightipe 17, W. Sopher 18, Conover 18, W. Haines 15, R. Williams 19, W. Parker 19, Newman 13, R. Morrison 25, Joe Bryant 19, E. Sickley 16, Zip Sayre 16, W. Wade 17. Diamond badge, first prize, R. Morrison, 25 straight; E. D. Miller, gold badge, second prize; J. M. Roll, third prize, silver badge. Ties on 19 for fourth, won by W. Parker; ties on 18 for fifth, won by Sopher; ties on 17 for sixth, won by Lightipe; ties on 16 for seventh, won by E. Sickley. The day was warm and clear, but a strong wind blew across the score from left to right, which made the right quarter birds very hard flyers and difficult shooting. The score of R. Morrison, with 25 straight, is accounted for by the way he pointed his new Parker gun, which he shot for the first time. The club holds a grand prize and sweepstake shoot, with 11 events on programme, on the 18th inst, to which all shooter friends are invited. Miss Oakley is to be present on that day if she can arrange her engagements.

MANCHESTER SHOOTING CLUB.—Manchester, N. H., April 3.—The annual meeting of the Manchester Shooting Club was held at Hotel Windsor on the evening of April 2, and the following officers were elected for the ensuing year: President, Chas. S. Tewksbury; Vice-President, Henry Gray; Secretary, Henry A. Herricks; Treasurer, Chas. H. Darrah; Executive Committee, Joshua B. Estey, Thos. R. Varick and C. E. Gove. At the last annual meeting it was voted to give medals to those making the three best scores during the year, three cards to count, 20 birds to a card. These were won as follows: Gold medal, Thaddeus Richards 55; silver medal, C. E. Gove, 53; bronze medal, H. A. Herrick, 50. Richards used an Ithaca gun, Gove a Parker and Herrick a Lefever.

NEW HOPE, Pa.—At the second annual meeting of the New Hope Gun Club, the following officers were elected for the ensuing year: President, John S. Thornton, M. D.; Vice-President, Wm. Closson; Secretary and Treasurer, C. C. B. John; Captain, Thomas Auld; Director, Joseph Peaker. The blue rock constitution and by-laws were adopted for the ensuing year.

A PHILADELPIA TOURNAMENT.—The North End Gun Club of Frankford, at its monthly meeting, April 21, decided to hold a tournament on May 28, 29, 30 and 31, at the Gentlemen's Driving Course. The prizes will aggregate $750, and there will also be donated prizes of sporting goods. The tournament will be open to all clubs now organizing in the United States and Canada. There will also be sweepstake shooting. A special prize, a very handsome diamond badge, donated by Vandegrift & Hicken and to be contested for by amateurs only. Cash prizes guaranteed to teams of 10 men from any regular organized gun club in the world: $100 to first, $50 to second, $25 to third and $25 to any member of a team breaking 25 straight single and double birds. There will also be handsome merchandise prizes awarded to members of each team shooting as follows: One prize to highest individual score, one prize to highest straight score, one prize to highest double bird score. There will also be special prizes for teams of 5 and 2 men each. Matches will be shot under National Gun Association rules, making it class shooting all the way through.

BROOKLYN, March 31.—The first clay-pigeon shoot between picked teams of ten from the Flatbush Gun Club and ten from the Flatlands Neck Athletic Club, both of which have been recently organized, took place this afternoon on the grounds of the latter club. The contest was a friendly one, the conditions being 24 pigeons each at 20yds. boundary. It was not a cold day for the birds: Flatbush Gun Club—D. Rumpf 6, J. Norton 6, E. Skidmore 17, F. Hegerman 13, E. Martin 12, T. Connolly 8, H. Balzer 21, G. Hagerman 5, G. King 8, A. Balzer 12; total, 108. Flatlands Athletic Club—P. G. Kouwenhoven 14, J. Van Wyck 15, G. S. K. Remsen 11, H. J. Selover 8, J. T. Scheick 13, J. D. Remsen 11, G. Van Wyck 15, J. R. Lott 12, J. Ryder 10, F. Wyckoff 10; total, 121.

WELLINGTON, April 6.—The shooters labored under great disadvantage at the Wellington range to-day on account of the wind. In the merchandise matches points were made by the following persons: Shumway 17, Bill and Bond 16, Snow 15, C. B. Sanborn, Baxter, Brown and Bert 14, Bradstreet 13, Swift, Melcher, Lee, Chase and Payson 12, Phelps, Garfield, Schaefer, Frank and Nichols 11, Hart, Scott and Stanton 10. The Grimes prize was taken by Baxter. A number of sweeps followed.

CARO, Mich., April 6.—The Caro Gun Club shot to-day with a high wind to keep the score down. Peorias at 21yds. rise, under National rules, 10 birds each: B. F. Nettleton 3, N. Lester 3, B. F. Harris 5, F. H. Baillie 5, G. W. Smith 7, J. R. Mason 6, D. Cooper 8.

SAN FRANCISCO, April 1.—To-day the California Wing Shooting Club held its second shoot of the season at San Bruno. The day was most propitious for the sport. The birds were a strong lot and flew swiftly. The following is the score of the club shoot: James 9, Sprague 8, Coffin 12, Haas 9, Ford 9, Melly 11, Foster 6, Slade 7, W. de Vaull 10, Brown 11, Parker 6, Johnson 8, Randall 6, Jones 7. A six-bird match came after the club shoot. Out of the fifteen contestants the pot was divided between Randall, Ford and Smith.

CHOICE HUNTING AND FISHING.—Sportsmen can ascertain by experiment, to their entire satisfaction, that rare facilities for healthful recreation and profitable sport with dog and gun or hook and line, are distributed all over the area traversed by the main lines and branches of the "Great Rock Island" system, including the "Famous Albert Lea Route." This territory once constituted the favorite game preserve of the aborigines, and its rivers still teem with fish of large size and delicate flavor; its lakes with bass, pike and perch, as well as duck, geese and wildfowl; its prairies with quail, grouse, partridge and chickens, and its woods with all the varieties of wild game. Some resorts are of course more especially favored than others. At Joliet, the fishing in the Kankakee and Desplaines rivers is excellent. At Senachwine Lake (Henry, Ill.) pickerel and bass bite freely. At "Gilbertown Rocks," near Davenport, bass, pike and cat are abundant. At the "eddies" near Rock Island, splendid wall-eyed pike are captured, and the finest bass, perch and sunfish are taken from ponds in this vicinity. The gamy muskalonge (from 5 to 30 pounds) is found in nearly all the waters of the Northwest. At Spirit Lake the capture of the noblest fish affords exciting sport. The lakes near Watertown, Shell Rock and Worthington are almost equally as attractive to the angler, while the fame of scores of lakes on the Albert Lea Route to Minneapolis, St. Paul and beyond has spread all over the continent. In nearly all sections of North Iowa, East Dakota and Minnesota trained dogs can be had, and ducks, geese, cranes, partridge and quail are abundant. Sportsmen who wish to shoot the coming season further north and northwest or south or west where elk, bear, antelope, mountain sheep and deer are found, should avail themselves of the round trip tourist excursion tickets, procurable at any time, offered by the Chicago, Rock Island & Pacific Railway at greatly reduced rates to and from Utah, Wyoming, Colorado, Idaho and Montana. Half rate round trip excursion tickets are also announced by this road for sale April 24, May 8-24, June 5-19 (limit thirty days for return passage) to and beyond designated points in Iowa, Minnesota and Dakota. For further information address E. A. Holbrook, General Ticket and Passenger Agent at Chicago, Ill. Also inclose to same address a 2-cent stamp for a copy of "Hunting and Fishing" on the Rock Island and Albert Lea routes.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

PRIMITIVE BOATS OR CANOES.

Editor Forest and Stream:

The "dugout" to which "Retaw" alludes as the progenitor of the Canadian canoe and which I mentioned in my last letter to you as being in use on the Trent chain of lakes, is not a primitive dugout at all, but one made by a civilized man, with civilized tools, who has had some previous knowledge of canoes or boats to guide him.

I do not think the dugout has been evolved from the raft. No doubt the South American Balza, the Singalese out-rigged canoe, the "flying Proa," the Madras "catamaran," etc., are all modified rafts, but in that most primitive of all primitive dugouts, the Andamese canoe, (wrongly described in Folkard's "Sailing Boat" as a handsome, well modelled canoe), there is no evidence of the savage islanders having used a raft before they hollowed out a log into the shape of an exaggerated pig trough, and put to sea in it.

A writer in one of the magazines a year or two ago gave an amusing imaginary sketch of the origin of the first boat. A savage of advanced ideas is trying to balance himself on a log while a fine old conservative wader is looking on, and jeering at his efforts. "Yah! There you go, trying your new-fangled notions. Why can't you be content with wading, as your fore-fathers did? You'll never do anything with it, except get yourself laughed at." By and bye, however, when the advanced savage has to get the lengty of hollowing his log out, and converting his pushing pole into a paddle, he has the laugh on his side, and the old conservative is obliged to admit there may be something in it after all. (Something to this effect, I haven't the magazine by me, to refer to.)

The progressive steps by which the ship grew out of the dugout, I have fancied I could trace in some of the boats I have met with on eastern waters. They are as follows: First, rudimentary ribs and washboards, raise the sides of the dugout and give it more freeboard, as in the Burmese canoes. In the next step the bottom of the boat only is hollowed out of the solid log, to this ribs, stem and sternposts are nailed, the dugout forms, in fact, a rudimentary keel and garboard strakes; the planks, which form the siding, are continuous into the hollowed log, and are fastened to the ribs. This mode of construction is seen in the Siamese canoe. This latter is a very handsome little open canoe, by the way, propelled by a double blade paddle 10 or 11ft. long, with long, narrow and very flexible blades. Lastly, we have the boat of civilized nations, in this the log, instead of being hollowed out to make the canoe, forms the keel, on which the vessel is built up. As the anatomist recognizes in some rudimentary process of the human skeleton an important bone of one of the lower animals, so we see the dugout of the savage in the keel of the ship.

But the dugout is only one form of primitive boat, there is at least one other class of primitive boats, which is quite distinct from the dugout, and which appears to have been conceived under different conditions. This is the "hide boat." Some indeed suppose it to have been the primitive boat.

> "Of twisted osiers the first boats were made,
> O'er which the skins of slaughtered beasts were laid,
> With these the Britons on the ocean row,
> And the Venetians on the swelling Po."

Following in an humble sort of way Mr. Phil Robinson's lead I will try and imagine the origin of this boat. A savage hunter having killed a deer, finds he has a deep and rapid river to cross; an idea strikes him. "Buoy myself up with the intestines of the animal and get over in that way." Finding this not quite satisfactory on mature consideration, he sews up the skin and inflates it; this is a great improvement; it is not so perishable, and he can more easily carry it about with him, so convenient does he find it that his successors continue to cross and float down rivers with its aid at the present day. Inflated hides ("sarniss" or "sonniées") are still extensively used on some of the rivers of the north of India. Then some inventive genius hit on the plans of making a wide framework of boughs, and stretching the skin over this. Straightway he advertises on the periodical palm leaf of the period, "Eureka!" "Great invention." "Only try it." "The last new patent, nothing comes nigh it." "A sure preventive against loss of lower limbs from alligators." The ancient British "coracle" (*corium*, a skin), the Esquimau "kyak," the skin boats of Western America, etc., are all evolved probably from the same parent stock, and I think the bark canoe of the North American Indian may be included in the same category, bark being so much more easily obtainable, having taken the place of the hide covering in the same way that canvas has done in the Welsh "coracle" of the present day. Our modern canoes are, I think, the offspring of the hide boat and have not been evolved from the dugout. Portability, which the dugout does not possess, is the distinctive feature of the hide boat, and so it should be of the canoe, that which mainly distinguishes it from the skiff. C. M. DOUGLAS.

LAKEFIELD, Ont., March 28.

A CHALLENGE FROM THE GRACIE.—*Editor Forest and Stream:* I will sail "Twinsharp" over the course of the M. S. C. and agree to sail around his ducker six times during the race and beat him over the finish line or pay his fare to Norristown and back and also the freight both ways on his ducker. I will sail the 12ft. skiff Gracie. I would suggest the date of April 21 at 1:30 P. M. The race to be under M. S. C. Rules.—E. A. LEOPOLD (Norristown, Pa.).

A. C. A. MEMBERSHIP.—Eastern Division: Frederick T. Mason, Norwich, Conn. Northern Division: J. A. Pritchard and S. Hughes, Lindsay, Ont. Atlantic Division: Robert E. Molloy, C. V. Schuyler, Stephen Rogers, Jr., W. H. Geib, I. V. Dorland, Arlington, N. J.

DEATH OF COM. WHITCHER.—Mr. W. F. Whitcher, of Ottawa, whose obituary appears on another page, was commodore of the Ottawa C. C. and a lifelong canoeist.

ATLANTIC DIVISION MEET.

Editor Forest and Stream:

Dr. Kitchel refers to me in his recommendation of Cheesequake Creek as the site for the Atlantic Division meet, and says I know all about it. He is right. I know Cheesequake better than I know my catechism. For three years I have made Pop Applegate's old inn—a quaint hostelry two centuries old—my cruising headquarters, and after trying the Knickerbocker clubhouse on the Hudson, the New York clubhouse on Staten Island, Marmalade Lodge on the Kills, Perth Amboy and the Shrewsbury and Rahway Rivers, I am satisfied that Cheesequake is the pleasantest cruising headquarters within easy reach of New York. For a lazy cruiser like myself it is a paradise, because, no matter which way wind or tide are serving, I can always sail for a day with both these elements in my favor. I can cruise up the Raritan and back, up Staten Island Sound and back, to the Narrows and back, to Sandy Hook and back, or in any one of as many directions as there are points to the compass, the course all depending on the direction of the wind and the state of the tide.

I went down to Cheesequake yesterday as a representative of the Atlantic Division. The New York and Long Branch Railroad (from foot of Liberty, Cortlandt or Desbrosses streets) runs along the shore from South Amboy to the creek, distance two miles. About midway between these two places there is a high wooded bluff right on the shore, where a camp could be made. The railroad has been cut through this bluff, leaving enough space shoreward for twenty-five or more tents. A little dock would have to be built out into the bay for fifty feet, as the bottom is soft when the tide goes out. Another bluff two hundred yards to the eastward of the creek is about the same distance from the railroad. It is partly wooded, and will accommodate one hundred tents. No dock would be necessary here as the bottom is hard sand and gravel, and there is ample beach in the highest tide to keep the canoes out of the water under the face of the bluff.

A sailing course of as many miles as desired can be had, and there are few days in summer when there is not a sailing breeze. The view from the bluffs is magnificent, taking in Sandy Hook, the whole lower bay, Staten Island and the Raritan River.

Pop Applegate can accommodate a few hotel canoeists if his house is not filled with summer boarders, as it frequently is. There is a hotel back of the second bluff mentioned above which is now unoccupied, but it may be opened in the summer. Perth Amboy, to which town I have sailed from Cheesequake in twenty minutes, has three hotels and many boarding houses. Keyport, about the same distance to the eastward, has two big hotels, one of them—the Mansion—the best country house I ever put up at. South Amboy has two hotels.

Provisions can be obtained for camp at any of the above places. Four trains each way on week days stop at Morgan station, which is on the bank of the creek.

I can obtain permission for the Division to camp on either side by assuring the owners of the land that the Division will behave itself. I have a personal acquaintance with every man, woman, child and dog in the country for miles around. All of 'em, dogs and all, put their trust in me, and I in them. The natives are fishermen, hunters, oystermen and clammers, and they are honest. I left my Barnegat cruiser in an open shed on the creek bank last December with considerable cruising duffle in it, unlocked, and when I opened the hatches yesterday not even a tin cup had been touched.

This site is a day's cruise from the New York, Newark, Brooklyn and Red Bank clubs. The Knickerbocker and Passaic clubs can make it in a day and a half, and the Newburgs in two. The Philadelphia canoeists can take the Camden and Amboy Railroad to within a mile of two or the camp. If the Washington men wish to know something about the place they can ask F. H. Moore ("Tonic") of the Potomac club, who came all the way from Washington last November to spend two weeks with me around old Cheesequake.

The tide in the bay is not very strong, but the mosquitoes are very robust. SENECA.

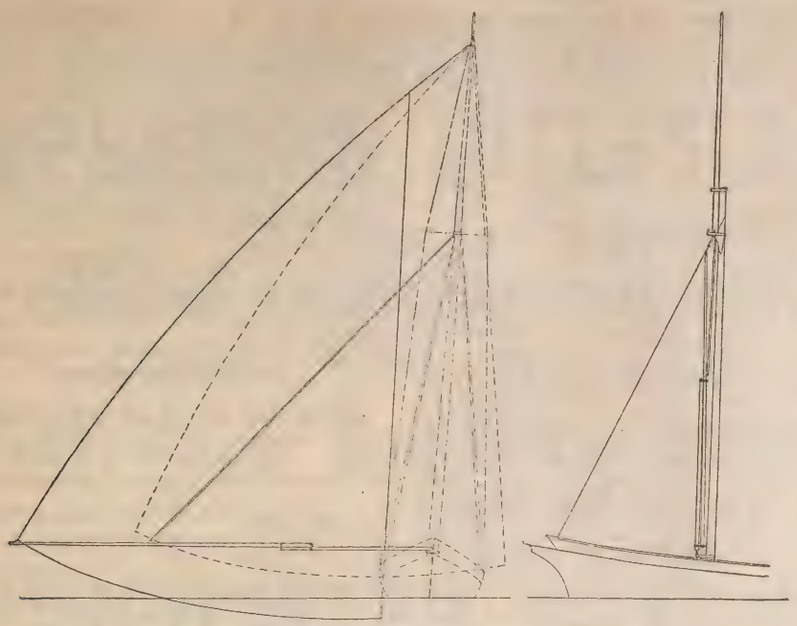
RAHWAY, N. J., April 2.

THE NEW A. C. A. CUPS.

THE following letter will show that our correspondent "Paddle" has not been idle, but has followed up his suggestions by actual work, and in one club alone the sum of $62 has been raised; which with Mr. Whitlock's subscription, makes a total of $67. The A. C. A. will not undertake to receive the subscriptions, but those wishing to subscribe can send the money to the FOREST AND STREAM, stating, of course, the purpose for which it is intended. As soon as the requisite amount has been raised Com. Gibson will be requested to appoint a committee to select designs and purchase the cups. With the example of the Springfield C.C. before them other clubs should soon make up the required amount.

Editor Forest and Stream:

Some weeks ago I suggested in your columns that possibly a solution of the cruiser versus racer problem might be found in the offering of suitable and valuable prizes for other than purely sailing races. My suggestion was that two cups of same value (say $100 each) and appropriate design and finish, be purchased by popular subscription, to become perpetual challenge trophies to be raced for yearly at the A. C. A. meet. One to be offered for the paddling championship, which would be decided in Classes III. and IV. boats, sailing canoes decked with wood, and the other to be offered for the combination races, as the one most likely to bring the true cruiser to the front. Two of your correspondents were pleased to comment favorably on the scheme, but no one has made a move toward raising the necessary funds, so the cups are as yet in embryo. Now, as a tangible proof that we are prepared to back our words with the necessary lucre, I send you a list of Springfield C. C. men who have each pledged the following amounts: H. E. Rice $5, C. M. Shedd $5, F. D. Foote $5, E. H. Barney $5, G. M. Barney $5, F. A. Nickerson $2, C. H. McKnight $3, W. R. Hetherington $2, N. D. Bill $5, John E. Bowles $5, J. G. Read $5, Emil Knappe $3, L. W. White $2, H. D. Marsh $3, F. D. Walker $3, W. C. Marsh $2, F. L. Safford $2; total, $62.



If some public-spirited canoeist in each club will start out with a list, the necessary funds will soon be raised, and we can turn the amount over to the present regatta committee, or, better yet (as the present regatta committee seems to be busy enough with already heave burdens) petition Com. Gibson to appoint a special committee to purchase and assume charge of the cups until the next meet.

Now let us hear from the men who have been doing so much missionary work for the cruiser, and trying to make a racer of him. Let them send their dollars instead of their two-column contributions finding fault with the existing state of things, and with rules and regulations with which a very large majority of us are well pleased.

If Springfield can raise $62, the necessary $200 or $300 ought not to be long in coming, and for that amount two very large and handsome cups of oxidized copper can be provided. PADDLE.

PURITAN C. C.—Boston, April 2.—*Editor Forest and Stream:* A meeting of Boston canoeists was held one evening in January, and they organized a club under the title of the Puritan C. C., for which excellent quarters have been secured at City Point. The club is duly incorporated under the statutes of Massachusetts, and has obtained a five years' lease from the Boston Y. C. of the commodious buildings, wharves, lockers and other property (formerly used by the Pierce brothers, yacht builders, on Sixth street) adjoining the Boston Y. C., thus acquiring ample accommodations and an incomparably beautiful water site. The object of the club, as set forth in the certificate of incorporation, is "to unite amateur canoeists for the encouragement of athletics for the purposes of pleasure, health or exploration, by means of meetings for business, camping, paddling, sailing and racing, and by keeping logs of voyages, records of waterways and routes, details, drawings and dimensions of boats, and collections of maps, charts and books." The club starts under very favorable auspices, already numbering over twenty members, who are busy planning pleasant cruises for the coming summer. The following is a list of officers: Com., Francis J. Baxter; Vice-Com., Chas. F. Hodge; Rear-Com., Lothrop Hedge; Sec'y., Hubert Huntington; Treas., Francis B. Wheaton. These officers, with Samuel A. Brown and Joseph E. Hill, constitute the board of directors. John R. Robertson is measurer.—HUBERT HUNTINGTON, Sec'y, 5 St. James Avenue, Boston.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Bell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

CAPT. CRANDALL'S SPINAKER BOOM.

Yachting.

CAPT. CRANDALL'S SPINAKER BOOM.

THE accompanying illustration shows the spinaker boom devised by Capt. Crandall, of the schooner Mohican. The boom is in two parts, each fitted with an iron similar to the ordinary masthead cap, so that the longer can be run in or out, as shown. When run in, the boom will pass under the stay. The position of the sail when used with the shortened boom is shown by the dotted lines.

JUDGING BY EXCEPTIONS.

Editor Forest and Stream:

The *Tribune* has continued discussing keels and boards with itself, its latest remarks being in much more fairer and more moderate spirit than its first rather reckless attack. The *Tribune* acknowledges that the improvements made in American yachts during recent years should be credited to the cutter, but when the *Tribune* says the keel has not been proven as good as the board it falls into the common error of superficial critics, and decides the whole question upon three international races, quietly ignoring the results of hundreds of races equally as pregnant in proof, though not as hugely advertised. It is not of much concern what the *Tribune* thinks, but it is just as well to set superficial critics straight for the common good. It has been most thoroughly demonstrated, aside from the national races, that up to 70ft. load line the keel is at least as good as the board, and the cutter, beamy or otherwise, just as good as the sloop. The records are proof, and when the *Tribune* can muster a sloop, orthodox trap of old or modern compromise, which can average better than Bedouin, Oriva, Clara, Pappoose, and scores of other cutters, and even the Burgess keel cats, it will be time enough to call upon keel people to prove their case. As yachts under 70ft. comprise nine-tenths of the fleet it is not a matter of much concern what may be preferred in very large craft, within the reach of a few rich men, although even among the largest, the tendency is constantly toward more depth and draft and less reliance upon the board, as your article on schooners last week very plainly intimates. The latest schooners are within a foot or two of the draft of keel vessels, and this difference is purely nominal, so that the same end is likely to be reached in big craft as in small, the centerboard being only resorted to as a makeshift in cases where draft is an objection for near-by sailing.

As we take more kindly to deep water, big craft, unfitted by their size for small work in shoal surroundings, promise, from present tendencies, to evolute into the regular keel. This may be left for the future to decide. Meanwhile, sound critics will not build solely upon the international races, representing special issues and results brought about by many other features overshadowing keel and board in their influence. Neither do good critics allow the "English" or "American" of the question to interfere in forming judgment upon purely mechanical and scientific problems. Otherwise I might note, were I arguing for the English, that not only has our good old sloop been transformed into three-quarters cutter, with the remaining quarter on the point of being accepted, but that our schooners are being Anglicised in rig as well as in hull. The round spar nose-pole is driving out the bowsprit and jibboom with all its attendant complications; staysails and one jib have displaced big jib and flying jib; spars are stepped Miranda fashion, etc., below and aloft. All of this is hailed with approval by good sailormen, who do not care a rap where things originated, as long as they are shipshape and seamanlike. "Patriotism" is a very lame argument, though it seems to be about all that many persons bring to bear in the matter. In its last article the *Tribune* has left "patriotism" at home for the nonce, and its reflections are much more rational in consequence.

If the *Tribune* and daily press generally will bear in mind that size and noise do not invest a race with any more critical importance than a match sailed quietly between well-mated craft of modest tonnage and cost, the columns of the daily press will be read with more respect by yachtsmen and further more correct views among the general public. It is the conditions under which a match is sailed which should give the results importance, and not the mere size and money value of the contestants.

NEW YORKER.

THE FISHERMAN'S RACE.

THE long talked race between the leaders of the Boston and Gloucester fishing fleet was sailed on April 5, resulting in a victory for the new Burgess fisherman, Carrie E. Phillips. The race was sailed under the following conditions, the first course being chosen. The referee was Vice-Com. J. Malcolm Forbes, E. Y. C., with Messrs. Daniel Appleton and G. H. Richards as judges. Starting from red buoy off Boston light.

Course No. 1. 15 miles to windward or to leeward, round a tugboat flying two flags on one mast, leaving the tugboat on the port; thence back to a line between the black buoy off Point Allerton and Boston light. Vessels must pass to the northeast of Harding's ledge, and to the south of southeast breakers off Baker's Island both going and returning.

Course No. 2. From starting line leaving Harding's bell buoy on starboard, to and around buoy on Davis' ledge, leaving it on port; then to Halfway Rock, leaving it on port and back to a line between buoy off Allerton and Boston light.

Course No. 3. From starting line to and around Halfway Rock, leaving it on starboard, to finish line, leaving Harding's bell buoy on port.

The entrance fees shall form a sweepstake purse, which shall be divided into the following prizes, as follows: Winner to take 40 per cent.; second vessel, 25 per cent.; third vessel, 20 per cent.; fourth vessel, 10 per cent.; fifth vessel, 5 per cent. Each vessel shall be steered by her regular skipper or by one of her regular crew. There will be no time allowance. No lead ballast shall be used. If the race be not finished by one of the vessels before sunset, the race shall be called off, and shall be sailed the next day at the same hour. There will be no time allowance.

The schooners had all hauled out just prior to the race, and were in the best condition. The wind was W. by N. in the morning, but by 11 A. M. it was blowing from S.E. by E., and the markboat was sent away to log off 15 knots. The preparatory whistle blew at 11.10 A. M., the starting whistle being 10min. later, with 10min. to cross. The five schooners were working to leeward of the line, the wind being quite light. The J. J. Merritt Jr. and the J. H. McManus were near the line, the Roulette and Carrie W. Babson some distance off, and the Burgess boat, Carrie E. Phillips, with Mr. Burgess and Capt. Crocker on board, still further away.

The Merritt was first across the line, getting a good start, the others following more slowly. The Phillips carried gaff topsail, maintopmaststaysail, and jibtopsail beside her four lower sails; the others carrying also their flying jibs. The fleet was timed: I. J. Merritt, Jr. 11:20:54, John H. McManus 11:22:42, Roulette 11:22:48, Carrie W. Babson 11:25:14, Carrie E. Phillips 11:26:30.

All crossed on starboard tack, but after a couple of minutes the Merritt went on port tack, followed by the McManus. The Roulette held on a little longer, while the other two kept on starboard tack for some time, the Phillips leaving the Babson steadily. The Merritt continued to increase her lead of the McManus, the Roulette gaining on the latter, while the Phillips, now on the same tack, was overhauling the second and third boats. At 11:38, when off Hull, the leader went on starboard tack again for the open water, the other two following a little later, and the Phillips at 11:47. Soon after going about the McManus met with a mishap, the jibtopsail halyard parting while a hand was aloft on the stay, letting man and sail down together, the sail being taken in. The Babson was now well astern and looking for flukes which she did not find. Roulette was gaining on the second boat, while the Merritt and the Phillips were doing the best work of the fleet, the latter holding the leader and gaining on the second and third boats.

The Merritt tacked off Nantasket Beach, Roulette being the next about. The Phillips gained steadily on the Merritt off Cohasset, both tacking frequently, the wind then being quite light, and finally took the weather berth. Meanwhile the McManus, well off shore, was getting more wind, and for a time it seemed that she would come out to windward when all came together, but she failed to do so. Passing Minot's Ledge Light the Phillips was to windward of the Merritt, and a little ahead, but from that point to the weather mark the Burgess boat gained rapidly. The Merritt housed her foretopmast after taking in jibtopsail, but the Phillips continued to leave them. Roulette was doing well, but she lost her jibboom, which crippled her somewhat. The times at the weather mark were: Phillips, 2:18:50; Merritt, 2:22:20; Roulette, 2:29:00; McManus, 2:33:20; Babson, 2:44:00.

The Phillips led by half a mile at the turn, jibing to starboard and starting for home with a little more wind, now a little more to the south. The boats traveled home very fast, as the wind increased, the Phillips and Merritt first, then the Roulette and McManus, the Babson being last. When about five miles from home a severe rain squall struck the fleet, after which the wind was quite light. The Phillips won by over a mile, but the others were helped along by a second heavy squall.

Following is the official time of the race:

	Start.	Outer Mark.	Finish.	Elapsed.
Carrie, E. Phillips	11 26 30	2 18 20	3 49 56	4 23 26
I. J. Merritt, Jr.	11 20 54	2 22 18	3 57 12	4 36 18
Roulette	11 23 48	2 28 53	4 12 26	4 49 38
John H. McManus	11 22 42	2 33 05	4 17 27	4 54 45
Babson	11 25 14	2 43 53	4 35 00	5 09 46

A WINTER CRUISE IN THE SOUTH.—IV.

(Continued from page 116).

Quickly starting sheet until all the strain was brought on the weather shrouds, and getting the jibboom on deck after some trouble, we made an examination and found that the eye of the band on the stem to which the jibstay was fastened had broken into three pieces, allowing the stay to run out through the bee hole in the bowsprit.

We now got the jib in and everything snug aboard, and trimming the mainsail so as to press the mast slightly forward, passed the jibstay back through the bee hole, and leading it to the stem head made a triple tackle fast to it, passed it round the windlass, and heaving, set the mast up until the stay was taut. Of course, with the weight of the mainsail and spars on the mast we could not get it up to place, which made her steer badly and made it very difficult to work to windward.

As we reached further into the open the swells became longer and not so vicious, making our road a little easier. As the sun fell the wind moderated somewhat, although it was still a storm, and the heavy swell kept up. The bottom of Albemarle is level, and there is about 12ft. of water nearly its whole length and breadth, so that navigation is easy. The shoal water, however, makes a sea very quickly, and a sharp, ugly one at that.

We held a council of war and concluded that in our crippled condition we had better get into port for repairs, and our nearest port was Norfolk, 60 miles away. Under ordinary conditions we would have had a slant into North River, and could have reached it inside of two hours, but under our crippled rig we had to head six points off the wind, which would bring us west of the Pasquotauk River. We headed the Monarch up as close as we could, and resigned ourselves to an all-night battle.

According to the beacon and lighthouse list, Croatan Light should be visible 11¼ miles at 15ft. above water level. We were only 5 miles from Croatan, but had already sunk her light from our light boards, which were 15ft. above water. We were within 5½ miles of North River Light, which was supposed to be visible 11¼ miles, and 10 miles from Wade's Point, which was supposed to be visible 10¼ miles, yet not one of the three could be seen, and we did not raise Wade's Point Light until we were within 4 miles of it, about 9 P. M., about the same time we raised North River Light, being within 5 miles of it. These lights are really ship's lanterns, and do not show much further. The lighthouse board is paying some attention to these waters, having erected Croatan and North River lights within the past two years, and being now engaged on Roanoke Light, yet the results obtained are still very tame. The trouble seems to be that the district is too large; it includes the Chesapeake Bay and the lower sounds. As the Chesapeake is the most important it naturally takes most of the attention, with the result that the sounds are neglected. There should be two lights to each one at present in the sound, and three buoys to each one now there.

As the evening wore on it grew colder and colder and the spray began to congeal as it fell, and we soon had several inches of ice on deck, making the Monarch still more loggy. At 9:30 P. M. we tacked under the lee of Wade's Point Shoal and reached along under the land, making short stretches occasionally to keep out of the chops. At 10 o'clock we were off North River Bar. The western point sets out nearly three miles and the eastern one slightly further, both being long finger-like shoals. Between the points of the two is a channel with 8ft. of water about 200yds wide. On the eastern point is a wreck with timbers nearly up to waterline. We made several boards from the lighthouse on the western point to the wreck on the eastern one, but it being dead to windward the tide running out strong, it was 10:30 before we finally got across; then starting sheet, we ran in under the land and anchored at 10:50, thoroughly tired out. When we anchored there were 2in. of ice on deck aft and about 6in. forward, while the shrouds up to the light boards were 4 to 6in. in diameter. We had to crack half a ton of ice off the anchor and chain before it would run, while the halliards and downhauls gave us another half hour's job. Logged 42 knots, although we only made on our course 24 knots.

Sunday, Jan. 22, made sail at 1 P. M., having spent the forenoon in clearing up. Set mast up a little more, so that we could carry full sail; wind from N., fresh, but growing lighter; barometer, 30.50; thermometer, 30. The wind being dead ahead, we tacked from shore to shore, but the tide running out of Currituck Sound strong through the canal, caused by the heavy northerly winds, made our progress slow. The mouth of North River is fan-shaped, running from a point at the north, where the river is but a few hundred yards wide, to a width of over six miles at the bar. Although the mouth is closed, as I said before, except for the narrow channel 200yds. wide, by the two shoals, which, by the way, make a splendid harbor from southerly winds—there is not a shoal or bar inside the river, and the bottom is nearly level, varying only from 7 to 10ft. in depth. The canal company is at work dredging a deeper channel across the bar at the mouth, and will have by the end of the year a much better entrance.

At the place where the river narrows into almost a creek we came across what to our ideas was a novelty. For some time before we approached it, we noticed a red beacon with the lamp about twenty feet above the water. The beacon seemed to be composed of three piles, with a cluster of piles around the base. But the novelty to us consisted of the fact that the lamp was lit, whereupon we supposed that some one had neglected his duty. After passing several of these beacons and asking all the questions we could think of about them, we finally discovered that they were of recent invention and were being given a trial. There are ten of them along the North and North Landing rivers and Currituck Sound, and are built by first sinking an iron pile about 12in. in diameter and protecting it by wooden piles. On top of the iron piles are three vertical reservoirs of compressed gas and upon the top of these a ship's lantern. The gas is lit and left alight until it is exhausted, which requires over a month. Once a month the launch from the lighthouse station at the entrance of the canal into Currituck Sound comes down and puts up new reservoirs, taking the empty ones back to the station to be refilled.

We ran up the river to the entrance of the Albemarle and Chesapeake Canal, where we dropped anchor. Logged 12 knots. The schooner Ocean Bird, which we had twice seen in Roanoke marshes, was lying here, trying to get into the canal. The ice was running pretty thick, however, and they did not dare attempt it. They also reported the upper cut in the canal closed with ice; so we made the best of it, and taking the ladies ashore, endeavored to find a native to talk with, but it was impossible. A greater wilderness does not exist on the continent. The only houses were two miles ahead at Coanjock, where the only wagon road leading down the peninsula crossed the canal. Here a store had been located, and the bridgetender and a few employes of the canal lived.

Monday, Jan. 23, we lay all the morning gazing at the ice slowly floating out of the canal, and hoping for a tug to show up. Thermometer at noon 45°, barometer 30.20, stationary. At 1 o'clock the Ocean Bird got under way and began poling into the canal, and seeing that they were making headway, we concluded to do likewise. After two hours work, in which we had made less than half a mile, we looked around for a better way of getting along. It must be remembered that there is no path along the canal, the diggers had simply thrown up a high bank on each side. These banks were now overgrown with trees and a rank undergrowth of bushes. On the far sides of the banks was an impenetrable cypress swamp. Notwithstanding the apparent difficulty we concluded to track the yacht, so sending two men out on the bank with a long line from the masthead, so that it would clear the small trees, then scrambling and climbing along, we made at the rate of a mile an hour, but no work seemed too hard which would bring us in sight of a human face. We soon caught up with the Ocean Bird and stopped alongside to rest and chat awhile. During the chat her owner proudly told us that she was considered a fast boat, she had done her nine knots before the wind, she was also as stiff as they made them. Notwithstanding which she had been capsized twice, the last time in the middle of Albemarle Sound, had sunk but was easily raised. From the different stories I heard along the sounds it seems to be the usual thing to capsize once a year or so. I heard of a three-masted schooner which had come down after watermelons, and was lying at anchor with only mainsail set, which had turned turtle. By the way, the fastest sloop on the sounds is reported to be the Thomas Hunt, hailing from Elizabeth City, she was built by Smith, at City Point, Long Island, to beat the Heywood, which was formerly the crack craft.

We resumed our tracking and passed through the drawbridge at Coanjock at 4 o'clock; here we heard that there was a fleet of large schooners lying about two miles above the bend, unable to get across Currituck Sound on account of the ice and low water. So with spirits raised (not to the lips) we pushed on, hoping to tie on to the end of the string. We had gone about a mile when the steward fouled the tow line and was dragged overboard, whereupon we concluded to stop and dry him off. Just above us we noticed the schooner John W. Bell, of Laurel, Del., aground; so we made fast just below her. Her captain told us it was first boat in, first boat out, so that the string of schooners ahead could not move on until the tug had come back and pulled him off. So we made our tow line fast to his stern and turned in, having made four knots on our way.

Tuesday, Jan. 24, opened cold, north wind, fresh, thermometer 46°, barometer 30.50 and falling. There being no prospect of moving on we escorted the ladies back to Coanjock and helped them to exercise their shopping proclivities in the only store with beneficial results to the larder, after which I joined the captains of the belated schooners in a duck shoot. This log not being part of the gunning columns of the FOREST AND STREAM, I do not think it necessary for us to confess to the size of our game bags. In the afternoon the tug came down, and the Belle having warped herself into deep water, took us in tow and brought us up to the waiting fleet at the mouth of the canal, then we waited some more, logged for the day two knots, a truly magnificent run.

Wednesday, Jan. 25, the wind blew from the north all day, the tide steadily running out. The ice, however, had rotted during the night and several steamers tried to break through. The tug Gipsey started across with a raft of forty links; she lost nearly half of it in the passage. After her followed the fleet of small canal steamers, and then another tug with a raft. Then, when this excitement was over we sat down and waited some more. A few of us went out after ducks, the constant booming of big guns in the batteries across the sound leading us to believe the ducks were there at last. Upon returning, however, it was the unanimous opinion of the party that they must be shooting at targets over there, for not a duck was in sight. We then organized an expedition of a dozen yawl boats down the canal to Coanjock, where on arriving the majority spent their time in reading the notices plastered all over the front of the store, while the others stood out in the road and showed the way they would kill ducks, if there were any there, by tossing tin cans in the air and perforating them. By intense attention to the notices on the store front we ascertained that a blacksmith came to town twice a week and shod horses for $1.30, also that we were not to shoot on the grounds of the Monkey Island Gun Club, wherever they were, and that Mrs. —— was to be despoiled of two pigs and some household articles by the sheriff. Digging among the ruins of antiquity we also discovered that some time in the remote past, somebody's circus had got lost down that way. Then by way of recreation we manned our boats and rowed back against the head wind and tide to Long Point, where we waited again.

The lighthouse station is the only point of interest here. The Government has docked up one side of the canal, thereby making something out of nothing—that is to say land out of the marsh. There is an office and a residence, three coal sheds, the gas house and compressor, a very complete plant for supplying the gas beacons, and a large house into which a canal is dug and in which the steam launch, about 60ft. long, is kept. The people at this station were very pleasant and did all they could to keep us amused. They were unable, however, to inform me how two

buoy tender boats were to keep 1,500 buoys and over 100 lights in good order all the time.

Thursday, Jan. 26, opened with the wind N.W. fresh, thermometer 40 and barometer rusted into its old place. During the day the tugs chased up and down the canal, occasionally bringing up another schooner from Buck Island, which is the point on North River that the tows are made up at. All through the day the small canal steamers passed us, going both ways, the ice having now been thoroughly broken up; but there was not yet water enough for our fleet. Once we grew disgusted and tried to raise sail and work across by ourselves, for every passing craft seemed to select us as a desirable piece of wood to bump into; but after getting worse jammed than ever we gave it up, and fell back to our old place at the end of the string.

In the afternoon the lighthouse tender Jessamine came up with three barges and a pile driver in tow. She had just finished with Roanoke Light, and as she had the right of way at the wharf there was some profanity until the tow was strung out along the other bank. This woke our tugs up and they concluded to run whatever of the fleet they concluded to run whatever of the fleet they could over into North Landing River. They started with the Edna A. Pogue, a schooner, which had left Newberne three days before we did; but as she stuck on the bar outside the canal, they gave it up and let her lay there.

The canal only guarantees 7ft. of water, yet every loaded schooner in the fleet drew over 7ft.; so that the fault was with the fleet and not with the canal. And as they would not take one without taking all, the deep-laden ones kept the whole fleet back.

There were now in our fleet thirteen sail; among them was the Pogue, noticeable in that although she was a three-masted schooner, yet she had a pointed stern; then the old Centennial, built in 1870, at Bridgton, N. Y.; she was built of logs, bolted together and entirely without timbers. She is not particularly successful financially, although had she been built as usual she would have been in pieces long ago. When she goes ashore now her crew light pipes and it down to wait until something comes along to pull her off, for they know that no tackle at their command is heavy enough to heave her off, and no sea heavy enough to pound her to pieces; indeed, they say that when she takes bottom the shoal itself sends around to the life-saving station to come down and heave her off, for she breaks the shoals through; that, however, I presume is a libel.

Friday morning, Jan. 27, the wind was still N.W. fresh, but the thermometer had risen to 45° and barometer to 30.20, so that we had slight hope of a change. The wind not being strong enough to hold the waters back any longer, they were coming in slowly and the tugs concluded to give us another try, so taking half the fleet between them they took us up to Deep Bend, North Landing River, where they left us, thirteen miles from where we started from. At 6 o'clock in the afternoon the tugs came back with the rest of the fleet. In bringing them to, one tug ran under the bowsprit of the schooner Geo. Taulane and carried away the end of her flying-jibboom and rigging, but we didn't mind a little thing like that by this time. We again got under way and at the ferry picked up another small schooner, then got under way again. Shortly afterward the Bell ran up on a sunken log. She was at the head of the fleet; the rest, of course, kept on. In about five seconds we had one of the prettiest messes ever seen. One schooner in his anxiety to check his headway, threw overboard his anchor, but as he had shipped it for canal work and taken the stock out and the chain off, it gave him little satisfaction. He dropped his yawl-boat over and moored it where the anchor dropped, then swept for it, caught it shortly after the fleet moved on, rowed after us, and arrived at North Landing nearly as soon as the fleet. After pulling at the Bell for a couple of hours the tugs gave it up, and leaving her for the water to rise, took the rest of the fleet in tow and arrived at North Landing, another 13 miles, at 3:30 A. M. Saturday.

Saturday, Jan. 28.—The wind was still N.W., fresh, thermometer 35°, barometer 30.15, the water had risen a little and the tugs had brought the Bell up, and at 9 o'clock got under way again, through the Virginia cut. All went well until we reached the second drawbridge in the canal, when the Taulane, which was a hard steerer and had been yawing all over the canal, ran her nose into the bank, parting her line and bringing up all standing; she was the second boat in the string and the rest of us piled upon her rather suddenly. We received another trade mark.

The tugs went to work to straighten us out again, and while they were doing it the small packet W. B. Rogers came along, bound the same way with us. Instead of waiting for the jam to be cleared up he began to push his way through, and when abreast of us he reached a slightly open spot, the Taulane was still lying across stream, her bowsprit in the trees and her mainboom nearly across the canal. At this point the Rogers rang her jingle bell and in ten seconds sparks began to fly, the mainboom of the Taulane went in one door of the Rogers' pilot house while her captain went out the other door, the roof sailed up in the air and the sides fell in like the sides of a card house, then the boom broke, the steamer stopped and the onlookers started in to pick up camp stools and duffle.

It was an hour before this mess was cleared up, then the head tug took the Rogers astern of her and ahead of the second tug so as to steer her, while the tow had the benefit of the Rogers's engine. Two darkies were placed at each steering chain; the captain stood on the hurricane deck and passed the word through from mouth to mouth to the darkies who pulled on the chains, and so she was kept in the canal.

We passed out of the canal at Great Bridge into the Elizabeth River and for a mile down the river, when a lumber barge took bottom and we were all tangled up again, a small schooner carrying away her main shrouds.

The tide was rapidly falling, and before we were straightened out it had fallen so that half of us were aground. The tug took those that were afloat and went on, returning for us at 6:30 P. M., when we were all afloat, and at 8 P. M. we dropped anchor in the East Branch at Norfolk.

Two days were spent in visiting Norfolk, and Monday night we took the Bay Line steamer for Philadelphia via Baltimore, to return when the weather was warmer. CHAS. L. WORK.

STARLING.—The steam yacht built for Mr. E. A. Seccomb, of New York, from Mr. J. L. Frisbie's designs, was launched on April 7, at Lawlor's yard, East Boston, where she was built by Mr. A. D. Story, of Essex. She is a wooden yacht, 122ft. over all, 101ft. l.w.l., 20ft. beam, and 7ft. 6in. depth, with about 150 tons displacement. The launch went off successfully, Miss Grace Seccomb christening the yacht Starling. The engines will be put in by Neafie & Levy, of Philadelphia, and the yacht will be completed by the middle of June. Capt. W. A. Withey, who has superintended the building, will command her.

THE RETURN OF THE ALVA.—Mr. W. K. Vanderbilt's steam yacht arrived at New York on April 6, and anchored off the New York Central docks, Sixty-fifth street, N. R. She left New York on July 2, arrived at Queenstown on July 11, since which time she has cruised in the Mediterranean and European waters. She left Gibraltar on March 10, touched at Madeira on the 12th, Teneriffe on the 14th, Nassau on the 28th, and Brunswick, Ga., on the 30th, where her owner left her.

THE MUSQUITO FLEET RACE, April 5.—As usual, the season opens with the annual race of the Boston Musquito Fleet, 15 and 13ft. boats, and in spite of a good S.S.W. breeze and a cold rain, 8 out of 11 entries sailed the course, which was from a mark boat anchored off McElroy's to the smelting buoy off Thompson's Island, leaving it on starboard, thence to white sloop anchored off Nautilus House, foot of O street, leaving it on the port, back to Smelting Buoy, leaving it on port, to finish, about 4 miles. Sprite capsized when nearing the Smelting Buoy for the first time. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Lucy, Howard Stickney	14.10	00 47 00	00 47 00
Minnie, Henry Jackson	14.10	00 48 45	00 48 45
Baby, J. W. Brandon	13.02	00 55 00	00 53 21
Lizzie, H. McDonough	13.04	00 55 02	00 53 40
Sprite, H. W. Wells	14.04	Capsized.	
SECOND CLASS.			
Egeria, W. J. Condon	12.01	00 56 17	00 53 34
Bunty, M. Ransom	12.11	00 56 15	00 54 45
Bessie, W. C. Charrington	12.02	1 06 10	1 03 27

Lucy takes first prize, $10; Minnie $5 and Baby $2.50. In second class Egeria takes $10, Burty $5 and Bessie a pair of oars presented by the Boston Yacht Agency. The judges were; J. Bullard, chairman; C. L. Crockett, F. Williams. Baby made a protest against Minnie, but it was not allowed.

HORIZONTAL KEELS.—The Halifax, N. S., *Daily Echo* of March 13 publishes the letter by "X." in the FOREST AND STREAM, with the following comments: "A member of the R. N. S. Yacht Squadron who had often heard Mr. J. E. Butler, the well-known yachtsman and builder of the Hebe, Esme and a host of other good little boats, speaking on the subject, showed him the above letter. 'Why yes,' said Mr. Butler; 'as you know, that is an old idea of mine. I got the notion away back—about 1860. The two brothers Allen—Ambrose and John—used to sail a couple of schooner-rigged boats about 25ft. or 26ft. long against one another, and one of them, I think it was Ambrose's, was always beaten going to windward. Her owner kept puzzling what to do to remedy the defect, and one evening before a race he hauled his boat up in a field and fastened a piece of board 5in. or 6in. wide in the middle, and running to nothing at each end, on the bottom of her keel, making it look like a capital T upside down. Next day instead of being beaten she walked out to windward of the other boat in a way that astonished them both. Ever since then I have thought that there was a great deal in the idea. I tried it in the shape of a concave-sided keel on the Esme, and I always believed it helped her greatly going to windward.'"

BUILDING AT BOSTON.—At McKie's yard Mr. Fabyans' steam yacht is planked, the frames for Mr. Cochrane's schooner will be started this week. Mr. Stetson's Sapphire is planked and the joiner work is partly completed. Smith has the Albert well along and will launch her on the spring tides, about April 26. Daisy, cutter, is being well overhauled, and Aglaia, formerly Maud, will have a ton of lead added, while Tholga, cutter, will have half a ton of lead on keel. Francis, sloop, has been changed to cutter rig. Raven, sloop, has had 3,500lbs. of lead added to keel. Mr. Taylor's cutter is well along at Pryor's yard, and a similar craft, also from Mr. Borden's designs, will be built for a Providence owner, to be 39ft. over all, 12ft. beam and 7ft. draft. Lawley & Son, beside the launch of Marguerite this week, have lately put overboard a fleet of smaller yachts, nearly all cutters; Messrs. Eaton, Messrs. Welch and Wilkinson's craft, while the Fowle and Flint yachts are both ready for the water.

A SUCCESSOR TO THE PILGRIM.—Mr. E. L. Williams will commence work at once on a cruising cutter from his own designs for Dr. W. H. Winslow of Pittsburg, Pa., to take the place of the little Pilgrim, so well known to all the readers of the FOREST AND STREAM through her owner's interesting logs. The new yacht will be 38ft. over all, 29ft. l.w.l., 9ft. 3in. beam, and 6ft. draft, with an iron keel of 5 tons. She will have a high freeboard, giving over 5ft 9in. under deck beams, but with a long and handsome clipper stem and a fine counter she will not show her height. On deck she will have a very small cockpit for steersman. Below there will be two cabins 6ft. 3in. long, each with two berths beside the sofas. The galley is large with good headroom, and will have a berth for man, with icebox, tanks, etc. The arrangement will be very good, every inch of space being utilized. The yacht will be cutter rigged and will be ready in time for a cruise this summer.

IMPROVEMENTS AT MARBLEHEAD.—The Eastern Y. C. proposes to build a float on the neck side of the harbor, in front of the club house, which will be a convenience, but what is imperatively needed if the place is to be made popular with yachtsmen is a good float on the town side, where yachtsmen can land without being victimized by local organizations. The approaches to the water from the depot are also much in need of improvement. Marblehead can easily be made the leading yachting station on the Eastern coast, but to do it the townspeople, who will reap the chief benefit, must show some disposition to accommodate yachtsmen and to offer reasonable conveniences, now entirely lacking. Some improvement in the harbor is promised by the removal of all moorings on the town side, leaving a fairway for vessels coming in or going out.

HAMILTON Y. C.—The Hamilton Y. C. held its annual meeting on April 2, when the following officers were elected: Com., F. E. Kilvert; Vice-Com., John Stewart; Capt., J. F. Monck; Sec., J. G. Watson; Treas., G. F. Bailey; Meas., Henry Lee; Committee, Messrs. Æmilius Jarvis, F. S. Malloch and Geo. Webster. Two hundred and thirty-five members were reported on the club books. It was moved, seconded and carried unanimously that the new incoming Governor-General, Lord Stanley, of Preston, be requested to act as the club's patron. The club has twenty-three sailing yachts and three steam yachts, a number of which are new, and will come out, like the club, in fresh paint. The club house at the foot of James street will be ready in the course of a few days, as the carpenter work is finished and the painters are rushing it through.

ACROSS THE ATLANTIC IN A DORY.—Capt. W. A. Andrews, of Boston, who with his brother crossed the Atlantic in the 15ft. dory Nautilus in 1878 in 46 days is having a smaller dory built in Boston and will start for England in her on June 17, intending to return next year. Capt. Marcus Kenney has bought the old Nautilus.

ELMA—PRISCILLA.—Mr. Belknap has decided to change the name of his schooner, formerly the sloop Priscilla, and she will be henceforth known as the Elma. Wilson & Griffin are making her sails and she will be ready in good season. She will carry a naphtha launch made by the Gas Engine and Power Co.

DAWSON.—Dr. B. F. Dawson, a well-known New York yachtsman, died in this city on April 3. Dr. Dawson built Valkyr, the first compromise with lead keel and board, and afterward owned the schooner Ranger and the steam yacht Hinda.

CRUISING.—Nirvana, schr., Gen. H. W. Perkins, arrived at Matanzas on March 24, sailing for Havana on March 28.... Loando, steamer, Mr. T. H. French, arrived at Charleston from Jacksonville on April 7.

SEAWANHAKA C. Y. C.—On April 7 the club house was well filled by members and guests to listen to the lecture on "Sails and How to Make Them" by Mr. Wilson. The lecture was read by Mr. Tams, Mr. Wilson explaining the diagrams. The subject was treated in a thoroughly practical manner, much valuable information being given. Mr. Wilson's long experience and close observation make him an authority on the subject and his lecture was the most valuable of the course.

A CHALLENGE FROM ST. JOHN'S.—A rumor is current that Mr. David Lynch, of St. John's, N. B. has prepared a model of a coming challenger, a yacht somewhat similar to Volunteer.

VOLUNTEER.—The cementing is now completed and Volunteer will soon be launched to lie in Lawley's Basin all summer. Her crew has been offered to Capt. Craven for Mayflower.

MARGUERITE.—On April 10 Mr. Burden's new schooner Marguerite was successfully launched at Lawley's yard, South Boston.

EURYBIA.—This sloop is owned by Mr. Chas. Pryer, N. R. Y. C., not Mr. Lawton, as erroneously stated last week.

ANACONDA.—Mr. J. C. Prague will put a double head rig on his sloop, the single jib having been a failure.

CYTHERA.—Nothing has yet been heard from Cythera in any of the West Indian ports.

MAYFLOWER.—Rear Com. Morgan's yacht is now afloat at Port Jefferson.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. K., Chicago.—See back volumes of FOREST AND STREAM for waterproofing receipts.

R. S. F.—When will "Sam Lovell's Camps" be ready for distribution? Ans. We don't know yet.

W. N. S., Hazzard, Pa.—Rules of the N. R. A. from secretary of the association, Temple Court, New York.

L. P., Phiadelphia.—Galatea was painted black in 1885, white when she raced here in 1886, and black in 1887.

G. F. P., Philadelphia.—You are eligible for membership; read the notice at the head of our Canoe Department.

LATERN, Philadelphia.—Step the mast against the beam at fore end of well. The keel will not be enough to sail to windward with.

W. B. A., Fort Simpson, B. C.—Varnish making requires long experience and expensive plant. You had best buy a good marine varnish, as advertised in our columns.

F. O. DE L., New York.—Can you, perhaps, inform me if there is any change in the game law, any bills affecting Long Island—any passed? Ans. We know of none as yet.

E. A. H., Philadelphia.—The largest folding board is suitable for an open boat of about 18ft. of moderate beam. For a sailboat such as the ordinary 18ft. cat, it is too small.

F. W. M., Toronto.—The design you mention is not like Pappoose, but she would make a good cruiser. If you desire a racer try the Bedouin in the last edition of "Yacht and Boat Sailing."

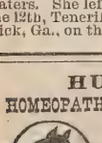
J. H. C., Brooklyn, N. Y.—1. Do English bull-terriers make good house dogs, and can pets be made of them? 2. Which is the better, a bull or a Scotch terrier? Ans. 1. Yes. 2. It is a matter of taste.

H. E. D., Brooklyn.—No definition of amateur and professional is made in the printed constitution and rules of the Larchmont Y. C. A professional is by usual definition one who earns his living by manual labor about the water.

A., Middlesex.—1. Can you furnish the "Gazetteer," by Hallock, and at what price? 2. What is the cause of a setter losing control of his hind parts—not sore to rubbing nor stretching? 3. What causes another to bite at flanks; she is spayed? Ans. 1. No; it is out of print. 2. Paralysis; worms, perhaps. 3. Fleas.

J. L. M., Jr., New York.—Will FOREST AND STREAM kindly inform subscriber where healthy, live quail can be procured for stocking purposes? They are to be turned out in Litchfield county, Coun. When will be the proper season to put them out in that part of country? Ans. 2. Write to E. B. Woodward, 174 Chambers street, New York. 2. The sooner the better now.

W. A. T., Philadelphia.—1. Can you tell me the best place to go to for the Potomac black bass fishing? 2. Where moderately good trout fishing can be had, within five or six hours' ride from Philadelphia, where it would not be necessary to wade? Ans. 1. Try between Harper's Ferry and Point of Rocks, there is often good fishing at the latter place. 2. Pine Creek, Lycoming county, Pa.; or Lackawaxen, Pike county.



A. J. D., Montreal.—Do you think English rabbits would breed here and if they would live through the winter? Have they ever been imported to America? Have you ever heard anything about the migratory quail that were imported a few years ago? We imported one hundred, and they bred, but they never came back, Ans. 1. Probably they would do so. 2. They all disappeared. We have not heard of one being taken for years.

E. G. T., Chicago.—Do you know of any way to keep angle worms fresh for a period of one month? Ans. The worms need fresh earth and air. Get a keg or box of sufficient size to allow a handful of earth to two or three worms, and change the earth daily. Do not give too much water, as they will drown. When you find the worms are shiny give fresh earth. Let them scour themselves in moss for a day or two before using, this will empty them of earth and toughen them.

J. G. S., Brooklyn.—1. What is the cause of a line when casting running from a reel to turn and run the other way? It seems to run all right for about 10ft., then the reel seems to run too fast for the line. 2. What is the best bait or lure for catching pickerel with rod or line? 3. Will pickerel rise to the fly, and what one? 4. I have four years' subscriptions of the FOREST AND STREAM in good order, and would like to know what it would cost to have them bound in four books? Ans. 1. The reel runs too fast. You must control it with your thumb, or use a reel with either a click or drag. 2. Live or dead minnows, or a spinning bait or spoon. 3. Yes, a bright red fly is good sometimes, but they do not rise freely, and tear a fly badly. 4. From $1.75 to $2 each book. If you sent them to us you would have to pay expressage.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

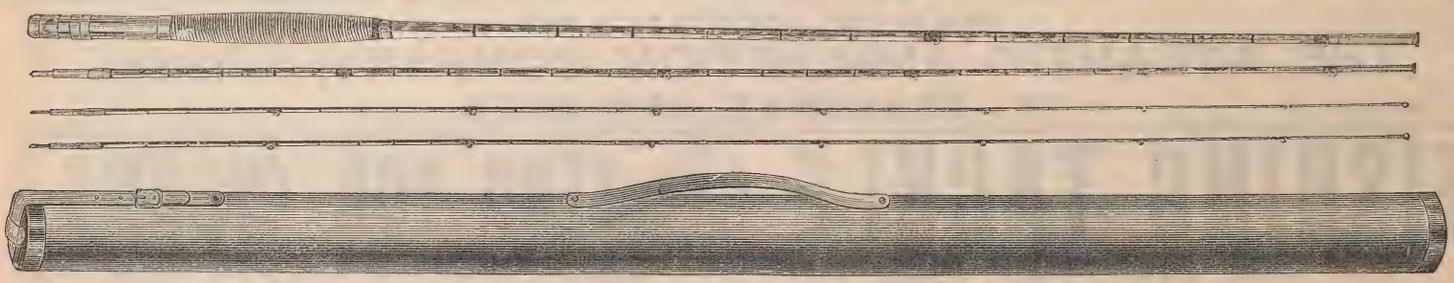
JOBBERS OF EVERY DESCRIPTION OF FIRE ARMS AND AMMUNITION.

Fishing Tackle Department.



We wish to call the attention of Dealers in Fishing Tackle throughout the United States and Canada to the fact that we have recently purchased their entire stock of GUNS, PISTOLS AND FISHING TACKLE from Messrs. John P. Moore's Sons, and shall continue the business at 302 Broadway and 84 Duane Street. There being no time to get out a New Catalogue of Fishing Tackle for this season's trade, we have decided to use J. P. Moore's Sons' Catalogue, fourth edition. TO THIS CATALOGUE we have just issued a New Discount Sheet and Supplement. Dealers who have not the above Catalogue will please send for it. If you have it send for Supplement and Yellow Discount Sheet. CATALOGUES TO DEALERS ONLY.

Steam Yachts and Launches;

THEIR

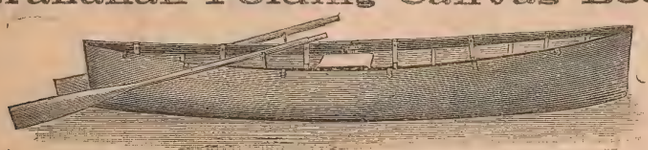
MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.

SCOPE OF THE VOLUME.



Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.

SALMON FISHING

IN CANADA.

The celebrated rivers Mingan, Romaine and several others in the Seigniory of Mingan on the north shore of the St. Lawrence are to let for the season of 1888. Lists and particulars will be sent on application to the

LABRADOR COMPANY (Limited),
377 St. Paul street (P. O. Box 105),
Montreal, Canada.

For Sale--Spruce Cottage

This cottage is 18×24, two stories high and gable roof, 3 rooms below, 4 rooms and hall above, besides attic, a wide porch on one side and both ends, rough kitchen in rear; built last September and well painted outside. The lot contains one acre, a beautiful wooded point commanding a fine view of STAR LAKE, a sheet of water whose shores are a succession of deep bays and long, sharp points, its waters clear, deep and cold, and containing both brook trout and landlocked salmon (well stocked, up to 4lbs. weight. The ground adjoins those of a large hotel, and the location is but one mile from the C. & A. R.R. in the town of Fine, St. Lawrence Co., N. Y. Sold because the owner cannot find time to occupy it. Price, $1,200. Address J. H. RUSHTON, Canton, N. Y.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

FLY-RODS AND FLY-TACKLE.

SUGGESTIONS AS TO THEIR MANUFACTURE AND USE.

By HENRY P. WELLS.

Illustrated. Square 8vo, Cloth, Illuminated, $2.50.

Of great value. It will take its place as a standard authority. We cannot commend it too highly.—FOREST AND STREAM, N. Y.

Professional as well as amateur rod and tackle makers will find this work invaluable. It contains a vast amount of information not to be found in any other work.—*Fishing Gazette*, London.

This handsome book ought to delight fishermen, who will read every page and call for more. —*N. Y. Herald.*

A book without which every sportsman's library is incomplete.—*American Field*, Chicago.

The author has earned the gratitude of anglers, whose name is legion.—*American Angler*, N. Y.

II.

A complete treatise by an exert.—*Saturday Evening Gazette*, Boston.

The American Salmon-Fisherman.

By HENRY P. WELLS,

Author of "Fly-Rods and Fly-Tackle." With Illustrations and a Map. Square 8vo, cloth, $1.

It gives a vast amount of information both as to the best fishing localities and the best methods of taking fish.—*Boston Traveler.*

Mr. Wells speaks with an authority which will scarcely be questioned. Above all he is the salmon-fisher *par excellence.* —*N. Y. Sun.*

A careful study of the book would go some way toward making a man a complete angler for the salmon.—*Saturday Review*, London.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 19, 1888.

VOL. XXX.—No. 13. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

This week's issue of the FOREST AND STREAM *consists of thirty-two pages.*

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

MR. PLUMB'S IGNORANCE.

THE flood of petitions for the proper protection of the Yellowstone Park which is pouring into Congress led to a rather remarkable exhibition the other day in the Senate.

Mr. Plumb, of Kansas, who voted for Senator Vest's bill when it passed the Senate, and who acknowledges himself entirely ignorant of the provisions of the bill, as well as of the condition of things which it is designed to remedy, rose in his seat and hinted that there was something behind the bill; in fact, that it was a job. His reasons for suspecting this are based on two facts: first, that he had received a letter from a constituent who had paid a visit to the Park and had seen nothing wrong there, and second, that a great number of petitions for the passage of the bill are being received. He reasoned that the printing and circulation of these petitions cost time and money, and that no one would be fool enough to spend time and money on anything unless he expected some advantage from it.

There is a good deal of human nature about Senator Plumb, and his conclusions are in the main sound. Those who advocate this bill, those who sign the petition for it, do hope to gain something by its passage, and since Senator Plumb has fathomed these motives, we may as well confess to him what this hoped for advantage consists of. It is the protection from speculators of the great forest tract which surrounds the sources of the streams supplying water to a vast area in the Northwest, and the establishment of a machinery of justice for the preservation of law and order and the enforcement of the regulations of the Interior Department in the Park—the securing to the great Northwest an abundant water supply forever, and the protection of the persons and property of visitors to the Park. We expect to share in the benefit which this bill will be to the country generally.

If Senator Plumb had taken the trouble to inquire as to the character of the signers of these petitions, he would have learned that they are the representative men in thousands of communities throughout the country; in fact, that these petitions represent not the demands of individuals or corporations or classes for personal gain, but the demands of the whole people for the general welfare.

Mr. Plumb cannot get over the fact that it cost money to print these petitions. That excites his suspicions, and causes him to shake his head. Clever man, Mr. Plumb; but with all his native shrewdness, it probably never occurred to him that in a world in which the great majority of men are striving each for his own selfish ends at the expense of his fellows, the honest trusted advocacy of the public interests might become a fairly remunerative occupation.

The FOREST AND STREAM owes its position to the trust that it has inspired in its honest, faithful advocacy of the people's interests, and we should be blind to our own advantage if we hesitated to incur exceptional expenditure to give opportunity for the expression of the popular sentiment on an important public question, when, as in the present case, the indifference of our legislators to the public good has rendered such a step necessary.

Senator Plumb did not know where the petition emanated from. He might have learned by a very moderate use of his eyes, for FOREST AND STREAM was printed on each petition. Besides, our sending them out was not done in secret, but was noticed and approved by the press throughout the whole country. There are a lot of things that Senator Plumb does not know, and it is a pity that he should be called to legislate upon matters about which he is as ignorant as he is about the Park and the Vest bill. Perhaps he does not want to know about these things. A man who makes a specialty of his ignorance would naturally wish to have as much of it as possible.

For sixteen years the Yellowstone Park has been a National Reservation. For three succeeding sessions of Congress bills providing for its care have passed the Senate and met the nation's approval, but owing to the neglect of the House the region is still outside the jurisdiction of the courts. A force of military is stationed there to prevent crime, but there is no means by which crime can be punished. Crimes have been committed in the Park and the perpetrators are to-day free men with nothing to fear from the hands of justice.

Senator Plumb may feel assured of one thing; that is, that all over this land there are thousands and thousands of individuals and organizations, who, with no other motive than the general good, insist that the Yellowstone National Park shall be protected from railroad grabbers, from timber speculators, and—worst of all—from indifferent legislators.

SNAP SHOTS.

THE acquisition by the authorities of the Smithsonian Institution at Washington of a male and female living buffalo is a subject for congratulation, and Mr. Blackford, the donor, will receive the thanks of a large number of people for his wise liberality. If anywhere in the United States there should be a herd of buffalo, it is at Washington, the scientific center of the country. If may be hoped that Mr. Blackford's action will induce some one else to add a buffalo or two to the Smithsonian's small herd. There must still be a number of single individuals held in a state of domestication in the Western country which can do their owners but little good, but which would be of priceless value if sent to Washington to be bred there. We know of three considerable bunches of domesticated buffalo in this country. One of these is said to contain 25 head, one about 40 and one 84, about 150 in all. If, as we believe, there are single specimens scattered here and there over the West, they certainly should not be allowed to live alone, but should be brought together and utilized as breeders. We should be very glad to learn from any of our readers of the whereabouts of any domesticated buffalo, or of any that are held in captivity. It is about time to take a buffalo census.

The letter on Maine game protection from the pen of "Special," which appears elsewhere, will interest that large class of readers who annually visit the Pine Tree State. That the Maine Commissioners are doing everything in their power to enforce the laws is not doubted by those who have followed their course, but that the unfortunate change of law in regard to the payment of the wardens has somewhat hampered these efforts seems equally certain. We have reason to believe that there has been considerable poaching this winter in one or two of the counties bordering on Canada. Arrests have been made in Aroostook county, where Indians have been slaughtering moose, and the attention of the Commissioners is called to Whitneyville, Maine, and the surrounding country.

The paper by Mr. Thompson published in our Natural History columns, in which he details the methods in which he proposes to investigate the life history of the song sparrow, is pregnant with suggestions. The time for glittering generalities with regard to the habits of our birds should by this time have passed away, and we may now hope for information far more detailed and exact than is contained in any of the published works on ornithology. That the young student of ornithology will read Mr. Thompson's paper with great interest is certain, and it is equally so that he will gather from it a vast number of ideas which will make his future investigations much more profitable as well as pleasant.

The bill introduced in the New York Assembly by Mr. Platt, of Poughkeepsie, to exempt Dutchess county from the provisions of the game law has been reported adversely. Why it was introduced is probably known only to Mr. Platt. It was in itself a disgraceful measure. Further than that, it was an example of special local legislation with regard to game laws which should never be tolerated.

A special dispatch to FOREST AND STREAM states that the bill, allowing the use of certain nets in the waters of the St. Lawrence River, of Jefferson county, has been forced to a third reading in the Assembly. It should be caught on the final passage and defeated.

Dr. C. E. Nichols, of Troy, announces that his club has handed over to the Soldiers' and Sailors' Monument Fund the sum of $1,500 profit from the Troy dog show. This is a most excellent showing.

THE AUDUBON MONUMENT.

THE subscriptions to the Audubon Monument fund have not come in at all in a way to meet our expectations, and we confess to feeling somewhat ashamed of sportsmen for their lack of readiness in this matter. Sportsmen as a class are generous and open-handed; they are, moreover, men who have the means to gratify their taste for outdoor sport, and they should certainly be willing to contribute a small amount to an object like this. Large sums are not desired, and if each one of our subscribers would contribute a dollar the sum needed would be raised twice over. We are not so sanguine as to expect this, but we do hope that a certain proportion of them will contribute to this fund.

The amount to be raised is not a large one, and there should be no difficulty about making it up by voluntary contributions, and if the sportsmen of America are not willing to do their part toward rearing a monument to one who was one of the first and best of American sportsmen, it will be a shame and a disgrace. Below we give a list of the contributions received by the Forest and Stream Publishing Company to date, and we regret to say that without our own contributions the list would be a very sorry one. We hope that next week a better showing may be made for the sportsmen of the United States and Canada.

CONTRIBUTIONS TO THE AUDUBON MONUMENT.

The Forest and Stream Publishing Company now holds:

For the FOREST AND STREAM Sportsmen's Fund:

FOREST AND STREAM	$25 00
E. D. Ward	2 00
Frank L. Page	2 00
Peter G. Lamont	2 00
L. H. North	2 00
Sportsman	1 00
An Admirer	1 00
	$35 00

For the AUDUBON SOCIETY Fund:

Forest and Stream Publishing Company for the Audubon Society	$25 00
Miss Florence A. Merriam	5 00
Mrs. F. S. Foster	1 00
Mrs. Henry N. Dodge	1 00
Miss Mary D. Dodge	50
Mrs. Sophia Homp	25
	$32 75

Total held by FOREST AND STREAM for Audubon Monument. $67 75

THE ROCK CLIMBERS.

XVI.—VISITORS TO THE CAMP.

VERY few men have their powers of observation trained in more than one direction. Even those who live in the wilds, keen-eyed though they are and quick to detect whatever is of interest in the particular calling which they follow, miss a great deal of what goes on about them. The practiced hunter is ever on the watch for game, but he does not see the fossils in the rocks over which he follows his prey. The packer is intent on his animals and their loads, and notices at once the bad places in the trail over which he has to pass, but he does not see the game unless it is immediately before him. The trapper has his eye always on the ground or the water looking for beaver sign, and is blind to almost everything else. The senses of each one of these have been developed in one particular direction. He has become in a sense a specialist.

The man who goes into the mountains for the first time sees but a small portion of what goes on about him, and a long training is required before he learns to use his eyes. It is not unusual to hear those who are new to the plains and mountains remark upon the absence of life in these uninhabited regions. The silence of the forest depresses them, and they miss the bird songs, which are such a feature of our Eastern country life in summer. This only means that they do not know how and where to look for the birds and the mammals. They are there. Even in the narrow valley where the Rock Climbers were camped, walled in as it is with mountains whose ribs of rock are bound together by bands of everlasting ice, and whose summits are white with perpetual snow, there were birds, and beautiful ones, and some of them came close about camp.

The day after the ascent of the glacier, Jack and Appekunny, starting at daylight with their saddles and bridles on their backs, crossed the head of the lake, caught two horses, and went up stream to climb the mountain and bring down the meat of the sheep. They tried to pass around the north side of the lake just below the glacier, but the way was so rough and rocky that they were obliged to abandon their horses and to perform half the journey on foot. Reaching the base of the precipice, they climbed it and reached the place where the sheep lay. They then, with great labor, brought it to the summit of the cliff, and lowering it down from shelf to shelf by means of ropes which they had provided, at length got it to the lake shore, and then carried it on their backs to the horses, which packed it into camp. It was a long and hard day's work, however, and when they reached camp that night they were thoroughly exhausted.

Yo, whose note book was somewhat behindhand, and who wished to bring it up to date, determined to remain in camp, and after finishing his task, to search with his glass for the huge male goat seen two or three days before, and, if it could be discovered, to climb the mountain and try to secure it. He wrote for several hours, and then taking his glass and rifle and going out to the edge of the snowslide, swept the mountain long and carefully, but was unable to find a single goat. Somewhat discouraged, he returned to the fire and resumed his writing.

There was a good deal that was delightful in his solitary day, even though nothing very exciting happened and no blood at all was spilled. The forest, which to the casual traveler seems so silent and so destitute of life, was not without its sounds and its inhabitants, who made themselves very much at home about camp. Early in the morning a friendly little water ouzel came feeding along the shore, and after he had finished his breakfast perched himself on a drift stick which ran out into the water, and sat there for hours practicing the thrush-like song with which next spring he was to charm his mate and lighten her labors all through the long summer days. He was a young bird, but his song, though low, was sweetly musical. And he tried it over and over again, stopping whenever he made a mistake and beginning anew, with a patience and a perseverance that was most admirable. He seemed a very humble bit of life as he stood there clad in Quaker gray, and hardly to be distinguished from the stones of the beach about him; but no one could help admiring the little fellow, or being delighted by his liquid notes, which the surrounding silence made only more sweet.

On one of the trees hung the shoulders of the sheep, and these, shining red against the dark green, soon attracted the notice of a vagrant family of gray jays which, like a troop of devil-may-care marauders, were skylarking among the pines. What amusing rascals these meat-hawks are. They are incomparably impudent, and their daring compels your admiration. If they happened to care for it they would have no hesitation in trying to steal the nose off your face. Perhaps they could succeed in doing it, who knows. At all events they would make a bold effort for it. To use an expressive Western phrase "they would steal the cross off a mule"—if they took a fancy to it. A gray jay has no hesitation in alighting within three feet af your face and winking at you in a rakish rollicking way as much as to say, "Don't you wish you could catch me?" He will stand on the legs of a deer which is hanging in a tree while you are skinning it, and will dart down to the ground after every little bit of meat or fat that drops from your knife. Sometimes two or three will stand about your feet, almost like hens about a person who is feeding them. You can entice them almost up to your hand by judiciously tossing bits of meat to them, making each one fall a little nearer you than the last.

And yet they understand very well how to take care of themselves, do the gray jays. Talk about catching a weasel asleep, why a weasel is a fool to a gray jay! They watch you suspiciously with their keen black eyes, always on the alert, ever ready to take flight to avoid a snare. Treat them as generously as you please, they will not trust you. They have borrowed their motto from the Mantuan bard, and each one of them lives up to it most religiously, and thinks, if he does not say, *Timeo Danaos, et dona ferentes.* Still they plunge down on to your meat or close to your fire with an audacious flirt, which makes you feel that the camp really belongs to them and that you are only an intruder and ought, if you have any modesty about you at all, to withdraw and take yourself off into the timber. Then there is a flirt of wings and tail, a sort of experimental trial of the limbs to see that they are in good working order in case they should be suddenly called on to use them. The next thing is to raise themselves to full height as if standing on tiptoe to get a good look on all sides. A couple of hops bring them to the coveted morsel. If it is not too large they carry it off bodily to a neighboring branch, and then holding it under one foot, hammer and tear it until it is so divided that it can be swallowed, but if it is a large piece of meat they tear off bits and strips until they have a good beakful, and then fly to a safe distance to eat it, returning almost immediately for more. They sometimes cling and hang to a piece of meat like titmice, up side down. Usually only one will be present at a time, and the moment he leaves his position, another takes his place. If two should happen to alight together, the younger almost immediately retires, for the other holds himself very straight indeed, slightly erects the feathers of his head and utters a low flute-like whistle, which seems to be a note of warning, and is almost always respected. They are not satisfied with taking what they want to eat, not at all. After they have satisfied their appetites, they continue to come and plunder, carrying off their booty and laying up in secret storehouses that they have far up above the earth, where it will be safe from the depredations of any but feathered thieves. More on this point will be told elsewhere.

But though the gray jays do not fear mortal man, there is one of their own kinsfolk that they hold in high respect, and for whom they at once make way. As Yo sat there with his back against a tree and with his open book on his knee lazily watching the robber brood, a dark shape flashed across an opening in the spruces and a moment later a superb Steller's jay alighted in a small tree which overlooked the camp, erected his long crest, looked about him for an instant, and then hopping from one branch to another, ascended to the topmost spray, where he hung for an instant, swinging backward and forward on the slender twig. Then he darted down and lit upon the meat, and after another glance around him, to see that all was safe, attacked it vigorously, sinking his sharp bill into the tender flesh at every stroke. He was a fine fellow, beautiful in color and shape, with dark blue wings and tail and a smoky-brown body and head, a long crest and light blue dots on his forehead; trim, graceful, alert and quick in all his motions. He remained but a little while about the camp, and then dashed away into the forest. Perhaps there was something about the motionless figure that sat within five or six feet of him that aroused his suspicions, or perhaps he was merely too restless to stay long in one place, and having taken a bite or two, felt he must make explorations in some other direction. At all events he went, and the camp saw him no more at that time, though later in the day he or another of his family returned, took a few bites of the meat and then hurried off as if called by pressing business. The gray jays came back again when the coast was clear, and so persistently did they attack the meat, that Yo finally drove them off and threw a coat over it to protect it.

There were other birds about the camp, and the jays, though the most conspicuous by their size and their boldness, could not monopolize the attention of the watcher. The modest little juncos, birds like the black snowbird of the East, now and then crept out of the forest, and advancing by cautious hops to the neighborhood of the fire, feasted on the bread crumbs that had been dropped on the ground. Feasted and almost fought, for, though they seem the most timid and shrinking little creatures you can imagine, they have a spirit of their own, and when one had found a choice bit of bread, and was picking it to pieces, he allowed no one of his companions to come very near to him. An approach was promptly met by a threatened attack, and the claimant of the bread, with grimly lowered head and bristling feathers, prepared to defend his rights. They never quite came to blows, though once or twice war seemed imminent, for the individual threatened declined to be bullied, and promptly threw himself into a defensive position; but after eyeing each other fiercely for a few seconds one or the other would take a little hop to one side, and then the other would move off, and presently the ruffled feathers would be smoothed down and peace would once more resume her sway.

Sometimes, from far back in the wood, there would be heard dull tappings and drummings, which told that the carpenters among birds were about, and after a while one of these dashed into camp, and alighting near the top of an old dead stub, stood there for a while as if waiting to be admired. He was handsome enough to be looked at, with his glossy black back relieved by white shoulder knots and his satin-bound cap of red. A jolly fellow, as energetic as could be while at work, but with a liking for frequent intervals of rest. He would hammer away at the wood as if his life depended on it, making the chips fly this way and that, but when he had secured the grub that his keen ear told him was concealed there, and had swallowed it, he would sit quite still for some moments as if meditating on its excellent flavor. A sudden movement of the gray jays, which still loitered about in the hope of being able to steal something more, would sometimes alarm this gentleman, and cause him to dodge round to the other side of the stub with a little shriek of alarm, but he would at once peer out from behind it again, and finding that his fears were groundless, would go to work again.

Two rather distant cousins of his also made their appearance. Banded three-toed woodpeckers they were, somewhat more modestly clad in black and white, with yellow silken caps. They worked more on the trunks of the higher trees, and their larger limbs, corkscrewing about them and pecking away in a modest fashion as if anxious to escape observation. One of them ensconced himself in a hollow in the back of a great spruce, and staid there for a long time, taking a siesta, it was conjectured, before starting out for his evening meal.

Once in a while there would be heard far back in the forest a tremendous row—shouts of fury, screams of passion and volleys of oaths and bad language, as if two ruffians had had a falling out and were abusing each other with all their might, but the listener was not greatly disturbed, for he knew that the racket only indicated that something had occurred to ruffle the temper—always somewhat uncertain—of a little pine squirrel, who was now railing against fate with all the power of his small lungs.

The day passed thus in quiet fashion, and Yo sat about the camp and welcomed the visitors that came to it. Once or twice he went out to the snowslide and looked at the mountains, but the great goat whose head and hide he longed for could not be seen. It was not worth while to climb the hills to kill another small one, for they already had quite as much meat as they were likely to use for some time, and the mere killing of an animal is not sport.

On one of his walks to the snowslide he met two Franklin's grouse, pretty dainty little birds quite ignorant of fear. He looked at them and they at him for some time, and at length one of them flew up into the low branches of a spruce and ruffling up its feathers and cuddling down, seemed disposed to take a nap. Yo was tempted to try whether it would not be possible to accomplish with this bird what he had seen done in Canada with its close relative the spruce grouse. Those birds are so gentle and unsuspicious that they may be caught by means of a noose tied to the end of a pole eight or ten feet long. The noose is slipped over the bird's head as it sits on a limb and it is dragged from its perch to its captor's hand. He even got out a bit of twine from his pocket, made a loop in it and looked about for a pole, but before he had completed his preparations he thought better of it, and gave over the attempt. There was really so much that was appealing in the perfect trust and innocence of the little creature that sat sleepily there above him, that he had not the heart to disturb it, much less to compass its destruction.

All through the afternoon the sky had been overcast, and the weather looked threatening. The peaks about the glacier were hidden in clouds, and it seemed to be snowing at the head of the valley. A storm was brewing. As it grew later Yo made excursions into the timber and brought into camp a plentiful supply of wood, for he felt sure that when the men returned they would not feel much like "rustling." By and by he made a fire and began preparations for supper, getting everything ready so that ten minutes' work would suffice to "put the meal on the table."

It was almost dark when the tired men came in, and by the time their packs and saddles were taken off and the horses turned across the lake, supper was ready.

Yo.

House Bill 271, introduced by Mr. Stranahan in the General Assembly of Ohio, provides a machinery for the enforcement of game and fish laws in Ohio which appears to be excellent. If its provisions be intelligently carried out, it should be productive of a great deal of good.

The Sportsman Tourist.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

REMINISCENCES.

WHO would, who could forget the jolly by-gone days. Many of the "boys" will recall the incidents that come before me as I sit before my open fire of birch logs, something like those the genial John Chadwick used to cross-pile on the hearth at Upper Dam.

What a fireplace they have now. Won't Dr. McL. remember how he fished from early morn till six at night from one of the old piers at Upper Dam for a big one he knew was there; and how disgusted he was to see a New York club man take the same stand and in five minutes fasten to a fellow which, when landed, tipped the scales at plump six pounds? Does the veteran K. C. remember how he felt when, coming from dinner, he found his boat, with his new rod, reel and line, had floated in front of the rushing sluice, and in a twinkling was bottom up, and he saw the last of that fishing gear? How we all laughed when, after a hurried half-mile walk, my guide despairingly exclaimed, "By mighty, I've forgot the lunch." Poor John, the well-known "U. W. P. Co." can pail hung on his arm all the time.

Who saw us that day on Ship Island while trolling with single minnows, when I said to my guide, "Harry has hooked a whale," and as he slowly reeled in and at last landed two (trout, not whales) that weighed 2¾lbs. and 3¼lbs. respectively, the mystery was solved? The first in jumping for the minnow had actually passed it through its mouth and out the gill, and a second had taken it.

My friend O. P. B., who caught the first landlocked salmon of any size I ever saw caught at Upper Dam, (I think it was '83 or '84 and it weighed a little over 3lbs.) will not forget how, when on my arrival I called down to him from the top of the dam as he sat on one of the piers, he turned to greet me and gracefully slid off into the quick water, and then our patient doctor came to the rescue and "landed" him safely, but the draughts on the Jamaica ginger were heavy that day.

What a sportsman's paradise; how bracing the morning air; what an appetite for breakfast at seven after two hours' casting in the gray dawn. Davis and myself will never forget the day we dined at the Narrows with the river drivers at their camp. Very hospitable they were, and the baked beans, bread and tea seemed the best I ever tasted. Well, if the editor don't smother this I will take you later to Bemis, Kenebago, Moosehead, the other way to Sunday Cove, Errol Dam. FRED.

THAT OLD BUCK OF TRIMCANE.

THE morning was clear and a little frosty about Jan. 10 in the time so far back I dare not write it. But I was young and full of the enthusiasm of youth; in fact I had more than my share of love for dogs and guns.

The day before I had for the first time been introduced to Squire Rock, a magnificent specimen of black and tan hound; deep of chest, clean of limb, with ears wide as my hand, 10in. in length, and soft as a lady's cheek, full 28in. at the shoulders, and with a loin strong and supple. I noticed his feet, not round as a wolf's, but long and elastic, and his step as noiseless as a cat's. There was something in his long bony head, bright and intelligent eye and quickness of response when spoken to, that made one feel sure he was ready for any work you could set him to do, and his flexible and dilating nostrils said as plain as words could that he never made a mistake in a "run."

The negro man who led him to me looked up with the remark, "Well, massa, ef dat ole buck gits up to-day you'm jes sure to bring home his horns, for Rock nebber lets go until you choke him off or he gets his muzzle into de deer." And, as I said when I began, the morning was all a keen hunter could wish, and mounting my pony and laying my double barrel across the pommel I whistled Rock and we started. In that part of Mississippi where I was we shot altogether with long-barreled 10-bore double guns, muzzleloaders that chambered three heavy buckshot, and the load was fifteen shot in each barrel. Trimcane Swamp was about two miles to the west of us, and at the crossing was about three-quarters of a mile wide, intersected with cattle and deer paths, and with some water in it, as it always had in winter, it made a safe home for deer, wolves and an occasional bear. The cane was so thick and dense that a horse could not step out of the path and go 10ft.

Jerry, the black boy, followed me, leading Rock, and after giving me directions where to stand, he went across the slough and into the edge of the piny woods and so up the swamp and against the wind. He told me when we reached home at night that Rock continually strained at the rope and whined with excitement for the last mile of his tramp. When he had gone about three miles he turned into the swamp and loosed the hound, which at once broke into a run down the swamp toward my stand. I had been sitting on my pony about an hour listening to the wonderful sounds from bird, beast and insect, when my ears detected a faint, mellow "open" of the keen old hound, and soon another and another, and I knew the game was afoot. I faced around and looked at the caps, while the little pony began to tremble and prick his tapering ears back and forward and stamp. By this time old Rock's clear, distinct and vibrant baying was continuous and coming nearer and nearer. One hundred yards to the left of me was an open spot with hard ground and entirely clear of cane or brush for an acre, and I had thought of going into it, but Jerry rather insisted upon my staying at the crossing where he had put me.

Into this "open" within fifteen minutes of the first baying of the hounds, there jumped a buck, the most magnificent creature I ever saw, and as he struck the hard ground he faced around toward the coming dog and stamped his angry foot a half dozen times. Such a sight! Such a glorious pair of horns, and such angry defiance as he looked in the direction of the rushing hound. But all this had passed in a few seconds, and while the pony braced himself, I raised my gun and gave him one barrel. Quicker than lightning, he sprang into the air and turned with hair all forward, ears back, head down, and with broken leg, but with tremendous bounds he sprang toward me. I had not calculated on this attack, and oh! how I prayed for Rock to come. But in my excitement I did just what was for my only safety. I turned to the side of a big tree, and as I reached it, fired almost into his very face, tearing off his under jaw, and for an instant stunning him into a pause. How my heart bounded and thumped, and how quick one thinks of everything in such an extremity, for I had instantly as I fired sprang from the pony and jumped behind the tree. But no need was there of such a cowardly move, for before the buck could recover himself, Rock, the splendid old fellow, was upon him, with his fangs deep in his throat. With eager haste I loaded one barrel, fearing the buck would kill the good dog. Over and over each other, now one and now the other on the ground, they fought, and I could see that Rock had no baby play before him. I was amazed at his staunchness and courage, never once letting go his hold. How my hands did fly as I rammed the wad upon the balls, and how my courage rose as I saw the good dog still fast where his first leap had struck the deer. But the contest must be ended quickly, for I see blood upon the neck and sides of the old hound, and the sharp-pointed hoofs of the buck were beginning to do deadly work. I raised my gun, and watching an opportunity when I would not hurt the dog, I fired and dropped the buck dead.

What a magnificent specimen! Seven points upon each horn, and just in his very best color, though his swollen neck showed that the rutting season was on. Jerry came up in a moment and knelt down by the dear old dog, for in my wonder at the fright and enjoyment of my prize I had almost forgotten him. We raised the old fellow up and found four long and pretty deep cuts on his neck and sides, which Jerry said were not very dangerous. After hanging the buck we placed the hound upon the saddle before me in my arms, and while Jerry carried the gun I rode slowly home with him.

I was young then, but never since have I been as proud and excited. H. B. S.

MARIETTA, Ohio.

"THE MYSTERIOUS MISTASSINI."

Editor Forest and Stream:

It has been a long while since anything published in an American journal has caused so much merriment among us at the Ancient Capital as Mr. Charles Hallock's article in your issue of the 22d of March on "The Mysterious Mistassini" in which he attempts to impeach Mr. W. H. H. Murray's knowledge of Canadian geography and belittle his researches in the Labradorian Peninsula. It is probable that when Mr. Murray sees the article he will pleasantly laugh at it and go on with his preparations for his exploration to the Mistassini region, without further comment, and probably that is the proper course of action touching a statement that starts only astonishment and laughter among all who have knowledge of the matter. But the article of Mr. Hallock's is very funny, from the very gravity with which he states his ignorance, and the broad humor of it can be appreciated by your American readers, when they peruse this brief statement of the case.

The country lying between Hudson's Bay and the eastern line of Labrador looking from west to east, and from the St. Lawrence to Hudson's Straits looking from north to south, is a vast sweep of territory. The distance from Moose Factory on the west side of James' Bay and eastern Labrador is as great as the distance lying between Moose Factory and Washington, D. C.! No living man has ever trailed this line and we doubt if Mr. Hallock will be the first to attempt it. From the St. Lawrence River to Hudson's Straits it is 1200 miles of distance (estimated), for no man, red or white, has ever run that line. This vast region, save for a few patch-like settlements, as at Chicoutimi and Lake St. John, is an uninhabited wilderness of the most savage description, threaded here and there for short distances in different directions by a few trapping lines. The Jesuit missionaries nearly two hundred and twenty years ago drew a trail through it from Tadousac to Hudson's Bay, a single trail through a region as wide as the space between Maine and Lake Erie. The Price brothers have pushed their lumber camps a little beyond Lake St. John in spots; the government has started two or three expeditions into it, and the Lake St. John R. R. and the Provincial Crown Lands Department have surveyed a score of townships or parishes, but beyond this nothing has been done, and beyond the scanty and unsatisfactory glimpses thus obtained nothing is known by any of us Canadians of this monstrous forest and wild waste of land. The idea of Mr. Charles Hallock "tipping" to Mr. Murray "a few points to help him through" this vast and utterly unexplored region, is, in the light of the facts of the case, exceedingly rich!

But the choicest fun in Mr. Hallock's article is artistically put up by him in this passage: "If he"—viz., Mr. Murray—"will examine a common Mitchell School Atlas, published in 1855, he will find this mysterious body of water located exactly where it belongs, across the Laurentian watershed in latitude 51°, and its dimensions given as 125 miles long by 25 miles wide."

This is immense! What the boys would call a "screamer." Why, there are no two maps, either in the Library at Paris or in the Crown Lands Department here at Quebec that agree touching this Lake Mistassini either as to its size or whereabouts. Père Albanel was the first man who claims to have seen it. This was in 1672. Père Lauré in 1733 went through on Père Albanel's trail and brought out a rough sketch of it. These two old maps are lying before me. These two charts represent Mistassini as a very large body of water, vast, indefinite, which they only crossed but never explored. Mr. John Bignell—a surveyor in high standing in his profession and truthful—heading a government survey some three or four years ago, went through to the Hudson's Bay Company's post on what is called Mistassini, but he returned without surveying the country and believes that the water he saw was only an arm or one of the bays of Great Mistassini, and that the lake itself lies far beyond and was never seen by white man since the Jesuit's time, save by some wandering trapper. A Mr. Low, who headed another government expedition, made a survey of the bit of water—which is not believed to be Mistassini by those who have impartially and fully examined into the subject—and made a report to the Department on his return to Ottawa. His survey makes Mistassini only some 100 miles long by 12 wide. This survey is utterly discredited here by those cognizant of its true "inwardness," which connects it with certain political matters peculiar to ourselves. In brief, Mr. Murray in his article on the "Mistassini Question" printed in the *Boston Herald*, last autumn, which was republished in the journal of which I am the city editor, gave a clear and truthful statement, without exaggeration, of the whole matter. And if he ever does succeed in reaching the real Mistassini, and bringing out to the world exact knowledge of its locality, its size, and its physical characteristics, he will have performed a most arduous undertaking and will receive the thanks of every Canadian and the deserved acknowledgment of learned bodies. It is very easy to laugh at an earnest man, but such laughter, while it may "Split the ears of the groundlings * * * make the unskilful laugh, cannot but make the judicious grieve." But, Mr. Editor, I did not intend, at the start, to have treated Mr. Hallock's screed seriously, for it does not deserve serious refutation, and would merely say in conclusion that if Mr. Hallock will only engage "one of the smaller Indian pupils at Lake St. John to conduct him to his mysterious Mistassini," and advertise his start, he will command a larger audience to see him off than ever attended Barnum's Circus. E. T. D. CHAMBERS.

QUEBEC, April 2.

Natural History.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

SPRING NOTES.

BUFFALO, N. Y., April 10.—*Editor Forest and Stream:* Despite the cold weather which prevailed during March and the first days of this month, the season is advancing rapidly.

On March 31, Mr. Alan Alberger shot into a flock of some 200 American crossbills, at Athol Springs on the lake shore. They were flying in four groups of about 50 each. On Thursday last, April 5, Dr. W. H. Bergtold shot a hermit thrush at Orchard Park, 10 miles east of here. He also shot a fox sparrow, little known about this locality. He reports finding the hepatica in bloom. He also observed the following: Hairbird, bay-winged bunting, common shrike, phœbe, and both of the kinglets. The robins, sparrows, and bluebirds were in great force.

I walked over to the reservation at Niagara Falls on Sunday last, April 8. Green things are coming up at a lively rate. The quantity of wild flowers promises to be greater than for some years. There is little of interest in an ornithological line yet to be seen on the islands. I saw several species of winter birds which have not yet gone north.

Here at Buffalo one is well repaid for a trip to our Park. Great numbers of grackles, robins, bluebirds, and song sparrows can be seen. The shrubbery is full of lisping kinglets and black snowbirds (*Junco hyemalis*), which latter are very conspicuous by reason of the white tail primaries shown in flight. Meadow larks and phœbe birds are here.

I saw a robin in this city on Feb. 25. This is the earliest date I ever saw our familiar red-breast.

EBEN P. DORR.

DETROIT, April 4.—*Editor Forest and Stream:* No ducks have put in an appearance yet, and as we have no more spring shooting the hunters look forward to the fall shooting with double-barreled interest, and just as well pleased.—.50-95.

CENTRAL LAKE, Mich., April 6.—*Editor Forest and Stream:* Robin seen yesterday. The rector of St. John's Church, Elk Rapids, informs me that he saw a meadow lark on Sunday, March 25. As the snow, though "settling," has been some 2ft. deep up to date, I did not look for these birds so soon.—KELPIE.

MOUNTAIN LIONS AND DEER.

RIFLE CREEK, Colo., March 9.—*Editor Forest and Stream:* There are about here plenty of mountain lions, but it is not very often that one is seen; no one fears them, as they have the reputation of being great cowards, except when wounded.

There have been many arguments in this camp this winter, one of which ended in a row, over the question whether or no a mountain lion can climb a tree? I have talked with a number of hunters and no one of them ever saw a mountain lion climb a tree. Of course they will run up an inclined tree and spring up to the limbs, but can they support the weight of their body by the claws alone as a house cat does when ascending a tree?

There is an old man in camp, the owner of seven yoke of oxen, who says he will wager "the whole outfit against a hayseed" that no one can prove to him that the above question can be answered in the affirmative. I think he takes a safe stand.

There is a belief among many old prospectors and trappers in this country that there exists a very rare variety of deer in Montana which they name fantail deer; they say it is never larger than a Gordon setter, is of a more yellow color than the blacktail deer, never has more than three points to its horns, which are not longer than a man's hand, and has a tail six or eight inches wide.

The above is the most vivid description that I have been able to gather. Is there any such deer or any deer in the least like these specifications? One more question, Do Eastern trout spawn twice a year? P. B.

[It is believed that mountain lions do climb trees, but it would be difficult perhaps to produce any one who had actually seen one do it. What do our readers say? Let the panther hunters speak up. The "fantail" deer is a whitetail, nothing more. There is no trout, nor salmon, that spawns twice a year, although there are people who believe that they do.]

PRAIRIE CHICKENS WANTED.—Toronto, Ontario, April 9.—*Editor Forest and Stream:* Can any of your readers put me in the way of getting a few pairs of pinnated grouse, or a few dozen of their eggs, with a view to the introduction of the species to a locality in Ontario, that seems to me peculiarly suitable.—ERNEST E. THOMPSON.

BIRDS AND SPECIMENS.

Editor Forest and Stream:

I noticed the courteous reply of Mr. Swift, and something else from Mr. E. M. Hasbrouck, to my stricture on skinning rare birds. I foresaw that I should stir up some such matter as the latter. Mr. H. says "there are men and men." Might I also remark that there are ornithologists and other folks. My remarks were not directed against ornithologists as such, but against the craze that is abroad in the land for killing anything that is new to the eyes of the would-be ornithologists or so-called scientists, or which they do not happen to have in their collection. Truly "the woods are full of them." They can be seen almost any fine day running around the country labeled "ornithologist" and "scientist," scaring the *oï polloi* most to death.

I included as authorities for sufficient reference Audubon, Wilson and Coues. If Mr. H., who rises in such haste, arrayed in the habiliments of ornithology and science (which he so discourteously champions), thinks he can name three who better cover the ground of ornithology, he may do so—in silence. I purposely named Coues as a later and first-class authority. Mr. H. says: "If, in accordance with the doctrine of 'O. O. S.,' the study of birds had stopped with naturalists (Audubon and Wilson) to say nothing of what Coues has done, where would our ornithology be to-day?' Well, but instead of saying nothing of Dr. C. I expressly mentioned him, did I not? There was no criticism of reputable ornithologists. Mr. H. exhibits more heat and haste than candid statement and simple justice demands.

Do I suppose that mankind will be benefitted in any commensurate or otherwise degree for all the time and effort donated by these would-be ornithologists and scientists? Not much. I have a misty idea somewhere that there have been a good many wood sawyers and clock peddlers spoiled in the interest of science. Just as like as not Mr. H. will find a grosbeak or tomtit one of these days with a wry tail or cast in his eye, and then there will be a noise about "variation between individuals." The nations of the earth are yearning for this "right now." An evening grosbeak, *Coccothraustes vespertina* (if he hadn't a Latin name he wouldn't be worth gathering), is an evening grosbeak, isn't it? It has been described, hasn't it? More than once? And it couldn't be mistaken and potted for a blue heron or a cow, could it? No. Such being the case I suppose the world is all agog with its mouth wide open to know what the said evening grosbeak aforesaid is thinking of when it scratches its head with its off hind foot, or which egg is male and which female, or how long it takes to build its nest, or whether its northern limit is latitude 42 or 42½, or how long it will take the female to find a mate (in the interest of science) when the male is shot by a would-be ornithologist, or in which direction the bird will fly when the w. b. o. gets after it with a gun. It is the want of such valuable information as this that is causing the world to lie awake o' nights and wobble in its orbit.

It was not necessary that Mr. H. should state that were he to find a flock of grosbeaks he would work his old scatter gun until he had a full collection. I can imagine him after the very last grosbeak on earth, and if his legs and wind and shot held out he'd exterminate the species to ascertain whether that particular bird had a crooked toe, or differed in other important particulars from the last one he murdered. I saw a speckled robin last year, but I did not wish to shoot it. Why? Because I'm not a scientist, I suppose. Well for the robin.

Mr. H. thinks that because he thinks that the Audubon Society has no voice as to what scientists may deem wisest to do, therefore a private individual ought not to object. Um! Sacred circle! Might a cat look at a king? Further, Mr. H. insinuates that because I have an honest opinion as to what is right and merciful, I am a would-be sentimentalist and sensationalist. Well, now, if grazing in the pasture of science stimulates such deductions as that, I will, as Uncle Remus puts it, "jestify my stomach" along the roadside.

In the last place, thirty-fourthly, I say again that the whole business of bird slaughter by would-be ornithologists, scientists, what not, who think they have a mission (encouraged by the laws) to slay every bird they see in the name of science, is an abomination that should be wiped out. Nine-tenths of them are in the same category with the birds'-nest robbers, who go about as soon as they can climb a tree, tearing their clothes in the name of science, despoiling the birds' homes that they may get a collection of eggs as large as somebody else's collection. However, they are less to blame than the slayers, for the live birds can lay more eggs on a pinch—in the interest of science. The song birds migrate in the autumn, and the pot-shooting negro at the South mercilessly pursues them the livelong winter with his Zulu or old army musket. The survivors come North in the spring and straightway the army of would-be ornithologists, scientists, feather hunters and nest robbers take up the hunt, until between the upper and nether millstones the poor birds have a hard squeak to pull through. It is wrong. There is no adequate good in it. The larger part of the slaying is done to minister to vanity. To paraphrase a little—Oh, ornithology, what cruelties have been practiced in thy name!

I can understand very easily how Mr. Swift came to shoot the grosbeak, but what good in general and particular did it do? It is a well-known principle that ignorance of law is no excuse for crime. Mr. Swift's ignorance of the bird caused him to shoot it, according to his own statement. Now, don't hop up, a few dozen of you quasi-ornithologists, and spill over with the charge that I called the killing of the bird a crime. I say nothing of the kind. I say it was wrong. Because a bird flew across a State line after something to eat is it right to kill it? The bird has been classified and described. As a grosbeak, can it be classified any better or better described for the benefit of students? Of what advantage is it in any way under heaven to know that a grosbeak was seen in Schuyler county when it hadn't been seen before north of Chemung? Does it make it a *Schwylarkus cocobolo concertina*, and change its form, color or character?

Because I condemn the killing of birds it by no means follows that I am blind to the benefits conferred by ornithology, though I think that sometimes a fictitious value is placed upon results. I appreciate Mr. Swift's research as to food of rapacious birds, and hope it may result in repeal of laws sanctioning the killing of birds which are of benefit to mankind, just as much as I hope for the repeal of the laws permitting Tom, Dick and Harry to slaughter song birds to no good.

Now, I have no doubt other bright and shining lights, scientists and ornithologists so-called, will burst upon your vision from the sacred and undefiled precints of science (if they are able to get out past the lynx-eyed guardianship of Mr. H.) and hurl the awful and annihilating charge against me that I am no scientist, or don't know a chickadee from a dodo, and will throw paper wads at me and ooze all over with contempt. As Toddy used to say to Budge, "Aw wight, g'won!" It don't count. "What I says I stands to." Stop the bird killing. It is needless and cruel. O. O. S.

THE SONG SPARROW.

AN INVESTIGATION OF HIS LIFE HISTORY.

WITH a view to suggesting lines of investigation to those would-be workers who do not go the length of styling themselves ornithologists, these notes containing the subject matter of an address recently delivered at the Canadian Institute, were put in their present shape.

The rapid advance of ornithological science in our country during the last few years, and the systematic organization of the great body of working ornithologists of America, have had the satisfactory effect not only of stimulating the interest felt in the subject by that snowball process of increment that is a property of all knowledge, but also of demonstrating clearly to the lay following that all who have eyes may be of use, and all who would be of great use must keep their eyes in one direction.

Now, with any one who for the first time sees a new or unknown object, the three questions that naturally arise are: What is it? Where did you get it? and What is it for? *i. e.*, we are asked its name, native place and nature; and it is the whole province of each branch of zoological science to answer these three questions with regard to its individual subjects. Or to illustrate to the point, ornithology treats of birds and is supposed to supply the student, first, with the name of each bird; second, with information about its country or habitat; third, with information of its nature, which includes two very wide fields, the physical and the metaphysical, or anatomy and life history. The first of these questions, the which?, can be answered only by authorities profoundly versed in the subject, and the Check List of the American Ornithologist's Union contains the united opinions of the competent authorities of America.

The second question, the where?, comprising the whole subject of geographical distribution and migration, is partly answered already with regard to most of our birds. As it can be properly treated only by persons who have large collections of material at hand, and have given a great deal of time and study to the subject, here also it is better for the lay bird man to refrain from "rushing in."

But the last question, the what?, is the greatest of all. It naturally divides itself into two branches, anatomy and life history. With regard to the first, much the same remarks apply as in the preceding paragraph, but the second, the life history, is the most important, and affords the proper field for those who simply love nature for her own sake, and desire only to know the wild birds in their wildness. "The real history of a bird is its life history. The deepest interest attaches to everything that reveals the little mind, however feebly it may be developed, which lies behind the feathers." So says the celebrated English ornithologist Seebohm, in his History of British Birds, and I am very sure that there is no lack of bird lovers to re-echo the sentiment. The first two questions are of very great importance, and of such a nature that they insist on first notice, but having settled them as we now have, sufficiently for the purposes of the ordinary observer of Eastern America, we are brought face to face with what is, after all, of chief interest, the great question of the "little mind."

The almost absolute ignorance that exists with regard to the life history of our birds is only beginning to be appreciated. We have, in fact, as a result of great labors during the last few years, only just succeeded in obtaining enough light to make the darkness visible. To show our utter nescience with regard to even the best known species, I would take for example the bird of all others that we are supposed to be perfectly familiar with, the common barn fowl. How many of us can prove or disprove the simplest statements that can be made concerning it? How many of us can decide on the theory that a hen beginning to lay, lays on the first day early in the morning, next day an hour later, and so on until afternoon is reached, then a day is missed, and on the next day the bird begins again in the early morning? How many of us can contradict the statement that the hen is capable of real and faithful attachment to one particular male, even though several be in the yard? Which of us can say when and why the hen turns her eggs, or whether she knowingly turns them at all? It would be easy to go on exposing our ignorance, but sufficient has been said for my purpose, and I would now follow with the remark, if we know so little of our familiar domestic fowls, how insignificant must be our knowledge of the wild birds. I am so satisfied that a harvest of knowledge and pleasure awaits those who will venture into this almost virgin field, that I have determined to spend one season at least in investigating the life history of a single species, and to the end, that I may approach the subject systematically, I have tabulated the lines of investigation under seventeen heads. These heads, be it noticed, are naturally limited by the knowledge and theories of the writer, but I believe that in working them out one will most assuredly stumble on clues which, properly followed, will lead to light most unexpected, and to ideas of startling newness that have not even been guessed at by the preliminary schedule, for such has ever been the experience of those who have blindly but earnestly groped after the truth.

For numerous reasons, more or less evident, I have selected the song sparrow (*Melospiza fasciata*) as the species for study, and propose collecting all possible evidence on the following items:

1. *Spring Migration.*—Give earliest appearance, etc.; state whether in flocks or singly; males in advance or both sexes together; by day or by night; crossing the lake or skirting its shores; flying high or low; recording in full the weather at the time of observation, also date, locality, etc. Does it hide or return southward during the late spring storms? Do individuals that come early differ from those that come late? If so, are both found breeding here?
2. *Habitat.*—Is it found in dry uplands, dense forests or marshes, or does it manifest a preference for the vicinity of water, or especially of running water? Can any reason be assigned for its choice of locality?
3. *Voice of the Male.*—Song and the variations of the same; height from ground when singing; time of day; alarm notes, song periods, song flight, song by night; influence of the weather.
4. *Voice of the Female.*—Song, if any, and full particulars as above.
5. *Habits.*—What are its peculiar tricks of attitude, motion and expression? Does it hop or run? Is its flight ever undulatory, like that of many of its relatives? Is it nocturnal or aquatic at all? Does it ever wade for food or swim to escape its enemies? Does it feed on the wing? Does it regurgitate pellets of indigestible matter? Does it indulge in any sort of play, especially in a social way? Does it enter holes or burrows? Does it distinguish poisonous plants or insects? How do individuals communicate with each other?
6. *Condition of each Specimen.*—Give full notes *re* genitalia watching for cases of sterility, hermaphroditism or disease, counting if possible the number of ova, especially of those enlarged; giving also general condition of the specimen; stating whether fat or lean, diseased or healthy, parasitized or not, internally or externally, and to what extent.
7. *Food.*—Give in full—contents of mouth, gullet and gizzard, and preserve the same in labeled phials.
8. *Plumage.*—Particularize each specimen in form, color and measurement, noting differences of sex, season, age, moult and locality.
9. *Mating.*—Note fully any courtship observed, with maneuvers of both birds, or competitions of rivals; is it ever polygamous? do the same birds remain paired throughout the season, or for more than one season?
10. *Nesting.*—Give full particulars of construction, materials, proximity to the ground and to the water of each nest, preserving, photographing or sketching the same, and observing whether covered over or approached by a covered way; giving details of laying, time between each oviposition, variation of the eggs in size and color, stating whether those first laid are larger or more heavily marked than those laid later; are the eggs turned daily, and if so by which bird.
11. *Broods.*—Number per season; average of each. Are later broods less? How long is each cared for by the parents? Is the female first to desert her charge?
12. *Cowbird Parasitism.*—Is the song sparrow ever imposed on by the cowbird? Particularize each case observed.
13. *Young.*—Give in full their habits, food, plumage, comparing them with their parents and with their near congeners. Are they ever fed from the crop of the parents? Is there any evidence of a late summer northward migration among them?
14. *Relatives.*—What are their nearest congeners? Compare them in range, local habitat, changes of plumage, etc.
15. *Competitors.*—With what species do they most actively come into competition in the struggle for life?
16. *Natural Enemies.*—Enumerate predatory birds, mammals, reptiles, etc. Also meteorological phenomena, and means employed to combat, elude or withstand in each case.
17. *Fall Migration.*—Particularize as in spring ditto, giving latest appearance. Does it arrive in the spring singly and go in the fall in flocks? Is it ever a winter resident here?

Of course no one would expect to elucidate many of these points in a single season, but it is believed that enough may be gathered to form a valuable contribution to ornithological literature, and to decide whether or not the investigation may ultimately be made a complete success. ERNEST E. THOMPSON.

BUFFALO FOR WASHINGTON.

SOME time ago Mr. Goode, Curator of the National Museum, set on foot the project of establishing a zoological garden in Washington in connection with the Smithsonian Institution. The idea excited great interest, and a beginning was made, though at first only in a small way, since no funds were available for this purpose.

One of the first species of North American mammals which was desired was the buffalo, now almost extinct in a wild state. There were opportunities to purchase three or four head at different localities, but the appropriations were so low that it was impossible to use the money at the present time for this purpose. In his dilemma Mr. Goode bethought him of Commissioner Blackford of this city, to whom he wrote as follows:

"We are at present very much interested in the project of establishing a national zoological garden in Washington, with every prospect of favorable action on the part of Congress. Mr. Beck and several other influential Senators are enthusiastic about it, and in connection with this we are anxious to accomplish another very essential thing, namely, to secure for Washington, for the Smithsonian, and for the prospective garden, a nucleus of a herd of buffaloes. You know how near they are to extinction. I do not think that there are 100 at large in the United States, and it seems probable that if our plan is not carried out without delay, even the few now remaining will be exterminated very soon. We have the opportunity to buy at North Platte, Neb., for $400, a fine bull and a cow which will have a calf in August. Unfortunately, it being near the end of the year, our appropriation for the museum is getting very low, and we do not feel that we ought to venture upon this expenditure.

"If Prof. Baird were alive I have no doubt he would find some means to accomplish this end, but his resources were much larger than mine are. You can see that if we could have a pair of buffalo through the summer on the Smithsonian campus, and especially if a young buffalo could be born here, it would be a great boom for the zoological garden project. Now, there are two ways in which you could help us out of our difficulty. If you felt disposed to present these animals to the Smithsonian

Institution for the zoological garden it would be a great help to us, and I need not say to you that we should be very glad to have Mr. Blackford's name associated more prominently than that of any other citizen in the United States with the inauguration of what we believe is bound to be a very important national enterprise. There is still another way in which you can help us out of our trouble should you so prefer. If you would buy the animals and hold them for us until after July 1 we would be very glad to bring them on to Washington at the expense of the museum, take care of them, and reimburse you for the expenditure as soon as our next appropriation becomes available."

Commissioner Blackford replied to this that the idea pleased him and that he would make the donation. Mr. Goode will send a man on to North Platte to bring the buffalo on to Washington, and it is hoped that they will arrive safely.

It appears that these buffalo are from the band that ever since the extinction of the buffalo along the Platte has lived in the barren sandhills about the head of the Dismal River in Nebraska. Two or three years ago there were but thirty of them, but they were killed off by ones and twos, and last year the Sioux from Redcloud Agency came down and are said to have killed twenty of them, probably exterminating the little band.

The bull and cow secured by the Smithsonian Institution were caught as calves four years ago in Keith county, Nebraska, north of the North Platte River, and were kept on the farm of a ranchman near Big Springs. He is reported to have roped the heifer out of the bunch of seven and afterward to have bought the bull for $100.

These buffalo have been reared with domestic stock and are very gentle. Last fall the bull learned the combination on the corral gate and would frequently open it, thus releasing any stock that was inside. After many such occurrences the boys on the ranch tied the sagacious buffalo up and sawed off his horns. It was not from any fear of violence that they did it. The animals will follow a man about and eat corn from his hand. The bull is broken to lead.

A CHANCE FOR CANADA.

WE understand that a movement is on foot among ornithologists and friends of science generally in Canada to have Mr. Montague Chamberlain appointed to a position on the Geological Survey of Canada. There will be no doubt, in the mind of any one competent to form an opinion, about the desirability of making such an appointment, provided Mr. Chamberlain can be induced to accept the position. It would be a great thing for American ornithology, for it would insure the investigation of a number of problems in this science which can only be solved in the region north of the boundary line; it would be a great thing for the Geological Survey, for it would bring the work of that survey in the department of ornithology up to the high standard held by its work in geology; and it would reflect great credit on the Director of the Survey, who should have the knowledge and acuteness to select out of all Canada, the man best fitted to take charge of a branch of science so important, but hitherto so sadly neglected in Canada.

Mr. Chamberlain's work in ornithology is too well known to students in this science to require any special mention. His papers in scientific journals, his book on ornithology of Canada, and the fact that he was long one of the editors of the *Auk* have made his name familiar to every one who is interested in birds.

We can imagine no occurrence in connection with the science in Canada that would be hailed with so much satisfaction by ornithologists as to learn that this department of the Canadian Survey had been handed over to Mr. Chamberlain's charge.

WOODCOCK FOUND DEAD.—Bethel, Conn.—On March 25 a cousin brought to me a female woodcock that he found dead, lying on a bog near a spring around which was a barbed wire fence. There was a cut on the bird from base of bill around to back of neck, which must have been caused by its flying against the fence. She was very poor and had been dead several days. April 3 a friend gave me another female woodcock that he had picked up in his yard the night before. When found the body was warm. The only injury to this one was the skull broken close to base of bill. This woodcock had undoubtedly struck a telegraph wire, while flying across railroad track near by. She was pointed by a setter owned by the man who found her. It was between four and five P. M., and was about four rods from the track to where she was picked up. My brother mounted both birds and they occupy a prominent position in our collection.—E. T. J.

CHOICE HUNTING AND FISHING.—Sportsmen can ascertain by experiment, to their entire satisfaction, that rare facilities for healthful recreation and profitable sport with dog and gun or hook and line, are distributed all over the area traversed by the main lines and branches of the "Great Rock Island" system, including the "Famous Albert Lea Route." This territory once constituted the favorite game preserve of the aborigines, and its rivers still teem with fish of large size and delicate flavor; its lakes with bass, pike and perch, as well as duck, geese and wildfowl; its prairies with quail, grouse, partridge and chickens, and its woods with all the varieties of wild game. Some resorts are of course more especially favored than others. At Joliet, the fishing in the Kankakee and Desplaines rivers is excellent. At Senachwine Lake (Henry, Ill.) pickerel and bass bite freely. At "Gilbertown Rocks," near Davenport, bass, pike and cat are abundant. At the "eddies" near Rock Island, splendid wall-eyed pike are captured, and the finest bass, perch and sunfish are taken from ponds in this vicinity. The gamy muskalonge (from 5 to 30 pounds) is found in nearly all the waters of the Northwest. At Spirit Lake the capture of the noblest fish affords exciting sport. The lakes near Watertown, Shell Rock and Worthington are almost equally as attractive to the angler, while the fame of scores of lakes on the Albert Lea Route to Minneapolis, St. Paul and beyond has spread all over the continent. In nearly all sections of North Iowa, East Dakota and Minnesota trained dogs can be had, and ducks, geese, cranes, partridge and quail are abundant. Sportsmen who wish to shoot the coming season further north and northwest or south or west where elk, bear, antelope, mountain sheep and deer are found, should avail themselves of the round trip tourist excursion tickets, procurable at any time, offered by the Chicago, Rock Island & Pacific Railway at greatly reduced rates to and from Utah, Wyoming, Colorado, Idaho and Montana. Half rate round trip excursion tickets are also announced by this road for sale April 24, May 8-22, June 5-19 (limit thirty days for return passage) to and beyond designated points in Iowa, Minnesota and Dakota. For further information address E. A. Holbrook, General Ticket and Passenger Agent at Chicago, Ill. Also inclose to same address a 2-cent stamp for a copy of "Hunting and Fishing" on the Rock Island and Albert Lea routes.—*Adv.*

Game Bag and Gun.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

MAINE GAME PROTECTION.

THE office of a fish and game protector is by no means a bed of roses, in any State, and in a sparsely settled State like Maine it is especially difficult. To thoroughly understand that State in the way of its fish and game possibilities, it is well to bear in mind that not over one-third of the territory is settled or is all covered by roads; that there is a vast length of border, which border is mainly in the woods; that the great State is six months of the year buried in snow. Again, a great deal of interest has been taken in the fish and game of that State of late years by people outside of the State. The newspapers, outside of the State as well as in, have of late years devoted a great deal of space to the discussion of the question. During all this time the Fish and Game Commissioners have worked on, being greatly rewarded by a wonderful increase in the large game native to the State, and making good headway in the culture and the propagation of fish. With the increase of the larger game especially, the interest of sportsmen in Maine and its game has greatly increased and a strong desire to hunt there has naturally grown up. But the season when most men can find time to hunt has unfortunately—perhaps fortunately for the increase of the game—fallen on the time when the statutes for the protection of such game have been operative. This has very naturally created an uneasiness, and in many cases an open defiance of the laws. Prominent citizens of other States have been arrested for violation of these fish and game laws, and in many cases the parties have been convicted. Naturally enough such parties have not come out of their troubles with any great love for the game laws of Maine nor for the untiring commission which has labored arduously to see these laws enforced. Citizens of the State itself have not always taken kindly to the enforcement of these laws, as may be abundantly proven by the fact that the actual murder of two game wardens has grown out of this enforcement. One of the murderers is now serving out a life sentence for this murder. The horses of the game wardens have also been poisoned. Wardens' buildings have been burned. The attempt has many times been made to entrap the wardens in all sorts of difficult positions, and yet to-day it would be difficult to find many cases where wardens have not tried to do their duty faithfully, and the cases where wardens in that State have been guilty of intemperance or grossness of behavior of any kind are exceedingly rare. Why, even a band of masked men assembled in the nighttime last November, and with arms and blackened faces intimidated the man in charge, and tore up the hatching works at Edes Falls, letting go the captured fish, after they had loaded their wagons with the breeding fish to take to their homes, though no one but an Indian would care to eat a fish in that state.

Thus the troubles that have beset the protection of fish and game in Maine may briefly be enumerated. Why, the enemies of the Commission have even tried to impeach the worthy Commissioners—though without law or authority—before the Governor and Council. Impeach them for what? For trying to do their duty, as was amply proven at the trial. Who was at the head of this impeachment business? One of these very hunters from outside the State, who had been brought up to pay a fine for killing deer out of season. Well, have the enemies of the fish and game protective laws yet done? No. They hate the laws and their enforcement, and hence they doubly hate the men who have tried to see that the laws were enforced. But failing in all their attempts to overthrow the work of the Commission, they have turned their attention at last to trying to belittle what the Commission has done and is doing. Some of the enemies of the game wardens and the Commissioners succeeded, at the last session of the Legislature of that State, in springing an act upon the Commission after the matter had virtually been settled. This act took away all the fines from the wardens and gave them to the counties where the cases should happen to be tried. The design of this act was to utterly cripple the Commission in the work of enforcing the law. Wardens could not be induced to go where they might be murdered for nothing, and the appropriation of the State was by no means sufficient to pay for all the expenses of the wardens. But this time the designs of the enemies of the law have fallen flat, and far more flatly than is generally understood. The story of the poverty of the Commission has been industriously circulated, and nervous sportsmen and the enemies of the game laws have taken up the cry, adding to it the theory that the game in Maine must suffer this spring, if ever it suffered. Why, these people have had all the moose and deer killed by crust-hunting, even before the snow had begun to thaw enough to make a crust in any part of the State. The cry got into the newspapers. Boston and New York papers have had special dispatches. Maine papers, that should have been sure of the truth of what they published before giving it to the public, have had special dispatches. These dispatches have all been in the same strain; indeed, they all evidently emanated from the same source—the enemies of the Commission. The dispatches said that the "woods are full of dead game, and owing to the inefficiency of the Commission, the wardens, the want of money—all these reasons—nothing is being done. The game is sure to be exterminated."

Well, the Commissioners have suffered such stories to be circulated. They have served to create an impression, to lead the natural poacher to think that he might hunt and kill in close time. There being no wardens who would work, why, of course, there was no danger of arrests. But what has the Commission been doing all this time? Keeping still and allowing the reports to circulate? Yes. Doing nothing else? No. I have it from the very best of authority that they really have been doing as much for game protection as at any time since the inauguration of the Commission. It is a fact they have had all their old and tried wardens at work, and these wardens are being paid, too, though by what method they are being paid it is not yet time to divulge. Suffice it to say that these wardens are at work, and they have done good work, too. In what direction? In the very direction of investigating these stories of game slaughter and "woods full of dead game." What have they found? In nine cases out of ten, they have found that the stories were lies, made up by those who would like to take the game laws into their own hands, and all the game in the State into their own hampers. These wardens have not been at work openly. They have generally gone to points named rather as a detective would go—as a private citizen, on some other business. Some of these investigations have been exceedingly curious in results. Some of them have resulted in finding dead game, in which cases the wardens have secured all the evidence possible, and the cases will be brought to the attention of the courts in due season.

In one instance the story came to the Commissioners that in a certain back town "they were killing off the deer by wholesale." The name of the postmaster of the nearest post office to the place of game slaughter was given as one who had information of game killed and would give it. That man was visited. Yes. They were killing off the deer by the hundred up in the woods. How did he know such to be the case? Had he seen any of the deer that had been killed? No, he had not, but he had heard, from good authority, that such was the case. Who was this authority? Reluctantly he gave the name, and on went the warden a number of miles further into the woods. He found the man at last. Did he know of any deer killed there since the snow came? No. He was not sure of any, but he had seen suspicious sled tracks where they left the lumber road and went into the woods. He had seen no hunters, no slaughtered deer. This is the history of one case where the deer were being "killed off by the hundred" and "the woods were full of dead game." The history of about all the cases that the Commission has investigated is about the same. The enemies of the game laws, and hence the Commission, have given themselves industriously to circulating such stories, all to create an impression which shall injure the law and the Commission before the Legislature in that State another winter.

The tame deer dodge has been worked for all it is worth in Maine this winter, and the Commission has met that pretty effectually. The law is construed by some people to admit of the holding of a moose, a deer or a caribou alive, since it reads that no man shall hunt or kill, etc., etc. Well, it is not a very difficult thing to take a deer alive in the deep snow, and by the aid of ropes he may be towed down to the hunter's barn, where, in a short time, he becomes quite tame. The owner has him ostensibly for a pet, but invariably something happens to that deer so that he has to be killed, and when once he is killed, why, he might as well be eaten. Of course the hunter is not to blame. He caught the deer for a pet, but it broke its leg, or the dog got at him, or, or—well, he got hurt and had to be killed. Now, the wardens have instructions just how to manage these cases of pets. They visit the pet owners. They ask to see the pet; perhaps they would like to buy him. Once well into the presence of the pet with the pet owner standing by the warden says with his hand on the pet: "I seize this deer in the name of the State of Maine." "Well, but what are you going to do with him, sir?" says the now frightened pet owner. "Do nothing with him. He is here in your possession, the property of the State, and I charge you that nothing happens him. I shall hold you responsible for the life of this deer till such time as the snow is gone and he may be safely turned out, then I will see you again. If he dies on your hands the State will require you to pay $40, the penalty for killing a deer unlawfully. The deer is here solely by your act and the State will hold you responsible." The hunter soon begins to wake up to the fact that he has a deer (dear) pet on his hands. Finally he begins to wish that he had never seen him. In such a way the State now has one moose at Kingfield, one caribou at Winn and a deer at another point.

The maimed deer is another dodge that has been played successfully in some cases, and it has been frustrated by the wardens in others. Early in the winter a couple of kind-hearted young men brought a deer to Bangor, and later to Commissioner Stilwell. The deer had a broken leg. They said that they found the deer near the roadside, and finding that his leg was broken, they had thought it not right to let it suffer and had put it on their team and brought it to the Commissioner for authority as to what to do with it. It had evidently been hunted the day before, and its hindleg was terribly shattered by a bullet. Commissioner Stilwell, finding that the leg was broken beyond all possibility of recovery, and believing that the young men were honest, asked them to kill it, to put it out of its misery. He also told them that if they could use it for food to do so. They did kill the deer and did eat it, but they did not keep their tongues still about the magnaminity and kindness of the Commissioner. Others heard of the case, and other broken-legged deer have been called to the attention of the Commissioner and the wardens, till now the broken leg story has come to mean a warrant for the arrest of the holders of the deer. In one case word was sent to the Commission, by two boys, that a man had killed a deer and left it in the woods, and that if a warden was sent they would show him where the deer was. The warden went to the place. Sure enough, there was the dead deer. The boys declared that they had seen a man shoot the deer, and then go and sit on the body to warm his feet and hands, that when they attempted to approach him he ran away. Their story was hardly to be believed, but in the absence of any evidence against them it was not considered worth while to put them under arrest.

Such is the fight for game protection in Maine, and the story that the Commissioners have laid down this winter for want of funds has in it a good deal of moonshine. Perhaps the records of some of the county courts at their next sessions will tell a different story. SPECIAL.

VIRGINIA QUAIL TO ITALY.—New York, April 16.—*Editor Forest and Stream:* During the fall I receive more live quail than can be disposed of, buyers preferring the spring, when it is impossible to secure a supply. As an experiment, a gentleman purchased three dozen, had them properly cooped and shipped to Italy. I this day received a letter, saying "that but two died, the others arriving in first-class condition." I wish clubs would order birds to be delivered between the months of Sept. 1 and February 1. This will prevent our game from being exported.—E. B. WOODWARD.

YELLOWSTONE PARK PETITION.

NOTWITHSTANDING the large number of names of persons who have signed the Yellowstone Park petitions which we print this week, we find ourselves about six days behind the mail—in other words, none of the names received since last Friday have been put in type. The petitions are going into Congress by hundreds, and their signers number many thousands. Moreover, these signatures represent the best people in the communities from which they come. It is important now to get the bill out of the Public Lands Committee and into the House. When this can be done is uncertain.

THE YELLOWSTONE NATIONAL PARK.

MR. PLUMB—I have heretofore presented some petitions headed "The Protection of the Yellowstone National Park." They have evidently been gotten up by some central authority and circulated for signatures. I have now a letter from a gentleman living in Kansas, written at the foot of one of these petitions, which I will take the liberty of reading in order that the matter may be understood.

CHANUTE, Kan., April 7, 1888.—Hon. P. B. PLUMB: Above received from some unknown source. I do not know the provisions of Senate bill 253 referred to, but by a sojourn in the Park last summer a different state of affairs presented itself than represented above as to the unprotected condition of the Park, and the dangers to its forests, game and natural wonders. The strict rules of the Interior Department for the protection of the Park and game, appear to be rigidly adhered to, a conspicuous portion of the United States Army being suggestive of the advisability of doing so, if nothing else. As to danger to visitors from "lawless criminal acts," such a fear would scarcely occur to the most timid. Yours truly, L. L. BAILEY.

The gentleman is entirely respectable and highly intelligent. I have no doubt that this movement for elaborate laws to regulate the Yellowstone National Park has had its foundation in some personal purpose. I ask that the petition which I present be referred.

THE PRESIDENT *pro tempore*—The bill having been passed, the petition will lie on the table.

MR. VEST—I wish to say a word in answer to the Senator from Kansas. He is mistaken. I was in the Yellowstone National Park, as were other Senators, last summer, and the bill which has passed the Senate simply meets a great necessity. It simply meets a condition of affairs which is anomalous, and found nowhere else in this country.

MR. CHACE—We cannot hear the Senator from Missouri on this side. I am very desirous of hearing what he says.

MR. VEST—I say the bill which passed the Senate was simply intended to meet a great necessity, a necessity growing out of an anomalous condition of affairs in the Yellowstone National Park at this time.

There is one company of troops stationed in the Park, sent there by the Secretary of War upon the request of the Secretary of the Interior. I was myself opposed to any military government in the Park, and resisted it to the full extent of my influence and power; but Congress deemed it proper not to adopt my view of the case, and the result has been the sending of a company of soldiers there to preserve peace and order.

I am happy to say here in the most public manner, as I have stated to the authorities before by written communication, that I was most agreeably disappointed to find that the Park was in admirable condition so far as police regulation was concerned, growing in a large degree out of the fact that the present officer in command, Captain Harris, is singularly adapted to the duties of his position, and is a gentleman of intelligence and justice and high character.

But while the military are there for the purpose of preserving order, there is no civil law whatever administered in the Park. It is not under the jurisdiction of Wyoming. There are no laws of the United States which protect property or life there. Murders have been committed in the Park, criminals arrested and placed in the jails of Wyoming and Montana, but under habeas corpus they were turned loose by the courts because there could be no punishment for such crimes.

The bill which has passed the Senate simply provides for the appointment of a commissioner whose duty it shall be, when information of crime having been committed is lodged with him, to act as an examining officer, while at the same time he has a small jurisdiction over misdemeanors, violations of the rules of the Secretary, and offenses of that class. Where a felony is committed, his only duty is to examine, and if he find probable cause, as in the case of other examinations of that character, he sends the criminal on for trial to the courts of Wyoming Territory.

I do not know where the petition came from to which the Senator from Kansas refers. I do not know from what source it emanates, but I want distinctly to affirm, of my personal knowledge, that the bill which passed the Senate, and which I drew myself, but which was reported from the Committee on Territories of which I am not a member, had no personal object, and could not possibly have had any.

MR. PLUMB—It was not necessary for the Senator from Missouri to disclaim any personal purpose in drawing the bill, although I did not know at the moment that he was the author of it. I heard the authorship ascribed to the late Chief Justice of the United States.

MR. VEST—Oh, no; he had nothing to do with it. I wrote every line of it.

MR. PLUMB—I do not know that the Chief-Justice himself, if he were alive, would care to make any pretension upon that subject; but what I referred to was the fact that printed petitions were sent all over the country, printed by somebody, and presumably by somebody who had sufficient personal interest in it to warrant the expenditure of money, and I wanted to put opposite to and in contradistinction to those petitions, which I myself have presented when they have been sent to me, the statement of a thoroughly reliable and intelligent man in regard to the condition of things existing in the Park.

I myself was not in favor of the legislation passed by the Senate, but I did not care to oppose it, because the disposition to get on to every subject about which we can legislate is too overwhelming; and to have a little principality up there which can only get its laws from the Federal Government, and whose every official must be appointed by the President of the United States, possesses undoubtedly very attractive features. They are not attractive to me, but I am speaking of the average legislator. We are seeking all the while, as I think, to get hold of objects of legislation of that kind, and I look upon this as substantially one of them.

I, of course, impute motives to nobody, but I have brought this matter to the attention of the Senate simply to say that there was somewhere in this country an interest sufficiently powerful to induce people to spend money and to print petitions and send them all over the country about a matter which I supposed was, and which ought to be, a public matter.

MR. VEST—The Senator will permit me to make one observation and I am done as to a discussion of the matter of legislation. At any time in which that could occur, I have always been ready to discuss it with the Senator from Kansas or any one else, here or anywhere, but I want to say in regard to these petitions that I have no doubt they come from the most disinterested motives, from gun clubs and other sources of that sort throughout the country. I have received letters from persons whom I do not know at all, in which they express great interest in the Park, and I think that any gentleman who has ever visited it will not be surprised that that interest exists.

MR. DAWES—I should like to ask if the Senator from Kansas prefers or proposes to surrender that Park to the public domain. If he does, that is a fair question and an issue which has been already decided and disposed of. If not, does he propose to keep it up and preserve it; and if he proposes to preserve it does he propose to adopt such measures as will bring about that result? Two or three such questions as that answered will settle this question. So far as these petitions are concerned, I have a number of them in my committee-room from the towns of Massachusetts, and I am glad to know that all over this country there is an interest being awakened and preserved that will keep its eye upon this National Park. For one, I am in favor of its preservation; I am in favor of all such proper means and measures as will secure its preservation.

MR. PLUMB—I did not know that my opinion was of any great importance, but the Senator from Massachusetts seems to think that the existence and maintenance of that Park may depend upon my opinion on the subject. Therefore I am perfectly willing to say in this most solemn manner, befitting the solemn character of the interrogatories which have been propounded to me, that I am in favor of maintaining the Park. This statement ought to settle that point at all events.

THE PRESIDENT *pro tempore*—The petition will lie on the table.—*Congressional Record, April 11.*

JEFFERSON, April 7.—*Editor Forest and Stream:* While the number of signers is not large, their character and standing will carry weight, and they fully and fairly represent the sense of this community. Most of them are personally known to both Senator Allison and Congressman Holmes and will, I believe, have greater influence with them than a larger number of promiscuous names. Sincerely hoping that your efforts in the matter may receive a suitable reward in the prompt passage of the bill by Congress, I am, M. E. HALL.

COOPERSTOWN, N. Y., April 9.—*Editor Forest and Stream:* For the first time in my life undertaking such work, at 64 years of age, and in the midst of a pouring rainstorm, I yesterday circulated the Yellowstone Park petition, obtaining the names of all our principal citizens. The original subscription is sent to Washington, with as earnest words in its behalf as I am able to command. Thanking you heartily for your public spirited endeavor, and wishing it complete success.—ELIHU PHINNEY.

MARION, O., April 7.—*EditorForest and Stream:* I have had the papers signed by some of our most prominent citizens and county officials and have sent them to the Hon. W. C. Cooper, M.C., from this Congressional District. I could have procured the names of several hundred persons, and every one I spoke to seemed to be interested in the matter, but I had not the time.—WILLIAM FIES, Capt. Marion Gun Club.

BUFFALO, N. Y.—*Editor Forest and Stream:* Many thanks for the Park petition you sent me. And I now inclose a copy of the signatures which I secured for it, representing, as they do, some of our most prominent men, who are aware of the fact that something should be done at once for the protection of the Yellowstone National Park.—EDWIN L. FRENCH.

DILLINGERSVILLE, Pa.—*Editor Forest and Stream:* Inclosed please find list of signers. All whom I have asked have signed willingly. Remember, most of these signers are men who do no hunting, but consider the Park should be protected and the petition signed by all the American people. What large game and forests are left should be protected.—L. W. MAZURIE.

MILLVIEW, Pa., April 9.—*Editor Forest and Stream:* As I think the National Park ought to be preserved by the United States of America, I will, if you will send me one of your petitions for that purpose, get as many subscribers as I can and then I will forward it to our representative at Washington.—F. N. MOLYNEAUX.

MILWAUKEE, Wis., April 6.—*Editor Forest and Stream:* If I had time to swing around the circle of my friendship, I could send you a list almost as large as a city directory. Everybody is in favor of protecting the Park and the hunted game.—JULIUS BLEYER.

YELLOWSTONE PARK ROADS.

WHEN Capt. Dan Kingman, for several years the efficient Engineer officer in charge of the Park, made his estimates in 1886 of the sums required for continuing his work on the roads and bridges, he asked for $150,000, but only $20,000 was allowed him. Captain Sears, U. S. Engineer, at present in charge of the improvement of the Park, in his report dated July 20, 1887, renewed this estimate, deducting from it, however, the sum already granted, making $130,000 in all. He proposes with that sum to accomplish the following improvements:

To build a road from the Upper Geyser Basin over the Continental Divide to the mouth of the Yellowstone River, via the West Arm of the lake, 30 miles	$40,000
To improve and complete the present road from the lake along the river to the Grand Cañon, 14 miles	10,000
To build a new road from the Grand Cañon to Yancey's, 20 miles	30,000
To improve and complete the present rough road from Yancey's to the Mammoth Hot Springs, 15 miles	20,000
For general repairs of existing roads	20,000
For portable steam saw mill	3,000
For portable rock crusher	2,000
Buildings, etc., for employees	5,000
	$130,000

Captain Sears will, it is hoped, receive a more liberal appropriation at this session of Congress than he did from the last.

SMALL RIFLES FOR DEER.

Editor Forest and Stream:

Apropos of Mr. Zimmerman's article in your paper some weeks since, I will give a bit of my experience with a Winchester 32 cal. model of '73. I purchased this gun with no intention of using it for anything but small game shooting and practice. After some experiments, however, I determined to try it on deer.

On going to the mountains last fall, notwithstanding the advice of my friends to take "something I could stop a deer with," I took my .32, and with it killed seven deer, and I came down from the mountains with the pleasant reflection that I had sent no animal into the thicket to die of wounds. Of course, I used some discretion as to distance and positions of game. I never opened on deer running at two or three hundred yards, or even one hundred. I killed two running deer while out, one at twenty-five or thirty yards running at right angles, and one at sixty yards running quartering. Both were killed outright with one shot, the other one running about one thousand yards before I came up with it, to find it dead. My longest shot was two hundred steps at a walking deer; she went about fifty steps and laid down, when a bullet through the head finished her.

One deer that I shot high at 110 steps, was hit in the spinal column over the shoulder. I was kneeling when I shot, and the ball ranged upward through the right shoulder blade in the thin part and crushed one section of the backbone into small pieces. This ball did not pass out, and was the only one which lodged in the body of any animal shot. All but two of my deer were shot through the shoulder, the balls passing through both blades when shot in the lungs, and through at least one bone when shot in the heart or its region. Parties hunting with me who were using Winchester .44-cal. and Marlin .45-70, were astonished at the work of the little cartridge. So was I, for I had so far deferred to the opinions of hunters more experienced than myself as to take a larger gun with me, but I never used it. I will state that I still hunt exclusively, and though the field where I hunted is within eighteen miles of this post and is much frequented by hunters, so that the game was reasonably wild, it will be seen from distances given above that it is possible to approach wild game to within distances from which it can be killed with a small bullet.

I use the Lyman sights, and for all light on both standing and moving game find them very satisfactory. I shall, if I live, take the little gun into the mountains the coming fall, feeling satisfied that with proper handling it will answer every purpose, save for dangerous game. I see no necessity for reducing the powder charge for short distances or small game. I reload the Winchester shell and find my ammunition cheap enough, and the gun works well on small game with the 70grs. charge of powder. I think it a better all-round gun than the .44 Winchester, as the ammunition is lighter, and, so far as my experience goes, just as efficient. I think, however, if I were choosing a .32-cal. gun now, I would prefer the Marlin .32-40-165, both because the cartridge is heavier and the shell is more easily employed for a reduced powder charge and being straight. J. A. P.

NORTHERN CALIFORNIA.

SMALL-BORE GUNS.

Editor Forest and Stream:

I have devoted much time in past years in experimenting with shotguns, and I am convinced of the superiority of the small gauges, and use them for hunting for all game from wild turkey down, and for deer. A small gauge, provided it is not chokebored and has long enough barrels, shoots much stronger than a 10-bore. By small gauge I mean 16, 18 and 20 gauges. The 16 gauge shoots coarse shot better than shot as fine as No. 8 or 10. The small bores, with their small charges of powder, develop greater power than large charges in a 10 bore. I have done much better shooting with a 16 gauge, 2¾drs. of powder, than a 10-bore with 5drs. powder. To choke a small bore spoils it. Chokebores do not do well with coarse shot. The larger the shot the poorer will the chokebore shoot. I have for years, in trying guns, discarded the regulation 40yds. and test all guns at 60yds. It is at this distance, with No. 4 or No. 2 shot (or larger), that the cylindrical-bored 16-gauge, with long barrels, will beat badly the fashionable 10-bore choke. But 2¾drs. of powder must be used (at most 3drs.) in the 16-bore.

It takes more force to throw a handful of fine sand a long distance, than it does a handful of coarse gravel, and this is the reason the 10-bore needs the heavy charges of powder to propel the fine No. 8 or 10 shot, and coarse shot cannot be used to advantage with the large powder charges necessary in a 10-bore gun. 30in. barrels are better for a 16-gauge than 30in. With practice, as quick shooting flying can be done as with shorter barrels, and the pattern and penetration out of a 30in., 16 or 20-gauge cylinder bore gun at 60yds. would surprise those who are only used to 10-gauge chokebores. I repeat it is a great error to choke a small-gauge gun. The following shows well what choking does to a 16-gauge gun. The two guns were both 16-gauges, one cylinder bore, the other choked. Distance 60yds., target 6x4 inches, charge the same in both guns, 2¾drs. of powder, 1⅛oz. of No. 4 shot: Cylinder bore put 4 shot in target, chokebore 2. The penetration of cylinder bore about 1½ per cent. better than choke. Chokebores shoot buckshot very badly, which is another advantage for the cylinder bore. As I wrote to the FOREST AND STREAM several years ago, I knew a deer to be killed dead at 80yds. with a 24-gauge muzzle-loader, and a Rocky mountain wildcat at 65yds., with a 20-gauge. 40in. barrels shoot even better than 36in., but for shooting flying, most men would find from 34 to 36in. handier.

I have often had wild turkey drop dead (flying from the tops of high trees), at from 60 to 65 and once 70yds., with a 16-gauge, loaded with BB. These distances were measured each time. I wish FOREST AND STREAM would hold a trial of 10, 16 and 20 gauges; it would take less time and money than the celebrated rifle trajectory tests. But to get the best results from the small bores, cylinder bores must be used, coarse shot, and the longer the barrels the better. I find No. 6 shot shoots close enough in my gun for snipe, and I do not use smaller shot. Why should I, when the gun, a cylinder bore, 16-gauge, puts twenty-one No. 6 shot in a book 9x5in. at 40yds.? The poor wing-shot does not like the small bore, as you have to hold right on the bird and can't trust to the scattering

of the charge to make up for bad shooting. I wrote some years ago several articles on small bores, but as since then new readers have come to the FOREST AND STREAM, and as there seems to be considerable interest in the subject, allow me to quote from what I wrote. I may call the following "axioms" in the matter of small gauges vs. large bores. The small gauges referred to are cylindrical bores:

First—The small bore scatters less with same charge of shot than the big bore.

Second—The small charge of powder used in small bores shoots coarse shot better than fine.

Third—With the small charge of powder used in small bores coarser shot must be used to obtain penetration than in a big bore.

Fourth—We do not lose in pattern when using coarse shot in small bores, but in big bores with the large charges of powder they require, coarse shot containing but few pellets scatters too much.

Fifth—The small charge of powder suitable for small bores does not answer in big bores.

Sixth—It is a heresy, favorite with users of big bores, that the small shot penetrates further than coarse shot, as it has less resisting surface. This is not so, but is a statement full of mistakes, as any one can prove by experiment.

In conclusion let me say again, I hope the FOREST AND STREAM may see its way clear to give us a trial of small-gauge cylinders vs. the fashionable, modern, so-called "improved" big chokebores. CYRTONYX.

FAYETTEVILLE, Ark.

AN OHIO LAW.

WE print below a bill introduced by Mr. Stranahan in the last General Assembly of Ohio, which has now become a law. It is entitled "A bill to amend Section 409 of the Revised Statutes of Ohio."

SECTION 1. Be it enacted by the General Assembly of the State of Ohio that Section 409 of the Revised Statute of Ohio be so amended as to read as follows:

SEC. 409. The Commissioners shall annually, on or before the 15th day of January, make to the Governor a report of their proceedings for the preceding year, giving in detail their labor and operations with such suggestions as they deem proper, and also a detailed statement of expenditures; and their report shall be published with the report of the State Board of Agriculture. The Commissioners shall, at their annual meeting in January or at any other time, appoint a fish and game warden in each county in the State, who shall hold his office for two years, unless sooner removed; and they shall also appoint a special warden for Lake Erie and for the Mercer county, Lewiston, Six-Mile, Licking, Laramie and Sippo reservoirs of the State; each warden shall, before entering upon the discharge of his duties, give a bond to the State, with sureties to the satisfaction of the Commissioners, in the sum of two hundred dollars, conditioned for the faithful performance of the duties of his office, which bond shall be deposited with the Commissioners; it shall be the duty of the wardens, under the general direction of the Commissioners to appoint such assistants as they may require to assist them in policing the territory, both land and water, of their respective counties and territories, arresting wherever found in the State all violators of the laws of the State enacted for the protection of fish and game; and the Commissioners shall appoint, if in their judgment it is desirable, a State warden, who shall hold his office for one year, unless sooner removed, at a salary of not more than $1,200 per annum, payable quarterly, and he shall be allowed a sum not exceeding $400 per annum for expenses. The salary and expenses of the State wardens shall be paid out of the fund set apart for the use of the Commissioners. The State warden shall, before entering upon the discharge of his duties, give a bond to the State in the sum of $2,000, conditioned for the faithful performance of his duties, which bond shall be deposited with the Commissioners. It shall be the duty of the State warden under the general direction of the Commissioners, to visit any and all parts of the State, assist the county and reservoir wardens, and arrest, wherever found in the State, all violators of the laws of the State enacted for the protection of fish and game, and to assist when so ordered, in the work of propagation and transfer of fish. Each warden shall annually, on or before the first day of December of each year, make a detailed repert to the Commissioners of their respective labors, number of arrests made, number of convictions with such other suggestions as they may deem proper; the compensation of the county wardens shall be from fees the same as are paid the sheriffs of their respective counties for similar services, to be paid from the fish and game fund, which shall be made up from fines arising from convictions for violation of the fish and game laws; and the County Commissioners shall, upon the recommendation of the Fish and Game Commissioners, allow to their county warden a salary not exceeding $500 per annum, which salary shall be paid quarterly, upon the warrant of the Fish and Game Commissioners, out of the fish and game fund or dog fund. And the Fish and Game Commissioners may pay to the Lake Erie warden and to each of the wardens of the reservoirs, from the State fund set apart for their use, a salary not exceeding $300 per annum, payable quarterly; and if in the judgment of the Commissioners any special class shall be entitled to increased compensation, it shall be paid them out of the State fund set apart for their use.

SEC. 2. That Section 409 be and the same is hereby repealed.

SEC. 3. This act shall take effect on its passage.

MASSACHUSETTS GAME LAWS.—Melrose, Mass., April 10.—*Editor Forest and Stream:* I am informed a bill has been favorably reported from the committee in the Massachusetts Legislature making the open season for woodcock and ruffed grouse Sept. 1 to Dec. 1, and for quail Oct. 15 to Jan. 1. As the law now stands the season for grouse and quail closes on Jan. 1. I see no objection to the proposed law except as regards grouse. In September our grouse are small and weak of wing as compared with some birds in November. But to my mind the proposed change is especially unwise in attempting to make a close season for grouse in December while the season is open on quail. With us both quail and grouse are found on the same grounds, and are, or ought to be, hunted in the same manner. When a dog comes to a point it is impossible to tell which bird is to rise. Now this law purposes to give its sanction, during the best month of the season, to the shooting of one bird and to make it a criminal offense to shoot the other. To keep the law in good faith, we are to get ready for a shot and then after the bird rises determine which it is and let the grouse go unchallenged. If this law is confirmed I shall try to keep it, and hope others will do the same; but I have harrowing doubts whether even law-abiding sportsmen will be able to respect it upon trial. I am afraid it will tend to bring all game laws into disrepute. Will brother sportsmen give their opinions? If the law can be enforced, well and good; if it cannot, then I hope it will not be enacted. Rather let the season commence Oct. 15 for woodcock, grouse and quail, and end Jan. 1.—W.

IT WAS GOOD.—Toronto, Ontario, April 9.—*Editor Forest and Stream:* Allow me here to express the pleasure I had in reading Mr. Orin Belknap's article, "My only Buffalo Hunt." I do not remember that I ever before read so interesting an account, or one which so abounded in those little incidental touches which, to use Pooh-Bah's words, "give an aspect of verisimilitude" to a narrative.—ERNEST E. THOMPSON.

SCHULTZE POWDER.—New York, April 12.—*Editor Forest and Stream:* I have lately been trying some of the much talked of Schultze white powder which has come into such prominence during the last year. I am shooting a 7½lbs. Clabrough gun, and have been using 3½drs. of this powder, 3 pink-edge, and 1⅛oz. of shot at the trap. I find that the powder is all that is claimed for it, excepting as to the recoil, which I find to be a great deal more than that of any black powder I have ever used, nor can I make as close and even patterns with it as I can with the Dead Shot FFG. It has always been claimed that all wood powders give less recoil and closer patterns than black, which, however, I have not been able to verify. The almost total absence of smoke and the great strength and quickness of this powder, together with its cleanness, make it very desirable. I notice that it is so quick that I need not lead my crossing birds as much as with black, and at live birds it kills cleaner than anything I have seen. I always believe in a good charge of powder, but the recoil of this Schultze seems excessive, and I shall either have to reduce my charge, in which I have no confidence, or go back to my favorite FFG. I have seen it used by some members of the Country Club at Bartow, in imported shells, before I tried it myself, and all spoke in the highest terms of the powder, and no one complained about kicking. I understood they were also shooting 3½drs. of it. I primed my shells with a few grains of black powder, as otherwise it seemed to hang fire. I am very sorry to say that the quail which were originally let out on the grounds of the Country Club, and which have stocked the whole surrounding country, seem to have nearly all perished during the blizzard last month. I have heard of several being found dead in the cemetery, a very appropriate place.—AMATEUR.

COLORADO JOTTINGS.—Berthoud, Colo., April 9.—Ducks and geese have been very plenty in our lakes this spring, but there has not been a great deal of shooting by the "town dudes." A few have been shot by the farmers for their own use. Saw four fine swan in my field this week. Our alfalfa fields near the reservoir are a favorite place for the teal to nest and hatch their broods. Last summer I found a number of nests when I cut my hay, and they are about the smartest little things I ever saw. A neighbor caught two coon on the creek near here this winter, something new for Colorado, as this is not a timber or a coon country. How did they come here? Think they must have emigrated from Kansas or Missouri. Mink and muskrat are getting very plenty along our large irrigating ditches and reservoirs. What became of the Alaska excursion? Expected to hear from them through the FOREST AND STREAM.—A. A. K.

A MARYLAND GAME AND FISH CLUB.—At Elkton, Md., April 6, the Northeast Gunning and Fishing Association of Cecil county was incorporated under the general laws of the State, the incorporators being James C. Davis, Wm. D. McCullough, Alex. H. George and Jonathan M. Dougherty, of Cecil county, and Don. J. Wallings, William E. Moses and Harry C. Lowden, of Philadelphia. The capital stock is $10,000, with shares at $50 each. The objects of the association, as stated in the articles of incorporation, are to provide a club house and premises where they may gun, hunt, fish, etc. The association will be managed by seven directors. The new association purchased of J. M. Dougherty his farm on Northeast River. The property contains 106 acres, and $5,000 was the price paid.

OLD RELIABLE ROD AND GUN CLUB.—Detroit, Mich., April 7.—The Old Reliable Rod and Gun Club of Detroit held their annual meeting Friday evening April 6, at which the following officers were elected for the ensuing year: B. W. Parker, President; C. H. Preston, Vice-President; Wm. Blair, Secretary and Treasurer; J. R. Brooks, Field Captain; Jno. Parker, Lieutenant; W. H. Smith, W. J. Miller, M. P. Hutchins, Directors. This club is in a healthy and prosperous condition, increasing in numbers and contains within its ranks some excellent shots. Their grounds are pleasantly situated below the Fort, and are pronounced by experts equal to the best.—WM. BLAIR, Sec'y.

EUREKA GUN CLUB.—At a meeting held Wednesday, April 4, at Eureka, Dak., the Eureka Gun Club was organized, and the officers were elected as follows: President, W. Bach; Vice-President, J. E. Reagen; Treasurer, E. L. Hopkins; Secretary, F. W. Moulton. The club was formed for the purpose of enforcing the game laws. A club house will be built on Brant Lake and several boats made.—W. E. B.

A MASSACHUSETTS BILL.—A bill has been introduced into the Massachusetts House of Representatives which forbids the shooting of black ducks with any gun larger than 8-bore, or pursuing or killing them by the use of a boat or any floating device.

DEER IN ESSEX COUNTY, N. Y.—A letter received by the Adirondack Preserve Association says that the deer have wintered well, lumber camps being scarce in this vicinity, their yards have not been disturbed.

ENGLISH SNIPE AT BUFFALO.—The *News* of April 10 says: "Geo. Stauber and his shotgun were up the Lake shore road, near Brocton, yesterday, and bagged 18 English snipe."

CHRONIC FOUNDER."—OFFICE OF SECRETARY OF STATE, Raleigh, N. C., Dec. 8, 1887.—Humphreys' Homeopathic Med. Co., 109 Fulton st., N. Y. GENTS: In November last I purchased a case of your Veterinary Specifics because I had an opportunity to test them on the worst case of chronic founder that I ever saw. I think it but justice to you to say that the experiment has been absolutely successful. The animal was foundered in July or August. From then until the time your system was brought to bear on her she could not step over the butt cut of a broomstraw. She is all right now and rapidly regaining the flesh she lost during her long illness. Very respectfully, W. F. BATCHELOR, Chief Clerk Dept. of State. *Note.*—Upon our request for permission to use the above as an "open letter," Mr. Batchelor responded in a public spirited manner, saying: "The cure to which I refer is really so remarkable that if the use therof leads to the further adoption of your system, I shall regard it of greater service to the public than to your company."—*Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

TACKLE.

GREENE, N. Y., April 11.—*Editor Forest and Stream:* I do not consider the automatic reel available for minnow casting. I only use mine for fly-fishing. When I have to make short and long casts I use not over thirty yards of the best enamel line I can buy. I have a line which I have used four years, and it is good for four years more. I never allow my line to get water-soaked. I always have a lump of white wax in my pocket, and keep about twenty-five feet of my line well waxed, which preserves the line and causes it to lay out straight when you cast, and makes it less liable to kink than a water-soaked line. For minnow casting, the only reel to use, in my opinion, is an easy-running multiplier, such as Prof. W. M. Mayer used in the tournament of October 4, 1884, and with which he won first prize for minnow casting. I only, as I have said, use my automatic reel for fly-fishing, and any angler who wishes to fish with flies, after he has once learned to use an automatic reel, will use no other. For all bait-fishing I use a single multiplier. I have no particular preference, as all first class reels are good. If any one thinks that in fly-casting an automatic reel is not a luxury, if they will visit me and go trout fishing with me, I will try and demonstrate the superiority of an automatic over an old crank reel.

SKILL-BACK.

Editor Forest and Stream:

Will "P. L.," "Skill-Back" and Mr. Keene please accept my thanks for information concerning the automatic reel and Horton steel rod. I notice "H. P. U.," inquires if the reel can be used in minnow casting. I hardly see how, for instead of being free-running, the spring of the reel is "wound up" by unwinding the line, the more line out the stronger the tension. Of course if the cast is not to be much longer than the rod, it could be used as well as any reel. There may be more than one pattern of automatic, but in the one shown me lately, the line was unwound by the hand with considerable tension.

O. O. S.

FORT SHAW, Montana, April 6.—*Editor Forest and Stream:* I have used the automatic reel for two years, and would not give it for a wagon-load of those old crank reels. The automatic gets there every time. If "O. O. S." uses one for a day or two he will use no other.—R. H. W.

SUNAPEE TROUT APPEAR IN A DREAM.

NEWPORT, N. H., April 7.—*Editor Forest and Stream:* I have noticed much in the FOREST AND STREAM regarding the trout in Sunapee Lake, and the different varieties of trout found there and the mode of catching them. Some pretend to have first fished in deep water as far back as 1857. I used to fish upon the shore of Sunapee Lake for trout, making large catches after the fish commissioners stocked the lake with black bass. I used to make regular trips to the lake, occasionally getting some trout, and was in a deep study to know how I could catch trout which I saw jumping in all directions. In 1882, I proposed a fishing trip to the lake, and before we went I had a dream that if I could anchor in 70 or 80ft. of water I could find trout fishing good. Two of us got everything in readiness and took the train for Mt. Sunapee, a team waiting for us conveyed us to our destination, and at three in the morning we started for the lake. We anchored in 80ft. of water and threw in our hooks and in less than ten minutes I had a beauty in the boat. The sun was sinking in the west when we returned to our camping place, leaving our basket of provisions and the rods in a secret place and returned to camp. After a night's rest we were up at an early hour, once more trying our luck at trout fishing. We found our provisions destroyed and the rods broken. We repaired our rods and in two or three hours were ready for a start, and arrived at our old fishing ground, and we had all the fun we wanted for this day, making a catch of nine trout that would tip the beam at from 2 to 5½lbs. I claim having first discovered the deep-water fishing. I have fished in different parts of the lake to good advantage, making large catches at different places. Once on a trip three of us fished all day; I caught none, my comrades making a catch of eleven trout each. Next morning found me on my old trout ground, anchored on the same ground, threw in my hooks, had a strike, played the fish a short time, then landed my prize, which tipped the beam at 5½lbs. By noon I had caught ten trout, making in all 38 trout for three of us in less than two days. Have fished at Chandler's, Indian canoe banks ledge, George's mills, North Point Underhill, Cold Spring, Birch Point, Hedgehog, and a great many other places. There are four different kinds of trout in Sunapee lake—native trout, white trout, blueback, and landlocked salmon. JACOB R. HUTCHINSON.

THE TROUT OPENING IN CALIFORNIA.—San Francisco, April 2.—*Editor Forest and Stream:* This is the first day of the legal trout season, but illegal fishing has been going on for some time and anglers feel that they have been forestalled by the poachers. Reports from Pescadoro Creek, and neighboring streams, say that hundreds of trout were taken last month by all sorts of devices. The Pescadoro is the best stream for trout in this part, which is readily accessible to anglers from this city, and if it was well stocked and protected would be one of the best in the country. As it is the law is violated with impunity and men fish openly in the close season, without fear of arrest. This state of things is not peculiar to the vicinity of San Francisco, but exists throughout the State, especially in the splendid streams of Sonoma county, among the tributaries of the Russian river. We have a large foreign population here which needs a lesson in fish protection, especially the Italians and Chinese, and if we had an efficient force of fish and game protectors, something after the model of the New York system, working in harmony with our Fish Commision, no State would have better trout fishing than California.—PESCA.

TROUT PROSPECTS IN MAINE.

THE latest reports from the Maine trout waters do not indicate an early departure of the ice, though up to the middle of March the ice seemed very thin and fast wearing away. But the fact is that ice has actually been making since that time, instead of melting away, as it often does in the month of April. One letter from the South Arm, Richardson Lake, of April 11, says that the weather has been very cold, the mercury running down to zero since April came in, and going below freezing nearly every night. This letter also says that the ice has actually grown stronger, and that it will be late about going out. Another letter from the Upper Dam confirms the same position, and goes on to say that it will hardly be possible for the ice to get out before the 10th of May, though it went out of a part of the lakes on the 4th last year. From the Moosehead waters the reports all indicate cold weather for the first part of April. Hence the ice has not made the usual headway toward melting.

There has been considerable fishing through the ice on the waters in that State where the inhabitants thereof are permitted by law to take trout after the first day of February, to be carried to their own homes. This permission by the fish and game protective laws is one of the most abused of any in the code. It is a very easy matter for the guides, residents of the State, to have the holes all ready, indeed the lines all set, if need be, against the arrival of the gentleman from Connecticut, the gentleman from New York, the gentleman from Boston. Then the fishing goes on, under the cover of the law. The gentlemen from out of the State do not catch the trout.(?) They are there only as spectators—silent witnesses of the sport. There is no law to prevent their standing on the ice while the fun goes on. Oh, no! But what are those long trips from Boston, New York or Connecticut to the trout lakes made for in the month of March?

The law permitting any fishing out of season is a foolish one, and that should engage the attention of the Legislature of the State, which convenes again next winter. There is no good reason why even a resident of the State should be permitted to take trout through the ice. It is well known that ice fishing has done more to deplete our troutwaters than it is possible for all the fly-fishermen in the country ever to do, and yet Maine permits residents of the State to fish out of season. They give some of the trout butchers out of the State the word, when unitedly they go to some of the best trout lakes and ponds, and with live bait take every trout that can be lured to their lines. Such fishing is all the worse when it is remembered that the trout, long confined under the ice, are hungry, and readily accept the live bait offered. Give us all an equal chance with fly or bait in open season, is all we ask. When Maine, as a State, once rises to the dignity and good sense of such a position, then will her people begin to reap the benefits her trout and salmon waters are capable of yielding. But so long as poaching and fish butchering are permitted by loose statutes or a niggardly enforcement of some of her really excellent statutes, so long will her best fish waters continue to become depleted, till at length they will fall into utter disrepute. The demand is very great from the sportsmen who are willing to go without trout unless they can be taken fairly; but once cut off the poaching and sneaking in, under any form of the law, and there will then begin to be trout enough for all. He who plans a trip to Maine to take trout through the ice is letting himself out to do a mean act, and an act which is actual robbery, so far as other sportsmen are concerned, who are willing to wait the time when they can get trout legally and fairly; unless that robbery has taken them all. Is not there growing up a sense of honor among the lovers of fishing? Is not there a time coming when a man will be ashamed of taking trout out of season? Ashamed of it, for the reason that he is robbing his brother sportsmen. SPECIAL.

A BAD BILL.

A VERY bad bill is now before the New York Legislature, which, if it becomes a law, will open the way to the destruction of the more valuable fishes of the St. Lawrence River. It is the Assembly bill No. 732, entitled "An act to regulate fishing in the waters bordering on Jefferson county." Under the present law no nets can be used in the St. Lawrence, and it is comparatively easy to protect the river, but if the proposed bill should pass, no available force could supervise the nets and see that all the provisions of the law were complied with, because the fish which it is desirable to protect are the very ones that are of value to the fishermen for market. The bill opens the door to all dishonest and illegal fishermen, and will end in destroying the fishing which now attracts thousands to the river every season. We give the bill in full, in order that the danger which lurks in it may be fully seen:

Sec. 1. Any resident of the county of Jefferson may net all kinds of food fish, with the exception of black bass, pickerel, muscalonge and California mountain trout, in the St. Lawrence River, between the twentieth day of September and the first day of May; and in the waters of Lake Ontario, bordering on Jefferson county, subject to the following restrictions: No gill nets shall be used in the river St. Lawrence, nor within one mile of the main shore or islands adjacent in Lake Ontario; and no pound or trap net shall be set within one-half mile of any shore or islands or inlets thereto in Lake Ontario, between March 1 and May 1, between the St. Lawrence River and the Oswego county line. Fyke or box nets may be used in all the waters bordering on Jefferson county and its inlets between the twentieth day of September and the first day of May. Cisco nets may be used to take ciscoes in their season, within the mile limit, between Oct. 20 and Dec. 1. Only sturgeon nets, with not less than 6in. meshes, and fyke or box nets shall be used in the St. Lawrence River and its tributaries.

Sec. 2. Any person taking black bass, pickerel, muscalonge and California mountain trout in the nets named in section one of this act while fishing for food fish, shall at once restore the same, without injury, to the water whence taken.

Sec. 3. Henderson Bay and the shoals adjacent are exempt from the operations of this act.

Sec. 4. Any person taking, or found with black bass, pickerel, muscalonge and California trout in their possession, which have been caught in the waters covered by this act, in nets or by any device other than hook and line, or rod held in hand, shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than fifty dollars and imprisonment in the county jail for a period of thirty days for the first offense, and for the second or any other subsequent offense a fine of one hundred dollars and imprisonment in the county jail for a period of sixty days for each conviction. The finding of black bass, pickerel or muscalonge in possession of any person violating this act shall be taken as *prima facie* evidence of guilt, unless satisfactory proof is furnished by said party that said fish were caught by hooks and line, or rod held in hand.

Sec. 5. Any resident of the county of Jefferson may use a suitable seine to take "menhaden" for fertilizing purposes in the waters covered by this act, at any season of the year, providing all game fish named in this act are at once restored to the water whence taken, without injury.

Sec. 6. All penalties imposed by this act may be recovered with costs of suit before any justice of the peace or any court of record of Jefferson county. The District Attorney of said county is hereby required to prosecute actions in the name of the people of the State of New York for the recovery of the penalties hereby imposed immediately upon receiving proper information of the incurring of a liability to pay said penalty, and to undergo said imprisonment. Any penalty so recovered in a court of record or before a justice of the peace shall be paid as follows: One-half thereof to the person informing the District Attorney, and one-half to the Superintendent of the Poor of said county for the benefit of the county poor. All costs or charges incurred in any such prosecution shall be a county charge.

Sec. 7. This act shall take effect immediately.

FIN OF ROCKY MOUNTAIN GRAYLING (*Thymallus montanus*)—NATURAL SIZE.

A BIG GRAYLING.

THE accompanying cut shows the natural size of the fin of a Rocky Mountain grayling (*Thymallus montanus*), from the South Fork of the Madison River in Idaho, about twelve miles from the Firehole Basin in the National Park, and ten miles from Henry's Lake. The fish was caught within half a mile of Manly's ranch. We have caught in our time a good many grayling in the mountains, but we are free to confess that we never captured one anywhere near so large as this one. The grayling in the South Madison are rapidly growing fewer in number. This is not because there are too many anglers there, but because nets are dragged through the river which take out all the fish. It is said that at one time 2,000lbs. of these delicate fish were taken with seines and hauled into the Park, where they were bought by the hotels and sold to the tourists for trout. It is a pity that some means cannot be taken to preserve these fish there, for it is the nearest convenient fishing ground for grayling to the National Park.

THE COMING TOURNAMENT.

NEW YORK, April 10.—*Editor Forest and Stream:* Prizes for the tournament of the National Rod and Reel Association next month are coming in, and I can now report the following:

Capt. Wm. Dunning, cash for medals	$25 00
Mr. Louis B. Wright, cash for medals	25 00
Mr. Chas. A. Bryant, cash for medals	25 00
R. Dunlap & Co., order for silk hat	8 00
J. Harrington Keene, Cossayuna, N. Y., one lot trout flies	15 00
J. Harrington Keene, Cossayuna, N. Y., one lot bass flies	15 00
A. G. Spalding & Bros., Premier S. B. fly-rod	25 00
A. G. Spalding & Bros., automatic reel, rubber	8 00
A. G. Spalding & Bros., Bray fly-book	5 00

Several others have agreed to contribute, but were not ready to say what they would give. G. POEY, Sec'y.

THE ICE MOVING.—New York, April 11.—*Editor Forest and Stream:* The Adirondack Preserve Association, of which Mr. Henry C. Squires is president, is in receipt of a letter from the club house, in Essex county, N. Y., which states that the ice is fast going from the lakes on their preserve and will probably be all out by the 20th inst., which is early for this section, and will permit the members to take advantage of the opening of the trout season May 1.—SECRETARY.

BIG TARPON.—Our correspondent "Tarpon" sends us from Sanibel Island, where, April 9, he was lying wind bound on his way north, a scale from the big tarpon caught by Senator Quay, of Pennsylvania. Length, 7ft. 1in.; weight, 187½lbs. He says: "Tarpon are plenty here, and fishing of all kinds good."

FISH PROTECTION IN MICHIGAN.—Sault Ste. Marie, Mich., April 9.—*Editor Forest and Stream:* A few notes from this frigid corner of the earth may perhaps be interesting to your readers as a proof of the really wonderful progress being made in the rigid enforcement of healthy game protection in this State, of which your valuable paper is the most powerful advocate I know of. As far as I can learn, the past close season has been the first and only one which has been enforced in this locality, and when I say that it is stated that trout fishing (up to the present winter) has been carried on through the ice to such an extent that hundreds of pounds have been caught and marketed by this means just at the lower part of Ste. Marie's Falls, and that during the past close season not a trout has been taken in this or any other way, it will be apparent that some good will accrue from this decided change in affairs, and that the millions of brook trout inhabiting these wonderful waters will surely be increased by being unmolested for even a season. There is not a sign of spring here yet. The snow is from three to ten feet deep and the ice in the river about thirty inches thick, no ice having come down from Lake Superior yet. For the past week the temperature has ranged about 8° below zero at night.—EDWARD H. BOWERS.

CHARLESTON FISH PROTECTIVE ASSOCIATION.—Charleston, Ill., April 9.—*Editor Forest and Stream:* The Charleston Fish Protective Association was incorporated April 1, 1888, its object being to enforce the fish laws of the State which prohibit the catching of fish in any way except with hook and line, and the members of it are determined that the law shall be enforced, and in a few years expect to have fine fishing in our little stream, the Embarras River. The officers of the association are: Pres., Isaac Winter; Treas., D. H. Calvert; Sec'y, Otto Weiss; Directors, D. H. Calvert, A. M. Mitchell, J. M. Liston, C. D. McCrory, C. O. Skidmore, W. F. Jenkins, E. H. Easton. — OTTO WEISS, Sec'y.

SUNAPEE TROUT.—New York, April 12.—*Editor Forest and Stream:* I may answer Mr. Hallock, who, in your issue of April 5, approves the opinion advanced by Dr. Quackenbos and Mr. Webber as to the origin of the Sunapee trout by a very brief statement. *S. aureolus* was caught in Sunapee Lake in large numbers before the introduction of the landlocked salmon into that lake.—E. B. HODGE.

FLY-FISHING FOR SHAD.—Birmingham, Conn.—*Editor Forest and Stream:* I am anxious to try fly-fishing for shad. Will some one be kind enough to give me through your valuable columns, a few points about flies, tackle, weather and best time to fish?—W. W. H. [We have published many articles on this subject during the past ten years. See our issue of March 29.]

FISH LAWS AT ALBANY.

ALBANY, April 12.—Although an unusually large number of game bills have been introduced in the Senate and Assembly, yet only two or three of them have passed one house.

The Senate committee on game laws has reported Senator Foley's bill relating to fish hatcheries in the Adirondacks.

Mr. Prime's bill (for the game laws committee) providing for the appointment of 15 game and fish inspectors, for as many districts in the State, has passed the Assembly.

The committee on game laws in the Senate did not make any report during the past week. In the Assembly the committee reported the Aldrich bill relating to fishing through the ice in Lake George; also the Hunting bill prohibiting the shooting of ducks, etc., from steamers in Peconic and Gardiner's bays.

A very important bill for the erection of fish hatcheries by the several towns in this State has been introduced by Assemblyman Brownell, which is said to cover more especially a fish hatchery at Indian Lake, Hamilton county. It provides as follows:

Sec. 1. The electors of any town of this State are hereby authorized to vote, by resolution at the annual town meeting held in their respective towns, for the purchase of a site and the erection of a fish hatchery thereon, a sum of money not exceeding $800.

Sec. 2. Upon the erection of such fish hatchery in any town as provided by this act, the electors of such town may also by resolution vote at each annual town meeting a sum not to exceed $200, to be expended under the direction of the supervisor of such town for the purpose of the propagation of fish for stocking the waters of such town. Such supervisor shall account annually to the board of town auditors for all moneys received and paid out by him under the provisions of this act.

Sec. 3. The action of the electors of any town heretofore taken at an annual town meeting in voting by resolution any sum of money not exceeding $800 for the purpose of erecting a fish hatchery is hereby in all respects legalized, ratified and confirmed, and such resolution is hereby declared to have, and at the time of its adoption to have had the same force and effect as if it had been adopted under the provisions of this act.

Sec. 4. Nothing in this act contained shall affect any action or legal proceeding now pending.

Sec. 5. This act shall take effect immediately.

ALBANY, April 16.—Both Senator Vedder and Assemblyman Prime, the chairmen of the game law committees in the Senate and Assembly respectively, are of the opinion that it is very much better to leave the game laws about where they are than it is to agitate the question of very much change. There has been little effort on either part to secure much legislation. The Assembly committee, however, has reported a number of bills during the past week. Among them were the following: Mr. Maynard's to facilitate the ingress of fish into Chittenango Creek. The original bill compelled owners to put in a dam. But, on investigation, it was found that all similar dams had been put in at the expense of the State and so a substitute for the bill was prepared and reported which appropriates $1,000 of State money to meet the expenses. The second bill reported was McAdams' amendment to the general game law of 1879 still further amended by the committee so as to make the close season for duck, brant, etc., from March to September. The third bill was Mr. Sheehan's amendment to the same law, allowing pike, etc., taken outside of the State to be sold within the State. The fourth bill was Seavers's for the protection of fish in Lake Ontario along the northern border of Cayuga county. The fifth bill was reported adversely. It was Mr. Platt's, exempting Dutchess county from the operation of the game laws. The judiciary committee of the Senate has reported Senator Murphy's bill amending the penal code in relation to dredging for oysters.

Camp-Fire Flickerings.

"That reminds me."

231.

OUT for a short trip via G. R. & I. R. R., last summer, and while enjoying a whiff or two from the old brierwood in the smoking car the following took place:

Seated opposite me and occupying two seats sat two young gentlemen who were evidently bent for the lakes to have a day or so with the black bass, as I surmised from the amount of rods and tackle they displayed. They also had a guitar, which occupied a place among the tackle. While enjoying their cigars they were approached by an old gentleman whom I knew to be a veteran of the angle and who said, "Well, my lads, are you out for a day or two?" "Yes," said one, "don't you see our lay out?" and pointing as he spoke directly at the guitar. "And pray, what are you ging to do with that?" said old Isaac. "Why," said the spokesman, "my friend here plays the guitar and his music will bring the fish to the surface and (picking up a landing net handle) I will hit 'em on the head with this club." When the laughter had subsided somewhat from this sally the old Trojan said: "Well, if your friend can't play any better now than when I last heard him you won't need the club—he'll paralyze 'em." BANJO.

Fishculture.

Every person who it sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

WORK OF THE GRAMPUS.

BY CAPT. J. W. COLLINS.

[Read before the Biological Society, Washington, April 7.]

Mr. President and Gentlemen of the Society:

Professor Baird long ago realized the desirability of carrying on the propagation of marine food fishes upon a large scale, in order that certain depleted fishing grounds along the Atlantic coast of the United States might be restocked, so that our markets could be abundantly supplied with the most valuable of our ocean fishes. It was largely with this object in view that the important station at Wood's Holl was established. As soon as that was in such condition that the work of hatching cod, mackerel, etc., could be extentensively carried on, it was obvious that arrangements should be made to supply the station (and other hatching stations which might be built at a later date), with live fish, while they were in a gravid condition, or with the eggs collected from them on the fishing grounds. "The possibilities of artificial propagation," wrote Professor Baird, "so far as sea fish are concerned, seemed almost limitless, provided an ample supply of fish, such as halibut, cod, mackerel, etc., could be obtained. It is only possible to get a supply of these by using a smack containing a well, and the possession of such an adjunct has been considered a very important matter to the Commission."

More than five years ago Professor Baird had taken seriously into consideration the question of having a smack for the use of the Fish Commission, though at that time he had an idea that a vessel much smaller than the Grampus would be sufficient for the purpose. In the spring of 1883, just before my departure for the London Exhibition with Professor Goode, I made two models at Professor Baird's request, and prepared, in a rough and hurried manner, the plans and specifications. One of these models was for a smack of only thirty-five tons, and the other was for a schooner of sixty tons register. Owing, however, to the fact that the time and attention of the Fish Commission was devoted to other objects at that date, no definite action was taken toward having the smack built. When the question came up for consideration in the fall of 1884, it was decided to have a schooner-rigged vessel built of about eighty tons; one which, while adapted to the special work of collecting fish and fish eggs for hatching purposes, would also be fitted for making special cruises of investigation, which might take her where she would be liable to encounter the roughest weather occurring in the Atlantic.

The well of the Grampus, in which fish are kept alive, is of a unique pattern for so large a vessel, and is specially adapted for the work of the Commission. It is nearly amidships, and is cone-shaped, with the base at the bottom of the vessel, the apex at the deck, being what is commonly termed a "box-well." The dimensions are 16ft. long by 8ft. wide at the base, and 4ft. by 2½ft. the top, which is flush with the deck, and is covered with a movable wooden grating. It is stoutly built of oak and made tight to the bottom of the vessel. The outside planking, inside of the space inclosed by the well, is perforated by 200 2in. holes, which permit the free circulation of sea-water into the compartment. This form of well makes it possible to reach any fish that may be in it, from the deck, and obviates any necessity that might occur of grounding the vessel when the contents of the well are to be removed.

The Grampus was completed and equipped in the summer of 1886, and after making a trip of research along the northern edge of the gulf stream, south of Nantucket and Long Island, she started on her first cruise to collect seafish for the Wood's Holl hatchery. The cruise was made for the purpose of experimentation in bringing in halibut alive from the fishing grounds. It is probably known to most of you that there has been a marked depletion in the abundance of halibut in all the regions where it has been fished for in the western Atlantic. Therefore, Professor Baird considered it of great importance that a special effort should be made to propagate artificially this highly valued species. During the spawning season—from July to December—the halibut is usually most numerous on small rocky patches along the edges of the fishing banks in depths varying from 150 to 400 fathoms. The special problem to be solved was whether fish caught in such depths could be kept alive in a vessel's well, for upon the definite settlement of this question much depended.

Leaving Gloucester Sept. 22, 1886, the Grampus went direct to La Have Bank. There, in depths varying from 250 to 350 fathoms or thereabouts, a number of live halibut were caught and put into the well. These were taken under specially favorable conditions, the majority of them being caught on a trawl, which we hauled on board of the vessel, so that the fish were quickly and carefully transferred from the hook to the vessel's well. We had hopes that they might live until we could reach Wood's Holl. But our hopes were doomed to disappointment, for none of the fish lived beyond thirty-six hours, and most of them died in less than twenty hours. Our lack of success taught us that it is apparently impossible to keep fish alive which are taken in such great depths, since they can scarcely endure the change that they are subjected to in pressure and temperature while they are being pulled up on the trawl line. This change, added to the suffering they must endure in being held to a line for hours, exhausts them to such an extent that it seems quite improbable that they can live when taken under such circumstances. It is evident, however, that the results obtained, though negative in their character, are important, since we now know what we cannot do, and in the future our attempt to obtain live halibut will be made in a different direction.

Halibut are known to occur in the summer in the shallow waters about western Newfoundland and the Island of Anticosti; and I believe they can be brought alive from there to the United States.

On our last summer's cruise to the Gulf of St. Lawrence, Newfoundland and Labrador, we caught two halibut with hand lines off the Magdalens, in depths varying from about 15 to 20 fathoms. These were put into the well and kept there for some time, and when they were taken out they appeared as lively as when caught.

During the past two winters the Grampus has been employed in collecting cod, pollock and haddock, and carrying them alive to the stations at Wood's Holl and Gloucester. A portion of the time, however, it has been found more advantageous to collect the eggs of the cod from the fish taken by the Gloucester schooners. Last winter upward of thirty-two millions of cod eggs were obtained for the Wood's Holl station, part of these being taken from the fish which were carried to the station alive and the remainder, 13,550,000, collected from the fishing vessels and shipped to the hatchery by rail. Unfortunately for the complete success of the work, the collection of eggs ceased on March 14, at which date about five millions were taken, and after which, until the end of May, spawning cod of large size were very abundant some five to eight miles from Gloucester.

The Grampus was then ordered to cruise in the region between Cape Hatteras and Block Island, to make special investigation of the movements, abundance and habits of the mackerel, menhaden and other migratory species which approach the coast north of Hatteras in the spring. It is true that Prof. Baird much desired to continue the cod hatching until the close of the season. But he considered the investigation referred to more important, and since we had only one vessel available for such research, the cod propagation had to stop.

It was hoped that the collection of cod would begin early last fall, but there was considerable delay in getting the Grampus coppered and this gave her a late start. It was unfortunate, too, that several hundred codfish which she had collected, most of which were stored in live cars at Gloucester—part being in the vessel's well—we derived no benefit from. Before the Gloucester hatchery (which was built last December and January) was completed, the weather grew suddenly cold, while the temperature remained so low that the harbor was soon frozen over, and all our fish died

But notwithstanding the weather has been exceptionally severe, the Grampus has collected 31,500,000 of cod eggs during the winter. Her work in that direction stopped two weeks ago and to-day she left Wood's Holl on a cruise of investigation similar to that she made last spring, and in the same region. Part of her crew, who have been well trained, have been detailed to prosecute the work of collecting cod eggs by going out on the Gloucester fishing vessels which return each night to market their catch. Thus the effort is being made by this assignment of men, to have the Grampus carry on a cruise of research in the Atlantic, and at the same time supply the Glocester station with cod eggs. I hope the attempt may be successful, but while so much remains to be learned of the habits and migrations of our fishes, it is evident that one vessel like the Grampus can find enough to keep her employed at sea for years to come, while it is just as apparent that there is fishcultural work enough for one schooner to do from the beginning of January to the end of December.

It may be permissible to mention here that quantities of floating eggs were taken last spring in small towing nets in the waters off the mouth of the Chesapeake and northward. This spring a special effort will be made to ascertain what species of fish the eggs are from by carrying on the schooner fish-hatching apparatus to develop the embryos. And if large quantities of these eggs are secured, it may be possible to carry them alive to Wood's Holl, where they can be hatched under the most favorable conditions.

To return from this digression, I will say that the collection of sea fish for hatching purposes may be carried on in various ways, such as fishing with hand-lines, trawl-lines, gill-nets, seines, etc. The special form of apparatus required usually depends largely upon the species sought for, but occasionally upon locality or season. Thus mackerel, menhaden and herring can be caught, with least injury to the fish, in a purse seine or trap, while cod, halibut and other ground-feeding species, may be readily taken on hand-lines or trawls.

In the fall and early part of the winter, cod are usually caught on hand lines on the rocky shoals along the New England coast. Many of these shoals lie off Cape Ann, in Massachusetts Bay, and this has been the favorite fishing ground for the Grampus. In prosecuting this fishery a small herring called spurling is used for bait. This is caught in large quantities near the shores of Ipswich Bay, and is brought to Gloucester upon teams, where it is sold for bait to the fishermen.

If we are going to make a trip upon the Grampus, and about midnight there is a prospect for a "good fish day," we must soon thereatter be on the alert to watch for the bait to arrive from the east side of Cape Ann. While still half asleep we climb over the vessel's side into a dory and pull for some well-known landing at the wharves, looming in dark shadowy outlines in the distance. Scrambling up a broken ladder or slippery piles we reach the top, and then wend our way through dark alleys and forsaken streets to the point where the bait sellers are most likely to be intercepted. There we meet some half dozen fishing skippers, who, like ourselves, are in quest of bait. The stars twinkle brightly overhead, giving promise of a fair day. But the air is decidedly frosty, the frozen snow creaks beneath our feet as we pace back and forth, while an attempt is frequently made to overcome the chilling influences by a vigorous threshing of hands. There is some growling at the delay, but little other talk—the conditions are not favorable to yarn spinning.

At length we descry the expected wagon approaching, and at once gather around it to learn the price of the spurling it contains. Soon a bargain is struck, whatever the price, for there is no time to bandy words, and the half frozen bait hawker has apparently reached a condition of mental as well as physical congelation, for he will not budge from his first figures. Securing a supply of the bait, which we pay for on the spot, we hurry on board the vessel.

The sails have already been hoisted, and we are soon under way and heading out of the harbor. Passing Eastern Point, the course is laid for Old Nan's Pasture, Brown's Rock, or some other of the numerous small rocky spots, five to eight miles distant. The exact location of these is determined by range marks, which the fisherman has memorized, for it never occurs to him to put these marks in writing. The proper position being reached, the headsails are hauled down and the vessel is anchored. All hands now gather at the rail and put over their hand lines, and soon the fish are being pulled on board. As fast as they are taken in they are carefully unhooked and thrown into the well. If the hook has not penetrated their gills or touched any other vital part, they usually survive without difficulty, but generally a considerable percentage die soon after being caught. The day's fishing ended, the anchor is weighed, sails are hoisted and the vessel stands away for the harbor, where she seeks shelter until the following morning, when the same scenes are re-enacted so long as the weather is favorable and a supply of bait can be had. Advantage is taken of stormy days to transfer the fish into the live cars at the Gloucester station, though last winter it was necessary to carry them to Wood's Holl.

About the middle of December, the so-called "fall school" apparently leave the shore grounds, and move off into deep water or depart entirely from the coast. Then it is necessary to use trawl lines to catch the cod. In this case the lines are usually set one day and hauled the next, if the weather permits, and instead of the men working on board of the vessel, they are obliged to go out in dories, while the schooner sails back and forth in their vicinity until the fishing is ended and the boats return on board.

At first, we had much difficulty in keeping alive these fish which were taken on the trawls, until they could be brought on board the vessel and put into the well. Boat-shaped live-cars were tried, but these did not prove satisfactory, for, though it was possible to keep fish alive in them, they were unwieldy to handle and in a rough sea would bump into the dories, and when brought alongside of the vessel would frequently take a dive beneath her bottom and thus make it very difficult to manage them. The problem of successfully keeping the fish alive which were caught on the trawl lines, and transferring them to the well of the Grampus, was successfully solved by the use of large bags, made of coarse netting, which I devised for the purpose. These are secured alongside of a dory while a trawl is being hauled, and as fast as the fish are caught they are put into the bag, where they remain until the lines have been taken in. The vessel then comes to alongside of the dory, and the bag, around the top of which is fastened a rope, is quickly hoisted on board and its contents dumped into the well. This can be done even when the weather is quite rough; and since trawl-fishing in winter must often be carried on when there are fresh winds and considerable sea, the adoption of this simple device has been of great advantage to the Commission.

As previously mentioned, it has frequently been found most advantageous to the work of the Commission for the Grampus to collect eggs from the cod which the fishermen catch, rather than to depend upon the procurement of eggs from the fish she would be able to take herself. When carrying on this work she generally has on board one or more expert spawn takers. If the weather is favorable for fishing, the Grampus gets under weigh in the early morning, about the same time that the fishing vessels leave Gloucester harbor, and proceeds with them to the fishing grounds, from five to forty miles distant. There she cruises about among the boats to ascertain where the most fish are being taken. This having been learned, her dories are sent on board the fishing schooners most liable to have large catches. In each boat are two seamen, who may be those who have been trained in taking eggs, and besides there may be in one or more of the dories one of our expert spawn takers, sent out from the hatching station. An equipment of collecting pans, dippers, etc., is carried, the pans being peculiar in shape and specially designed for this outside work. Reaching the side of the fishing schooner, and watching the proper opportunity as the dory rises upon a wave, the men scramble over the vessel's rail and climb on board, taking with them their pans and other apparatus.

Soon the schooner's dories arrive alongside, and their catch is thrown upon the vessel's deck. This is the opportunity for the Fish Commission men, who handle the fish as rapidly as practicable, selecting those that are ripe and immediately taking the eggs from them. This is continued until the last of the fish are thrown upon the deck and all the eggs are obtained which can be secured at the time. The men then quickly climb into their dory, and pull away for the Grampus, unless they see an opportunity of securing more collections on board of some other vessel which has been longer delayed in hauling her gear. When the day's collection is ended and the dories have all returned to the Grampus, which, in the meantime, has been cruising back and forth, her officers watching every movement, she heads away for the harbor, where she anchors close to the hatchery on Ten Pund Island, and the eggs are quickly transferred to the hatching boxes, or shipped by rail to Wood's Holl.

But there are many difficulties, hardships and perils to be met with in this work which I have not yet hinted at. Spawning a codfish might, at first thought, be considered a very simple and easy thing to do. But imagine the scene of the operation on the sloping, slippery deck of a fishing schooner, which is jumping and lurching in a tumble of a chop sea, tacking this way and the other to pick up her boats, and her lee scuppers afloat with water all the time. Now, grasp a slimy codfish of 60lbs. weight and try to take its eggs! You brace yourself, of course, as best you can, but unless you have had a training at sea and know the movements of fishing boats, the chances are that in less than two minutes you go sliding away to leeward, perhaps lose hold of your fish, while your spawn pan starts off on a cruise of its own, and is soon sailing gaily along the lee scuppers and in danger of going over the rail. A lively scramble follows, as a matter of course, and the work is resumed as speedily as possible, while additional precautions are observed to retain the proper relations between man, fish and apparatus, and to prevent another slide to leeward. It is quite supposable, however, that a too frequent occurrence of such mishaps, especially if the discomforted spawn taker gets well drenched with icy spray, will produce a condition of mind and body far from what may be termed comfortable.

I think it is not necessary to discuss this operation of spawn-taking at great length, since sufficient has been said to convey some idea of the difficulties attending it.

It may not be fairly claimed, perhaps, that the Grampus is exposed to so many dangers as are the vessels fishing upon the outer banks in winter. Nevertheless, her work is not performed without much exposure of the men and more or less hazardous adventure.

On one occasion last winter she visited the fishing grounds off Gloucester, and the men hauled their trawls when the temperature was from 7 to 12 degrees below zero, and the vapor lay so thick upon the water that the dories could not be seen, except at brief intervals, more than a quarter of a mile distant. Two of the men froze their feet and faces, and we can surmise what the result might have been if those on board of the vessel failed to keep trace of the boats and left them exposed to the peril of finding the land in the dense vapor.

On the 15th of February the men on the Grampus had the most severe experience they have yet met with. As usual, they left Gloucester in the early morning. There was a stiff breeze off the land, but a promise of a fairly good day for fishing. Reaching the grounds, about twelve miles from the land, two dories were sent on board the fishing schooners to collect cod eggs. Shortly before noon the wind piped up sharply from the northwest, promising a hard thresh to windward to reach Gloucester. At the same time the temperature fell rapidly, and the vessel's deck and rigging was soon covered with ice, for the flying spray froze wherever it fell.

One dory, with her crew of two seamen, returned on board the Grampus, leaving the spawn-taker on board the fishing vessel, where he preferred to stay rather than take the chance of making a safe passage in a small boat, with such a gale blowing. The Grampus then stood along to pick up her other dory. But, before she arrived near the schooner, astern of which the boat was towing, the painter parted and the dory was seen adrift. By skilful maneuvering the boat was picked up and hoisted on board, but it was then so rough, and the wind was increasing so rapidly, that it was not considered safe to send for the two men on board of the

fishing schooner, who, it was supposed, would reach Gloucester harbor without special difficulty. This expectation was not realized, however for the wind soon after blew very hard, and the schooner upon which the two seamen were, was unable to beat to windward in the teeth of the gale. She therefore kept off for Provincetown, but in running across Massachusetts Bay the sea broke upon her to such an extent as to completely fill her decks, rendering it necessary to knock off her bulwarks to prevent her from foundering. At the same time she sprung a leak, and it was with great difficulty that she was kept afloat until she reached the shelter of Provincetown harbor, where she had to remain two or three days before she could return to Gloucester. My brother, who is in command of the Grampus, briefly reports the return of these men, as follows:

"Our men got back from Provincetown Sunday, at 12:30 A. M. They had a rough time getting over to Provincetown, and came near swamping before reaching there."

This simple statement will give you some idea of the severity of the gale.

Fortunately, the mainsail of the Grampus was single reefed when she left the harbor. For she was so short handed, owing to the absence of two out of five of her seamen, that it was believed to be impracticable to reef the sails, which were coated with ice and stiff as sheets of iron. And even if the mainsail could be double reefed, there was not sufficient force to hoist it. It was evident that the single reefed mainsail must not be lowered, if the vessel could possibly stand up under it, with the jib and forestaysail set. "There was too much wind for comfort, under the sail," my brother wrote, and the fact that he stood at the wheel for six hours, not daring to leave it in the hands of another until anchor was dropped in Gloucester harbor, is evidence of the lack of "comfort," particularly as his face was badly frostbitten on both cheeks, and his clothing was covered with sheets of ice.

Of course, on the New England coast where occurrences like this are common, such experiences excite little comment, but the incidents which I have related will show that the part performed by the Grampus in fishcultural work is not by any means always a pleasant pastime, such as yachtsmen sigh for and so thoroughly enjoy.

Sometime about the last of May or the beginning of June an effort will be made to secure a supply of live mackerel for the Wood's Holl hatchery. That is about the period when the mackerel spawns, and if the "Grampus" can succeed in surrounding a school with her purse-seine, it is believed that a quantity of the fish may be carried alive to the hatching station. It is also the purpose of Colonel MacDonald, the present Commissioner of Fish and Fisheries, to make another special effort to secure live halibut, or the eggs of the halibut, during the present year, for no one appreciates more fully than he the importance of artificially propagating this and other species of ocean fishes, which are now depleted by overfishing, or other causes.

FISHERIES OF BRITISH COLUMBIA.

NEW WESTMINSTER, B. C.—*Editor Forest and Stream:* Presuming that it will be interesting to the many readers of your valuable paper, I send you a summary of the report on the fisheries of British Columbia for the year 1887. You will at once notice that our salmon fishing constitutes the greater part of our fishing industry, and these are principally taken from the Fraser and Skeena rivers. During the season of 1887 the amount of salmon taken from the Fraser alone for export, local and Indian consumption, would have kept a train of 20 cars running daily for more than a month. Next to the salmon the fur seal fisheries are the most important, but on account of seizures by U. S. Revenue cutters, and trouble with the Alaska Company, the value of this fishery fell far short of previous years. British Columbia has a sea coast of 7,180 miles teeming with valuable food fishes, but owing to our isolated position, and a lack of marketing facilities, our deep sea fishing has up to the present remained undeveloped. This, however, cannot last much longer, and in the near future I hope to see a fleet of vessels from British Columbian ports fishing for whale, cod, halibut, etc.

THOS. MOWAT.

NUMBER AND VALUE OF VESSELS, NETS, GEAR AND PLANT USED IN THE FISHERIES OF BRITISH COLUMBIA DURING THE SEASON OF 1887.

93 schooners, steamers and sloops		$137,500 00
991 fishing boats		41,915 00
181 cedar canoes		6,240 00
96 flat boats and scows		14,725 00
1379 salmon nets		127,450 00
19 salmon seines		7,700 00
41 herring seines		7,700 00
53 fish seines		19,225 00
		$362,455 00
Estimated value of—		
20 canneries	$360,000	
2 oil factories	15,000	
Various salting stations	20,000	
2 fish freezing establishments	10,000	$405,000 00
Total		$767,455 00
Number of men employed—		
Sailors		229
Fishermen		3,095
Shoremen		2,535
Native hunters		295
Total		6,154

YIELD AND VALUE OF THE FISHERIES OF BRITISH COLUMBIA FOR THE YEAR 1887.

Kinds.	Quantity.	Price.	Value.
Salmon preserved in cans, lbs.	9,795,984	$0 12	$1,175,518 08
Salmon, fresh, lbs.	2,226,600	10	222,660 00
Salmon, smoked, lbs.	31,050	16	4,968 00
Salmon, salted, bbls.	4,459	12 00	53,508 00
Sturgeon, fresh, lbs.	249,000	06	14,940 00
Halibut, fresh, lbs.	386,000	10	38,600 00
Herring, fresh, lbs.	205,600	03	6,180 00
Herring, smoked, lbs.	14,500	10	1,450 00
Mixed fish, lbs.	712,000	05	35,600 00
Trout, fresh, lbs.	55,500	10	5,550 00
Oolahans, fresh, lbs.	25,500	06	1,530 00
Oolahans, salted, bbls.	115	12 00	1,380 00
Oolahans, smoked, boxes	350	2 00	700 00
Fur seal skins	33,800	7 00	236,600 00
Hair seal skins	3,500	75	2,625 00
Sea otter skins	75	60 00	4,500 00
Oolahan oil, gals.	340	1 00	340 00
Dogfish oil (refined), gals.	67,500	50	33,750 00
Mixed oil, gals.	40,000	40	16,000 00
Estimated value of fish consumed in the Province by other than Indians			100,000 00
Estimate of shellfish, sardines and anchovies			18,500 00
Total, exclusive of Indian consumption			$1,974,899 08
Estimated consumption by Indians—			
Salmon	$2,732,500		
Halibut	190,000		
Sturgeon and other fish	260,000		
Fish oils	75,000		$3,257,500 00
Grand total			$5,232,399 08

DAMARISCOTTA, Me., April 9.—*Editor Forest and Stream:* I have seen much on the menhaden question in your valuable paper. I will give you a list of the menhaden factories that used to be in Lincoln county in 1874. There is not one of them in operation to-day, and the most of them have been taken down and sold for old junk. The bays and rivers were full of menhaden then, but there has not been one seen for nine years. Where have the menhaden gone, can any one answer this question? The fishermen have to use clams for bait and go further out to sea to get food fish and their catch is small. The following firms owned factories here: Judson Tarr & Co., Union Oil Works, Round Pond Oil Co., L. Brightman & Son, Jas. Church & Co., Bremen Oil Works, Bristol Oil Works, Atlantic Oil Co., Gallup & Manchester, Gallup & Holmes, Wells & Co., and the Suffolk Oil Co.—N. N. C.

THE NEW HAMPSHIRE HATCHERY.—After the burning of the hatchery at Plymouth it was found that the water from the hatching troughs saved the floor, as they dropped, and Col. Hodge improvised some troughs for the salmon and landlocked salmon eggs, which had not arrived, and by covering them with boards has been able to carry on this portion of the work. Last week a delegation consisting of Commissioners Hodge and Riddle, with Mr. Clark, of Gov. Sawyer's council, visited the new hatchery of the New York Fish Commission at Cold Spring Harbor, Long Island, in order to inspect it before rebuilding. Work on a new hatchery will be begun as soon as the snow has gone and in the end the State will be a gainer by the fire.

THE NEW JERSEY COMMISSION.—The Governor has appointed Mr. J. R. Elkinton to be a Commissioner of Fisheries, in place of Mr. R. S. Jenkins. The board now stands as follows: William Wright, Newark, Essex Co. Frank M. Ward, Newton, Sussex Co. Joseps R. Elkinton, Pennsgrove, Salem Co.

THE MICHIGAN FISH COMMISSION.—Detroit, March 20, 1888.—The State Board of Fish Commissioners announce the resignation of Mr. A. J. Kellogg, as Secretary of the Board, and the appointment of Mr. George D. Mussey, of Detroit, to that office.—MICHIGAN BOARD OF FISH COMMISSIONERS.

The Kennel.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FIXTURES.

DOG SHOWS.

April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 23 to 27.—Second annual bench show of the Baltimore Kennel Club, Baltimore, Md. Frank Hall, Manager.

April 24 to 27.—International bench show of dogs of the Cincinnati Sportsman's Club, Cincinnati, Ohio. Geo. H. Hill, Supt.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6104**.

BOSTON DOG SHOW.

FOLLOWING are the comments of the judges of St. Bernards, pugs and fox-terriers at the Boston dog show. They were not received in time for publication last week.

ST. BERNARDS.

The unprecedently large entry showed the increasing interest in this grand breed, but unfortunately it also proved the dense ignorance of the public at large as to the points of the true St. Bernard, of standard type. It is time to dispel the popular fallacy that every large shaggy yellow dog is the coming crack. Class 7 (champion rough-coated dogs) brought out our old friend Otho, who had a comfortable walk-over, and the easy-going, well-fed Miranda showed herself alone in the class (8) for bitches. Both were shown as usual, in excellent condition. Class 9 (rough-coated dogs) fairly packed the ring with dogs, poor enough as a collection of typical St. Bernards, though rich in handsome, well-marked big fellows. Owing to lack of space it was impossible to make them show up well, and weeding was difficult. First prize went to the lately-imported youngster Kastelhorn II., not a giant, too short in neck and body, straight in hocks, and with curiously small feet, giving him the appearance of standing on his toes. His noble head, massive build throughout, character and quality, put him above the equal seconds, Scotch Bonivard, a tall, graceful, well-marked orange and white dog, somewhat light of bone and small in head, and Visp II., a good dog, showing his relationship to Otho. His badly-carried ears and sunken eyes mar his expression. In coat, he and Bonivard were a lesson to the exhibitors who had brushed their dogs the wrong way to bring out the "rough," and also to those others who had given their exhibits a good soaping the day before, quite killing the brilliancy of the hair. Third fell to Everest, another importation, rich in color, deficient in markings, and not massive enough. Among the vhcs. the new-comer from Switzerland, Alpine Chief, a puppy in his twelfth month, was one of the best. More of him later. The well-known Galaxy Kennels' dogs, Marcus, Roland, Tasso, etc., enormous in frame, perfect in limbs and feet, and marked exquisitely—a wonderful lot—yet lacked the character in head and flatness of coat desirable. Merchant Prince, Jr., and Merchant Prince, two fine young dogs, showed their sire's beautiful coat and commanding height. The latter is almost a *fac simile* of champion Merchant Prince, and may reach a higher place next year. The Baron is too fine in lines throughout for one of his sex, though well built and in the richest coat. Tantallon is not big enough and too suggestive of the setter. Rip Van Winkle is well marked, but lacks character and size. Class 10 (rough-coated bitches) introduced to the American public a grand new one, just from Switzerland, Gemma, the dam of Barry II., Eiger and young Alpine Chief. It was easy to place such a beauty. In her well-built, massive frame and markings (white and rich brindle) she is much like her sister Swiss Beda, but excels her in head and stands higher, we should say. Next came the well-known Lady Alice and Recluse, equal second, both useful, handsome bitches, of good color, and fair in size; Lady Alice excels in straightness of limb, Recluse in bone and markings. Were Recluse on a larger scale she could dispute the pride of place with the best. Lady Flories, third, is a finely marked deep brindle, too narrow before the eyes, which are not sufficiently deep set to give a good St. Bernard expression. Like most of the class, she is hardly big enough. Una, vhc., is a well-built, good-bodied member of the Galaxy Kennels, with the same good points and faults as her brothers. There were several other pretty, well-built, nicely marked bitches among the seventeen, but far too small, and most of them weak or bad in head and curly in coat. As a class they excelled the preceding in build and action. If they prove as good breeders as they look we shall see a lot of fine youngsters next year. Class 11 (rough-coated dog puppies) gave us a row of grand young giants, all promising in one way or another. Alpine Chief, a tall, massive, well grown son of Gemma, scored first. Young and undeveloped, he yet dwarfs many grown dogs, standing fully 31in. at the shoulder, and excellent in proportions. His skull looks a bit narrow; this may be due to the depth of flew, quite remarkable in so young a dog. His pasterns and quarters show softness and lack of exercise; they will doubtless come right with a few more months. His expression leaves little to be desired. For the sake of his good points we will try to forget his color, a pale cream fawn, for which nature made amends by good white markings and intense black shadings. He is a dog with a future Melrose Prince, second prize, is a grand-bodied, heavy-framed puppy, very beautiful in color and markings and built on a large plan, but too short in limb for a dog with much growth before him. His coat lacks the quality of the Merchant Prince stock, though another year may show great improvement in it. Puppies delight in surprising us every month by their whims and freaks of growth. At present Prince lacks character in face; his head is pleasing but almost commonplace. Prince Leo, third prize, a tall, "growthy," rangy fellow, might spare an inch or two of the daylight under him, to the second prize winner. Well marked, flat coated, big in loin and fair in head, he is far away in advance of his handsome uncles, of the same kennels, in St. Bernard quality. His litter brother, Prince Bayard, runs him close, but lacks his size and depth of muzzle. Bayard, reserve, a litter brother of Melrose Prince, was such a whirlwind that it was well nigh impossible to look him over. Similar in markings he is a taller dog than Prince, and like him, excellent in bone, straight and strong of limb, and altogether a credit to his breeder. The enormous Plinlimmon, Jr., outranked all others in the class in height, length and avoirdupois, but just now labors under the disadvantage of being at the most awkward age, "neither hay nor grass." His head seems small and weak to front his huge body, but time may better him vastly. Vindex, hc., is a good example of Otho stock, well marked, big in bone, and showing type. He was sadly in need of grooming. Class 12 (rough-coated bitch puppies) numbered twenty-eight, and included specimens of all ages and degrees of merit. The Galaxy Kennels came to the front with two grand, well-grown 11-months-old daughters of Merchant Prince. In coat, bone and size they are excellent. Their heads show their youth, but are good for all that, short, fairly deep and right in expression. Alice (third prize), younger and smaller, is a medium-sized white and orange bitch of fair promise. A tall sister of Alpine Chief, white and pale fawn, reminded us of her grand brother, but is by no means his equal yet, though pleasant in face and well grown. Class 13 (champion smooth-coated dogs) saw Hector alone and in better shape than at New York. Every breeder present mourned poor Apollo's sudden death. Fortunately the grand old dog has left many good sons and daughters for the benefit of the race he represented so typically. Class 14 (champion smooth-coated bitches) was more interesting than the other champion classes, as there were competitors for the reserve, Leila, the peerless, in perennial bloom, winning first. Daphne and Wanda are both handsome tiger brindles, beating Leila in carriage of tail. Wanda is better than Daphne in skull, but a little too square in face and far less pleasing in expression, due to her prominent eyes and high-set ears. Class 15 (smooth-coated dogs) was small and contained no wonders. Petrarch (first) is a handsomely-marked white and orange of fair size, winning expression, well built and a good mover. Wotan (second) is a small useful dog, more cheeky than we like a St. Bernard to be. Winchester (third) is on the small side also, coarse in coat and a bit too fine in head. Phillips is houndy. Class 16 (smooth-coated bitches) showed us Apollona, a very nice, symmetrical daughter of Apollo, full of style and quality. Inspired by the near presence of her late owner, she showed herself finely and won first. In markings, size and bone she might be better. Myrtle, the beautiful daughter of Duke of Leeds, golden tiger brindle with white markings, was awarded second, pressing Apollona closely. She is but a puppy now, and faulty in head, which shows too much peak; neither do her ears hang just right in the show ring, but withal her finely built body and limbs, sweet expression and quality placed her above Gip, third, and Thisbe, vhc. Gip, a rich orange with barely white markings enough, massive in bone and good in head, out-scored handsome Thisbe a trifle. She was shown too fat and Thisbe too thin. The latter is very good; decidedly small, however, and not inclined to carry herself well in the ring this time. The four bitches made a family class, two being daughters, one a great-granddaughter and the other a great-great-granddaughter of the same bitch. Class 17 (smooth-coated dog puppies) was soon disposed of, containing only three. Duke of Brunswick, first, is a wonderfully tall dog for his age, has bone enough and is very well marked. His head is well shaped, with a beautiful brow, but his ears were so badly carried in the ring that his expression was disappointing. He is now too short in body, a good fault in one of his age; should make up into a very large dog. The others were average specimens. Class 18 (smooth-coated bitch puppies) numbered three, Myrtle scoring first. Alpine Queen is a big-limbed, heavy puppy, so coarse in coat that next year will see her among the roughs. Her head lacks quality, but is not snipy nor plain. Posie, vhc., was so good in body, bone and carriage that she deserved notice in spite of her weak head, sharp foreface and absence of blaze. The kennel prize was awarded to Otho. Alpine Chief, Gemma and another from the Hospice exhibit, all except Otho, Swiss importations and rare in quality. The special for the best stud dog went to Otho, with the puppies Vindex and Crysa, neither of them big ones, but fine in character and properly marked. The competitors were a handsome, even lot, better in size. Leila walked away with the special for the best smooth-coat, beating Hector a few points. There was no competition for the special for the best kennel of smooths, and it was a walk-over for Hector, Daphne, and their kennel companions. In numbers and quality the rough-coats far excelled the smooths, we regret to say. This ought not to be. The smooth is of the original race, is fully equal in intelligence, beauty and all good qualities, to the rough-coated; is usually stronger in constitution and will measure and weigh as much as his long-coated brother, though he may not appear to be quite as large. He has the advantage of never looking ragged and shabby when shedding his coat, and for a house or home dog is much less trouble in the matter of grooming. In alertness and agility he is greatly in advance of the rough-coat. When shall a worthy successor to Leila be bred in America?

PUGS.

Class 151 (champion dogs) was a *pas seul* for little Max. Frosty with years, straight in hocks, and carrying his ears somewhat *à la rose*, his heavy wrinkle, good short face, cobby body, jaunty carriage and general character made him well worthy of the prize. In size he and all the others exhibited by his owner, with one notable exception, leave nothing to be desired. In Class 52 his kennel companion, the well-known Bessie, had no competitor. She is a charming little bitch, good all around, beating Max in ears and black markings. Class 153 (pug dogs) was very interesting

Dr. Cryer's exquisite tiny Dude won first without any effort. He is undoubtedly the best small pug yet bred in America. Even the best dog has some "outs," and Dude is approaching the champion class in spite of his white nails, lack of trace and faulty skull. Though somewhat apple-headed, his ears are well hung and properly buttoned down, his wrinkle in folds, stop deep, muzzle square and broad, coat like velvet, tail tight, legs and feet better than those of his sire. Second went to Santa Claus, good in size and style, but carrying his ears too loosely. Sir George, third prize, is a worthy son of old champion George, rather larger than those above him, and a bit low on the legs for so young a dog. His markings were not so brilliant as they might be, ears well carried but heavy, tail fair. Tom Thumb, vhc., is small enough to merit his name; a dark stone fawn, well built, rather loose in tail, pinched in muzzle, and carries one ear too far out. Sam, vhc., a larger dog of good style and markings, apricot fawn, doesn't always remember how to hold his ears. Othello, vhc. r., well known, is a model in so many respects that his size can almost be forgiven. He is too smutty in color, light in eye and large, tremendous in wrinkle, wonderfully short in face and tight in twist, but his tail is too much over his back for perfection. A grand good sire is he, as champion Bessie proved. The others of the class hardly call for mention. Dawn was too thin, Boots rather large, and Diamond would not show himself. Class 150 (pug bitches) was small in numbers, but a good lot. Vesta, first, is of the right size, true in build, showing Othello's best points in ear, face and bone. Her kennel companion, Myrtle, beat Tra-la-la for second place because she carried herself so much better. In Quality Tra-la-la is good enough for anybody, though she lacks trace and is the least bit apple-headed. But here she was out of sorts, shivering and drooping, her tail down and her bearing anything but happy and airy. Her half sister Alwah, a good bitch all around, was out-classed here, and had to be content with letters. Belle and Juliet, respectively too fat and too thin, are pretty bitches, as is Judy; all should have shorter faces and better ears. The puppy classes, containing only three altogether, call for no special mention. There's plenty of good material in America for producing the best pugs, that is evident, if breeders will only study combination of the strains carefully. Quality first, then quantity. As an English breeder once said to me, "If a pug is 'armonious, I don't care if 'e weighs forty pounds." Of course, a good little one is better than an equally good big one, however.

ANNA H. WHITNEY.

FOX-TERRIERS.

The fox-terrier classes at Boston contained some good specimens of the breed, but it was anything but a representative show of the fox-terriers of America. In champion dogs Belgrave Primrose was alone and looked first-rate, his coat under Heald's care improves; he is a terrier-like little dog, standing on rare good legs and feet, and has lots of bone. In champion bitches Lyra, snipy in face, full in eye and very wide in front, was fairly beaten by Richmond Olive, a bitch who wears wonderfully well; Heald has lately shown her far fitter than he used to, as she carries less beef. In the open dog class Raby Mixer, first, won easily, with Reckoner second, and Luke, a dog I always liked, third; the latter is coarse and too big, but a useful one. Reckoner, were he straight would be a good little dog, but he is not, and do all I would, I could not make him stand square. The winner, Raby Mixer, is getting a little cheeky, but looked very well, he has rattling legs and feet, good shoulders and neck, beautiful ears, but is a bit high on leg and would be all the better for another rib. In the open bitch class Richmond Dazzle won very easily; she is a good bitch, her head is not perfection, and she is inclined to go wide in front, but she is a most taking terrier and one that always makes the most of herself. Fräulein Mixture (by Mixture out of Shame) lacks bone and substance. Pluck is decidedly snipy, and wants bone. Meersbrook Nan has a nasty soft coat. The winner in the dog puppy class was a good one by Raby Mixer out of Jaunty, and should he not get thick in front will be heard of: his mouth is not perfect. A good-looking son of Mixture and Richmond Olive was second; he is just a useful dog, and does not always carry his ears correctly but he can, and did so in the ring; his brother Richmond Tart is too big and not right in front. Bitch puppies saw a couple of fair ones first and second in Venetiana (by Venetian out of Freya) and Olivette (by Mixture out of Richmond Olive). The former is weak in jaw and wrong in front, while the latter fault applies to Olivette. Wire-haired terriers, outside of the winner, were as usual wretched. Rat Trap is a good-looking terrier with nice ears, fair coat and stands well. His head might be improved to advantage. Why don't some of the fox-terrier men take hold of these dogs, and help them along? Richmond Dazzle fairly beat Mixer for the cup.

THOMAS DAWSON.

THE GARDEN CITY KENNEL CLUB.

Editor Forest and Stream:

At last Chicago has a kennel club which promises to be worthy the name. At three o'clock Wednesday afternoon, April 11, the twenty-five gentlemen assembled in the Leland Hotel parlors were called to order by Mr. H. M. Joralman, the prime mover in the enterprise, and Mr. Alexander Cook elected chairman and Mr. J. B. Wickery clerk. The organization was begun by the adoption of a name, and after some discussion the new club was christened the Garden City Kennel Club. It was voted to place the management of the club in the hands of fifteen directors, which was done by the election of the following gentlemen: Dr. George M. Chamberlin, Messrs. Heney Ives Cobb, Frank Floyd, Paul Morton, John R. Walsh, A. Montgomery Ward, Chas. B. Van Kirk, Alexander Cook, Warren F. Leland, Francis M. Whitehouse, W. H. Colcord, T. W. Fargo, W. E. Rothermel, W. F. Fox, and R. P. H. Durkee. The directors then proceeded to the election of the following officers: Henry Ives Cobb, President; Warren F. Leland, First Vice-President; R. P. H. Durkee, Second Vice-President; John R. Walsh, Treasurer; Frank Floyd, Secretary. After some discussion upon the question of incorporation, and upon the feasibility of holding a bench show in the near future, both matters were referred to the board of directors for action. It is quite probable, however, that the club will give a bench show some time in June.

CHICAGO.

AFRAID OF THUNDER.—*Editor Forest and Stream:* I have a fine pointer dog well trained for field work, in fact as near perfection under the gun as you can find, but he is afraid of thunder and becomes very nervous and excited, puting out his tongue and panting as he would after a run on a very hot day, and when I let him in the house he will lie down in some dark corner and tremble or shake as though he was very cold. Will some of your readers give me information through the FOREST AND STREAM as to the cause?—F. [We have seen several instances of the kind in dogs that were not in the least gun shy.]

EASTERN FIELD TRIALS DERBY.—Entries for the Eastern Field Trials Derby for 1888 close on May 1. Blanks may be had at this office or by adressing W. A. Coster, Secretary, Saratoga Springs, N. Y.

COLLIE LOST.—A cream colored collie dog nine months old has recently been stolen. He has dark pink nose and black lips. Any one knowing his whereabouts will confer a favor by informing us.

SAN FRANCISCISCO DOG SHOW.

[Special report to Forest and Stream.]

THE inaugural show of the Pacific Kennel Club, held at San Francisco on April 4, 5, 6 and 7, was one of the best conducted affairs of the kind which has taken place anywhere. The ample space on the floor of Mechanic's Pavilion enabled the benching to be so arranged as to give plenty of room between the rows, and two large judging inclosures in the center of the building finished off the show so far as appearance went. The arrangements were a decided surprise to the thousands of visitors, many of whom expressed regret that they had not supported the show by entering their dogs, which they had refrained from doing owing to past experiences in this city. Dog exhibiting has received a boom in this city and the result of the increased interest engendered will be the immediate purchase of a number of good dogs in the East and a decided improvement all-round at the next show. The officials were painstaking and hard working to a degree. Col. Stuart Taylor, the president of the club, is well known by name to all, and personally to many of the readers of FOREST AND STREAM as a gentleman of enlightened experience. Mr. James E. Watson, the secretary, is one of the right sort for his position and worked as few men would or could for the success of the show. Mr. J. F. Carroll left nothing to be desired in his work as superintendent, the dogs being well benched, exercised and fed, and it has never been the writer's lot to visit a show, till this one, of which it could truthfully be said that the smell of "dog" could not be detected. Credit must also be given to Dr. Bowhill, the veterinary surgeon. It is often considered a merely complimentary office, but Dr. Bowhill had no such idea and examined and passed upon every dog before it was benched, and also looked them over daily; the result was a clear bill of health. Mr. H. H. Briggs, of the *Breeder and Sportsman*, prepared a good catalogue, which appeared in a second edition with all the awards and absentees marked on the margin. Mr. Briggs was of the executive committee, and with Mr. Wm. Schreiber, Dr. Toland and Mr. Adams, also of that committee, devoted much time for the good of the show.

The judges were Mr. John Davidson and Mr. James Watson, the former taking deerhounds, greyhounds, foxhounds, beagles, pointers, setters and spaniels, and the latter the remainder of the classes.

The classification began as is usual, with mastiffs first, of which there were five dogs. The winner, Dick, is a well-built dog, with good legs and feet, and the right coat. Has good girth of skull for his size, but falls away in front of the eyes. Don is only passably good, and looked somewhat tucked up. The others were not noticed. Actress, of Mr. V. M. Haldeman's breeding, easily won in her class and took two specials. This is a very nice bitch, a smutty face and rather too much taper in muzzle detracts from her character, but back of her head she is a hard one to beat.

The St. Bernards numbered sixteen, but there were a lot of them only St. Bernards by imagination, though the dozen turned out of the ring as mongrels will, of course, figure in the "official" in company with Duke of Leeds, Otho, Hector, and the rest of the cracks. Judge won by condition, Bruce being light in flesh and bad in coat after a three months' voyage. Judge is long and weak in head, but will improve in that respect, as he is yet a puppy. Garda is undersized, of a bad color, and her head is too small, otherwise she is well built. Rector III. was the best headed dog of the breed, but lacks size and carries his tail badly.

The Newfoundlands were very poor, but Great Danes were good. Cæsar and Modoc were not far apart, but the former showed a little more quality, while Modoc was wide in front and slack in loin. Leo is a big, rangy bitch, weak in head.

The two deerhound bitches were properly placed, Schula II. being larger and with a better head.

Mr. Davidson had his work cut out in greyhounds. Monarch is now past his prime as a show dog, and we preferred Sir William II. for first place as cleaner in neck and shoulders, and not so wide in chest. Jennie June won well in bitches and got the special for the best greyhound. The foxhounds were well judged, the native dogs being of the black and tan bloodhound type. Pointers were voted good classes, but Tom Pinch is not a dog that shows well. In the ring he knuckles over and shows heavy in shoulders and wide in front; for second we preferred Rush, who is better behind the head than either Point or Rush T., both of whom are slack in loin. The bitches were well judged, but nearly all are faulty in length of coupling. Climax is a good-bodied puppy, but is short and stumpy in head. The winning puppies are good, and will be heard of again in better company.

The English setters, while very even in quality, did not include any flyers. Pilot was not well shown, looked light and was short in coat. He is a dog that would get his three letters in good competition, and as he was the best of the breed here, the quality of the others may be best ascertained in that way.

Mike T. won easily in Irish setter dogs. He is very coarse in head, while Pat is coarse all over. Lady Elcho T. did not fill our eye as the model she was claimed to be. Her head, while well shaped, looked too small, and there was a want of style end finish about her so necessary to make a first-class Irish setter. The 12-year-old Gordon setter Dorr was first in his class and got the breed special, an award which sufficiently describes the remainder of the exhibits after saying that they were pretty close together in point of merit. The water spaniels all showed good breeding, but with the exception of Nellie and Julie, the field and cocker spaniels were very poor.

A poorer lot of collies could hardly be got together. The climate doubtless deprives them of coat, but they were all wrong in head and showed no breeding whatever. The two dachshunde were good specimens of the small terrier type, Mikado being better in crook. Beagles were not good; short and thick in ear and weedy. Mr. Bassford's were not shown well. The retrievers were far too liberally treated in the way of prizes, for Roy, only passably good, was alone worthy of a prize. The others were black dogs with every variety of coat. Bull-terriers were mainly of the fighting stamp. A thick-headed white dog got second in his class and Kittie beat a nice bitch in Olivette.

Sly Mixture, whose claims are well-known to Eastern exhibitors, won first in fox-terrier dogs and a new arrival from England, Daisy, took first in her class and the breed special. The classes were well filled but there were a lot of pricked ears about. The Skyes, Scotch and Yorkshires were a mixed company, Mash, the Yorkshire, being the only one of decided breeding. Jappy is a fair Japanese spaniel, and the best pug was the bitch Queen. An Esquimaux won in the miscellaneous class with a black Pomeranian second. The list of awards is as follows:

AWARDS.

MASTIFFS.—*Dogs:* 1st, R. Scott's Dick; 2d, Miss Amy J. Crocker's Don; 3d, withheld. *Bitches:* 1st, Mrs. E. F. Presten's Actress; 2d, withheld.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, A. W. Manning's Judge; 2d, J. H. Auld's Bruce; 3d, withheld. *Bitches:* 1st, withheld; 2d, A. Hoeppner's Garda; 3d, withheld. SMOOTH-COATED. —*Dogs:* 1st, withheld; 2d, R. E. Culbreth's Rector III. *Bitches:* No entries.—PUPPIES—*Dogs:* 1st, A. W. Manning's Judge; 2d, withheld. *Bitches:* Withheld.

NEWFOUNDLANDS.—*Dogs:* 1st, withheld; 2d, F. A. Schulo's Prince.—*Puppies:* Withheld.

GREAT DANES.—1st, 3d and high com., A. Hoeppner's Cæsar, Lea and Dora; 2d, Mrs. Van Ploennies's Modoc.

DEERHOUNDS.—*Dogs:* No entries. *Bitches:* 1st and 2d, C. H. Jouett's Schula II. and Phyllis.

GREYHOUNDS.—*Dogs:* 1st, J. F. Carroll's Monarch; 2d, P. Lyman's Saturday Night; 3d, A. P. Mordaunt's Sir William II. Reserve, H. Bingham's Tullamore. Very high com., J. F. Carroll's Dictator. High com., J. O'Shea's Ben Ali. Com., T. Brady's Menlo Chief. *Bitches:* 1st and 2d, J. F. Carroll's Jennie June and Mischief; 3d, A. P. Mordaunt's Lizzie. Reserve, T. J. Cronin's Rose Tralee. Very high com., D. W. Swain's Juauita. High com., T. McDermott's Lady Emma. Com., P. A. McDonald's Camelia. —PUPPIES—*Dogs:* 1st, J. F. Carroll's Benelon II.; 2d, withheld. *Bitches:* 1st, M. J. Keating's Gyp; 2d, E. J. Mahoney's Lady Catherine.

FOXHOUNDS.—ENGLISH—1st and 2d, D. M. Murphy's Ringwood and Landlord.—NATIVE—*Dogs:* 1st, A. H. Rickett's Josh; 2d, Fritch & Daniels's Joe; 3d, S. E. Fischer's Don. Very high com., J. H. Fritch's Jack. High com., A. H. Rickett's Carlo. *Bitches:* 1st, C. Roos's Kate; 2d, withheld; 3d, C. H. Smith's Bessie.—PUPPIES—*Dogs:* 1st, H. W. Heeth's Nero; 2d, J. Zammett's Music. *Bitches:* Withheld.

POINTERS.—LARGE—*Dogs:* 1st, J. M. Barney's Tom Pinch; 2d, C. A. Haight's Dick H.; 3d, A. B. Truman's Rush T. Reserve and very high com., L. J. Rose, Jr.'s Rush and Point. High com., R. V. Gardiner's Bruce II. Com., F. C. Chapman's Prince. *Bitches:* 1st, H. R. Brown's Donna Sensation; 2d, G. W. Bassford's Blossom; 3d, P. D. Lanville's Roberta. Reserve, P. J. Powers's Beauty. Very high com., A. B. Elford's Jessie Ranger.—SMALL—*Dogs:* 1st, E. W. Briggs's Climax; 2d, H. A. Duggan's Shot; 3d, withheld. Reserve, Dr. T. H. Bowhill's Jack. High com., J. F. Bonnell's Sportsman. *Bitches:* 1st, A. B. Truman's Patti Croxteth T.; 2d, G. W. Bassford's Don's Girl; 3d, Kittle & Potter's Drab D.—PUPPIES—*Dogs:* 1st, H. Kahn's Wade Hampton; 2d, E. J. Powers's Pat P.; 3d, W. Schreiber's Laddie. Reserve, H. S. Wort's Fennimore. Very high com., R. M. Wyman's Tolenas. *Bitches:* 1st, G. W. Bassford's Lottie B.; 2d, W. D. Howe's Belle H.

ENGLISH SETTERS.—*Dogs:* 1st, J. B. Barber's Pilot; 2d, E. Leaverley's Ben; 3d, T. J. Watson's Hamlet W. Reserve, G. Muller's Carlo. Very high com., E. Leaverley's Rock. High com., T. Higgs's Rover H. Com., T. J. Watson's Belmont W. *Bitches:* 1st, C. Kaeding's Fannie K.; 2d, H. M. Gorham's Mollie Belton; 3d, C. C. Westonhaver's Queen. Reserve, T. J. Watson's Miss Alice. Very highcom., C. J. Haas's Countess. High com., F. Lacoste's Nellie. Com., W. E. Lester's Dottie Dimple.—PUPPIES—*Dogs:* 1st, 2d and very high com., C. Kaeding's Buddie K., Shot and Hunt; 3d, E. Leavesley's Prince Albert. Reserve, R. E. Culbreth's Rock. *Bitches:* 1st, Miss Dollie Bates's Donna; 2d, A. Peri's Pride; 3d, D. E. Goodman's Countess Lion.

IRISH SETTERS.—*Dogs:* 1st, A. B. Truman's Mike T.; 2d, T. R. Hart's Hero; 3d, J. J. Ryan's Pat. Com., A. B. Truman's Dick R. *Bitches:* 1st, A. B. Truman's Lady Elcho T.; 2d, L. L. Campbell's Bell's C.; 3d, withheld.—PUPPIES—*Dogs:* 1st, withheld; 2d H. A. Roesler, Jr.'s Major. *Bitches:* 1st, A. B. Truman's Kate T.

BLACK AND TAN SETTERS.—*Dogs:* 1st, F. A. Taft's Dorr; 2d, E. C. Koenig's Bob; 3d, F. McManus's Jack. *Bitches:* 1st, E. H. Wakeman's Hazel Kirke; 2d, W. E. Detel's Nellie; 3d, withheld.—PUPPIES—*Dogs:* No entries. *Bitches:* 1st, W. R. Spalding's Lena S.

IRISH WATER SPANIELS.—1st and reserve, T. J. Pinder's Nora P. and Jerry P.; 2d, A. B. Elford's Irish Girl; 3d, W. S. Kittle's Brian Born.

FIELD SPANIELS.—1st, J. Struven's Nellie.

COCKER SPANIELS.—1st, Mrs. E. Leavesley's Julie; 2d, W. S. Kittle's Gift; 3d, T. Jennings, Jr.'s, Rip. Very high com., L. Loupe's Sport. High com., F. Meyer's Tiney. *Puppies:* 1st, D. Gilroy's Jet.

CLUMBER SPANIELS.—1st, W. V. Helfrich's Maude.

COLLIES.—*Dogs:* Prizes withheld. High com., C. Cox's Jack. *Bitches:* 1st and 2d, withheld; 3d, Mrs. Patten's Fanny.

DACHSHUNDE.—1st and 2d, E. D. Beylard's The Mikado and Turbulence.

BEAGLES.—*Dogs:* 1st, G. W. Bassford's Bannerman Jr., 2d, withheld. *Bitches:* 1st, G. W. Bassford's Dolly; 2d, H. W. M. Sandbach's Nellie. *Puppies:* 1st, G. W. Bassford's Daisy II.

BULLDOGS.—No entries.

RETRIEVERS.—*Dogs:* 1st, T. E. Watson's Roy; 2d, T. Burke's Cæsar; 3d, J. H. Hall's Dan. *Bitches:* 1st, Fritch & Kross's Kate II.; 2d, C. Kroos's Nellie; 3d, J. Klein's Juno.

DALMATIANS.—*Dogs:* No entries. *Bitches:* 1st, withheld; 2d, Mr. N. L. Havey's Bessie.

Kaeding's Fannie K.; greyhound with coursin record, Sir William II.; mastiff or St. Bernard, Actress; grey hound dog, Monarch; puppy, Benelon II.; Yorkshire terrier, Mash kennel greyhounds (2), J. F. Carroll; of any breed, the same pointers, G. W. Bassford; English setters, C. Kaeding; Irish, A. B Truman; best dog exhibited by a lady (2), MRS. E. F. Preston' Actress.

LOSS OF FEATHER.—*Editor Forest and Stream:* D you not think that allowance should be made by judges fo scanty or ragged feathering in dogs that have been worke in the field? It seems most unjust that a dog who has tor out his feathering in honest work should suffer when competing with "carpet knights," dogs who are not allowed to do anything that would injure their precious feather from one year's end to the other. It is well known that if a dog has been worked in the fall his feather does not come in well in the following spring, the show season, and he is set back and detractingly criticised in consequence. Can nothing be done to mitigate this injustice, for injustice it certainly is? I am glad to see that New Haven and Baltimore have created a precedent for the giving of second champion prizes, and wish them success in the new departure. By the way, will you take pity on my ignorance and inform me what an "Irish Field Spaniel" is? I notice that a special prize is offered for the best dog or bitch of that breed at the Baltimore show.—CEE.

LONDON DOG SHOW.—London, Ont., April 9.—*Editor Forest and Stream:* At a meeting of the Dog Fanciers on Friday evening, it was decided to hold their fifth London international bench show in this city in September in connection with the Western Fair. The following officers were elected: Col. Walker, President; T. H. Marsh, First Vice-President; T. S. Hobbs, Second Vice-President; Allan Bogue, Third Vice-President; S. F. Glass, Treasurer; C. A. Stowe, Hon. Secretary; Ed. Cleghorn, Assistant Secretary; Committee—F. C. Wheeler, T. G. Davey, Wm. Lind, L. Merrideth, B. C. McCann, Ald. James Vinning, A. O. Graydon, Richard Gibson, R. McEwen.—C. A. STOWE, Sec'y.

NEW HAVEN DOG SHOW.

Editor Forest and Stream:

The New Haven Kennel Club's fourth annual show opened this morning, and promises to be the most successful exhibition ever held under the auspices of this popular club. The secretary, Mr. Porter, informs me that a large number of entries have been returned, especially St. Bernards. This was done on account of the size of the Polo Rink, which is not large enough to comfortably bench more than the number of dogs (283) on exhibition. As might be expected, after the weeding out, the quality is excellent in almost every class.

No word was heard from Mr. Watson, either last night or this morning, and at 12 o'clock I commenced to judge the classes assigned to him.

The weather is charming, and the attendance this evening excellent.

I send you full list of awards, including specials, made up to 6:30 P. M. CHARLES H. MASON.

NEW HAVEN, April 17.

MASTIFFS.—CHAMPION—*Dogs:* 1st and 2d, E. H. Moore's Minting and Ilford Caution. *Bitch:* G. & H. B. Cromwell's The Lady Clare.—OPEN—*Dogs:* 1st, Wyoming Kennels' Scar's Monarch. *Bitches:* 1st and 2d, E. H. Moore's Duchess and Lady Beatrice. Best dog, Minting; bitch, The Lady Clare; kennel, E. H. Moore.

ST. BERNARDS.—ROUGH-COATED.—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitches:* No entries.—OPEN—*Dogs:* 1st, R. B. Dennett's St. Gothard III.; 2d, Contocook Kennels' Kastelhorn II. *Bitches:* 1st, Hospice Kennels' Gemma; 2d, City View Kennels' Minna; 3d, E. H. Morris's Corrette. *Puppies:* Prizes withheld.—SMOOTH-COATED.—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitches:* 1st, Mrs. Albert Reuter's Leila; 2d, Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, Hospice Kennels' Wotan. *Bitches:* 1st, Hospice Kennels' Thisbe. *Puppies:* 1st, withheld; 2d, J. Keeran's Halloween. Best, Leila; bitch, the same; kennel, Hospice Kennels; best in New Haven county, Minna.

NEWFOUNDLANDS.—1st, Associated Fanciers's Miro; 2d, E. H. Morris's New York Lass. Best dog, Miro; bitch, New York Lass.

GREYHOUNDS.—CHAMPION—1st and 2d, H. W. Huntington's Cassandra and Balkis.—OPEN—1st, A. M. Ide's Tom; 2d, Mrs. Albert Reuter's Black Crook. Best, Cassandra.

DEERHOUNDS.—CHAMPION—1st and 2d, J. E. Thayer's Ramona and Bran.—OPEN—1st, 2d and 3d, J. E. Thayer's Theodora, Duncan and Prude of the Heather. Best, Ramona.

POINTERS.—LARGE—CHAMPION—*Dog:* Only entry not for competition. *Bitch:* Clifton Kennels' Juno S.—OPEN—*Dogs:* 1st, J. H. Winslow's Bang; 2d, Clifton Kennels' Sachem; 3d, withheld. *Bitches:* 1st, E. H. Morris's Devon Nell; 2d, Seaside Kennels' Belle of Winchester; 3d, Barnes Bros.' Devonshire Countess.—SMALL—*Dogs:* 1st, S. W. Pentz's Brake; 2d, F. Willrath's Jersey Bang Bang; 3d, Clifton Kennels' Blizzard. *Bitches:* 1st and 3d, withheld; 2d, G. W. Waite's Jane.—PUPPIES—*Dogs:* Prizes withheld. *Bitches:* 1st, N. L. Rockwell's Lapford Pearl; 2d, O. T. Warren's Clytie. Best dog, Brake; bitch, Juno J.; puppy, Lapford Pearl; bitch puppy, the same; kennel, Clifton Kennels.

ENGLISH SETTERS.—CHAMPION—*Dogs:* 1st, F. Windholz's Rockingham; 2d, F. Leonard's Royal Prince II. *Bitches:* 1st, F. Windholz's Cora of Wetheral; 2d, G. W. Neal's Daisy Foreman.—OPEN—*Dogs:* 1st, L. Gardner's Roger; 2d, E. C. Ross' Dick Belton; 3d, A. J. Calahan's Fairy King. Very high com., R. B. Penn's Duke of Wellington. High com., W. G. White's Forest Planter. Com., G. W. Neal's Pride of Orleans. *Bitches:* 1st and 2d, E. W. Durkee's Haphazard and Calico; 3d, S. W. Hinman's Dixie B. Very high com., W. C. Augur's Pearl Belton and J. E. Hair's Empress Eugenie. High com., G. M. Johnson's Sparkle and C. A. Ives' Mena II. Com., E. C. Ross' Ruby R. and Mrs. A. J. Calahan's Countess Veda. *Puppies:* 1st, J. Pierce's Belle; 2d and 3d, W. G. White's Dream and Victoria. SPECIALS—Best dog, Rockingham; bitch, Cora of Wetheral; owned in New Haven county (3), Dick Belton; sired by Yale Belton, the same; brace, the same with Ruby R.; bitch in New Haven county (2), Dixie B.; bitch puppy, Belle; kennel, W. G. White.

BLACK AND TAN SETTERS.—CHAMPION—W. S. Hammett's Royal Duke.—OPEN—*Dogs:* 1st, E. H. Morris's Beaumont; 2d and 3d, withheld. *Bitches:* 1st, W. S. Hammett's Vic; 2d, E. H. Morris's New York Belle; 3d, J. W. Meachen's Merle. *Puppies:* 1st and 2d, G. D. Terhune's Rose and Prince.—SPECIALS—Best, Royal Duke; dog in New Haven county, Prince; bitch, Merle; dog puppy, Prince; bitch, Rose.

IRISH SETTERS.—CHAMPION—*Dog:* No entries. *Bitch:* C. T. Thompson's Nellie.—OPEN—*Dogs:* 1st, A. W. Pearsall's Redstone; 2d, J. F. Wolf, Jr.'s, Ned; 3d, C. E. Bunnell's Tam O'Shanter. Very high com., W. H. Warren's Trojan Rory O'More. High com., Onota Kennels' Glenmar II. and E. N. Wilcox's Oghlan. *Bitches:* 1st, Dr. C. E. Nichols's Molly; 2d, Dr. E. C. Kirk's Berwa; 3d, Associated Fanciers' Lady Fawn. High com., T. H. Lynch's Lady Clare and A. W. Pearsall's Belle Ida. *Puppies:* 1st and 2d, A. W. Pearsall's two unnamed; 3d, D. Maxwell's Rose.

FIELD SPANIELS.—CHAMPION—1st and 2d, E. M. Oldham's Newton Abbot Darkie and Newton Abbot Jubilee.—BLACK—OPEN—*Dogs:* E. M. Oldham's Newton Abbot Lord; 2d, W. H. Moseley's Jerry; J. T. Benham's Jet. *Bitches:* 1st, E. M. Oldham's Lady Abbot; 2d, W. Scott's Black Flash.—ANY OTHER COLOR—*Dogs:* 1st, J. P. Willey's Newton Abbot Beau; 2d, E. H. Morris's Beau. *Bitches:* 1st, withheld; 2d, Bridford Kenuels' Bridford Ruby. Best owned in New Haven (two), Jerry.

CLUMBER SPANIELS.—1st and 2d, withheld; 3d, A. B. Rogowski's Fritz; also special for best.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Jess.

Reserve, W. Scott's Jennie. Very high com., T. S. Keeler's Flossie K., J. T. Benham's Millie and Associated Fanciers' Mooress. High com., W. F. Murphy's Cleopatra.—ANY OTHER COLOR—1st, J. P. Willey's Lady of Learning; 2d, W. Dougherty's Dora.—*Puppies:* 1st, C. A. Hinckley's Novel; 2d, F. B. Root's Bijou. Reserve, W. Dougherty's Lillie. Very high com., W. Scott's Chip. High com., G. S. Benham's Abo B. and W. Dougherty's Lucy.—SPECIALS—Best cocker dog, Baby Obo; bitch, Chloe W.; brace, the same, with Baby Obo; best—other than black—Lady of Learning; puppy, Novel; puppy bred and owned in New Haven, the same; county (two), the same; bitch owned in New Haven, the same; kennel, J. P. Willey.

AN APPEAL.

THE following circular has been issued by the board of management of the A. F. T. C.:

To whom it may concern:

The American Field Trial Club was organized by a few gentlemen in the early part of last year, and the first field trials under the auspices of the club were held last December, at Florence, Ala. The management of the club is composed of nine members, and not one of them has any interest other than that of an honest desire to place field trials on an honorable basis. The board does not ask any compensation whatever for its services, and only those who have done the work, can have an adequate conception of the large amount of labor involved in arranging the details of a field trial and bringing it to a successful issue. Owing to the very liberal support it received last year, the club is free from debt, and there is no good reason why it should not meet with even a more liberal support this season. Yet there are chances in having the entries and starting money equal the prizes and necessary working expenses, and the management of the club believe that as they have no greater interest in the matter than any one who desires to encourage the objects sought to be advanced by the club should have, it can not be reasonably expected that the officers of the club should personally guarantee the financial results. With the exception of $120, to be set aside for clerk hire, there will be no other expense than that incurred directly in the management of the trials, such as advertising, postage, blanks, expenses of judges, prizes, incidental expenses, etc. The management agrees that not a cent shall be spent that can be avoided, and that strict business principles shall apply, that the prizes shall not exceed those promised for 1887, and that the "entries" and "starts" shall not be less than charged for last year. In case of shortage, an itemized account in detail, certified to by a majority of the board, showing receipts and expenditures, shall be furnished each guarantor.

In order to have the guarantee fund represent an amount beyond any contingency, the board has made it $1,000, and they hope a very large number of sportsmen are ready to affix their signatures to the inclosed agreement. If you decide to be one of them you are requested to designate the amount subscribed by writing it in blank space in agreement published below, and forward same to secretary. Under no circumstance could you be required to pay a greater amount than that subscribed, and no assessment will be made except on the basis of a pro rata of the deficit of $1,000 or under (amount of the guarantee).

We have every reason to believe that considerably more than a thousand dollars will be subscribed, and in that case each one's liability will be proportionately lessened. The club believes it is right to adopt this plan, as every sportsman is vitally interested in the matter. The benefit which will result from keeping field trials up to the highest point of honorable conduct, is one shared by every sportsman in the country. When such trials cease to show good results, and can not be indorsed by the sportsmen generally, the management will consider that there is no general requirement for the existence of the club, and will be governed accordingly. The management will insist that its backing and support be general, so that no special or particular interest need expect any favors on account of support given the club. An early response is desired. W. B. SHATTUC, President.

C. W. PARIS, Sec. and Treas.

CINCINNATI, March 24.

Following is the form of agreement:

.....1888.

I, the undersigned, in consideration that the American Field Trial Club will hold its annual competitive trial for the year 1888, as provided for in its constitution, and not desiring that the same shall result in any loss to the club, do hereby promise to pay to the said club the sum of.....dollars upon demand, after such trial is made.

Provided, however, and this promise is made upon the express condition, that if such field trial is held as aforesaid, and shall result in a bonafide loss, the total amount of which loss shall not exceed one thousand dollars, then this promise is valid for the said amount of.....dollars, or such pro rata part thereof as may be sufficient to cover such loss, less than one thousand dollars.

.....

IRISH SETTERS AT BOSTON.—Boston, April 14.—*Editor Forest and Stream:* In regard to the judging at the late Boston show I shall have to criticise the Irish setter judge. I see in your last issue that he says in his report that dogs other than those that he gave prizes to were a poor lot. Now I think I have a good Irish setter and it has got to be a pretty good lot when he does not get a mention. I have shown him two years in Boston and was recognized both times in company with such dogs as Blarney, Max Wenzel's Tim, Roberts's Bruce, Wilson's Dash, and other good ones, last year winning third prize. I have now before me Mr. Mason's report of last year's show; he says "Kenerson's Tim is a fairly built dog, good body, coat, legs and feet, heavy in head and shoulders." Now I know he has these bad points, and I have yet to see one who has not got some bad ones. I don't suppose that I ought to find much fault, for I captured the stud dog medal, three of his pups winning prizes all from different dams, but of course "they all took after their mothers." By inserting this you will oblige an unwilling kicker.—CHARLES F. KENERSON.

PUG REGISTER.—*Editor Forest and Stream:* I intend during the summer to publish an American Pug Register containing all the first prize winners during the last ten years. The book will also contain the names, pedigrees, and prizes won of about thirty of the best pugs in England during the same period, also the English Pug Club standard and some other matters interesting to pug owners and breeders. Compliance with the following rules makes a dog eligible for entry: First—All dogs or bitches that have won a first prize at any show recognized by the American Kennel Club, New England Kennel Club and New Haven Kennel Club. Second—Dogs or bitches which have produced two or more such winners. There will be no charge for registration and if the owner of a champion dog or bitch will furnish a good cut of his dog it will be published without charge. Any one wishing blanks, to aid me in making the book as complete as possible, may have them by applying to me. I should be greatly obliged if they will do so at once and return at an early date.—M. H. CRYER.

BALTIMORE DOG SHOW.—Baltimore, April 12.—*Editor Forest and Stream:* It had been the intention of the Baltimore Bench Show Association to give a show in this city on April 24, 25, 26 and 27, but as Cincinnati had claimed these dates, and we being unable to make arrangements for holding it later, we have been forced to defer it to a future date next year, when we will make all necessary arrangements in due time so as not to conflict with any other city. There is to be a bench show held here on April 24 to 27 under the style of the Baltimore Kennel Club, but our Bench Show Association is not connected in any way whatever with it. The officers of the Baltimore Bench Show Association: Sherlock Swann, Pres.; H. Malcolm, Vice-Pres.; George Norbury Appold, Treas.; W. Stewart Diffenderffer, Sec'y. Mr. J. O. Fellows has been appointed as one of the judges at the Baltimore dog show.—W. S. D.

CINCINNATI DOG SHOW.—*Editor Forest and Stream:* The following named railroads will transport dogs in crates to and from the Cincinnati show, free of charge, care train baggagemasters, at owners' risk, when accompanied by owner or keeper, until May 1: Cincinnati, New Orleans & Texas Pacific; Kentucky Central; Ohio & Mississippi; Cincinnati, Indianapolis, St. Louis & Chicago (Kankakee Line); Louisville, New Albany & Chicago (Monon Route); Cincinnati, Hamilton & Dayton and leased lines; Cleveland, Columbus, Cincinnati & Indianapolis (Bee Line); New York, Lake Erie & Western and leased lines; Baltimore & Ohio; Columbia & Cincinnati Midland; Cincinnati, Washington & Baltimore; Pittsburgh, Cincinnati & St. Louis. Personal application should be made to the nearest agent of this line for authority for free transportation of dogs.—GEO. H. HILL, Superintendent.

TO COLLIE BREEDERS.—The Collie Club was organized for the encouragement and improvement of the breed of collies. The club desires the hearty co-operation of every breeder and owner of collies, and to this end will welcome them as members. A very great improvement in type and character has already been accomplished, and collies are now one of the largest and most attractive classes at the bench shows. We think it to the interest of every reputable breeder to join the club. A careful study of the stakes for 1889 must demonstrate our earnest endeavor to accomplish what the club started for. Puppies eligible for these stakes certainly have an increased market value. Blank applications for membership (annual dues $5) and blank entries for the stakes may be obtained by addressing J. D. Shotwell, Secretary, box 18, Rahway, N. J.

HORNELL-HARMONY KENNEL.—Hornellsville, N. Y., April 16.—I have formed a partnership with C. S. Wixom of Covert, N. Y., for the purpose of breeding spaniels, beagles and greyhounds, to be known as the Hornell-Harmony Kennels. Spaniels at Hornellsville, N. Y., beagles and greyhounds at Covert.—J. OTIS FELLOWS.

FOX-TERRIERS AT NEW BEDFORD.—*Editor Forest and Stream:* Please make the following correction in report of New Bedford show on fox-terriers: Geo. L. Fish, high com. on bitch Fan Tan in open class, same in puppy class, first and special with bitch Nettle III. You have me credited with high com. on Nettle III. and H. G. Vinal first and special in puppy class, which is a mistake, as Dot is a black and tan terrier and is credited with the proper winning in her class.—GEO. L. FISH (New Bedford, Mass.).

DEATH OF A WEIGHTY YOUNGSTER.—*Editor Forest and Stream:*—I regret to have to announce the death of Mr. J. J. Lynn's (Port Huron, Mich.) mastiff puppy Egbert (a.k.r. 5219), who was by the English champion Orlando, ex My Countess of Woodlands. Egbert was killed by a locomotive when eight months old, when he weighed 142lbs., a weight, I think, never before recorded at that age, his sire, Orlando, coming nearest with 140lbs.—W. WADE (Hulton, Pa., April 7).

LULU III.—Fall River, Mass., April 14.—*Editor Forest and Stream:* Please make the following correction: The catalogue of the last Boston dog show had Lulu II. (Glencho—Lulu). It should have been Lulu III. (Glencho—Lulu II.). She was winner of second in the Irish setter bitch class.—J. J. SCANLAN.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Chevalier Bayard. By Chevalier Kennels, Chicago, Ill., for fawn mastiff dog, whelped Dec. 28, 1887, by Ponce (Kent—Nun) out of Cautyre (Sentry—Druidess).

Benedict and Melody. By H. E. Cook, Hillsdale, Mich., for black, white and tan foxhounds, dog and bitch, whelped July 3, 1887, by Brave out of Langtry.

Trio and Guardette. By H. E. Cook, Hillsdale, Mich., for black, white and tan foxhounds, dog and bitch, whelped July 1, 1887, by Brave out of Bernhardt.

Streak. By H. E. Cook, Hillsdale, Mich., for black, white and tan foxhound dog, whelped Nov. 1, 1886, by Brave out of Fly.

Nip. By R. J. Douglass, Waukegan, Ill., for tan and white foxhound dog, whelped June 21, 1887, by Brave out of Fly.

Tuck. By R. J. Douglass, Waukegan, Ill., for tan and white foxhound dog, whelped July 1, 1887, by Brave out of Bernhardt.

Surrey Farm Kennels. By Geo. H. Wrightson, Baltimore, Md., for his keenels at Mt. Washington, Md.

Hornell-Harmony Kennels. By J. O. Fellows and C. S. Wixom, Hornellsville and Covert, N. Y., for their kennel of spaniels, beagles and greyhounds.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Katrina—Superbus II. F. G. Stewart's (Boosick Falls, N. Y.) dachshund bitch Katrina (Lux II.—Thekla) to R. D. Foote's Superbus II. (Superbus—Zither), March 27.

Lou—Sport, Jr. Simcoe Kennels' (Simcoe, Ont.) imported cocker spaniel bitch Lou to G. Cook's Sport, Jr. (Sport—Bess).

Jilt—Blemton Valentine. O. H. P. Belmont's (New York) fox-terrier bitch Jilt (Joker—Lilly) to Blemton Kennels' Blemton Valentine (Bacchanal—Marguerite), April 1.

Cinders—Dusky Trap. H. Pomeroy's (New York) fox-terrier bitch Cinders (The Belgravian—Dirty) to Blemton Kennels' Dusky Trap (Dusky Splinter—Spider), March 28.

Blemton Bagatelle—Blemton Valentine. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Blemton Bagatelle (Mephisto—Trifle) to their Blemton Valentine (Bacchanal—Marguerite), March 27.

Festive—Lucifer. L. Timpson's (Red Hook, N. Y.) fox-terrier bitch Festive (Bacchanal—Blemton Arrow) to Blemton Kennels' Lucifer (Splinter—Kohinoor), March 29.

Blemton Lively—Blemton Sentinel. L. Timpson's (Red Hook, N. Y.) fox-terrier bitch Blemton Lively (Venetian—Lurette) to Blemton Kennels' Blemton Sentinel (Bacchanal—Safety), March 23.

Media—Lucifer. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Media (Arius—Nancy Lee) to their Lucifer (Splinter—Kohinoor), April 2.

Althea—Dixie. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Althea (A.K.R. 842) to his Dixie (A.K.R. 4465), March 18.

Phyllis—Dixie. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (A.K.R. 5193) to his Dixie (A.K.R. 4465), March 28.

Zanetta—Bang Bang. W. F. Todd's (Portland, Me.) pointer bitch Zanetta (Sensation—Clymont) to Westminster Kennel Club's Bang Bang (Bang—Princess Kate), March 19.

Mora—Hector. Wyoming Kennels' (Melrose, Mass.) smooth St. Bernard bitch Mora (A.K.R. 5540) to J. H. Long's Hector (A.K.R. 2249), March 3.

Princess Karl—Prince. Wyoming Kenaels' (Melrose, Mass.) rough St. Bernard bitch Princess Karl (A.K.R. 4775) to Barnard's Prince (A.K.R. 791), Feb. 29.

Bertie—Naso of Devonshire. W. F. Payne's (New York) pointer bitch Bertie (Rab—Bellona) to Floyd Vail's Naso of Devonshire (Nick of Naso—Devonshire Queen), April 2.

Venus M.—Potomac. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Venus M. (Bloomer—Fan) to their Potomac (Lee—Countess), April 4.

Queen Victoria—Somerset Mike. Somerset Kennels' (Bernardsville, N. J.) fox-terrier bitch Queen Victoria to their Somerset Mike (Belgrave Primrose—Smuggler).

Korell—My Maryland. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Korell (Frank—Fashion) to D. F. Cox's My Maryland (Lee—Diana), March 30.

Lady Romp—Jupiter. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Lady Romp (Cæsar—Lulu) to their Jupiter (Lee—Saad), March 30.

Tussle—Somerset Mike. Somerset Kennels' (Bernardsville, N. J.) fox-terrier bitch Tussle (imported Jack—imported Fly) to their Somerset Mike (Belgrave Primrose—Smuggler), March 5.

Halfway—Cato. Halfway Brook Kennels' (Glens Falls, N. Y.) rough St. Bernard bitch Nutmeg (A.K.R. 5001) to their Cato (A.K.R. 5265), Feb. 28.

Topsy B.—Robin. G. Banting's (Woodstock, Ont.) cocker spaniel bitch Topsy B. (Brahmin—Melly) to Andrew Laidlaw's Robin, March 28.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Jill. A. P. Case's (Vernon, N. Y.) pointer bitch Jill (Planter—Nell), March 26, seven (four dogs), by F. A. Elliott's Doncaster (A. K.R. 563).

Nina. Simcoe Kennels' (Simcoe, Ont.) cocker spaniel bitch Nina (Obo, Jr.—Woodstock Flirt), March 6, seven (three dogs), by Black Mack.

Cantyre. Chevalier Kennels' (Chicago, Ill.) mastiff bitch Cantyre (Sentry—Druidess), Dec. 23, five (one dog), by McGunty's Ponce (Grant's Kent—Ashmont's Nun).

Blanchie May. Prof. J. C. Schuyler's (Berryville, Va.) pointer bitch Blanchie May (A.K.R. 5063), March 23, nine (five dogs), by C. W. Littlejohn's Fritz (A.K.R. 1851).

Woodstock Ada. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Woodstock Ada (Obo II.—Woodstock Dinah), April 1, four (two dogs), by his Master Shina (Young Obo—Shina).

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

RANGE AND GALLERY.

THE REVOLVER WRANGLERS.

IT would seem that the question of the revolver championship between Messrs. Paine and Bennett is being made the most of in the way of advertising. The chevalier has been spending a few days in Boston, and the shooters have had a rich time talking and letter writing. On Wednesday, April 11, F. E. Bennett issued his programme of a match as follows for $250 a side and deposited $100:

One hundred shots a day for six consecutive days, on standard American target, at a distance of 50 measured yards; revolver, any with barrel not over eight inches in length, including cylinder, and of caliber not less than .44; factory ammunition in unbroken boxes of any of the following makes: United States Cartridge Company or Winchester Repeating Arms Company, to be furnished by the referee; any open sights, revolver to have a three-pound trigger pull, to be tested each day by the referee before the shooting; privilege of cleaning revolver between each 10 shots.

Each man to choose a judge, the judges to choose a referee, whose decision shall be final, and who shall also be the stakeholder.

The referee to give each man 10 cartridges as he goes to the firing point.

The shooter shall not be challenged or interfered with in any manner while shooting; either party violating this rule shall forfeit the match.

The shooting to commence between 1 and 2 o'clock P. M. each day.

The party securing the highest aggregate in the six days' shooting to be the winner. This challenge to remain open for six days from date.

The match to be shot under the following conditions: 300 shots to be fired at Providence, R. I., and 300 at Walnut Hill, Mass., or 600 shots, 100 a day on six consecutive days, on neutral grounds at Springfield Mass. The Smith & Wesson Revolver Club rules to govern the competition. F. E. BENNETT,
27 Essex street, Boston, Mass.

On the 13th the men met and had a confab. After a few introductory remarks, Mr. Paine opened negotiations by saying: "If I shoot Mr. F. E. Bennett, the championship does not stand, as Mr. W. W. Bennett is the gentleman who is regarded in the eyes of the public to be a better marksman than his brother, and for that reason I want to shoot Mr. W. W. Bennett or both together."

"Well," said Mr. Bennett, "if you want to make a match with me, I am here to make it. If you want to make a match with my brother, you will have to see him."

"I want to shoot the best in the world," said Mr. Paine, "and the public believes your brother is better than you."

"I did not know there was a championship concerned between us," said Mr. Bennett. "I came to make a match with you for $250 a side, and not for any title."

"A match for $250 a side between you and myself," said the chevalier, "would do me no good. That would be a match for commercial purposes, and taking a week to finish it would cost me more than the stake money should I win. If your brother will make a match with me, I will concede about everything to him excepting trigger pull, if he will put up $1,000 backing, or if the match is for the championship and that money, I will use almost any trigger pull."

Bennett replied, "If I shoot a match with you, it will be under the rules of some club."

"If you shoot for the championship with me, I think I will have something to say in the matter," replied Paine.

"Then you do not care to shoot me for $250 a side?" said Bennett, rising.

"Certainly not," said Paine. "I have beaten your score some 100 odd points, and, as I said before, I would not gain anything by beating you. I will shoot you for $1,000 a side on neutral grounds, any way and any pull, championship not to be considered."

Mr. Paine finally said, "I wish to make another proposition. I will shoot a full match with both Bennetts for $250 a side each, all the money to be put up before the first match is shot."

Mr. Bennett again reiterated he was not making matches for his brother.

Paine again gave several reasons for not wishing to shoot F. E. Bennett for $250 a side, the most important being that he had already beaten F. E. Bennett's score 133 points in just such a match as proposed, and again, he (Paine) did not care to let a cartridge company, which, he alleged, Mr. Bennett was advertising, use him (Paine) for commercial purposes. Mr. Bennett and his party then left, after being assured that Mr. Paine was ready to meet W. W. Bennett for almost any consideration.

Mr. Paine then laid down $200 and said: "I reiterate my challenge to the world for $1,000 a side, the match to be shot as during recent trials, and I wish to leave this money as deposit. I will, however, shoot against Mr. W. W. Bennett for $250 a side and the championship, and I hope to hear from him soon."

As soon as Mr. Bennett had reached his desk he followed his natural impulse to write a letter and said: "Whenever I ask Mr. Paine to shoot against me, his answer is that he wants to shoot my brother and me for the small stake of $250 a side. If we were to make such a match with him, I object that he might, providing that he won with my brother, refuse to tackle me. He claims the right to choose which of us, providing we should both match him, he would shoot first. Now, my brother is one man and I am another, and I am the one seeking a match with Mr. Ira A. Paine for $1,000, for which my forfeit of $100 awaits him. This match is now open to Mr. Paine, viz: 600 shots, 100 a day for six days, .44-cal. Smith & Wesson revolvers, such as we both use, National Association rules, 50yds. distance, or 50yds. and 100yds. if he prefers the latter, United States Cartridge Company, U. M. C. Cartridge Company, or Winchester Repeating Arms Company, factory ammunition, and 3lb. minimum trigger pull, according to National Association rules. I will shoot three days of the six at Mr. Paine's targets in Providence, and three days at mine at Walnut Hill, Mass., or all six days on neutral ground. Now, if Mr. Paine persists in declining this match with me, and insisting that he must have a 'brother act' match, half against me and half against another man, he has, as I claim, relinquished his pretensions to the 'Revolver Shooting Championship of America and the World,' and Mr. Paine's successor, until somebody beats him, will be Fred E. Bennett."

CAPITAL GALLERY WORK.—At Conlin's gallery, corner of Thirty-first street and Broadway, New York, the go-as-you-please, teaser target match at the long range came to a close on the night of Wednesday, April 11, after a very closely-contested struggle lasting ten days. The conditions of the match were 10 shots with any .22-cal. rifle, position any, sights and trigger pull any. After the first half of the match it was nip and tuck between Mr. Alfred Brennan and Mr. George Bird, each having a score of 49 out of a possible 50, which was not beaten, and it is very doubtful if it ever will be, for in order to make a full score of 50 the shooter has to hit a spot which only measures 32-100 of an inch in diameter. The following are the six best scores made: Alfred Brennan and George Bird tie on 49, C. R. Geusch 46, J. J. Gill 45, G. E. Nichols 42, G. R. Goodwin 41, F. A. Young 40. At the conclusion of the match it was decided between Mr. Brennan and Mr. Bird that they shoot off the tie at five targets each of 10 shots each, under the same conditions, which was done, with the following result. Shot off 50 shots each: Mr. Brennan 223, Mr. Bird 224½. The revolver match now in progress at Mr. Conlin's will bring out some very fine revolver shooting, and the contest promises to be one of the most interesting ever decided at this celebrated gallery.

REVOLVERS FOR OFFICERS.—The report of Col. Rockwell and Majors Frost and Hinman favoring the issue of revolvers to the Massachusetts militia officers has been passed upon by the Adjutant-General so far as to decide that there will not be time before the approaching camps to arrange the details of an issue such as the procurement of the equipments, etc., and that it is expedient to lay the question on the shelf till fall. The first part of the report relates to the experiments made by the board with different patterns of revolvers and ammunitions, but their specific recommendations are for the present withheld; but the board say that whenever the State buys revolvers they should get the best, referring not only to quality of manufacture, but to accuracy of shooting. Coming to the question of the "advisability of the issue," we are constrained to the opinion that there is a very serious doubt of the advisability of issuing revolvers to all officers. We take it there has been no thought or intention of issuing revolvers as a purely ornamental adjunct of the officers' outfit. The advantage to be gained may perhaps be summed up by the simple statement that officers would be instructed in the use of the arm, which, in case of public tumult or other civil service, would be their individual weapon of offence or defence. The chief disadvantage, as affecting officers of the infantry line especially, and one which may or may not be permanent, is that, as our system of rifle practice has developed, it is necessary that company officers should become personally interested in the rifle practice of their commands; for the men, without the active co-operation and encouragement of their officers, would seldom reach a state of efficiency. In fact, the officers have become an active part of the system; and it may be unwise at present to divert their attention in another direction.

SAN FRANCISCO, April 8.—The shooting festival at Shell Mound Park to-day was well attended, and at the rifle as well as on the pistol targets excellent scores were made. The following marksmen carried off the prizes at 200yds.:

	Rings.		Rings.
A Rahwyler	94	F O Young	85
Philo Jacoby	93	Wm Ehrenpfort	85
A Meyer	93	McCloughlan	84
F Kuhls	92	J Hortsman	84
A Johnson	92	Barrere	83
F Kuhnle	91	L Radovich	83
A Strecker	91	C Robertson	82
K Wertheimer	90	Kurlin	80
F Boeckman	89	Brod	79
F A Freese	89	Waltham	79

A Johnson	47	H Carr	45

OWENSVILLE, Ind., April 10.—Five of the members of the Owensville Ballard Rifle Team made the following scores to-day. High 8 o'clock wind; standard target 200yds., for gold medal:

J Montgomery	6	8	8	9	8	8	4	5	9	7—72
W Roberts	4	7	6	5	9	6	9	7	10	8—71
Jas Daugherty	9	6	4	8	7	6	9	3	7	9—68
R Speck	4	6	10	7	10	5	6	5	6	9—68
W Gentry	5	8	5	0	3	8	6	4	5	5—49

LONDON, Eng., April 15.—It is proposed that the Kolapore cup instead of being shot for at Wimbledon by colonial teams, shall be competed for in the colonies qualified to send teams. This proposal is intended to place colonial teams in a better position, because they would know their own ranges, whereas Wimbledon is strange to them. Should the proposal be accepted authenticated results of them firing in Canada, India, and elsewhere will be forwarded to the National Rifle Association for the award of the cup.

BRADFORD, Ont., April 13.—A rifle match took place here to-day between the Aurora and Bradford Rifle clubs, Bradford winning by 2 points. Position, off-hand; 5 shots per man. Below is the individual score:

Aurora.	100	200	Total.	Bradford.	100	200	Total.
A Patch	21	16	37	B Kilborn	24	18	42
J W Crossly	22	20	42	R Neilly	23	14	37

NEW BEDFORD, April 11.—The interest among the firemen on gallery shooting still runs high. At Cornelius Howland engine house to-night the sharpshooters of the company were again called upon to defend the silver medal which they have held against all comers up to the present time. Again they succeeded in defeating a crack team from Frederick Macy company by the following scores. Ten shots per man. Cornelius Howland team: S. Watson, 2d, 44, J. Backus 43, E. S. Gilbert 43, D. D. Briggs 43, J. J. Donaghy 41, W. A. Gibbs 45, W. Watson, Jr., 40—299. Frederick Macy team: C. K. Wood 41, T. Wood 36, B. Groves 41, C. G. Tabor 41, H. M. Mosher 40, R. N. Allen 36, J. L. Ballou 39—274.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CANADIAN TRAP NOTES.

OTTAWA, April 7.—The St. Huberts Gun Club held their regular weekly shoot this afternoon, when a team sweepstakes, at 15 birds each, was shot, followed by a sweep at 10 birds each. The following was the result:

T McLean	111111111011110—13	T Trudeau	1101111111010000—10
J Deslauriers	0001110011100001— 7	A Throop	0000000100100000— 2
G White	1011111010101101—11	S White	1000110111010110— 9
R G Dalton	0111111001111101—11	E White	1100011101101100— 8
P Thompson	0011010011010101— 7	Dr Martin	1101110010100010— 8
E King	0000010000010000— 2	L Labelle	0010100001011111— 7
	51		44

Sweepstakes, at 10 birds each:

Thompson	1101010101—6	G Trudeau	1111101111—9
G White	0011100110—5	S White	1001100100—4
T Labelle	0011100000—3	Dr Martin	0101111111—8
J Deslauriers	0010110111—6		

The clubs are working energetically to make their 24th of May tournament a grand success, and the prizes offered in kind and cash will amount to $450.

MONTREAL, April 7.—This afternoon some of the leading representatives of the local gun clubs gathered at the club house to compete for the silver cup and three other prizes donated by the Club House company. The conditions were twenty-five Peoria blackbirds thrown from five traps, eighteen yards rise. The match was refereed by Mr. F. G. Verity. Capt. Howard, of Gatling gun fame was one of the contestants. A large number of spectators were present. A feature of the match was the shooting off of ties by Hadley and Shaver, who tied for third place with a score of fourteen each. In the third set of five birds, Hadley broke one more than Shaver.

D Robertson	1111111101001011101001011—18
R Redmond	1111101110111000110011110—17
J G Hadley	0011011000110111011110110—14
J Shaver	1110101110010110131001100—14
L Thackwell	0100011010101010101010111—13
Wm. McDuff	1010110001111001010010011—13
A Boa	0000000110100111011100011—11
A L Howard	1100101010110011000101000—10
S W Edwards	1000011110100010000100011—10
C F Gabler	0000001010100010101011000— 8

The match for the cup was followed by a sweepstake at 5 pair double Peoria blackbirds, with Robertson first and Redmond second.

TORONTO, April 9.—A shooting match took place on John Oulcott's grounds, Eglington, to-day, between Armstrong and Worden at 25 birds each, 26yds. rise, for $50 a side:

Armstrong	1010111111000111010110110—16
Worden	1111000101001010110011001—14

TORONTO, April 11.—The third shoot for the Enos James gun presented to the West Toronto Junction Gun Club by Mr. Charles Stark, took place to-day. Some good scores were made, considering the very high wind. The shooting of Mr. Clarke was exceptionally good, he breaking 33 out of 35 birds. The following is the score. Twenty Canada blackbirds each, from three screened traps, 18yds. rise:

Clarke	11101111111111111111—19	Dollery	11010111101000111101—14
D Blea	11111010111111111111—18	Hinton	10101111111011110001—14
H George	11111110011111111111—17	Wilson	10110010111111011101—13
Wakefield	11111110011101011011—16	Davidge	10101110101010101011—12
J Bailey	10111111111110100110—15	Thomson	10100001010010100000— 6

The fourth shoot for the president's gold medal also took place. Fifteen Canada blackbirds from three screened traps, 18yds. rise. Won by Mr. Clarke with 14.

MONTREAL, April 11.—The Montreal Gun Club have made arrangements for a telegraphic gun shoot with the Toronto club, to take place on April 24. The conditions will be: Teams to consist of 5 men each, 3 traps to be used, 18yds. rise, the traps to be set to throw targets 40yds. from traps, the targets to be between 4ft. and 12ft. from the grounds. The shoot is to take place on the grounds of each club; the president of each club to act as umpire and scorer; the results to be telegraphed immediately after the matches.

OTTAWA, April 12.—The Ottawa Gun Club held a shoot to-day for the club badge, Alex. Stewart turning out to be the winner. The shoot was at 15 Ligowsky clay-pigeons: A. Stewart 10, Dr. McPhee 9, J. Manuel 8, J. Stewart 8, H. Street 8, W. H. Tracy 8, C. Labelle 7, R. Rathwell 7, G. Laing 3. A sweepstake of 5 birds each was won by C. Labelle after a tie with J. Stewart. A match has been arranged between Dr. Alex Martin, P. Thompson, T. McLelan and John Deslauriers, the crack shots of the St. Huberts, to shoot at 100 pigeons each, for the championship of the club.

OTTAWA, April 14.—The St. Huberts Gun Club held their monthly shoot for club prizes, the competitors being divided into two classes, six in each class, facing the traps. The weather was what the boys call St. Huberts weather, snow and rain falling all the time. The match was at 15 Ligowsky pigeons at 18yds. rise, the following being the result:

First Class.		Second Class.	
G Thompson	100010011001010— 6	J Deslaurier	1111111101111101—13
T McLelan	1111111111101111—14	J White	1111011110000111—10
Dr Martin	1000110011010111— 8	G Trudeau	1111011011011111—12
Ed White	0010110100100001— 6	A H Throop	1111010111100010— 9
S White	0101000010011111— 7	P Boulay	1011010000011111— 8
R G Dalton	0101011100000111— 7	C J Tache	0001110100010111— 7

Dalton won tie for third. A sweepstake at 10 birds each followed and first was won by Deslaurier, McLelan second, Thompson third. All preparations for the Queen's Birthday, May 24, tournament are going on in a most satisfactory manner and numerous promises of the support from outside clubs have been received by the secretary, Mr. N. Fortier. The prizes are a good lot and will be on the ground ready to hand to the winners on the conclusion of each match. The only prize that cannot be won and held for good is the Lansdowne trophy for teams of 5 *bona fide* members of gun clubs, this prize having to be produced by the winning team for annual competition.

MONTREAL, April 13.—The Montreal Gun Club formally opened their new grounds to-day with a practice match, at which there was some good shooting done. They are going to have abundant practice to prepare for team work for the Ottawa shoot on the Queen's Birthday.

The Toronto Gun Club have accepted the challenge of the

Montreal Gun Club to shoot a match at 20 Peoria blackbirds, 5 men on each side, the scores to be ascertained by telegraph. The following compose the Toronto team: A. Wyness, G. Briggs, E. W. Sandys, D. Blea and John Townson.

WORCESTER, Mass., April 11.—The Worcester Sportsmen's Club went down to Coal Mine Brook Range yesterday. The occasion was the first in the series of classification shoots. For position six strings of five birds. Clay-pigeons (C.P.) and blue rocks (B.R.) were shot from screen traps, and for the class score clay-pigeons. The work of each man was as follows:

	Classification. C.P.	B.R.	C.P.	B.R.	C.P.	B.R.	A.
H W Eager	5	4	4	5	4	4—26	10
A R Bowdish	4	3	4	4	3	5—23	10
E F Smith	4	5	5	5	4	4—27	9

L S Kilourn	2	3	3	2	5	5—19	1
L R Hudson	1	2	2	0	1	w.	

BROOKLYN, April 11.—One of the best shoots of the season took place to-day at Dorler's Park, Jamaica Plank Road. Twenty-one members of the Unknown Gun Club competed for the club's championship badge, which was won by M. Brown, who killed 7 birds straight. H. Cahill and H. Knebel, Jr., killed 6 each and divided second money. Eleven killed 5 each, and on shooting off the ties J. Horsman won third, killing all his birds. C. Plate and E. Vroome tied at the last shoot for second prize, each killing 10 birds, and to-day they shot at 4 birds, Plate winning with 3 killed. In the match between H Gilman and C. Hopkins the former won by one bird on shooting off the tie, the latter missing his first bird on the shoot off:

J Horsman (25)	1101110—5	H Paulsen (25)	0111101—5
M Brown (20)	1111111—7	J Jumbo, Jr (25)	1110011—5
J Boyle (21)	1010101—3	E Vroome (28)	1111100—5
L Kahen (23)	0011010—3	H Kold (21)	1010110—3
W Skidmore (25)	1101101—5	J Rathjen (28)	1010100—3
C Plate (20)	1110000—3	H Gilman (23)	0011111—5
H Von Stader (25)	0011111—5	C Hopkins (25)	1111001—5
J Bohling (25)	1110100—4	H Knebel, Jr (25)	1111101—6
H Behrman (22)	1011110—5	H Knebel, Sr (25)	1011011—5
H Cahill (23)	1111101—6	J Schroeder (25)	1011011—5
C Ring (21)	1001 00—3		

In a sweepstakes that followed thirteen entered, miss and out. At the end of the second round C. Plate, C. Hopkins, H. Knebel, Sr., and H. Von Stader were even with 4 each, but on account of the scarcity of birds did not shoot off and divided the stakes. The management of the Unknown Gun Club, not to be outdone by their rival shooting organizations, had a band of music playing during the afternoon, and a substantial collation was provided after the shooting. The referee was Mr. R. N. Stillwell and the scorer Mr. J. Boyle.

SAN FRANCISCO, April 4.—The perfection of weather greeted the California Wing Shooting Club on the occasion of their second shoot at San Bruno to-day. There was just sufficient breeze to blow away the smoke and allow the shooters to use their second barrels with great effect. The birds were a very fine lot, being specially strong in the wing, consequently a great many of them died out of bounds. In the "club shoot" some very fine scores where make. The following is the complete score:

James	1111010111101— 9	Slade	0110110100111— 7
Sprague	0011111010111— 8	W. De Vaull	1111001111111—10
Coffin	1111111111111—12	Brown	1011111111111—11
Haas	0111011111110— 9	Parker	1001000011111— 6
Ford	1111100111101— 9	Johnson	0111100011111— 8
Meily	1111111011111—11	Randall	0101111100000— 6
Foster	1110100111 0— 6	Jones	0100111111100— 7

After the shoot for the club medals, a six bird match was in order. Fifteen men put in $2.50 apiece, and Messrs. Randall, Ford and Smith divided it, each winner killing his full complement in fine style. Both matches were shot under Hurlingham rules, 80 yards boundary, those using a 10-bore gun firing at 28 yards, and 12 bore at 30 yards.

JERSEYVILLE, Ill., April 10.—At the regular weekly shoot for the clay bird medal, the following scores were made. Owing to the strong wind the scores were not extra good:

Twenty Ligowsky clay-pigeons, 18yds., 3 traps:

Hutchison	11011101111110111110—16	Smith	0101111011111110011—15
Skelly	1110111001111010111—15	Burleigh	1000101001101111100010—10
"Douglas"	1011100111111011101—15	Chappell	0101111100011101101—13
Beatty	1110101101011100111—13		

Trial at standard targets, as follows:

Hutchison	0101111111—8	Chappell	11111—5
"Douglas"	1101111011—8	Beatty	01010—2
Smith	0100111001—5	Burleigh	00101—3
		Skelly	01010—2

At 10 standards:

Beatty	0111011000—5	"Douglas"	0101001010—4
Hutchison	0110111111—8	Kellar	1001110000—5
Chappell	0100100101—5	Rogers	0000000011—2
Smith	1111100011—7		

At 5 standards:

Beatty	11101—4	"Douglas"	10101—3
Smith	11111—5	Chappell	11111—5
Rogers	01001—2	Kellar	11100—3
Hutchison	11111—5		

Hutchison first, Beatty second.

The new standard targets gave good satisfaction and proved to be excellent breakers when hit, breaking all to pieces.—HAMMERLESS.

WELLINGTON, Mass., April 14.—Lovers of the shotgun rallied in full force to-day, and passed over five hours in breaking the birds. In the merchandise match the following shooters scored points: Bond, 18; Schaefer, Scott and Stanton, 16; Chace, Stone and Baxter, 15; Brown and Nichols, 14; Edwards, Bill, Chapin and Hammond, 13; Phelps, Hart, Moore, Swift and Melcher, 12; Conant 11, Snow 10. The Grimes prize was taken by Chase. The winners in other events follow: Six bluerocks, Scott; 6 pigeons, Stanton and Schaefer; 6 bluerocks, Scott; 6 pigeons, Bond, Melcher and Schaefer; 6 bluerocks, Chapin and Bradstreet; 6 pigeons, Baxter; 6 bluerocks, Scott and Phelps; 10 bluerocks, Bond; 10 pigeons, Schaefer, Stone and Baxter; 6 bluerocks, Scott; 6 pigeons, Stanton, Brown and Snow; 6 bluerocks, Stanton and Schaefer. The Wellington Gun Club will hold a tournament on its grounds on April 18, at which time the final contest for the Climax Diamond Badge, held by J. F. C. Swift, will take place. Shooting will begin at 9 o'clock A. M. There are three shooters who each have won the badge twice, and if one of the three should win it on the 18th, it will then become his property. The gentlemen who have won it twice each are H. G. Wheeler, T. J. Beaudrey and H. W. Eager. All sweepstake matches will be shot under the rules of the Massachusetts State Shooting Association, being divided into three classes.

CLEVELAND, April 11.—The Kirtland cup contest is over, and the veteran clay-pigeon shot, C. M. Roof, carried away the Davis prize with a score of 31 out of 40. The shoot took place on the Kirtland Range. The shooting contest was open to members of the Kirtland Gun Club only, yet a large percentage of the membership of that club entered into competition for the prize. A few months ago Mr. Davis, an ex-member of the club, now residing in Chicago, visited the range and offered a silver cup to the member breaking the most birds in a contest open to the Kirtlands. His generous offer was accepted, and to-day was set apart for the trial. Fully fifty clay-pigeon shots took part in the club contest and in the sweepstake events, which were also held. Twenty-six members entered the contest, shooting at 40 blue rocks from 5 traps at different distances. A committee had charge of the contest and arranged the distances at which each marksman was to shoot. The committee took into consideration the previous scores of some of the contestants and their experience in trap and trigger shoots, and moved some of them back 5yds. further from the trap than some of the less experienced marksmen. One or two contestants intimated that they were somewhat handicapped by the distance they were required to shoot with light guns. The match was to have been for the highest score in 50 singles, but approaching darkness induced the contestants to close the contest at 40. Four sweepstakes followed.

BOSTON.—April 11. The Boston Gun Club held another shoot to-day. The principal event was the handicap contest for the amateur championship gold badge for 100 clays. Many of the best shooters in New England tried their luck. Mr. H. A. Baxter of Jamaica Plain, was the successful man at 17yds. distance, with a score of 79 birds, closely followed by Bond at 21yds., and Hutchinson, 15yds., with 77 birds each. Lang, 19yds., was third, with 75; Connell, 18yds., fourth, with 74, and Perry, 20yds., fifth, with 72. The rest of the entries were in the following order: Kirkwood sixth, Nichols seventh, Shepard eighth, Chase ninth, Rogers tenth, Wurms and Horton eleventh, Buck, Payson and Pierce twelfth, and Grew thirteenth. At the conclusion of the match, Mr. D. Kirkwood, secretary of the Boston Gun Club, delivered a speech, and handed Mr. Baxter the gold badge representing the amateur championship at 100 clays. Mr. Baxter responded in a pleasant manner.

Several "sweeps" were then shot, resulting as follows: 1, five clays, Grew first. 2, seven Peorias, Rogers, Wurms and Kirkwood first. 3, seven clays, Bond first. 4, seven Peorias, Nichols first. 5, five clays, Wurms first. 6, seven Peorias, Wurms first. 7, seven clays, Kirkwood first. 8, seven Peorias, Wurms and Chase first. 9, five straight Peorias, Chace first.

The shoot was in every way a success, and on April 25, a similar match and badge for the championship at 100 Peorias will be shot for on the grounds at Wellington.

SAN DIEGO, Cal. April 1.—A large number visited the San Diego Gun Club grounds to-day to witness the bird-shooting match between W. A. Hamilton and William Francis, both local shots. The match was for $25 a side, 100 blue rocks. The men were troubled some by the stiff wind that blew in off the bay, but in spite of that fact some splendid work was done. Hamilton breaking 94 out of 100 targets, and breaking the first 32 blue rocks out of the trap. Francis made two runs of 13 each. Hamilton's run of 32 was followed up by one of 22. W. C. Hinman and M. Chick acted as judges, and J. K. Hamilton was referee.

SAN FRANCISCO, April 7.—The Blue-rock Gun Club held its monthly meeting for the season to-day at Birds Point, Alameda. The traps were in good working order and threw the birds satisfactorily, but occasionally a gust of wind would catch the birds and fool the shooter. The rule was 18yds. for 10-gun, and 16yds. for 12-gun. Appended is the score, 20 birds: Kellogg 15, Golcher 12, Laing 14, Wattles 7, Maynard 14, Harris 5, Mayhew 11, Schwerin 13, Melia 3, Leviston 2, Tubbs 7, Dewing 4, Adams 8, Hawks 7, Fox 9, Melvin 3, Gould 10, Abbott 7.

The following prizes have been offered by the club for the best aggregate score of the season: First, gold watch charm medal, presented by the club; second, Winchester repeating rifle, by the club; third, split bamboo fishing-rod; fourth, dogskin waterproof hunting coat; fifth, Victoria leather gun cover; sixth, portrait "California Belle and puppies"; seventh, pair of leather hunting boots; eighth, fine silk umbrella; ninth, sole leather cartridge case; tenth, 250 Standard shotgun cartridges.

AUBURN, N. Y., April 16.—The thirtieth annual tournament of the New York State Association will be held here on the week beginning with May 28. The association will convene at the Osborne House Monday evening, May 28, at 8 o'clock. All delegates are requested to be present. The first contest of the tournament will commence Tuesday morning at 9 A. M. sharp. The prizes, both merchandise and cash, will be by far the largest ever given at any tournament in this State, and the entrance fees the lowest. The new mode of classifying the contestants will give the beginner an equal chance with the older shots, inasmuch as he will only shoot against men of his own class. All clubs desiring programmes of the tournament will please notify Charles E. Kerr, Secretary Auburn Gun Club, and they will be mailed to their address free of charge.

HOOSICK FALLS GUN CLUB.—Hoosick Falls, N. Y., April 11.—At a recent meeting of the Hoosick Falls Gun Club the following officers were elected: Pres., Chas. H. Palmer; Sec'y, C. A. Johnston; Treas., Wilmer J. King.

THE ILLINOIS TOURNAMENT.—The Central Illinois Sportsman's Association will hold its tenth annual tournament, open to the State, at Sportsman's Park, Jerseyville, July 24, 25, 26 and 27. The officers for the year are as follows, and they promise to make this the biggest tournament of the season: C. W. Parent, President, Jerseyville, Ill.; Dr. Chas. Henry Vice-President, Jacksonville, Ill.; John Fox, Treasurer, Jerseyville, Ill.; Directors—C. M. Powers, Decatur, Ill.; L. E. Brown, Delavan, Ill.; I. W. Budd, Crescent City, Ill.; L. S. Carter, Hammond, Ill.; W. C. Smith, Mt. Zion, Ill.; James Perrings, Jerseyville, Ill.; Executive Committee —L. S. Hansell, Geo. Beatty, G. R. Smith, H. L. Stoeckel, Al. Tack, Jerseyville, Ill.—CAM R. HUTCHISON, Sec'y, Jerseyville, Ill.

April 12.—Only twelve members entered the contest this afternoon for the Cleveland Gun Club badge on the club range, yet a lively interest was manifested both in the competition and also in the team shoot which followed. According to the rules, the winner has the privilege of keeping it in his possession until the next shoot comes off, or until he shoots and loses in a badge contest. W. Roberts, who has before won the badge, was again a winner, he having defeated H. H. Walls in shooting off the tie. The conditions were fifteen singles and five pairs of clay birds at eighteen yards rise. The scores follow:

F Chambers	111111011110011—12	01	00	01	11	00— 4—16
K D Bishop	1101111101111—12	00	11	10	01	10— 5—17
W Roberts	111111111101111—14	11	11	11	10	11— 9—23
J Moser	0110 0000011101— 7	10	00	11	10	10— 5—12
C F Wheal	1111011010111 1—12	11	10	10	10	11— 7—19
L O Jones	0000101111111100— 8	11	00	11	10	10— 5—13
F H Walls	1111001111111 1—13	11	11	11	11	11—10—23
J J White	1111101111101111—13	00	10	11	00	00— 3—16
W Tamblym	1101011010001 1—13	00	10	11	00	00— 3—16
M F Selsby	1111000111110010—10	11	10	01	11	11— 8—18
W A Bassett	1111011111010101—12	10	01	10	01	10— 5—17

Following the badge shoot, F. H. Walls and W. Roberts, who stood the highest in the badge shoot, divided the members and conducted a team shoot, five singles and five pairs, which resulted in favor of the former's side, 56 to 49.

HOOSICK FALLS, New York, April 14.—First match of the Hoosick Falls Gun Club in a series of ten. Match shot in a drizzling rain. Bats and pigeons, 5 of each from trap, 18yds. rise:

Chas Palmer	00110 11000— 4	L Willis	01010 00100— 3
Wm Mills	01000 10101— 4	Henry Lovell	00103 01000— 2
Geo Hagan	00110 00000— 2	C A Johnston	11111 11111—10

ST. LOUIS, April 8.—At the Compton Hill Gun Club's grounds to-day several sweepstake shoots were contested with the following result: First shoot, 10 clay-pigeons, 18yds. rise—Weaser won first and Moser second money. Second shoot, same conditions—Christopher first, Weaser second. Third shoot, 10 Peoria blackbirds, 18yds. rise—Moser first, Weaser second.

WASHINGTON, D. C., April 13.—The Capital City Gun Club, bluerocks, 5 traps, N. G. A. rules. Team shoot at 50 singles per man:

Green (16)	11111001111101111100100111110001111100101110111110—35

	— 77

ABILENE, Kan., April 12.—This afternoon at 1 o'clock, at the grounds of the Abilene gun club, occurred the much talked of match between Captain A. H. Bogardus, and W. S. Irwin, the champion wing shot of Kansas. The weather was bright and clear, and an immense crowd of spectators, including a large percentage of prominent sportsmen, was in attendance and all the conditions were favorable for an exciting contest—just what the match proved to be. The match was for $200 a side, 100 live birds for each man, and at thirty yards rise, use of both barrels, English rules to govern. When 50 birds had been shot at Irwin led by 7 birds, but before 60 had been reached he had missed 5 straight, the score standing at 60: Irwin 49; Bogardus, 47. From that on until the finish the contest was close and very exciting. The 78th bird Irwin missed and Bogardus killed, tieing the score which stood 63 birds each. Irwin then steadied down, killing 12 straight, while Bogardus lost 2, the score standing at 90 birds: Irwin, 75; Bogardus 73. In the last 10 Irwin and Bogardus each missed their first; then both killed; Irwin missed the next and Bogardus scored, making the score 76 and 75. The next two birds were killed, and the next missed, and on the 100th bird Irwin missed and Bogardus killed, and the match was announced a tie, each contestant having killed 80 birds.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: F. L. BIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div. Henry Stanton...A. S. Pennington..E. W. Brown, 146 B'way, N.Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney...W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen. W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Perkowell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

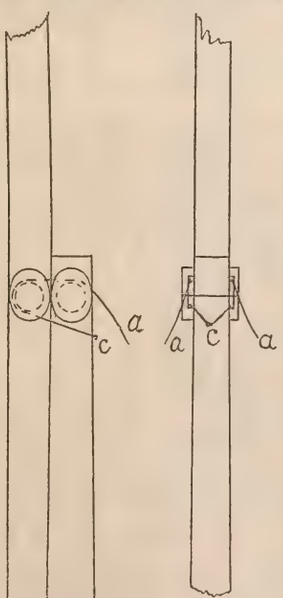
A NEW CANOE SAIL.



THE advantages of the old-fashioned leg-o'-mutton sail in the important points of light weight aloft and simplicity of rig, were so apparent that it is not surprising to find that while models and rigs were at first imported from England, the lug and gunter sails were soon discarded in America for the less complicated leg-o'-mutton, which, about ten years since, was the sail in general use here by canoeists. Both the lug and gunter required some care in rigging and more blocks and gear, but the plain triangular sail of the sharpie was easily made, after a fashion, and rigged to match, by any tyro. Up to 1878 this sail was used on almost all canoes in the United States, but as racing became more popular the lug was introduced and soon drove it out. The faults of the leg-o'-mutton sail were that the mast must be very long in order to obtain the area, and the sail was difficult to hoist and lower owing to the number of mast rings required, making it a slow and uncertain matter to reef or shake out. A mast of 14 to 15ft., such as was necessary for a 65ft. sail, was a very troublesome stick in a narrow boat, even if of bamboo. Naturally the idea of cutting this stick in two had suggested itself, leading to the sliding gunter rig, but a mechanical difficulty was met that caused the gunter sail to be abandoned by all. It was found to be impossible to rig a gear of any sort that would slide on the lower mast and carry the topmast without either binding and jamming fast, or on the other hand, being so loose when hoisted as to allow the topmast to wobble to an unbearable degree. Brass slides of various forms were tried, as well as other devices, but besides the weight aloft, they never could be relied on to hoist and lower quickly, while they permitted a great amount of play in the topmast.

The sail here shown was designed last year by Mr. C. J. Stevens, New York C. C., for the canoe Tramp, but the sail plan shown is adapted to the canoe Guenn, whose lines and fittings have lately appeared in our columns. Curiously enough this new sail, a combination of the leg-o'-mutton and sliding gunter, was evolved directly from the balance lug. The first step was to sling the ordinary round-headed balance lug sail abaft the mast, of course retaining the peak, the yard being very much rounded, as shown in the sail plan of the FOREST AND STREAM cruiser. This made a very good sail, but it was evident that the peak, falling more or less to leeward and out of the plane of the masts, was a decided disadvantage in so narrow a boat on the score of stability, whatever advantage it might possess to windward over a jib headed sail. The next step then was to cut away entirely the angle between luff and head, the throat of the sail, substituting a moderate curve to the upper part.

The most serious difficulty was the hoisting and holding in place of the yard, now transformed into a sort of topmast, but after a number of trials a method was devised that is at once effective and ingenious. The object sought was to bind both mast and yard so firmly together that they became for the time a single stick, avoiding the play of the gunter, as well as the weak construction due to the short gunter brass with its direct strain on the mast head. The details of the present plan are shown in the smaller drawing. On the mast two cheek blocks are securely lashed, leading fore and aft. On the yard are two similar blocks, also leading fore and aft. The halliard is double, a knot is first tied in the center, then the two ends are rove, one through each of the blocks on yard and then through corresponding block on mast, the bight of the line with the knot c being around the fore side of mast. It is evident that a pull on the two parts of the halliard will jam the spar firmly against the mast, practically making one spar of the two, as each braces the other. The size of each is so proportioned that the strength of the 2in. mast is retained all the way to the mast head, the yard growing larger as the mast grows smaller. The halliard was first used without the knot c, but it was found that in hoisting the bight was held close to the mast, thus jamming at times. The knot was then tied in so that the halliard could not unreeve through either block; and now in hoisting the strain is taken only on one halliard until the yard is fairly in place, then both halliards are set taut and belayed. The canoeist takes both halliards in hand, leaving one with some 6in. slack, then hoists away, the yard rising easily, as the bight is entirely loose around the mast. When well up, a pull on both halliards *a*, *a*, sets all snug. The result is the same when set at the masthead for full sail, or lower for a reef. The boom and battens are fitted with jaws of the size and shape shown in the smaller cut, which represents the full size of the pattern, the casting being a little smaller when finished. The battens are round in section, and each is ferruled with brass, the jaw then being driven in. To hold the jaw to the mast a hollow brass curtain ring is used, lashed to the batten just on top of the jaw. This allows the boom or batten to be folded close up against the mast in stowing. The fourth batten may not be needed if the sail is properly cut; in any case it has no jaw, but is merely slipped into a pocket. The halliards, A, A, lead from the masthead to blocks at deck on each side of the mast, thence to a cleat near the well. They may be led through a double block near the stem, thus acting as a forestay, provided the mast is not too far forward, but the present practice is to place the mast from 9 to 12in. from stem, in some cases still closer. A tack line is used to hold the boom down, being led through a block at deck abaft the mast. The topping lift is made fast to an eye at masthead, leading down each side of the sail, and spliced together just below the

sheet block. A small jaw of brass is lashed to the boom, and the bight of the toppinglift is slipped into it, holding the boom at the proper height. By casting the lift off from this jaw and allowing it to swing forward the boom will drop on deck, and by leaving it in the jaw and hauling in, belaying on the small cleat or boom, the latter may be topped up as far as desirable. No reefing gear is shown, but any of the well-known varieties may be fitted as in a lug or Mohican sail, two reefs being sufficient.

The mizen may be rigged precisely as the mainsail, but with the small area now carried att a sail of the same shape, but not fitted to lower, will answer perfectly. The luff is laced to the mast, one batten is fitted as shown, and a brail, in two parts, one on each side of the sail, the leading through small bullseyes lashed to the mast, the two parts spliced into one and belaying on the cleat at foot, serves to stow the sail snugly for running free or paddling. Though rather long, the mast and sail weigh but little, and may be readily unstepped and stowed on deck, a smaller mizen being substituted. The sprit mizen used on the Pearl will answer well for this latter, the spars being quite short. It is fitted as shown in the dotted lines, with one batten, there being rings on leech and head. A brail is rove through these rings in two parts, one end fast to boom and up the leech, thence through a bullseye on mast; the other end fast to top of batten, through rings on head, and through same bullseye. The sail may be reefed by hauling the latter part until the batten lies close to mast, or by a pull on both parts the sail is brailed up snugly against the mast. The spars may be short enough to allow the rig to be stowed inside the well.

The spinaker forms a most important feature of this rig, as the mizen is stowed when down wind and the spinaker set, the canoe running much steadier than under after sail. The shape is shown in the drawing by the broken lines, the foot being greatly roached in the curve shown. The head and outer angle of sail are fitted with small swivels, in case of a turn in hoisting; the halliard leads through a block at masthead, one end leading through a block at deck, the other hooking into the sling of sheet block when not in use. If on the wrong side, it may be swung around in front of the mast before snapping to head of sail. The sheet or after guy is fast to the sail, and a snap hook on the latter hooks into an eye on the end of boom. The tack leads through a screweye on deck just forward of the mast, the ends leading aft on each side of mast, so that either may be bent to the sail. The boom, of bamboo, is fitted with an eye at the outer end and a small jaw on the inner, the latter shipping in a brass stud in the deck just abaft the mast. The sail is snapped on to the halliard and hoisted, the tack being first hooked on; the outer angle is then hooked to the boom, the latter shipped against the stud on deck and swung forward, the sheet then being made fast and the tack trimmed. The sail should be of strong light linen that will dry quickly.

To complete the ordinary outfit for cruising and racing, an intermediate mainsail of about two-thirds the size of largest sail is used, and sometimes a small spinaker. The rig for a large canoe, such as the Guenn, will include a racing mainsail of 90ft., a cruising mainsail of about 60ft., a racing mizen of 25ft., a cruising mizen of 15ft.. and two spinakers of 60 and 45ft. The dimensions of spars and sails for such a rig are given in the following table, the spars being much lighter than any now in use on canoes, but they are all a little larger than those carried on the Tramp, a heavy Pearl, 14×33, for the past year; and if of good spruce and properly rigged, will be amply strong. The old Guenn carried a mainsail of 103ft. and a mizzen of 35ft., mast 15ft. above deck; but the present canoe, if built lightly and sailed with a moderate amount of ballast, should prove still faster under the rig shown. The weight aloft will be about one-half that of the old rig, consequently the boat can be held up with much less ballast and the crew will have far more control of her. The movement now is in the direction of smaller sails, and all experience goes to show that a boat will be faster under a properly proportioned rig of moderate dimensions than under a heavy outfit of spars and canvas, that must be upheld by heavy ballast and at times with great difficulty:

DIMENSIONS OF SPARS AND SAILS—CANOE GUENN.

	Main.		Mizen.	
	Racing.	Cruising.	Racing.	Cruising.
Mast, from stem	11⁴	11⁴	12 00	12 00
Deck to truck	11 00	8 09	9 06	5 02
Boom	10 06	8 04	5 07	5 00
Yard	10 06	8 04	....	....
Battens	9 01, 7 10, 6 6, 6 06	6 08, 5 02, 5 02	5 03	5 00
Spinaker boom	8 06	6 08	....	....
Foot	10 00	7 11	5 03	4 08
Luff	6 10	5 05	9 00	4 10
Head	10 01⁴	8 00	....	2 00
Leech	17 06	13 10	9 04	4 04
Tack to peak	16 11	13 05	....	....
Clew to throat	10 11	8 08	....	....
Area, square feet	90 00	55 00	25 00	15 00
Spinaker area, sq. ft.	61 00	48 00	....	....
Foot	10 00	8 00	....	....
Luff	10 03	8 01	....	....
Leech	13 04	10 06	....	....
Round of foot	1 06	1 03	....	....
Battens apart	2 03, 2 04⁴	2 08	....	....

The 90ft. sail has three battens, 55ft. sail has two. Battens are spaced 1½in. further apart on leech than on luff.

Racing mast 2in. at deck and up to second batten, thence tapering to 1in. at head. Mizenmast 1⅜in. at deck, tapering to ⅜in. at head.

Main boom 1½in. diameter for middle third of length, thence tapering to ¾in. at ends.

Yard 1in. diameter for about middle third, thence tapering to ½in. at ends. Battens round, ½in. at fore and ⅜in. at after ends, upper battens ⅜in. throughout. Mizenboom ⅞in. at middle, tapering to ½in. forward and ⅜in. aft, batten ⅜in. Spinaker boom, bamboo, about ¾in. at fore and ⅜in. at after ends. The spars for cruising rig will be a little smaller throughout. The mizenmast will fit forward tube, but will be reduced in size from deck up.

TORONTO C. C. NOTES.

Editor Forest and Stream:

As I sit musing, with my feet at an open window and the bright sunshine and gentle breezes of spring blowing in upon them, it reminds me that spring will soon be here, and that I have not written the usual annual notes concerning our club; so the hands are lazily taken out of my pockets, and, armed with a quill, I will give you the freshest. The officers for the year are: Com., John L. Kerr; Vice-Com., D. B. Jacques; Rear-Com., W. G. MacKendrick; Sec.-Treas., A. Shaw; Committeeman, Colin Fraser. Regatta Committee—Colin Fraser, D. B. Jacques and A. Anderson. The club has sixty members on the roll, and the prospects for an addition appear good. There are, I am sorry to say, no new canoes being brought in by the racers, but the regatta committee have arranged things so that the club racing will be very interesting. The idea was to put men on as even a footing as possible. This they found could not be done with any length or beam rules. They have made three classes, I., II. and III. The Dottrel, Dawn, Vic, Una and Mac are in the first, Boreas, Isabel, Sapphire and the balance of the decked craft in the second, and the open canoes in the third. Any member is allowed to go into the higher class, but cannot go to a lower.

In Class I. the racing is expected to be very close, as the members composing it are all getting new sails and getting things fixed up in good shape. There are to be three sailing and three combined races in the season, and the person winning two out of the three races takes the trophy.

A cruise is being arranged for our Queen's Birthday, May 24, to Mimico, and a large turnout is expected. It is likely that Toronto will send a large contingent of able-bodied paddlers, sailors and porridge eaters up to the division meet at Lake Couchiching, as the camp chosen is one of the prettiest in Canada, both for camping and cruising, while the lake is a clear racecourse, six miles by about three, with not an island or stone in it. The ice is still about two feet thick on the bay, but the edges are breaking and it must go before long. Meanwhile quite a number of the boys are raising blisters on their hands with sandpaper and varnish brushes, and as they scrape you can hear floating out on the breeze the gentle strains of

Let us gather up the blizzards
As they howl around our door,
Let us pack away the snowdrifts
That now dot the landscape o'er;
Let us bottle up the zero
That now cuts us like a blade,
For we'll need it all next summer,
When it's ninety in the shade.

MAC.

Toronto, April 8.

SPRINGFIELD CUP—A CRUISING MEET.

Commodore Jones, of the Hartford C. C., gave a camp-fire at his residence on Thursday evening, March 29, at which were present, besides a full attendance of home members, a large delegation of invited guests from out of town, among whom were Messrs. Shedd, Rice, Knappe, McKnight, Walker, Foote, Nickerson, Patterson, of the Springfield C. C. and Messrs. Gibbs and Holmes, of the Chelsea Boat Club, of Norwich. Nearly all of those present are members of the A. C. A., and the plans of the season for Eastern Division were the principal topics of conversation. The Springfield men had brought down the handsome cup given by Mr. Barney for their associates of the Eastern Division to admire, which they did, heartily. The cup is of a noble pattern, about 18in. high by 15in. across and bears upon the side in relief a lifelike picture of the famous Pecowsic, with the inscription "Springfield Cup, 1888." The conditions of the racing for this cup are as follows:

The Springfield cup for '88 is offered by E. H. & G. M. Barney to be competed for by any A. C. A. member. Five races are to be sailed during the summer. The winner of any of the 5 preliminary races to be barred from further competition until the final race, when the 5 winners will compete for ownership of the cup.

The Regatta Committee, Messrs. Gibbs, Holmes and Rice, heretofore mentioned in these columns, discussed the plans for the races and the value of a cruising meet to the Eastern Division to be held some time this spring or summer. At a suggestion of Vice-Com. Jones, the company present organized into a meeting, Secretary Parker, of the H. C. C., in the chair; E. B. Davidson, purser. After a full discussion and speeches from Messrs. Jones, Shedd, Parmele, Nickerson, Gibbs and Davidson, it was voted informally to be the sense of the company present that the Eastern Division, with all its canoeing acquaintances who can join them, hold a cruising meet on the 26th, 27th, 28th, 29th and 30th of May next; the start to be made from the Hartford canoe house early on Monday morning and Monday night all camping near some hotel to be selected down the Connecticut River, Tuesday night all to rendezvous at the racing ground, which will probably be at Deep River, where the races will be held on Decoration Day.

The facilities on the river are as good as can be found anywhere for carrying canoes and luggage by cars or boat; and stopping places will be selected where those who do not camp can find comfortable and reasonable hotel accommodations.

NEWBURGH BOATING ASSOCIATION.—The "Dockrats" will soon leave their old quarters for a new house, 30ft.×80ft. and two stories high. From the piazza a view of the Hudson for 18 miles may be had. The association now numbers 55 members. Two new cruisers are building by Samuel Ayers, in New York, are 18ft.×5ft. for Mr. Van Dalfsen, and one 17ft.×4ft. 6in. for Mr. Chas. S. Williams.

A. C. A. MEMBERSHIP—Central Division: M. N. Rochester, Albany, N. Y.

Harry Gordon is the most devoted disciple of Izaak Walton in this whole section. Nothing new in the way of tackle escapes his eagle eye. He makes his own flies and can discount an expert in this delicate work. Recently he saw an advertisement of a steel rod which he promptly ordered. The device struck him so forcibly that he marvelled that the same had not been discovered before. He whipped a weight around with it a few minutes and then started out for the Little Spokane to give it a test with animated scales. He had hardly made a cast when he had hooked an eight-pounder, an old timer who thought he was too fly to be caught. The trout struggled fiercely but the elasticity of the rod baffled him and he could not break the line and carry the hook off in triumph on his summer excursion down the Columbia. After playing with his victim and testing his rod, Harry hauled in his prey and pronounced the rod a success.—*Spokane Falls (W. T.) Chronicle.*

YACHT SAILS.

THROUGH permission of Mr. Gilbert H. Wilson we are able to give the following resumé of the lecture delivered by him before the Seawanhaka C. Y. C., on April 7:

MATERIAL.

One of the first things to consider and also one of the most interesting in regard to yacht sails is the material. In this country we prefer cotton duck; it has been in use here about 50 years; previous to that we used Russia and Holland duck which for nice sails was bighted. As this was before the advent of steam, among coasters pains were taken to have nice sails, and when racing it was customary to wet them down by means of a scoot horn placed on a long pole, and the best man was the one who could throw water the highest. Cotton almost immediately took the place of the flax as it was found cheaper and more satisfactory, although the Navy still uses the flax. The English and European countries hold on to the flax probably for commercial reasons. The superiority of our sailing ships over all others was undoubtedly due largely to the use of cotton duck, combined with great beam. Consider two ships each spreading 8,000 or 10,000yds, one of flax and the other of cotton duck. In a stiff breeze the cotton would offer a great deal more resistance to the wind, especially when the sails are partly worn. Flax duck is all qualities and the fine bleached yacht duck is no comparison to the ordinary ship duck, which soon grows limp and open and finally very,thin, so that the expression "can take the sun through them" is literally true. But cotton never gets in such form and keeps its stability to the last and is always about one quality. When the America went to England with No. 2 22in. cotton duck, the cut and sit of her sails were much admired; but they did not consider so much the material, which was really the principal cause of their merit.

A few years later the English attempted to use cotton on their yachts, but their cotton duck was a miserable affair and they soon abandoned it, and very much improved their quality of flax duck. To draw a proper comparison between cotton and flax they should be seen in the sails after they are partly worn; then a very great difference will appear that does not show at all in the piece. The cotton, to a great extent, holds its form and character, while the flax gets limpsey, elastic, crawley and stretchy, and loses all ability to stand up in a mass. (Specimens of both were shown here.) It is this fault probably that compels English racing yachts to have new sails so often. Flax probably has some advantage in light winds, and would be a good material for very light large balloon sails, where great strength is required combined with lightness, and is also best for storm sails, as it is much better than cotton, and stows more compactly and is less likely to mildew. During our war the coasting schooners were compelled to use flax, but after one trial they would pay double price for cotton, and all agreed that the vessel sailed much faster with the cotton. The perfection to which English sailmakers have brought their flax duck sails is deserving of the greatest praise; their whole experience has been with this material, but they undoubtedly see the advantage of cotton, and are now buying yacht duck in this market.

For the last two or three years our manufacturers have been competing to produce the best article of yacht duck, and we have now undoubtedly the most perfect duck ever used. Duck should be carefully weighed and numbered on the basis of 18oz. per yard of 22in. wide for No. 1 and falling about 1oz. per number, and the same ratio applied to 14in. duck.

No. 3 flax duck, 24in. wide, weighs 1lb. to the yard; No. 3 cotton duck, 22in. wide, weighs the same. No. 0, 14in. duck weighs 12.09oz. to the yard; No. 1, 11.46oz.; No. 2, 10.82oz.; No. 3, 10.18oz.; No. 4, 9.54oz.; No. 5, 8.91oz.; No. 6, 8.28oz.; No. 7, 7.64oz.; No. 8, 7oz.; No. 9, 6.37oz.; No. 10, 5.73oz.

It should be hard as possible to work properly, but if too close or hard, it breaks under the needle and makes a bad job. The color should be uniform, which is apt to be a difficult matter, as it changes from white to yellow with age, so that the same lot of cotton, if woven at different times, will show different colors. This can be guarded against by making up a large lot at one time.

The principal fault in the manufacture is the selvages: all woven material is inclined to have one selvage tighter than the other, which would condemn it for nice sails, so every piece should be carefully examined before using. The width of the seam varies from 2in. to 1⅝in., which last is sufficient for No. 1, and gradually less for the lighter numbers; the blue mark should be strong and fade out. Flax sails have no mark and are sewn; our sails are stitched. The question of the best width is not fairly settled. The narrow duck looks better and the additional laps give more stability and makes a heavier sail, but the increased frictional surface is probably a detriment. The old racers, America, Julia and Sappho, used 22in. duck. We have probably something to learn in this matter. There used to be a patent on sails cut horizontally, and they were used by Mr. Stevens on the Maria, but as they failed to come into use their advantage was not very apparent, although it was claimed by the inventor they would give extra speed to the vessel. Flax duck probably does better in the English climate than it does in our hot sun and dry winds.

SAIL PLAN.

The sail plan, as determined by the spars, very properly comes in the province of the designer, but to fill these spars properly and to the best advantage should be the study of the sail maker. All the parts of a boat should be in harmony so as to form a complete whole; this gives character to the boat and makes her effective. As many yachtsmen take pleasure in experimenting, it is quite common to make changes in the sail plan; very often the boat is improved, but sometimes she is not, and if a yacht is built for a sloop it is hard to make a cutter of her.

Some illustrations of this would be interesting. Take the America for example, as designed by Mr. Steers, with a character; and rigged as at present, without a character.

Some time since the mainsail of a centerboard sloop was altered to the cutter form, with long gaff, but the yacht failed to work as before. The final result of several changes in the mainsail was to restore it to its original proportions, when the yacht handled as of old. The rig must be adapted to the general type of hull and the same careful attention is necessary in sparring a boat in accordance with her general plan as is given to the proper proportion of the hull, in which matter the varied experience of the sail maker is sometimes useful. The designer's sail plan should be made as he expects the sails to be when fully stretched, and lengths of all spars, etc., should have accompanying figures. Supposing the plan of a 70ft. sloop. First the hoist of the mainsail is to be determined, how much drift should be between throat blocks and how much the luff will stretch. Long mastheads are desirable as they make an easier angle to hold the peak; the hoist of the sail finally should be determined. Duck stretches lengthwise and diagonally, but never crosswise unless under very heavy strain, and then but little, and where there is no direct strain it grows narrower.

A long leach is desirable, but care must be taken not to get the boom too low, as it does not improve the sit of the sail, and when boats have considerable sheer aft and the wheel stands high, if the boom swings low it is dangerous, as it may smash the wheel. The swing of the boom should remain the same, and is a good criterion that the sail is being properly stretched; the peak should be at an angle of about 50° with the waterline. It is a nice point to get the peak just right where it will look yachty and still do good work. It should be well understood that a certain angle of the gaff gives the greatest area of sail, and although the peak may be carried higher and increase the area of the mainsail a little, it will materially lessen that of the topsail, and where sail area is a factor in time allowance it would appear that for racing it would be advisable to get the largest possible sail spread, especially at the end of the gaff, where it is of more value than anywhere else. The high peak does well in a catboat, where there is no topsail, or in a cruising yacht; but for racing, where the mainsail and especially the clubtopsail are used for all-around work, it would appear advisable to get all the area possible. Under the N. Y. Y. C. rules for measuring area one boat may have considerably more than another with the same spar plan and get it where it will do the most good. In a sail 75ft. on foot and 45ft. hoist the areas would be for different angles of peak as follows: At 60°, mainsail 1,801sq. ft., topsail 539sq. ft., total 2,318sq. ft. At 52°, mainsail 1,752sq. ft., topsail 686sq. ft., total 2,448sq. ft. At 47°, mainsail 1,722sq. ft., topsail 758sq. ft., total 2,481sq. ft.

If the tack is placed too low it necessitates carrying the end of the boom too high. The tack should be placed so it will give the best angle for boom and have the leach long as possible.

What weight of duck we shall use is a nice point to determine. Heavy duck is no advantage in itself only as it gives stability and power to resist the wind pressure. For forestaysail, jib or top sail, the difference of one number lighter or heavier is not so much consequence as in the mainsail where if too light it fails in strong breezes, and if to heavy lacks draft for light winds; a proper determination of this is by experience.

How to finish the foot to bend to the boom is a vexed question; the common practice is by jack thimbles; with a jack rope running along the top of the boom the sail ought to bend so as to allow the slacking up of the clew, and in this matter yachtsmen have an opportunity to exercise their ingenuity. The sail when bent should be hauled on gaff and boom to the figures at which it was made and which should be indicated by the sailmaker. The sail will have some bag in the center and a very rounding leach, which when the vessel lays in the wind will roll from side to side but will lay out smooth when filled. Expert yachtsmen like to see a rolling leach, and it is evidence that the sail has not been over-strained on the head and foot. On the head the sail should never be strained but the slack simply taken out as the wind and weather slacks it and never urged.

The foot should be carried with a very easy strain, even slack, except when racing in a stiff breeze; then it should be hauled out sufficiently to make the sail sit, and always slacked up when not in use. The extreme line, which is the straight leach, should be reached as slowly as possible.

Before proceeding to the sit and action of sails something needs to be said about spars. Gaffs, as they are now rigged with spans, are held very straight, which is right; but we think they could be improved by being oval-shaped, as the strain by the wind on both booms and gaffs is perpendicular with the spar. The Newport catboats have a flat gaff with a very high peak, and the blocks well toward the center, and it appears as if this plan might be used on larger boats to advantage, as now it is necessary to carry the outer span to the end of the spar, and, when the peak is high, bringing an awkward strain or pull on the halliards. And why do we use a chock and great heavy awkward jaws on yacht gaffs? The Puritan's chock was lately replaced, and although made small it weighed 13lbs. Chocks are a necessity on seagoing vessels, but entirely unnecessary on yachts in smooth water. The Miranda has small iron jaws covered with rawhide, and they have been thoroughly tried, and even made an ocean voyage and the mast shows no sign of chafe. Imagine the weight and windage that might be saved. The matter of booms is one we would like to emphasize, as we consider it one of the most important questions that yachtsmen have now to consider. A straight boom we consider necessary, and any departure from it a damage to the sail; if they were simply crooked sticks the sail could be fitted to them, but when they change shape with every breeze it is too much for the sailmaker's art. The sail being made with 22in. roach, is about what will be taken up in stretch so as to leave the sail easy, with just enough pull along the boom to hold the sail from bagging; the result is, nearly the whole strain comes on the clew at the outer end, the sheet is the fulcrum, and if the spar springs, the center from the sheets to the mast drops down, bringing an undue strain through the center of the sails, entirely destroying its draft for fine windward work, also the outer end lifts and throws 2ft. or 3ft. of slack up the leach.

The trouble is more noticeable in schooners, where the boom projects so far over the stern, and in a first class sloop, where it is already a serious difficulty. The Thistle, with mast pretty well forward and long overhang, carried her sheets near the end of the boom, which answered very well. There have been a great many remedies suggested, but, so far as we know, the problem is unsolved. Now, suppose our spars right and the sail properly made and bent, we proceed to set it. After the sail is started up a bit the boom should be topped some distance above its regular angle (this is often neglected, and the boom is raised by unduly straining the angle of the sail). After the throat is hoisted well taut put the peak up a little higher, then the sail is out enough to allow for coming up of the halliards; then drop the boom with its full weight on the sail.

Sails should be studied and built for the purpose for which they are intended, and may be divided into three kinds, viz: For going against the wind, across the wind and down the wind, or in yachting language, beating, reaching and running. As sails have always been of a flexible material, probably for convenience, and no better plan for sailing has ever been adopted, it is fair to assume it is the best. Now, which is the best form for a sail to propel a boat against the wind? We should have a careful and thorough understanding of this most important matter relating to yacht sails; there has been considerable written and some nice figuring to illustrate this by the angles of incidence, showing the direction and force of the impulse, which might be interesting, but as we are not prepared to do this we shall simply try to show the practical results. The true test of the windward sail is the one that lies the closest and pulls the hardest. The lateen sail with boom appears to be the ideal, probably the lateen and mutton leg will go closer to the wind than any other. Our mainsail, if the topsail were included, would be a leg mutton with the gaff for a batten, and this shape should be retained as near as possible by not allowing the gaff to swing out beyond the line, which will make a fair, continuous curve from head of topsail to lower end. After the sail is fully stretched up there should be a light vertical strain on the sail along the boom, but not enough to interfere with the horizontal draft, or to slack the leach as to make it shake. There is a point at which a sail is at its best; it should be the aim of the sail maker to study this form and build his sail accordingly, and so that it will retain this shape the longest time possible.

FORESTAYSAIL.

The forestaysail, placed as it is between the jib and mainsail, is like being between the devil and the deep sea; if it escapes harm from the jib it is likely to harm the mainsail, and necessarily has to be made perfectly flat, sometimes even using battens, so that its propelling power very close (inside of four points) to the wind must be small. The forestaysail is often carried out on the bowsprit, this may be a benefit in some ways, but enlarging a forestaysail at the expense of the jib is not good, the jib being the better sail for all kinds of work.

JIB.

The jib is a fine sail and well illustrates the art of sailmaking, as more care and knowledge is required in its make and use than any sail on the yacht, and when properly made and handled will stand well and pull to 3½ points. The English have brought its build and use to near perfection, but we believe the cotton sail the best.

SMALL JIBTOPSAIL.

The small jibtopsail is a help to windward and is built on the same plan as the jib. The nicest point is to determine the weight of material as most effective for close work, but small yachts are obliged to use light ones as heavy ones pay them off too much.

WORKING TOPSAIL.

The working topsail should be of heavy duck, same weight as the jib; it requires a fair sized mast rope. The usefulness of this sail depends mostly on the setting and handling. The plan of two halliard blocks appears an unnecessary weight and windage aloft, which is saved by hoisting with a single part through a sheave; then have the purchase on the tack; the plan of setting them across the gaff necessitates making a small sail that never fills out except when everything is perfectly dry and well stretched; while if they have a long tack and stretch down they always fill the space full. The principal objection to setting on one side is that the foot bellies off too much; but this can be obviated by always having them on the windward side. This is a question to which yachtsmen should give some care and attention to settle which plan is the best.

CLUBTOPSAIL.

The clubtopsail does well in close windward work; forming as it does the apex of the pyramid and being much lighter material than the mainsail, it requires to be a flat sail. It would be better if made of heavier duck, but on account of its size and the great weight of the spars it is made light, generally of 10oz. bighted, but No. 10 would be better. It should be cut with sufficient roach on foot and mast to allow for the spring of the spars; when properly made, and set in the American fashion, it is a very perfect sail. The sit can always be assured by a proper adjustment of sheets and halliards. To set a topsail properly when new, the sail should be viewed from another boat, abeam of the yacht.

WORKING JIBTOPSAIL.

For reaching, yachts should have a fair sized working top-sail, one that will answer for ordinary windward work and off the wind in stiff breezes. Also a lighter one, about 50 per cent. larger, for reaching in strong winds and some sea where it would be unsafe to carry a balloon.

BALLOON JIBTOPSAIL.

The balloon jibtopsail is an excellent reaching sail with the wind abeam or on the quarter; its principal points are to be very large, very light and very strong. The tack should come down to the bowsprit and hoist chock aloft, the clew should come to the deck about one-third from the mast to the taffrail. Being so very large makes it a dangerous sail for the spars, it should therefore be as light as possible. When made of cotton duck, that which weighs 8oz. to the yard is the lightest that will insure sufficient strength. From its large area the pressure is so great that all the reinforcing that can be applied is hardly sufficient to keep it from bursting, but a fine twilled linen can be used that weighs only 4½oz. to the yard and has much more strength than the cotton. It has been used on two large yachts and in both it was satisfactory.

BALLOON FORESTAYSAIL.

The balloon forestaysail is also a good reaching sail; it should hoist well up and lug well aft the mast, and as it is sometimes used to windward it should be a flat sail for the same reason as the forestaysail. The clew should be low.

SPINAKER.

The spinaker is essentially a sail for running and should be used for all it is worth, but there appears to be a difference of practice among yachtsmen. There are some who carry the clew forward and spill the sail into the balloon jibtopsail; if this is the best it would be well to construct the sail with that view; but it is generally built to carry square across the ship, and if the whole space is filled it takes the full power of the wind directly, which would appear to be better than spilling it into another sail. Besides being a driving sail it is also a lifting one—a matter of consequence in running—and this force is greatest with the sail athwartship. In planning, the first consideration is to have the sail as large as possible. They sometimes have a yard across the head, when they can be used with or without it by having a cringle in each corner and one in the center of the head, and by lashing these together use it as a three-cornered jib-header sail.

When properly made and handled, it shows a lifting power which must be a great help in running, and this we consider one of the chief merits of the sail.

It is generally made of very light cotton drill, weighing about five ounces to the yard. As it is not subject to great strain, this does very well, if the corners are well strengthened and a preventer band about 30ft. long placed 10ft. above the foot, along the center, to prevent the sail from bursting by catching a sea in the belly of the foot. The sail would undoubtedly be stronger made of linen, but the need is so small it would hardly pay for the increased cost. This sail, like the balloon jibtopsail, however large they may be, when full of wind, gives the idea that they might be larger, whereas any addition to them would probably be of no use. It should be handled and slung like a kite, so it will pull upward.

WEIGHT OF SAILS.

The weights of the different sails for 70ft. w.l. sloop ready for bending are as follows:

	Lbs.		Lbs.
Mainsail	820	Clubtopsail	152
Forestaysail	180	Small jibtopsail	75
No. 1 jib	304	Working jibtopsail	154
No. 2 jib	234	Balloon jibtopsail	229
Storm jib	166	Spinaker	260
Working topsail	153		
		Total	2,687

SCHOONERS.

All our remarks on sloop sails apply equally to schooners. For racing they should have a lug foresail, and if required, the fore gaff could be longer than the space between the masts, thereby making a larger and more effective sail with less lug. They should have a small and moderately heavy working maintopmast staysail, and a very large balloon staysail of light drill. The head rig should be the same as a sloop's. Flying jibs are advisable only on very large seagoing vessels. Besides the No. 1 racing jib there should be a No. 2 jib, one number heavier that would answer for ordinary use, keeping the No. 1 jib for racing. They also require a small jib for heavy weather.

Much has been said about the care of sails. The principal trouble is mildew. There are numerous patent preventives, but it is quite certain none are efficient. Mildew is a parasitic fungus and appears to be part of the vegetable life of the cotton; it is brought out by heat and moisture. If the sails can be kept clear of it the first season the danger is greatly lessened, and after the second season they rarely mildew. Our plan and advice is when the sails are new and bont, to douse and drench them thoroughly on fine sunny days with clean salt water. The weather has decided effects on sails, and when new some care should be used. We have seen a new suit of heavy sails bent and used on the trial trip in one of our March northwesters, blowing all the boat could stagger under. Soon the dry wind and hot sun appeared to melt the duck, it went off in bags and never recovered. Then, sails first used in a long spell of cool, foggy weather will fill up and become hard and stiff. The salt water dousing is good for them, and helps them to retain their shape. If sails get out of shape by bad management, unless it is a pretty bad case, they can be recovered by careful handling. It is a bad plan to furl sails closely, as it is apt to make baggy places in the sail, and increase the danger of mildew. They should be allowed to fall naturally on the spars, and have neat fitting covers.

It is quite a common belief that new sails have got to be drilled into shape, and that it takes considerable time to get them right. This is unnecessary, as three days of good weather is quite sufficient. As a rule, sails do their best when new, and much pulling

and hauling is rather a damage than benefit. A yacht for racing should have a spare jib and mainsail, so that the racing sails can be kept in fine form for nice work. With proper care this outfit will last a number of years.

There are many elements of uncertainty besides the sailmaker in yacht sails. The handling is a fine art that is not sufficiently studied. When sails are not right it does not follow by any means that it is the sailmaker's fault. Look carefully and determine the trouble certainly; do not alter sails hastily; be sure it is necessary. It would be a good plan for yachtsmen to impress on the sailing master that he has something to learn as well as the sailmaker about sails. We know but little, and there is a great deal to learn.

LAKE ONTARIO.

WHILE yachting is on the decline with us, while our fleet has been growing smaller year by year, owing to the departure from among us of some of the most energetic supporters of the sport, the Bay of Quinte Y. C. will still, during the coming season, make a strong effort to maintain its reputation as the possessor of the fastest racing yachts on fresh water, in at least two of the classes, namely Class A and the second class. In the former we have Mr. John Bell's Norah, which is being prepared, regardless of expense. She has been out of the water all winter, and for several weeks has been in the hands of workmen who are making her bottom as smooth as it is possible for a boat's body to be. Her owner is not a racing man, but has always allowed his beautiful craft to defend the honors of the club in home waters, with an occasional flight abroad. He will do a good deal of cruising this year with his family, but will, I trust, send the Norah on the rounds of the Lake Yacht Racing Association, in which case her existing classmates and any possible competitors will have to look well to their laurels. As a second string in this class we have the Atalanta, which, although her owner is a member of other clubs besides ours, is distinctively a B. Q. Y. C. yacht, ours being her mother club. She is, however, in poor condition, both as to sails and hull, but will, if raced, beat all her class now on the lake excepting the Norah.

In our first class we have nothing but the Dauntless, an old yacht, but recently rebuilt. She is, however, of excellent model, and if put in racing trim would make a good record; but her owner has never raced her and is not very likely to do so. Our second class champion, the Iolanthe, which has stood at the head of her class ever since she was built, is likely to retain her prestige. Last year the Boston-built Burgess craft, the Merle, was brought to Oswego. In her races at Toronto and Charlotte she did not meet the Iolanthe, and the others were beaten quite readily. At Oswego, in a hard blow, she defeated the old champion, which was badly handled and carried too little canvas; but in the last half of the race, after a reef had been shaken out, the Belleville boat gained 6m., although that was not enough to win. At Kingston, in a nice sailing breeze, they met again and the Burgess production was handily beaten on all points of sailing and defeated by somewhere about 20m. The Merle, I may add, is in bulk fully one-half larger, measured by the eye, than the Iolanthe. The latter has had her topsides raised 7in., has a new and improved centerboard and a new mast, and the expectation is that she will be able to down the Merle in any kind of weather. The meeting between these craft will be mighty interesting. It will be war to the knife—Curthbert against Burgess—moderate beam and moderate depth against big beam and great depth. Both are pretty models, but the Iolanthe is the sharper of the two, and model will tell.

The grand fleet of the new Hamilton Y. C. will be a great and most welcome addition to the racers who take part in the L. Y. R. A. round. Hamilton will, if I mistake not, secure a goodly share of the honors.

Montreal has organized a strong club, with a large number of wealthy members and a fleet of twenty-seven yachts, none larger than second class, of which Cuthbert built three during the past winter. They will adopt the rules of the L. Y. R. A., but as they are more than 300 miles distant, we will not, unfortunately, be in touch with them. The sport is then booming generally, although in a somewhat depressed condition locally. PORT TACK.

BELLEVILLE, Ont., April 9.

YACHTING AT SOUTHAMPTON.—Capt. Newcomb, of Fortuna, writes as follows from Southampton, where his yacht is now fitting out, to the Boston *Globe;* "Here at Mr. Fay's yard are about 100 yachts of all kinds, and about one-third of them are being put in shape for the summer months. On one side of the Fortuna lies the cutter Irex, on the other the yawl Latona. Work is being done on both of these. In fact, it is rather a lively ship yard at the present time, in spite of the bad weather. Mr. Fay is building two new cutters, 60ft. waterline and 18ft. beam. He thinks the day of the narrow cutter has passed. Here one can see some queer looking yachts. Joining Mr. Fay's yard on the east side is that of Messrs. Payne & Sons. They have a large number of yachts laid up there. Next comes Mr. Tankerville Chamberlayne's yard, where his steam yacht and cutter Arrow are laid up in company for repairs. With Capt. Sam Randall, brother of Capt. Harry Randall of the Stranger, I went on board the new cutter Arrow, better known as the Old Arrow. Through the kindness of Capt. Henry Parker, who has been captain of the Arrow for 35 years, and is still in charge, we were shown over the old cutter. Ship carpenters have been at work on her for the past 18 months. Her square forefoot has been cut away and rounded up after the style of the cutter Irex. Thirty-five tons of lead has been bolted to her keel, and she has been all newly planked outside. Below decks she is being newly fitted up. Her wood finish is teak and pitch pine, and looks fine. Some of the old timbers are still to be seen. Most all the old deck frame is left in her, and looks as good as new. The Arrow is 68 years old, having been built in 1820. Capt. Parker is of the same age as the boat. He says, 'We were babies together.' Capt. Carter writes me that the Genesta will not come out this season. The weather here has been very bad, and it has stormed almost all the time since we reached Southampton."

A YACHT FOR BUENOS AYRES.—Mr. Thos. Clapham, of Roslyn, is now executing a telegraphic order from Mr. R. H. Kinch of the Yacht Club Argentino, for a Roslyn C.B. yawl similar to one he built for Mr. E. C. Auchincloss, but of much higher finish. She is 35ft. over all, 9½ft. beam and 16in. draft with board up. Hitherto the yachts in the River Plate have been of British build, but owing partly to the difficulties raised by English steamship owners in imposing an almost prohibitive freight, the club has resolved on sending their future orders to this country; all the more so as the shallow waters of the River Plate demand the centerboard type, which is undoubtedly better understood here than in England. To the same club Mr. Clapham has recently sent one of his well-known Nonpareil sharpies, which is reported to have attracted considerable attention and to have given the greatest possible satisfaction. Yachting in the River Plate is yet in its infancy, but there is every prospect of a rapid extension, and the Government to foster it has conferred on the Yacht Club Argentino the privilege of flying the war flag of the republic. All the yachts are centerboards except one, a fixed keel cutter of 20 tons, which has cruised as far south as Port Desire, opposite the Falkland Islands, and experienced its full share of the rough weather prevailing on that stormy and dangerous coast.

CLEVELAND Y. A.—Cleveland, O., April 9.—*Editor Forest and Stream:* The annual meeting of the Cleveland Yachting Association was held on April 4 at the club rooms, and the following officers elected: Com., Hon. Geo. W. Gardner; Vice-Com., Percy W. Rice; Rear-Com., Chas. W. Kelly; Sec'y, J. Geo. Downie; Treas., W. H. Kolbe; Meas., C. Richter; Ass't Meas., E. Overlecke; Surveyor, C. Krause; Director I. L. Y. A., Chas. W. Kelly; Fleet Surgeon, Dr. C. C. Arms; Collector, E. Saxe. Executive Committee—P. A. Mettling, Chairman; E. Radder, W. C. Sly, N. M. Anderson, F. H. Smead. The members of the C. Y. A. have been listening to some very interesting talks during the last winter. The talks by N. M. Anderson on the Magnetic Needle, and the one on Balancing Canvas, by Rear-Com. C. W. Kelly, being specially instructive. The club is in a very flourishing condition at present, and will have several new boats added to the fleet this season, with the old ones greatly improved, and we expect to do some very fast sailing this summer.—J. GEO. DOWNIE, Sec'y C. Y. A.

SHACKAMAXON Y. C.—A meeting of the Shackamaxon Y. C. was held at the club house, foot of Shackamaxon street, on April 16, Vice-Commodore Henry Anderson in the chair, two new members were elected. The spring regatta was set for June 11, and a committe appointed consisting of Henry Fortner, J. M. Archer, Wm. Thompson, John Egner and Chas. L. Work to arrange for steamboat accommodations, etc. The club has decided, in view of the scandals attached to yacht races in the past, not to sell any tickets for its races, but tickets will be distributed free to its members, who will be held responsible for the persons using them. The sail limit for tuckups was made 56ft. around the boltrope. The prizes offered will be ship clocks for first prizes and compasses for second prizes in each of the three classes of boats. The club accepted invitations to go "Maying" May 6 and 13 in a body. Meetings will be held at the club house every Monday evening until the regatta to attend to details.

BUILDING ON STATEN ISLAND.—Ellis, of Tottenville, Staten Island, is building a handsome steam yacht for parties in Cuba, to be used in carrying excursionists. She is 85ft. long and will draw only 4ft. 6in. S. B. Greacen, of Perth Amboy, will put in her an engine of 130 horse power. Brown, whose yard is half a mile below Tottenville, has nearly finished a 53ft. sharpie for the Government, for use in shallow Florida waters by the Coast Survey. He has just completed a 28ft. catboat for Mr. Wm. Langley, whose once famous schooner yacht Comet is being overhauled and newly rigged at this yard, as also is Mr. L. J. Merritt's sloop Carrie, with the addition of a 4-ton leaden keel. There is a rumor to the effect that Mr. Starin, of Glen Island fame, has bought or leased the fine property adjoining Brown's, known as Ellis's Bay View Grove, and intends to greatly improve and beautify it. This will be good news to quiet and nature-loving excursionists.

THE NEW BRUNSWICK CHALLENGER.—A model has been made by Mr. David Lynch, of St. Johns, for a yacht similar to Volunteer, but of the following dimensions: 107ft. over all, 83ft. l.w.l., 23ft. 4in. beam, 10ft. 6in. draft. The displacement of this new aspirant is but 105 tons, compared with Volunteer's 130 tons or more, her section being sharply curved below, in S form. An effort is being made to secure a syndicate to build and race her, but of course nothing can be done for a race this year. It is rather amusing to learn that Mr. Burgess is indebted to a St. Johns pilot boat thirty years old for his midship section, having obtained a surreptitious view of the model. This is about the twentieth claim that has been made in the last two years, and if they are all true we must conclude that Mr. Burgess has spent most of his time since he left the cradle in spying around the models of a lot of boats that no one ever hears of.

ROYAL CLYDE Y. C.—At the annual meeting on March 26, the following resolution was offered and carried: "That the prohibition against shifting keels contained in rule 8 of the Yacht Racing Association sailing rules shall, as far as it affects the Royal Clyde Yacht Club, be removed, and the said be read as follow: Yachts which are fitted with centerboards or shifting keels shall be permitted to enter at all regattas and matches, and to use their centerboards or keels without restriction." To this resolution there was now added, "The rule to come into force only and so soon as it or a similar rule is adopted by the Yacht Racing Association." Mr. G. L. Watson and Mr. Wm. Fife spoke in favor of the resolution, but expressed an opinion that a condition should be made for preventing the ballasting of centerboards, as being an element of danger.

MONTGOMERY SAILING CLUB.—First weekly cruise, April 15, 1888, Norristown to Indian Creek and return, distance 5 miles, weather clear and cool, wind northwesterly:

	Length.	Elapsed.	Corrected.
Rgidious, tuckup	15.00	1 24 25	1 24 25
G. W. Bowers, tuckup	15.00	1 25 11	1 25 11
Flying Eagle, tuckup	15.00	1 25 13	1 25 13
Priscilla, tuckup	15.00	1 29 54	1 29 54
Gracie, skiff	12.00	1 40 33	1 31 13
Ino, ducker	15.00	1 41 18	1 31 18
Elsie, ducker	15.00	1 42 30	1 32 30
Playford, tuckup	15.00	1 34 10	1 34 10
Iola, ducker	15.00	1 59 00	1 49 00
Nellie, tuckup	15.00	1 50 00	1 50 00
S. H. Querner, tuckup	15.00	Withdrew.	
Warren, ducker	14.00	Withdrew.	
Pennsylvania, hiker	16.00	Withdrew.	

The tuckups carried 165ft. of sail, excepting the Priscilla, 150, and the Nellie 110. The duckers carried 110ft., except the Warren, which has 90ft. The skiff Gracie carries 84ft. and gives an allowance of 40sec. to the duckers with 110ft. Judge, William Alcorn.

A NEW ENGLISH CUTTER.—On March 28, Mr. Harris launched from his yard a new cutter of 19 tons, Thames measurement, and 17 tons Y. R. A., which he has built to the order of Mr. Jas. Fraser. She was named Undine. Her principal dimensions are: Length for tonnage, 44ft. 6in.; beam, 10ft. 2in.; depth, 8ft. 4in.; Lw.l., 43ft. The length of the spars are: Mast, deck to hounds, 29ft.; topmast, from fid to pin, 25ft. 6in.; boom, 36ft. 6in., mast to pin sheave; gaff, from throat to pin, 24ft.; bowsprit, outside to pin, 19ft. 6in.; topsail yard, 20ft.; spinaker boom, 30ft. She is built Al to a high class at Lloyd's, and of the best materials and workmanship. She will receive a complete suit of canvas by Lapthorn and Ratsey. She has a lead keel of 8 tons, the rest of the ballast inside. She is fitted below in polished teak and birdseye maple. The accommodation is large, and very conveniently arranged, being ladies' cabin, steerage, with w.c. and two large cupboards on opposite side, very roomy main cabin, and before main cabin on starboard side is a good owner's cabin, and on port side pantry and stove, and for the crew a good forecastle.—*Field.*

ATLANTIC Y. C.—This club, at a meeting on April 10, again altered its classification as follows, thus corresponding in some respects with the N. Y. Y. C., and differing in the schooners: Schooners—Class 1, all over 75ft.; class 2, all over 63ft. and not over 75ft.; class 3, all over 56ft. and not over 63ft.; class 4, all of 50ft. and under. Sloops—Class 1, all over 70ft.; class 2, all over 61ft. and not over 70ft.; class 3, all over 53ft. and not over 61ft.; class 4, all over 46ft. and not over 53ft.; class 5, all over 40ft. and not over 46ft.; class 6, all over 35ft. and not over 40ft.; class 7, all over 30ft. and not over 35ft.; class 8, all over 25ft. and not over 30ft.; class 9, all of 25ft. and under. The load waterline length shall be the distance in a straight line between the points furthest aft and furthest forward, where the hull, exclusive of the rudder post, is intersected by the surface of the water when the yacht is afloat in racing trim, with all persons on board amidship. Any yacht which shall have been launched prior to June 1, 1888, exceeding the higher limit in any class by not over the fraction of a foot shall be included in that class.

SOUTHERN Y. C.—This active club held its annual meeting at New Orleans on April 5, the following officers being elected: Com., R. S. Day; Vice-Com., Alex. Brewster, Rear-Com., C. P. Richardson; Fleet Captain, John Astrea; Sec'y, F. M. Hall; Treas., Hugh Brown. Com. on Membership—J. Bringier, J. M. Bourge, W. A. Gordon, Blaine Jamison and G. W. Booth. Governing Com.—Jas. Benton, Wm. Lynd, Jr., Peter Laborsisse, M. L. de Fuentes and V. Valois. Ex-Com. O'Brien, who held office for 8 years, was elected a life member of the club, with all the privileges of the club, but to pay no dues. A motion was passed that all races be sailed by Corinthians unless otherwise requested of the commodore in writing. Mr. L. C. Wilt has offered a valuable prize for cabin sloops, and the race will be sailed shortly.

CYTHERA.—The steamer Barracouta arrived in New York on Friday last from West India ports, but brought no news of Cythera. Her captain reported however that on April 7, in long. 67° 15 W., lat. 23° 40 N., a yawl rigged vessel was sighted on the horizon, under a very small mainsail. No special notice was taken of her, as it was not known that Cythera was missing. The yacht was apparently heading for Mona Paggage. The yawl Nonparielle, the only yacht of this rig now known to be in the West Indies, was lately reported at Barbados, and it is very unlikely that it was she. It seems very probable that this was really Cythera, in which case she should be heard from soon in some West Indian port.

MIRAMICHI Y. C.—The officers for 1888 are: Com., J. C. Miller; Vice-Com., J. L. Stewart; Rear-Com., Chas. Sargeant; Sec'y-Treas., Geo. Watt; Meas., Thos. Crimmen; Trustees, Patrick Wheeler, R. H. Gremley, Jas. Miller. The regatta committee and committee on election of members will be appointed by the trustees. Vice-Com. Stewart suggested that rule of the Royal N. S. Yacht Squadron, for the measurement of schooners for time allowance, be adopted, and the matter was referred to a committee consisting of Messrs. Philip Cox, W. R. Gould and Jas. Miller. It was decided to have a Ladies' Day, and date, etc., were left to flag officers to decide.

CRUISING.—Mohican, steam yacht, Mr. Wm. Clark, arrived at Bermuda from St. Thomas on April 1, and is now at Newport News. Since leaving Fortress Monroe, on Feb. 13, she has visited the following islands: Nassau, Bahamas, Jamaica, Porto Rico, Santa Cruz, St. Lucia, Barbados, Trinidad, Grenada, Dominica, Guadaloupe, Martinique and St. Thomas.... Oneida, steam yacht, Mr. E. C. Benedict, was at Norfolk on April 16....Wanderer, schooner, Mr. Geo. W. Weld, sailed from St. Kitts for Bermuda on April 4....Montauk, schooner, was lately at Norfolk.

ST. LAWRENCE Y. C.—A club with this name was organized on April 6 at Montreal, with the following officers: Com., S. Greenshields; Vice-Com., G. H. Duggan; Rear-Com., C. H. Levin; Sec'y, J. Sinuonds; Treas., T. L. Poton; Meas., F. Scott and J. Gibson. Committee—J. Wallace, A. W. Norris, A. McIntosh, C. Gobler, J. Perrault and J. S. Monk. The new club will cover Valois, Dorval, St. Anne's, Lachine, Pointe Claire, Longueuil, Point St. Charles and St. Lambert. The flag will be a blue ground, with horizontal red bar, on which is St. Andrew's cross in white.

MICHIGAN Y. C.—The annual meeting of this club was held on April 9, the following officers being elected: Com., Fred. C. Whitney; Vice-Com., Arthur F. Alberison; Rear-Com., John G. Ferguson; Sec'y, J. G. Battelle; Treas., Frank C. Langley; Meas., E. Brady Wendell; Fleet Surgeon, Dr. Alois Thuner. Directors—Capt. Joseph Nicholson, S. Dow Elwood, Emory Wendell, J. G. Ferguson, R. Henkel. Regatta Committee—C. L. Dean, Will Granger, Thomas W. Noble. The club will build a new club house to cost $3,000, at Belle Isle.

CRICKET.—This yacht built by Wood Bros., for Mr. J. T. Mott, of Oswego, is now in the hands of Mr. Goble, the shipbuilder of that place, who will lengthen her aft, over 3ft. on l.w.l., with a long counter. She will be yawl rigged, the mast being retained in its old position. The changes will give much more room and will add greatly to her appearance. The plumb sternpost will now have a moderate rake, the wheel will be replaced by a tiller, and the large cockpit by a smaller one aft, leaving a clean deck between it and the house. Nearly a ton of lead will be added outside.

A NEW YACHT FOR NEW YORK.—At Syracuse, on the banks of the Erie Canal, Mr. Henley, the yacht builder, has nearly completed a handsome and powerful compromise craft for New York owners. She is 34ft. l.w.l. and 13ft. beam, drawing 5ft. with a 20in. keel, and a centerboard in addition. She will have a double head rig. The workmanship on the yacht is very good. As soon as she is launched she will be towed to New York.

CHANGES OF OWNERSHIP.—Breeze, schr., has been sold by Lawrence Barrett to W. C. Taylor, of Boston....Leather, schr., has been sold by W. H. Martin, of Portland, to Arthur Ryerson, of Chicago, Secretary of the Bar Harbor Y. C., who will rebuild her, with new deck and new rig, at Gloucester....Bohemian, schr., has been sold by J. Mason to W. C. Lamper, of Boston....Latona, schr., has been sold by C. W. Amory to C. G. Brooks.

NEW YACHTS FOR TORONTO.—Mr. C. P. Kunhardt has sent plans to a Toronto gentleman for a compromise yacht to rate in the 25ft. sail area and length class. The boat is 23ft. 6in. waterline, 30ft. over all, 8ft. extreme beam, 3ft. 6in. draft, with 2,000lbs. keel and a 7ft. centerboard below the cabin floor; lower sail, 600 sq. ft.; boom, 25ft.; gaff, 16ft; bowsprit beyond f. p., 12ft.

DORCHESTER Y. C.—Officers for 1888: Com., Henry W. Savage; Vice-Com., John C. Soley; Sec., Wm. B. McClellan; Treas., Henry B. Callender; Meas., Hartford Davenport; Asst. Meas., Wm. L. Dearborn; Directors, W. H. L. Smith, C. H. Nute, Coolidge Barnard; Reg. Com., Frank Gray, E. H. Tarbell, W. B. McClellan, A. J. Clark, C. J. Means.

THE FISHERMEN'S RACE.—The amounts received by each vessel were as follows: Phillips, $436.63; Merritt, $361.63; Roulette, $336.63; McManus, $286.63; and Babson, $261.63. The management of the race was mainly in the hands of Mr. Geo. A. Stewart, of the Boston *Globe*, and the successful result is due largely to his efforts.

ROYAL HARWICH Y. C.—At a meeting of this club, the committee recommended in its report that the club should vote in favor of expunging the rule which prohibits centerboards, and the report was adopted. The club's race at Harwich will be sailed May 28, and on the following day the race from Harwich to Southend.

SEAWANHAKA C. Y. C.—It has been found necessary to postpone Captain Taylor's lecture announced for April 21, but in its place the Fleet Surgeon, Dr. J. West Roosevelt, will lecture on "Yachting, Hygiene and the Treatment of Accidents." A second lecture on the same subject will be delivered on April 28.

BRIDESMAID AND ATLANTIS MATCH.—These two yachts started on April 4 from the pier at Hythe, Southampton, at 12 M. to race to Madeira. At 3 P. M. next day Atlantis was passed 26 miles from Ushant with spinaker set, the weather being fine. Bridesmaid was not then in sight.

LAUNCH OF THE SEA FOX.—On April 14, the steel schooner Sea Fox was successfully launched at Wilmington. Her owner, Com. Canfield and a number of other members of the Seawanhaka C. Y. C. being present. Mrs. Ledyard, of New York, christened the yacht.

TORONTO.—A committee has been appointed to arrange a scheme for the amalgamation of the Royal Canadian and Toronto clubs. If this is done it will make the largest club on the lakes, and one of the largest in the country.

DAUNTLESS, schr., Vice-Com. Colt, was out on Downing & Lawrence's ways last week, her garboards being cut out and new ones laid. Her topmasts have been lengthened 10ft., and the upper works have been rebuilt.

RAMONA, schr., late Resolute, has had her stern cut away entirely. A new one has been framed in the yard, and will be put in place this week. She will also have 2ft. more keel and a single bowsprit.

VENTURE, steam yacht, Mr. W. D. Bishop, has been lengthened 5ft. and made 14in. deeper, by Bayles & Son, at Port Jefferson.

GANNET.—This well-known keel sloop, described and illustrated in "Small Yachts," is offered for sale in another column.

NEW HAVEN Y. C.—At a meeting on April 10 a committee was appointed to prepare a new classification of the yachts.

NORNA, schr., will be cut away forward, with more rake to post and a deeper keel, at Poillon's yard.

MERLE.—Mr. Ames will have a new main boom 36ft. x7½in., or 2ft. longer and 1in. larger in diameter.

ALVA, steam yacht, Mr. W. K. Vanderbilt, has gone to Wilmington for repairs.

RAMBLER, schr., will be sold at auction at 87 Pine street, N. Y., at noon to-day.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

K., Hagerstown, Md.—Write to Chas. T. Thompson, 2,247 Richmond street, Philadelphia, Pa.

H. C., Indianapolis, Ind.—Do not cut the puppy's tail, it will probably come straight with age.

S., Ithaca, N. Y.—Your dog probably needs a change of diet. Give him cooked meat occasionally.

B. J., New York.—Please tell me where I can get "Yacht and Boat Sailing," and how much it will cost me. Ans. We can forward it; price $10.

F. A. E., Clinton, N. Y.—We do not think that the malformation was owing to inbreeding. It probably came from lack of vitality in the bitch.

J., Hoosick Falls, N. Y.—Mr. Charles H. Mason is the author of "Our Prize Dogs." It is now in the printer's hands, and will soon be advertised in FOREST AND STREAM.

H. C. W.—Please state what time I can trout fish in New York State? Do you think there any trout in Westchester county? Ans. 1. After April 1. 2. A very few.

F. B., Bozeman, M. T.—Will you kindly give me the name and address of either Yo, Appekunny, or any of that outfit? Ans. "Yo" may be addressed care this office.

C. W., Flatbush, L. I.—Rozezlawski's Glen V. (A.K.R. 124) is by Dr. Aten's Glen (Dash—Belle) out of Dr. Holmes's Kate (Gypsum—Rose). The so-called Llewellin setter is an English setter.

A. M., Jersey City, N. J.—1. There is no book on training hounds. 2. Beagles are rabbit hounds, but all rabbit hounds are not beagles. 3. Give your bitch plenty of exercise, and feed only at night.

J. McC. E., Hoboken.—The Winchester has been found very satisfactory and even. The use of wood powder in small cartridges has not been very successful owing probably to the difficulty of getting even charges.

A. M., Jersey City, N. J.—Feed the spaniel once a day on table scraps, with plenty of well-cooked vegetables and oatmeal, and

give plenty of exercise. Take your beagle out with an old dog, and he will soon take hold if he has any hunt in him.

D. M., Albany, N. Y.—1. How is the best way to keep sparrows out of the eaves of your house? 2. At what time of the year is the fly trout fishing best in Lake George? Ans. 1. You will have to put netting over the eaves. 2. There is no fly-fishing for trout in Lake George.

C. B., London, Ont.—Where can I get some information about building a trout pond? Have a stream on which a pond could be made, but do not know how to go about it. Ans. Get a book on the subject or employ a practical fisheulturist. We can furnish "Trout Culture," by J. H. Slack, price $1.

F. B., New York.—Where can I get the *Sideveal Messenger*, for February, 1888? Also tell me the best way to use vinegar and water in cleaning a gun, and does not pure vinegar eat the metal if not wiped off? Ans. 1. Write to Wm. W. Payne, Northfield, Minn. 2. Of course the vinegar and water must be wiped off, acetic acid does eat metal slightly.

LION, Camden.—1. Do all sporting dogs have the hunting claws? 2. Which book do you think is the best for a study of the birds, Coues's "Key to North American Birds," or Ridgway's "Manual of North American Birds"? 3. What are the principal colors of the snowbird? Ans. 1. They are sometimes seen in all breeds. 2. Either one is excellent, but Ridgway's is the latest. 3. Which snowbird do you mean, *Junco* or *Plectrophenax*? The former is slate-color and white.

W. H. B., Duluth, Minn.—In stocking a hunting ground near Duluth, Minn., where could I get any partridge, how late should they be let out and how much would they cost? Ans. If by partridges you mean ruffed grouse, we do not know where you can get them. If you mean quail (*Colinus virginianus*), they can probably be had almost anywhere in the Southwest, as they certainly can at the proper season in New York city. They are advertised every fall and winter in our columns.

G. F. M., Boston, Mass.—Can you tell me where one can find any trout, bass, or salmon fishing near here? I am tied down to my desk every day except Saturdays and Sundays and wish to spend those days in the open air. Ans. We know of no black bass near enough to Boston to enable you to enjoy fishing for them during the time named. For salmon you would have to go to the Merrimack or Penobscot, and for trout down on Cape Cod. We think you will have to content yourself with salt-water fishing.

R. D. W., Savannah.—I have some ring doves; they are nearly white, with a black ring half circling the neck. They lay two eggs, purely white. They hatch in fourteen days, invariably. The original pair I purchased had fifteen young ones last year, and this year the others have commenced laying and hatching, and my aviary, which is 10ft.×10ft. and 9ft. high, will be crowded. Can you give me any information as to the history of the birds, what country they are from? Ans. The ring dove is an Old World species and is common in India, whence, perhaps, your birds may have come.

A. B., Toronto.—As the trout season is about to open I write to ask you if any of your many readers could inform me through your columns of the best manner of attracting the trout at the opening of the season, just after the ice has left. I mean both in lakes and rivers where there are known to be lots of trout and large ones. I ask this because last year a party of us tried a lake and river at the opening of the season and had little sport, though they are pretty good anglers. Perhaps the methods employed in Rangeley or Maine lakes if explained might help us. Ans. Your inquiry is unsigned. See notice at head of this column.

HISTORIC WATERWAYS.

HISTORIC WATERWAYS. By Reuben Gold Thwaites. Chicago: A. C. McClurg & Co. 8vo., cloth. Price $1.25.

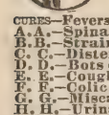
This is a narrative of six hundred miles of canoeing down the Rock, Fox and Wisconsin rivers, by Reuben Gold Thwaites, secretary of the State Historical Society of Wisconsin, and, as might be inferred from the professional status of the author, the book is something more than the ordinary narrative of a busy man's outing. As a mere narrative of six hundred miles of canoeing on almost deserted waterways, and of chance intercourse with settlers and villagers along the rivers' banks, the work would be read with interest, although the writer, with his fidelity to truth, has certainly not pictured many of the settlers and villagers with whom he came in contact in attractive colors.

But while the author has striven to do justice to his narrative, which he has brightened with fine bits of descriptive scenery and lighted with artistic sketches of the people he met, he has not been content with that, but drawing from the abundant records at his command, he pauses on the way to repeople the scenes through which he passes with the actors of past generations. Here he points out the forest where Black Hawk camped with the white-loving Pottawattomies, and there the open rolling prairie where Stillman's horsemen won undying shame by their cowardice, until finally you enter the Mississippi at the exact spot where Joliet and Marquette discovered it in June, 1673.

The work contains abundant historic narrative drawn from the most reliable sources, and the descriptive portion appears to be written rather with an eye for exactitude than for pictorial effect.

It is a work to be set aside for future reference after it has served its purpose of whiling away a mid-summer's holiday.

THE FLOWER PEOPLE, by Mrs. Horace Mann, is one of the series of classics for home and school, published by Lee & Shepard, Boston. The work is based on the pretty conceit that the flowers talk, "just like other folks," and from this standpoint it is easily conceived that their several narratives and descriptions of themselves will prove more interesting to the very young student than the dreary accounts of them to be found in the average first book of botany. The authoress has the happy faculty of provoking curiosity in respect of the numerous subjects touched on by the flowers in the course of conversation. For example, the tulips make many references to Holland, where their family were held in great esteem; flower people of distinction in fact; and the young reader will want enlightenment on this and a hundred other subjects touched on. The book as a first text book of botany contains a fund of exact information on the flower and its several parts, makes the flowers discuss the several popular and scientific names by which they are known, and express their preferences, and in fact contains quite a fund of general information on classification, descriptive botany, nomenclature and vegetable physiology, and on the properties of plants, their economic value as medicines, dyes, etc., all rendered as charming as a fairy tale. There were no such pleasant aids to the study of botany when the authoress and her reviewer went to school. The language is studiously simple, but the authoress has the poet's temperament, which, indicated in the pleasant conceit on which the book was designed, displays itself constantly in the rhythmic cadence of her carefully constructed sentences. This is one of the child classics we can recommend with confidence.



A KISS FOR A BLOW, by Henry C. Wright, is another of the same series of Lee & Shepard's classics for home and school. As its title implies it is not designed to enlighten the intellect, but to inculcate the beauty of peace—the spirit of love. In fact to stimulate to that spirit of self-sacrifice, which is always more ready to suffer injury than to inflict it. The lesson is inculcated in a series of some half a hundred very interesting little romances, most of them based on the actual experience of the author in his long connection with children, in the course of which, he tells us, he was an inmate of more than a thousand families, and had addressed more than fifty thousand children on his favorite subject, which he illustrated with the stories collected in the volume we are reviewing. One of the quaintest and most charming of these stories is that of the delicate little girl in the crowd, who being asked what children would do when they were filled with the spirit of peace, replied feelingly that "they would not hunch when others crowd."

FIRST STEPS WITH AMERICAN AND BRITISH AUTHORS.—Albert F. Blaisdell, already favorably known as the author of "The Study of the English Classics" and other educational works, has now given us a volume under the above title, designed to furnish a systematic first course of literary instruction for young people by means of judicious selections from the flowers of English literature in prose and verse. The volume begins with the least difficult and most modern authors, and by a systematic study and analysis of the several selections, in accordance with a general system prescribed by the author, to insure a perfect comprehension of the language, and so far as may be, a proper appreciation of the thought. The selections are culled from Longfellow, Washington Irving, John G. Whittier, Nathaniel Hawthorne, and all the best American writers in prose and verse, and the best English authors are also laid under contribution. Blaisdell's prescribed methods exact conscientious efficient work from the teachers, but will insure results which in the end will greatly facilitate their labors, to the very appreciable benefit of the students. Boston: Lee & Shepard.

PAPERS FOR FARMERS.—What becomes of all the literature published at the cost of the States is a question that suggests itself after the perusal of a series of lectures by Hiram A. Cutting, M.D., Ph.D. and Secretary of the Board of Agriculture of Vermont. They treat of plants, fertilization, insects, forestry, farm homes, maple sugar industry, experimental farm work, cattle disease, milk, birds, etc., and bring so much intelligent research to bear on each and all of these subjects, that it is not too much to say that the farmer who has mastered them is blessed with a liberal education. But who ever saw any of these works in a Vermont farmhouse, who ever met a Vermont farmer, or, for that matter, a Vermont legislator, familiar with the information which the learned secretary has acquired and striven to make public? There is something wrong about this; papers are valuable, but their value is potential only. It is very interesting to know that the secretary of a State Board of Agricultur is a man of enlightened mind and liberal culture and very creditable to the State to have such a man at the head of the Agricultural Department, but the measure of the pratical value of his labors is the extent to which his writings are distributed among the people. There is a vast amount of valuable literature printed in the State presses of the country, and some means should be devised to insure its distribution among those who would be benefited in health, purse and intelligence by the information it conveys.

SPALDING'S BASE BALL GUIDE FOR 1888.—It is said that 100,000 copies of this excellent work, the first edition, were placed on news stands throughout the country on the first day of April.

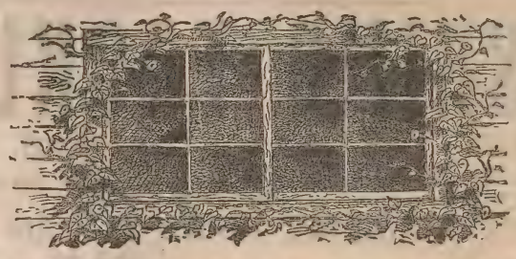
The Audubon Magazine

BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.



The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice. —*From Author's Preface.*

CLOTH, 240 PAGES.

Price, postpaid, $3.00.

FOREST AND STREAM PUB. CO.
40 PARK ROW, NEW YORK.
SAMPSON, LOW & CO., London, Eng.

E. L. WILLIAMS, Foot 9th st., S. Boston.

Yachts and Canoes For Sale.

THOMSON & CAMPBELL,

(Andrew Thomson),

Thames Yacht Agency,

5 Adelphi Terrace, London, England.

Telegraphic Address, - - "YACHT, LONDON."

MESSRS. THOMPSON & CAMPBELL are favored with instructions from Mr. George Frederic Lees, the owner, to SELL by AUCTION, at the Mart, Tokenhouse-yard, E. C., on Wednesday, April 25, 1888, at Two o'clock (unless previously disposed of by private contract), the very superior auxiliary STEAM YACHT MERRIE ENGLAND, 411 Tons Y. M., together with all her valuable belongings and outfit, as per inventory. Merrie England was built in 1881 by Messrs. Ramage & Ferguson, of Leith, under Lloyd's special survey, and classed A 1 for eighteen years, and has just passed her periodical survey. This grand ocean cruiser is of composite build, is fully rigged as a fore and aft schooner, and, being fitted with Beavis's patent feathering propeller, is very fast and handy under canvas; steams well and is a fine, able sea boat. Merrie England has very large accommodation, good deckhouse, saloon, and galley on deck; has Hocking's patent condenser, Jarman's patent steering gear, Sir W. Thompson's binnacle and compass, and is in all respects fully found in everything a first rate yacht requires, including bedding, linen, crockery, glass, &c.

Plans, particulars, inventories, photographs, orders to view, and conditions of sale may be obtained from Messrs. Andrew, Wood & Co., Solicitors, 3 Great James street, Bedford-row, W. C.; and from the auctioneers, Messrs. Thomson & Campbell, 5 Adelphi Terrace, London, W. C.

On same date Messrs. Thomson & Campbell are instructed to Sell by Auction several desirable Steam and Sailing Yachts, including the celebrated Schooner Yacht "CAMBRIA," 193 tons Y. M., and the fast and desirable Steam Yacht "GLADYS," 178 tons Y. M.
See "Field," March 31.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1081, Quebec City, Canada.

STEAM YACHT 85ft.×18ft. Fast. Built in 1885. Sold low for cash. Address J. H. BROWNLOW, Ogdensburg, N. Y.

MEINRAD (champ. Hermit—Nun). Fee $25. This grand young rough-coated dog will serve a limited number of approved bitches for first choice. Address with stamp, A. STUCKY, 1220 Carson st., Pittsburgh, Pa. mch29,3mos

Silver Shoe.

Imported pug dog; a grand sire. Weight 13lbs. **Stud Fee, $25.** (A.K.R. 3758). MIDGET PUG KENNELS, sep1,tf Lansing, Mich.

IN THE STUD.

The Llewellin Setter GUS BONDHU,

A field trial and bench show winner. Address A. M. TUCKER, 85 Main st., Charlestown, Mass.

Yorkshire Toy Terrier.

The English bench winner **Bradford Harry**, weight 6lbs., coat excels in *color* and *quantity*. Photographs 50 cts. Pedigree and winnings free. P. H. COOMBS, 1 Exchange Block, Bangor, Me. feb9,tf

STUD MASTIFF GROVER (A.K.R. 6033) BY Ilford Caution—Countess. For terms apply to J. ATCHISON, Woodbury, Conn. apr5,3mos

The Kennel.

SMOOTH-COATED ST. BERNARDS.

The Typical St. Bernard.

Young stock for sale, sired by champions Apollo, Hector, Victor Joseph and other noted prize winners. Address LORENZO DANIELS, Sec'y, P. O. Box 1,991, New York.

Champ. ROBERT LE DIABLE

PUPPIES FOR SALE.

A very choice litter of pointer puppies, six dogs and four bitches, whelped March 10, 1888, by the Highland Kennels' champion Robert le Diable (Croxteth—Spinaway) out of my Ferry (Tammany—Erie). These puppies combine the blood of the ideal bench show form, with the highest field qualities on sire as well as on dam side. Robert le Diable is the only pointer in America that is champion winner on the bench and first in the field. Will sell at $25 each for want of room if taken soon. Address T. FRANK RIVERS, 19 Prospect st., Bridgeport, Conn. ap12,2mo

CHOICE LLEWELLYN SETTER PUPS FOR sale, 8wks. old, by Gus Gladstone (champion Gladstone ex Donna J.) out Kitty Noble (Prince Noble ex Cassandra T.). This is best combination of Llewellyn blood in the world. These pups will be sold cheap if taken at once. Address 1t J. J. SCANLAN, Fall River, Mass.

FOR SALE.—SIR DASH (A.K.R. 1549) BY Dash III. ex Roberto Lavorack, black and white, a grand stud dog. Price $80. Also Nellie Elgin (A.K.R. 4078) black, white and tan, by Harry Elgin ex Nettie II. Price $30. Both are great bargains; full pedigrees. DR. J. R. HOUSEL, apr19,tf Watsontown, Pa.

COCKER SPANIELS.—ALL AGES AND colors; bitches in whelp; prices low. HANDSOME BROOK KENNELS, apr19,2t Franklin, Delaware county, N. Y.

BARGAINS.—DONNA GLADSTONE (GLADstone –Donna J.) 2yrs., handsome and evenly marked black, white and tan. Price $35. Lily Bondu (Gus Bondhu ex Rodreka) 9mos. old, has evenly marked black, white and tan head, blue ticked body; a perfect beauty. Price $25. Satisfaction guaranteed or money refunded. Address D. A. GOODWIN, JR., Newburyport, Mass.

FOX-TERRIERS FOR SALE,—TWO PUPS, dog and bitch, 6mos. old, well marked and with good pedigrees; $15 each, or pair for $25. Also fox-terrier Mt. Toby Flip, 1yr. old, first prize at Danbury, Conn., 1887. Price $35. DR. C. I. BAILEY, Millerton, N. Y. 1t

CLUMBER SPANIELS.—TWO PURE BRED puppies for sale, 12wks. old, full pedigree. apr19,2t W., 215 Beverly street, Toronto.

Handsome Gordon Setter Bitch Pup

6mos. old, best pedigree. Price $15. Also fine Gordon dog pup, 2mos. old. Price $25. Both from champion stock. Address or call at 774 WESTCHESTER AVENUE, New York city. 1t

MASTIFFS & BLOODHOUNDS.

Mastiff puppies of various ages sired by Boss from imported and show bitches. Also orders booked for choice pups from the great bitch Boss Minnie, sired by Moses, winner of the challenge cup for the best American bred dog or bitch. Also orders booked for pups, full brother and sister to Moses. Also imported bloodhound and bloodhound puppies for sale. J. WINCHELL, Fair Haven, Vt.

FOR SALE.

Six lemon and white pointer puppies, by Bang Bang—Christmas Vic. Send for pedigree and price. GEO. F. GRAY, Alfred Center, N. Y. 1t

FOR SALE.—ENGLISH SETTER PUPPIES, by Rex Gladstone ex Mina, whelped Jan. 19, 1888. Address JOHN GOULD, 321 West Hanover street, Trenton, N. J. 1t

FOR SALE CHEAP.—HANDSOME SPANIEL bitch, long jet black coat, no white, 11mos. old. Address H. E. JAMES, 1t 1,346 Broadway, New York.

FOR SALE.—WHITE BULL-TERRIER PUPS Royal Hermit and Royal Scorpion, 7mos. old, winners of first and second prizes, Boston, 1888. Full registered pedigree. W. C. HOOK, 59 Washington street, Boston, Mass. 1t

TO REDUCE STOCK.—POINTER PUPPIES, 4mos. old; registered stock, blood of champion Sensation, Beaufort, Lang and Faust; $15 each. J. P. GRAY, Utica, N. Y. 1t

FOR SALE.—SKYE TERRIER PUPPIES, Gladstone Boy ex Countess; dogs $25, bitches $20. Wire-haired fox-terriers, game, $20. BRITISH KENNELS, 253 S. 37th st., Phila., Pa. 1t

FOR SALE.—TWO GRANDSONS TO THE famous champion pointers Beaufort and Fritz, age 11mos. Also broken setter and foxhound. A. McDONALD, Rockland, Me. 1t

MASTIFF PUPPIES.—A FINE LITTER OF mastiff puppies to be sold at reasonable prices. Send for pedigree. C. C. RICHARDSON, Westfield, Mass.

SPANIELS FOR SALE.—ABOUT 25 HIGHLY bred cocker spaniel dogs, brood bitches and youngsters. Prices low to reduce stock. ANDREW LADLAW, Woodstock, Ontario. ap19,1t

FOR SALE.—ONE FIRST CLASS GORDON setter dog, 21 mos. old, a beauty, full pedigree. A rare chance for a good dog. Address MT. PLEASANT KENNELS, P. O. Box 335, New Bedford, Mass.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

FOR SALE.—THE LANDSEER KENNEL offers choice bred Scotch Deerhound and English greyhound puppies, bred only from stock of well-known field qualities. These are the aristocrats of all dogs. DR. VAN HUMMELL, 420 N. 17th st., Omaha, Neb.

DO YOU WANT A DOG

DOG BUYERS' GUIDE,

Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them. Mailed for 15 Cents.

ASSOCIATED FANCIERS, 237 S. Eighth St. Philadelphia, Pa.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 26, 1888.

VOL. XXX.—No. 14. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

CRUST AND SNOWSHOES.

THERE is not a doubt that the Maine Commissioners are actually "making it hot" for the crust-hunters in that State. These hunters have had their fun, supposing that the Commission was crippled for means, and that they could slaughter all the moose and deer they could find without danger of punishment. They have been allowed to go on thinking so, till now the work of the wardens is rattling rather unpleasantly around their ears. The Maine papers have it, though we have not had time to confirm the report, that Warden French has just returned from a raid up the East Branch of the Penobscot. He found that the crust-hunters had been at work as though it was their last chance. He captured a large number of moose and deer skins, and found that much of the meat had been left in the woods, to be used as bear bait later in the season. He is reported to have secured evidence to convict some twenty men crusting moose and deer, and that they will all be brought into court. Other wardens are at work in other parts of the State, and it is proving that what our correspondent "Special" suggested last week is true; that the Maine Commissioners are really very busy after the breakers of the law, and that the season is likely to prove one of the most successful, so far as bringing poachers to justice is concerned. But the curious tame-deer notion is still being worked. The veteran trapper and hunter, J. G. Rich, writes that some farm dogs got after a deer the other day in the vicinity of Bethel, Me., and that the owners of the dogs captured the deer alive and that they keep him in a barn. The Commissioners will be likely to take this case in hand. It is stated that a test case of this tame-deer business is to be tried at Farmington this season. The next Maine Legislature will have to settle the question beyond a doubt, as to whether it is lawful to take deer alive. If the tame-deer business was allowed to continue, it would soon amount to an absolute destruction of hundreds of these animals every winter. In that State the snows are so deep that it is an easy matter to run down a deer with snowshoes, and the same is true of the lordly moose.

THE ONE HUNDREDTH EDITION OF WALTON.

SOME time during the coming spring there will be issued by Samson Low, Marston, Searle & Rivington, London, the one hundredth edition of Walton and Cotton's "Complete Angler," edited by Mr. R. B. Marston, editor of the London *Fishing Gazette*, and Hon. Treas. Fly-Fisher's Club.

With the example before him of ninety and nine previous editions, Mr. Marston proposes to make the forthcoming edition one that will be in every way worthy to round out the hundred and do honor to its predecessors.

What an imposing array of decendants the "diminutive octavo, clad in a modest overcoat of brown calf," which had its birth one May morning at Master Richard Marriot's in Fleet street two hundred and thirty-five years ago, has raised up, and how fond the godfathers have been of the progeny.

Moses Browne, Hawkins, Ellis, Thomson, Major, Rennie, Nicolas, Bethune, "Ephemera" and Jessie are responsible for sixty-four editions of Walton, as Mr. Thomas Westwood, England's poet-angler, who is imbued with the same reverence, gentleness, tenderness and kindness of heart that characterized Walton, expresses it, "in all shapes and presentments, the simple and the sumptuous, the microscopic and monumental." It certainly is not because of its angling instructions that the "Complete Angler" is now more in demand than when first it saw the light, and we can recall no more fitting testimony regarding its worth than the words of Charles Lamb in a letter to Coleridge: "Walton's 'Complete Angler' would sweeten a man's temper at any time to read it; it would christianize every discordant, angry passion; pray make yourself acquainted with it."

The Rev. Dr. Bethune, editor of the first American edition of Walton, gave testimony of another such when he said that a friend told him that it was reading the "Complete Angler" which awakened the love of God in his breast.

The simplicity, purity, tenderness and innocence that Walton expresses will always appeal to that which is best in mankind, for "it is essentially a book to be loved and to be discoursed of lovingly." We shall not, however, attempt to "add another hue to the rainbow," for we could not if we would; and, furthermore, a detailed description of Mr. Marston's forthcoming "sumptuous" volume will be more appropriate than a feeble panegyric upon the angler's patron saint.

As the first edition of Walton's "Complete Angler" was issued from Fleet street, so also will be the one hundredth; and we notice that the name of one of the publishers of the edition of 1888 is similar to that of the publisher of the tenth edition in 1766. Mr. Marston's edition will be called "The Lea and Dove Illustrated Edition," and it will contain a reprint of "The Chronicle of the Complete Angler," by Thomas Westwood and the late Thomas Satchell; also twenty-seven photogravures of views on the Lea, from pictures by P. H. Emerson, B.A., and twenty-five photogravures of views on the Dove and Weye, from pictures by Mr. George Bankart. There will be nearly one hundred small wood engravings by F. Alphonse Stankowski, from drawings by F. Careless, scattered throughout the text, and photogravure portraits of Walton and Cotton. The pictures have been specially done for this edition, which will be issued in two styles, both being numbered and signed.

Of the first, an *édition de luxe*, royal quarto, in two volumes, it is announced that there will be two hundred copies; fifty for America. Of the second, demy quarto, there will be five hundred copies; one hundred and fifty for America.

SNAP SHOTS.

THE New Jersey game bill recently signed by the Governor and now a law is an ill-digested measure. It has many good points, chief of which are the abolition of summer shooting and the protection, in the north game section, of the English snipe, but there seems to be no special reason why the quail shooting should end Dec. 1 and the grouse shooting Dec. 25. It is possible that these two seasons were introduced to protect quail from tracking pot-hunters who might follow them when snow is on the ground, but so long as it is lawful for a man to be out shooting for ruffed grouse up to Christmas time just so long will the ruffed grouse shooter kill quail if he gets the chance. The division of the State into two sections is an unnecessary piece of special legislation greatly to be deprecated. It was probably done to satisfy conflicting local interests. It may be said, however, that the good points of the bill overbalance the bad ones, and that on the whole the measure is a step in the right direction. How long will it be, we wonder, before attempts are made to tear this bill to pieces and to replace it with something else, which, whether better or worse, will be no longer-lived than its predecessor. Nowadays a game law scarcely exists long enough to have a fair trial, even if it were enforced, which it scarcely ever is.

The press and the people are for the Vest Yellowstone Park bill. All that was needed to show the attitude of the public was to make known the condition of things and to call for a showing of hands. This the FOREST AND STREAM has done. The response has been a manifestation of interest beyond all anticipation. Petitions have poured in upon the members at Washington from every scattered district in the land. The names attached to these petitions are those which command respect. They are representative of the best classes of the community. They already number thousands, and they stand for many thousands more. A Denver correspondent, "W. N. B.," tells us, "Not a man I showed it to declined to sign it. In fact they were eager to sign. All Colorado would sign. The people are unanimous. Can get thousands of names if wanted." This has been the experience of others. The passage of the Vest bill by the House will only be carrying out the very clearly expressed wish of the American people.

Col. Thos. Goode Tucker, whose name is familiar to readers of our kennel columns, died at his home in Gaston, N. C., April 7, aged eighty-two years. Col. Tucker was an enthusiastic follower of the hounds, and the remarkable spirit with which he pursued his favorite sport, in his advanced age, has been a subject of comment in these columns. Over the initials of T. G. T., Col. Tucker contributed many accounts of his exciting runs, and he wrote much in praise of his favorite hounds of the "Byron strain." Not many years ago Col. Tucker attempted to carry out a pet project, which was to convert his plantation into a headquarters for a club of fox hunters, where men from different localities might gather to hunt "old reds" and entertain one another with talk of dogs and foxes and horses; but the scheme fell through because of lack of support.

A number of correspondents have expressed natural and perfectly excusable impatience at the unreasonable length of time, now two months, during which Sam Lovel and Pelatiah have been abandoned on "Gardin Islan'." The delay in extricating the two unfortunates from their predicament has been wholly unpremeditated and unavoidable. Every reader of Mr. Robinson's papers will regret to learn that their interruption has been caused by a very serious affection of the eyes, which has made writing a physical not less than mental impossibility. Though the manuscript of the chapter printed to-day has come to us in an unfamiliar hand, the reader will miss in the printed text none of the charm which has pervaded the series.

The offices of the FOREST AND STREAM are now at 318 Broadway, on the southeast corner of Pearl street. This is a short distance above the City Hall Park, and all our friends are invited to search out the location, where they will receive a welcome in the new quarters. It is hardly necessary to say that the FOREST AND STREAM will be unaffected. There will be no change of base, but the paper will be run on the same sure principles which have made it the best paper of its kind, indeed, the only paper of its distinctive spirit and quality on all the broad face of the earth. There is only one FOREST AND STREAM, and that is now published from 318 Broadway.

Between fifty and sixty good, bad and worse bills relating to game protection have been introduced at Albany. The Legislature will adjourn on May 11, and there is danger that some of the worse measures may be rushed through by the usual system of trickery, trade and dicker.

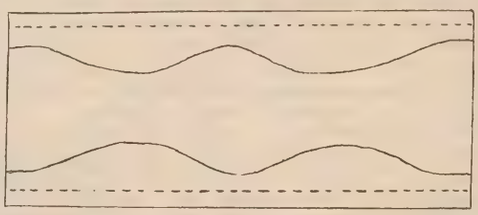
THE ROCK CLIMBERS.

XVII.—PACKERS AND HARNESS MAKERS.

ON this trip Yo learned a hitch that was new to him. It was simple and yet effective, extremely useful when the packer lacks a saddle on which to pack his load, and even more so when he has no lash cinch. The old reliable method of packing is by means of the diamond hitch, and no other system is likely ever to supersede this, but the stirrup hitch has its uses, and is by no means to be despised. Yo was an old packer, yet when he heard Jack talk of the "grapevine twist," the "Walla Walla wind" and the "stirrup hitch," he opened both eyes and ears and began to ask questions, for he realized that one is never too old to learn. A little cross-examination elicited from Jack the information that the first two were old and worthless acquaintances under new names, but the stirrup hitch was really something new.

"The main thing that it's good for," said Jack, the morning that they left the lake for Swift Current, "is to pack when you aint got no cinch. Everybody knows that if you put a bundle of blankets on a horse with a single rope passing under his belly, that rope's going to make him sore. Now the stirrup hitch gives you four ropes passing under his belly, and the consequence is that the pressure and the rubbing is divided up, and don't come all in one place. So you don't gall your animal, and the holding ropes being spread out over his whole belly, the load is much less likely to get loose or to turn, or come off in any way. We'll pack the pinto with some of the blankets that way some day, Yo, and you'll see that it aint a bad hitch. I don't brag much on throwing the diamond, but I guess I can put on the stirrup well enough to give you the idea of it." And he did.

The morning after the meat had been brought down from the mountain, two of the men crossed the lake after the horses, while the third busied himself about camp putting things in shape for packing up and returning to the St. Mary's lakes. The men were gone a long time, and when at length they made their appearance they had only six horses. One was missing. This seemed very mysterious, for it was difficult to conceive where it could have gone. On one side was the impassable mountain, on the other the lake. Evidently, if they had not missed it on the mountainside it must have gone up stream or down. If it had gone down stream they would see it or its trail on their way out, and it was therefore only necessary to search the valley above the lake and make sure that it was not there. The next three or four hours were devoted to a careful hunt through the forest and the beaver swamp, and then, as no trace of the missing beast could be found, the men one by one returned to camp and made ready to start.



The loads were more than twice as heavy going out as they had been coming in, and so had to be newly arranged. The hams, saddles and ribs of the sheep made a good load for one of the mules; the remainder of the meat and the head, with the camera and cook outfit went on the other, while the bedding was all put on the pinto and fastened with the stirrup hitch.

To pack with this hitch a rope thirty or forty feet long is needed, but no saddle and no cinch. The rope is doubled evenly and a loop about three feet long knotted in its middle part, and after the blankets have been folded and laid on the animal's back, extending from the withers back to the loin, the loop is spread out in an oval on top of the load, the knot being toward the horse's head. The free ends of the rope hang down to the ground on either side of the withers. The two packers, one standing on either side of the animal, take, each, one of these free ends, and carrying it back toward the end of the load, pass it under the loop and then out, over, and down again, pulling it until the slack is raised a foot or two from the ground. Now holding on to the free end close to where it passes down from the loop, so that it will not pull back when the strain comes, each packer puts his foot in the slack which is swinging above the ground, and, slowly and both together, they rest their weight in it so as to keep the loop spread and to settle the ropes down into the load. Then each one bending down passes the free end of the rope which he holds over his own foot, through the stirrup on his side, and then through that of the man on the other side from above downward, and then draws it back toward himself. This they must do together, each man slipping his foot out of the stirrup as it is drawn away from him. Then if the pulls have been even, the four ropes will lie tight against the horse's breast and belly about six or eight inches apart. It is now only necessary to cinch, by pulling outward on the free ends of the rope evenly and together. This done the free ends may be tied on top of the pack, or if the rope is not long enough for that, they may be tied by a half hitch to the sides of the loop. It will be evident to any one who may attempt to tie this hitch that it is of use principally in an emergency, and yet where one has a broad cinch with a hook at either end it might often be convenient for fastening on ill-shaped bundles that would hardly go in an ordinary pack.

The men put their blankets on the pinto with this hitch, and started down along the southern shore of the lake for the valley of the main Swift Current. They had not got more than half way down the lake, when a red object was seen on the other side, which was at once recognized as the missing horse. He was quietly feeding on the hillside where he had been all the morning, but the men had somehow missed him. Crossing the creek Appekunny went to him on foot, while the others kept on through the down timber, and presently, after some difficulties, they reached the trail. At their old camp they stopped, gathered up the articles left there, repacked, and then kept on down the valley.

Night overtook them before they reached the lakes, but next morning, in a driving rainstorm, they were back at their old camp at the foot of the lower lake. Yo rode over to say good-bye to Lieut. B., who was just moving out, and Jack and Appekunny took the boat and went to raise the cache.

The next two days were devoted to harness making. One of the horses which was used in the team was young and green, and did not know how to pull. While they were coming into the lakes he had shown signs of balking on more than one occasion, and it was feared that in going up the long hill he might refuse to pull, and if he did this the Rock Climbers might have a great deal of trouble. It was therefore decided to put the little mules in harness and to drive four-in-hand, but as they had but one set of double harness, a set of lead harness had to be made. Out of what should this be constructed? Their materials were scanty. Two extra riding bridles they had, and their lariats would make traces. Everything seemed easy enough except collars, hames and lead bars. It was suggested that from the hide of the sheep they could make a pair of "Dutch collars," but would the mules pull in these? After considerable thought a better plan was evolved. Their sugar was in a seamless canvas sack, which might form the basis of a pair of collars large enough for the mules. The sugar having been transferred to another receptacle, the sack was spread out flat on the ground, and on each side of it the pattern of a collar roughly marked out, something like this:

Then the sewing tools were got out, the sail needles and a ball of manilla twine. The sack was then cut along the curved lines, the dotted lines sewn up, and this part packed with cotton from an old quilt. Then the cut edges were sewn together and packed with cotton. Canvas strings, for tying the ends of the collar together over the neck, were fastened on, and the collars were found to fit the little animals for which they were made admirably. Next Jack took the ax, and going into the brush cut some crooked green willow sticks, which with a little shaping made two pairs of hames, and strings were made to answer for straps and buckles. Lariat ropes made good traces and two strips of old canvas did duty as back bands. The lead bars and single trees were formed of willow sticks. All this was not done in a minute, but took the better part of two days, and then one morning the wagon was packed, Jack and Yo cut a couple of willow poles, and, mounting their horses, took their positions on either side the team; Appekunny gathered up his lines, got into the wagon and cracked his whip, and the "St. Mary's stage" rolled merrily off toward the river.

Its journey up the long hill was not devoid of incident. There were times when in crossing the muddy sloughs the wagon got stuck in the mire, and timber had to be chopped out or brush cut and a road built to enable the animals to haul it through; but at length the summit of the ridge was surmounted, and the journey continued southwest over the rolling foothills close to the timber. The trail was a rough one, and as Appekunny had no four-horse whip, his leaders were not always under good control. The wise little mules understood the situation very well, and sometimes when the men, for one reason or other, were not close at their sides, they would do about as they liked, and would even stop and stare back at their driver in a most aggravating way. At one or two points at the crossing of muddy streams, which were deep and narrow, with a bad, steep pull out on the other side, Yo and Jack rode across and left their horses, and recrossing on foot, each jumped on the back of a leader and kept them going with spurs and switches, while Appekunny, standing in the wagon, whacked and yelled at the wheelers.

So one by one the difficulties of the journey were overcome. The weather had again turned bitter cold and again all the standing water was frozen solid. The men put on all their extra clothing, but often walked for warmth, leading their horses. Sometimes when passing close to a timbered point they would halt for a while, build a fire and thaw out.

Two or three days' slow traveling brought them, after crossing the heads of Milk River to Cutbank Creek, where they remained for a week, waiting for weather in which they could hunt. It was a stormy time, however. The wind blew almost without ceasing, and it snowed every day. The country is much less difficult to hunt than that about St. Mary's; the mountains, though tremendously rough, being less steep and easier to get about on. There are plenty of sheep and goats there too, but the men got none, chiefly on account of the bad weather.

One or two days were spent in snow and rain on the mountains, and fresh sheep tracks seen, but the weather was really too bad for hunting. In their wanderings over the mountains, some ptarmigan were seen which had assumed their white winter dress. They seem to change early here, becoming entirely white in September. Here Yo was guilty of a piece of carelessness which might have had serious consequences. He was working along a steep mountainside close up under the reefs, crossing the deep but narrow ravines by which the side of the slope was cut. At one place, to save a few yards' climbing, he walked over a steep snowdrift, which was old and hard and covered by a light coat of newly fallen snow. Presently he slipped, his feet flew up and he fell on his back, and followed by his gun, shot down toward the sharp rocks below. In an instant he gathered himself, came to a sitting position and dug heels and hands hard into the snow. The ride was short and swift, but when about three-quarters of the way down, he struck a drift of new soft snow and managed to stop himself. His rifle kept on and struck the sharp jagged rocks below with a crash which made him fear that it was irretrievably ruined, but when he got to it, after cautiously climbing down by the edge of the snowbank, he found that the only injury which it had sustained was the loss of a portion of the stock, which had been split off by the force of the blow.

How the wind did blow and the storms follow one another in these mountain valleys! Their camp on the North Fork of the Cut Bank was in a grove of pines and willows, admirably protected on all sides, but sometimes it seemed as if the blasts would tear the tent from its fastenings and carry it away. Every day it rained or snowed and blew, and as it was getting late in the season—the middle of November—the men began to think that it was time to be moving out of the mountains. It was impossible to hunt with comfort in such weather, and though they started out several times, they saw nothing save an occasional track.

High up among the peaks the astonishing violence of the wind was made manifest by the noise made by the gusts in striking the peaks. This thunderous sound was like the sudden puffing of a starting locomotive to one who is close to it, but much louder. One day Jack and Yo had ridden up the valley against a gale of wind, and had taken a deer's track and followed it in the timber for some time, but the wind blew harder and harder and whipped round among cañons and coulées, so that the deer smelt them at some distance, and ran before they saw it, and keeping down the wind could not be come up with. After leaving it they had kept on up the valley, but it blew so hard that it was useless to try to hunt. Turning back they started for camp with the wind at their backs, but it was not until they got out of the timber into the open valley that they began to have any conception of how hard it was blowing.

To describe the fury of this gale so as to give the reader an idea of it is quite impossible. A few incidents of the ride may be mentioned. Through the timber on the hills above the wind of course made the usual rushing, howling noise, and pines and spruces 50ft. high bent until their upper thirds were horizontal, and it seemed as if they must snap. But besides the sounds usually heard in a hard gale of wind, there was a new and louder one, which almost drowned the others. From far above seemed to come a hollow throbbing murmur, as if there were a conflict among the spirits of the upper air. The winds were contending with each other and groaning and straining for the mastery, and the sound of their warfare made a ceaseless monotone, now lower, now louder, which was like nothing but the hum of machinery in a great factory, but a thousand times louder. This sound formed a deep and terrible bass to the whistling, the screaming and the rushing of the winds, to the swish of the branches and to the dismal shrieks and groans of the tree trunks and branches as they rubbed together. But most of these sounds were drowned by the unutterable uproar of the complaining winds.

The men had tied their hats on their heads and held their guns in their hands, and so prepared, started out into the open. Here there was no protection and the terrific fury of the wind was felt in its full force. Several times it took them out of their saddles and flung them forward on their horses' necks, while the latter staggered and reeled as if suddenly pushed by some mighty force. Sometimes it almost seemed as if they might be thrown down by the gusts. The men could only keep their seats by leaning back in the saddle, clinging with their legs and bracing with one hand against the saddle horn. Had they been traveling across the wind it would have been impossible to ride. Down in the stream bed water was caught up by the barrel, tossed into the air, seen for an instant as white spray, changing at once to mist and then

disappearing. Now and then a stout pine branch would be twisted from a tree and whirled away like a feather. A bird which tried to rise from beside the trail was thrown to the earth, and crouched by a tuft of grass as they passed within two feet of it.

It seemed to blow harder each minute, and the shocks to the horses increased, so that sometimes in riding down a steep coulée where the trail was narrow and sidling, there really seemed danger that the horses might be thrown off the trail. Yo declared that, while he had been in many a gale at sea and had seen cyclones at work in Nebraska, he had never encountered a wind which blew as this one did. Jack said he thought he remembered one as bad, which picked up an empty cast-iron cook stove lying on the ground, lifted it over the wagon from which it had been unloaded, and carried it 100yds. Some little relief from the wind's violence was obtained by galloping fast, and both men were glad to reach the tent and get the saddles off the horses.

So day after day the men waited, and watched the flying snowflakes and listened to the howling of the winds or the monotonous patter of the rain drops on the tent.

Yo.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

SAM LOVEL'S CAMPS.—VIII.

FROM the dark clouds a veil of rain had fallen, completely hiding the distant mountains and the furthest western shore, while it had begun to flatten the nearer crags of Split Rock into a sheer wall whose even tint of dull gray was broken only by the white shaft of the lighthouse and the dull flash of the waves which the coming wind hurled against the point of the rugged promontory. Beyond the advancing veil whitecaps gleamed out of the obscurity, and out of it scudded a sloop with close-reefed sails and anchored in the shelter of Thompson's Point.

When the frequent flashes of lightning quivered down from the sky, it was as if the veil was torn with jagged rents that for an instant revealed a conflagration of the universe. Incessant peals of thunder rolled in repeated bursts and muttering growls, swelling and dying in echoes from cloud, mountain and headland, with a continuous undertone of the roar of wind and waves on distant woods and rock-bound shores. The wind, yet unfelt by the castaways, sent the hurrying clouds in a wide majestic sweep across the sky till all the sunlit blue was blotted out and the landscape was overspread with a gloom more awful than the darkness of night, flashing into instants of distinctness when wind-swept waves and clouds and trees, for a pulse beat, stood still in the white fire of the lightning. Then catspaws ruffled the black, still waters near them, a brief patter of big drops fell like leaden plummets on water, rocks and leaves, and then all at once the lake seethed at their feet, the lithe branches of the birches streamed to windward of their bending trunks, and the sturdy cedars tossed in brief resistance as the long-driven slant of the storm burst upon them.

Sam and Pelatiah were drenched before they could reach the partial shelter of the nearest clump of cedars, which only broke the force of the wind, while every branch and twig seemed to become a conduit to pour, dribble and drip down their backs and upon their knees every raindrop the tree caught.

"I don't s'pose it's nothin' tu what they hed time o' the flood," said Sam, wiping his wet face with a wetter coat sleeve, but I du feel more'n I ever did afore, for the poor creeturs 'at was aouten the ark."

"I guess I've got tu the hayth o' wetness," Pelatiah said, as with his chin on his knee he regarded the water overflowing from the tops of his boots, into which his trousers weretucked, "fer my boots is a runnin' over. O, gol dum it, I druther milk all aour caows in the rain 'an tu be squattin' here, like a draownded goslin', jes' fer fun. Dum sech fun!"

With such dolorous discourse and with watching the storm they whiled away a half hour of discomfort. Through the loop holes of their poor shelter they could see nothing but the blown and pelted trees and rocky bounds of their island, and a little beyond these the seething, angry sweep of the waves, whose white crests and black furrows faded into the gray downpour and fleeting drift of the rain, and it was as if this patch of rocks and earth was all that was left to them of the stable world whose blue mountains, green woods and fields and sunlit waters an hour ago had shone about them. Then the fury of the wind abated somewhat, the rain hissed less angrily upon the hurrying waves, the torn clots of black clouds swept more slowly across the sky, grew more infrequent, then had all passed by; the nearest headland was dimly revealed, vaguely defined shores reappeared and again clasped the bay, a distant field was lighted by a gleam of sunshine and shone through the vapor in golden green, the leaden hue of the waves turned to living blue and green, and as the last growl of the retreating storm was muttered among the eastern mountains, the sunlight came sweeping over all the landscape.

Sam and his companion crept from under their roof of dripping branches and stretched their cramped limbs in the genial warmth of the rekindled sunlight, while they scanned the lake in hope of seeing some friendly craft that might come to their rescue. But no vessel of any sort was in sight save the sloop that had taken shelter inside Thompson's Point, and which, if not beyond their hail, was unmindful of it, now spread its white wings to the fresh northern breeze and sailed away to the southward.

Her captain and crew they had never had speech with nor seen, but at such a distance that they were unrecognizable specks, presumably men, who might be white or black, brother Yankees, Yorkers or Canadians, for all they could make out concerning them, but they, too, had suffered the fury of the storm, and as the bellying sails bore them away, passing out of sight behind the cliffs, a heavier sense of loneliness fell upon Sam and Pelatiah.

Sam found a few dry matches in an inner pocket and was enabled to comfort himself with a pipe, a solace which was denied Pelatiah, as was also the rumination of his cud for which he vainly searched his pockets, remembering at last that he had given his only remaining piece of gum to the faithless Louisa. Far better, he thought, than if he had it, if she was now chewing it and was reminded by it of him. Would she feel any anxiety concerning him if he did not return that night, as it now seemed probable he could not, and be sorry that she had been unkind? Or would she and all of them think that he was careless of his word or had deliberately broken it? This seemed the likelier chance and again he groaned aloud, "O, gol dum sech fun!"

Standing on the south shore and looking toward the mouth of Little Otter, they saw two figures on the beach to the westward of it which they made out to be Solon and Joseph. They were moving excitedly about in the neighborhood of an object which Sam presently guessed to be the scow, stranded on the shallows. The favoring wind bore Sam's hail to them, and though their answer could not be heard, they could be seen frantically swinging their hats, delighted at the assurance of the safety of their friends, and Sam laughed to think of what he could not quite see, how Joseph was prancing about like an upreared mud turtle, and of the big words he knew Solon must be uttering.

Then they were seen to wade out to the scow, bail out the water it had shipped, board it, shove it into deeper water and then with a heroic endeavor to practice the lessons of Uncle Tyler, attempt to row to the island. It soon became evident that they might as well have undertaken so to voyage to the moon, for they clawed the air more than the water with the oars, making no progress, but in irregular circles which, if they should become wide enough, were as likely to take them out into the broad lake as to the island.

Sam became more alarmed for them than for himself and Pelatiah, and roared to them to get back to the shore if they could. When they comprehended his instructions they were fortunately in shoal water, and more effectually using the oars as setting poles they happily succeeded in beaching the scow on the sands at the foot of the bluff. Then Sam shouted to them in well separated words, slowly delivered between his hollowed hands:

"When—An—twine—gits—back (if he ever does an' haint parlyvooed hisself to death," taking his hands down and also taking breath as he addressed this aside to Pelatiah), "hev—him—come—over—arter—us—with—the—scaow! Du—you—hear?"

When they had taken time to ponder the message, Sam caught their faint "yes" making its way against the buffets of the wind.

"Naow, Peltier," he said, "le's dress aour parch, you wanter save that Swago, right here where the sun 'll dry us an' make us a fire an' hev us a hot dinner."

In the lee of the blooming thicket they set about scaling their fish. So absorbed in their occupation or with far away thoughts they took no note of the unobtrusive sounds about them, the wash of the subsiding waves, the rustle of the leaves and the songs of the vireos among them. Once they thought they heard mixed with these the thump of oars, but listening they heard no more.

Presently they were startled by the tramp of stumbling, heavy feet, the noise of spades and a crowbar thrown down, and then as one pair of feet came to a halt quite near them, a loud nasal voice broke out:

"O, look a-here! John-ah, Job-ah, here's seas an' oceans an' thaousan's o' Seneky snake rhut, I vaow!"

A voice that greatly resembled that of the first speaker, though it sounded more familiar to Pelatiah, answered impatiently:

"O, darn your Seneky snake rhut-ah! We got suthin' 'at's more 'caount 'an or'nary rhuts tu tend tu; what the Bible calls the rhut of all evil is what we're arter-ah. Come here an' le's git tu diggin' right stret off-ah, 'fore some darn fool comes shoolin' raound. I ruther guess, Jethro, 'at you an' Job, Junior, hed better dig-ah, an' I'll keep watch-ah, bein' 'at I'm the sharpest sightedest an' t' the spine o' my back's kinder lame-ah."

Peeping under the bushes, Sam and Pelatiah saw, standing quite near them, a tall, awkward lout, who with a face expressive of green conceit and low cunning regarded the patch of medicinal herbs that spread their broad leaves before him, and just beyond him, above the undergrowth, the heads and shoulders of two others of the same unfinished strong build, the same expression of conceit and cunning, with a little drying of the greenness that more years had given, unmistakably elder brothers of the one who had spoken first.

"I haint a-goin' tu dig a darned inch-ah," said this one, still gloating over his discovery of herbs, an aromatic root of which he had pulled and was crunching with swinish voracity, "erless I'm a-goin' tu hev a third o' all the money we get-ah; so there."

"Naow, gol darn it all, Jethro-ah," said the oldest brother, coming nearer and halting, while the swing of his arms gradually abated like the subsiding beats of a pendulum, "what's the use o' your bein' a nat'ral-born fool-ah, if you know anything? Who tol' us where we was a-goin' tu find all the money 'at Bennydick Arnil hid here, when he was a-retreatin'-ah? Wa' n't it Sairy, Sleepin' Sairy, when Job, Junior, hed gin her the inflewerence-ah?"

Evidently Jethro could not gainsay this, and maintained a sullen silence. "Wall, then," his brother continued, "'t wouldn't be no more 'n fair fer her tu hev half on't-ah, for haow'ld we ever ha' faound it 'f 't hedn't been for her-ah? Say, you darned off ox-ah!"

"Wal, we haint faound it, hev we-ah? We've got tu dig for 't, haint we-ah?" Jethro demanded with a sarcastic grin.

"Gol darn ye!" cried John, "we would ha' hed it 'f you'd hel' your plegged gab-ah. A speakin' jes' 's the crowbar hit the chist, an' then of course it moved, jes' 's any tarnal fool might ha' knowed it would-ah. But we're agoin' tu git it naow 'f you c'n keep yer hed shet a spell, an' all 't we ast is a quarter on 't for Sairy, jest a ekal divided quarter, 'n' one fur me 'n' one fur you 'n' one fur Job, Junior-ah. An' that's more'n fair. Neow, haint it Job-ah?"

"Wall-ah," answered Job, "I 'low 't is, that is to say fur you, bein' 'at Sairy's your womern, which it jes' in fac' gives you half-ah, a hull half-ah! I wanter ast, naow, who give Sairy the mess miricle inflewernce-ah? 'Twan't you, not by a jug full."

"Jes' so," said Jethro.

"Ah, wal-ah, strickly speakin', it wa'n't exakly me," the eldest reluctantly admitted, "but I furnished the womern, which she is the mess miricle subjeck."

"I'm goin' tu hev a third on't," Job emphatically reasserted, "erless I'll go an' tell Annerniees, an' break up the trade for the islan', which I can, bein' 'at the' haint no writin' 's drawed yit. So there-ah."

This threat seemed to strike dumb him whom they called John, but after swelling and choking with rage for a little, speech returned.

"Job an' me hed ort tu kill ye an' heave ye int' the lake, so we hed-ah!" but Job did not assent to this simple method of settling Jethro's claim, and John went on somewhat less angrily. "Wal, condarn ye, take a third, take it, you tarnal hawg, an' be damned, 'f you wanter take the bread aouten your brother's maouth 'at's allers bin your guardien an' the mainstay o' the fam'ly sence the ol' man yer father, Job, Senior, died! Take it, dam ye, but go to diggin' 'fore some fool comes gawpin' raound. An' keep yer head shet when ye git tu diggin'!"

Sam now whispered to Pelatiah that if they were to get these men to help them to return to the mainland it would be best to enter upon negotiations at once, before the treasure seeking was begun, and of which they must pretend complete ignorance.

Crouching low, they stole silently away to some little distance and then noisily made their way toward the money-diggers, who were now gathered about the pit, which Sam and Pelatiah had noticed in their survey of the island.

"Haow are ye? I'm turrible glad to see ye!" Sam said, heartily.

"Where in thunder an' chain lightnin' did you come from-ah?" demanded the eldest of the brothers, surprised, shame-faced, yet half defiant. "What ye duin' here? Clear aout! This is aour islan'! we jest bought it an' we haint agoin' tu 'low anybody on it-ah stealin' cedar pos's an' raisin' Cain-ah. We'll sue 'em fur trespuss, yes, sir, we will, an' you'd better put 'er,"

Sam hastened to explain that he and his comrade had come there fishing, that their boat had gone adrift in the storm, and that all they wanted of the island was to rid it of themselves; now how much would they ask to set them ashore at the mouth of Little Otter?

"Wal-ah," said the self-constituted mouthpiece of the three, "we come here a-fishin' tew, got aout o' worms an' come ashore tu dig some here," indicating the pit with a sweep of his arm. "We allus carry tools for diggin' worms," with another sweep in the direction of the spade and crowbar. "A man orter be prepared for everything when he goes a-fishin'-ah, but the' haint many 'at knows 'nough tu be. Naow, 't you'd ha' ben prepared-ah, you wouldn't ha' got ketched so."

"Wal, no," said Sam. "If we'd ha' fetched lumber an' tools to build another boat, we'd ha' ben all right, but seein' 'at we didn't think on't, haow much be you goin' tu charge tu take us over t' the crik? We got some fellers over there 'at 's expectin' of us, an' we're willin' tu pay you reasonable tu take us over."

"What be you a-duin' on here so many on ye-ah? I don't like the looks on't. Don't ye tech nothin' on this islan', not a cedar pos' nor not one stun-ah, nor dig none, for we cal'late tu pastur' sheep on't, an' we don't want it all tore up-ah. It's all aour'n tu hev an' tu hol', we, aour heirs an' 'signs for ever, et cetery un' so forth-ah."

Sam reasserted that he and his friend coveted nothing that the island contained and repeated his query as to the sum demanded for taking Pelatiah and himself away from it, to which John did not at once reply, but continued to ask questions, for his inquisitiveness was as craving as his acquisitiveness, "Where du ye live when you're 't hum? I don't remember seein' ye afore tu taown meetin', nor teamin', an' I don't b'lieve you b'long in Lakefield-ah. You've got a kinder furrin aspeck, so to speak-ah. Oh-ah, you live in Danvis du ye, an' come a fishin' hey? Come to think on't this young man does look kinder familler, an' I b'lieve I see him a sloshin' raound after pickril up t' the East Slang las' spring. Wan't ye? Say-ah?"

Pelatiah nodded an affirmative.

"Wal," he continued, while he meditatively pawed the earth with his big boot, "It'll hender us consid'able, but we wanter be 'commerdatin', an' seein' it's you, we'll take ye over fur, le'me see, wal, tew dollars in money, seein' it's you-ah." He announced his terms as if a sudden burst of generosity had overcome his better judgment.

"Seein' it's us," said Sam, with calm indignation, "we'll stay here till the lake freezes over an' Tophet tu, 'fore we'll pay you tew dollars for a half hour's rowin'!" and without further words he and Pelatiah turned away.

They had gone some distance and Pelatiah was suggesting that they should take the boat without leave, or as he put it, "kinder borrer it for a spell" and make their escape, and then, towing it back with their own, restore it to the owners; when they heard some one hastily following them in a clumsy attempt to do so stealthily. Looking back they saw Jethro struggling through the undergrowth, his arms at full swing where there was space for them.

"Say-ah! Hol' on-ah!" he half grunted, half whispered, and coming up to them, continued in the same tone, "I'll take ye over for seventy-five cents in money-ah, 'f you'll give it tu me right in my own fist. Will ye, say-ah?"

"I'll give ye fifty cents," said Sam, "an' pay ye soon as you start."

"Wal, gol darn it, fifty cents then. The ol' Capt'in wouldn't gi' me a cent 'f he'd got tew dollars. You shy raound tu the boat in the cove on the north side, an' I'll come in less 'n no time. Naow, don't ye let 'em see ye, an' I'll fix it slicker 'n goose grease." And he retreated while Sam and Pelatiah, gathering up their tackle and fish silently, made a wide detour and gained the rendezvous. As silently they got on board the scow of the money-diggers and, ready to shove it off if discovered by the two elder brothers, awaited the coming of the younger. Him they heard saying loudly, "I guess 'at I'd better go 'n' see 'f them critters don't hook the scaow," and then come threshing his way through the brush to them. He clattered over the stony beach, shoved the boat off, floundered on board, took the oars and after a

few back strokes which sent the craft well away from the shore, addressed his brothers in a tone which was not intended to reach them, "There, gol darn ye!"

But their suspicions had been in some way aroused, and they came hammering down to the shore in hot haste while Sam was handing over a Spanish half dollar to the exultant Jethro.

"Come back here, you darned heap, you," shouted the irate mainstay of his family, as he stooped and picked up a stone so big that his big hand could hardly grasp it; "come back here or I'll—" Jethro jeered at him a derisive guffaw, and the missile was thrown at the retreating boat with a cast strong enough to reach it, but it fell to one side and only splashed the occupants. A few more strokes took them beyond the reach of anything more harmful than angry words, which John and Job continued to hurl at them as, with Sam at the steering paddle, they swept around the west point of the island and headed toward the mouth of Little Otter, defined by the light green of its willowy gateway.

Jethro's brothers followed the shore, keeping the boat in sight and continually pouring after it a volley of threats, opprobrious names and words that came as near curses as church members might venture to use.

"You'd better save your breath and keep your temper," Sam advised, "an' go tu diggin' your worms. An' when you git tu diggin' don't ye speak. 'F you du they'll move, an' you won't git 'em."

This hint that their secret was known was enough to silence them without the threat thrown after it by Jethro, whose patience was becoming exhausted. 'F you don't shet up and stop yer sass," he shouted, resting on his oars, "I'll go right stret an' tell Annerniees the hull o'—you know what, darn ye. So, there naow-ah!"

Then the island became so quiet that a party of crows faring across the bay ventured to alight there, while Jethro, whose strength was as ox-like as his motions, sent the scow surging onward with strong, slow strokes.

When with a long swash, like a restful sigh, she came to the landing, Solon and Joseph were there to welcome their friends, undemonstratively, but heartily, and to comfort them with that balm which we are ever ready to give but never to receive—"I told you so."

The day was now too far spent for Pelatiah to get back to his evening chores, so he was easily persuaded to wait for the supper for which some hours of Crusoe life had given him a sharp appetite. Jethro was hospitably invited to remain and partake of it and was nothing loth improving the opportunity as one to whom such generous fare seldom came. "Darn 'em," he said, when uncomfortably full fed, he arose from the stone table, "they'd be madder yit 'f they knowed haow much I'd hed t' eat. But they dassent kill me an' they can't kick me, so there-ah." With this fraternal comment and without a word of thanks or good-bye, he departed.

"Perlite 's a pig," said Sam as the sound of their guest's departure changed from clumsy footfalls to as clumsy oar beats. "Wal, I don't want tu say nothin' agin my breed, but it's all in the fam'ly, here, an' I will say that of all mean critters a mean Yankee is the dumdest."

While Sam was making ready to transport Pelatiah on his homeward way, Antoine was heard lustily hailing the camp from the eastern shore, and Pelatiah proposed to cross the stream to that point with Sam and make his way thence through the woods, thus saving his friend the long voyage up the creek and Slang. Sam thought this inhospitable and a non-fulfillment of his promise, but Pelatiah insisted that he had had quite enough of boating for one day, and would much rather feel the solid earth under his feet. So he was landed where Antoine was waiting with a load of Canadian news that he at once began to unburden himself of.

Breaking loose from the thread of a story just begun, Pelatiah went his way into the gathering twilight of the woods.

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

IS MISTASSINI MYSTERIOUS?

Editor Forest and Stream:

I have looked carefully over the historical references which editor Chambers of Quebec has taken the pains to annotate for my enlightenment regarding Lake Mistassini, and I have only to say in consideration thereof that it is remarkable how much more the early explorers apparently knew of this continent than geographers do now! The French "Cartes" of the 16th century, of which I have several, with access to many more in sundry historical society collections, are truly marvellous for general accuracy and also for their physical details. The old French trappers established their lines on these primitive tracings, and the Hudson's Bay Company which supplanted them, has never deviated from the same old-time fluvial thoroughfares and overland traverses. Once a year the entire vast area embraced within the H. B. Company's jurisdiction is covered by its agents and collectors, through whom furs are brought out and supplies delivered to the numerous factories and trading posts; and once a year also, in the Canadian Blue Book, the Superintendent General of Indian Affairs submits to the Dominion Government a report which embraces every department, district, sub-agency and farm, where Indians are employed or supplied with rations, from the Mackenzie River to Cape Breton. All trails between commercial points and places of rendezvous are as well defined to constant travel as a turnpike and as easy of recognition as a railroad; and yet railroads and turnpikes in all parts of the globe often run through wildernesses as vast and uninhabited as the Labrador. If the Crown Lands Department of Quebec has no general map of the country, and no draft of the Hudson's Bay Itinerary, in its archives, it speaks unfavorably for its enterprise, as Mr. Murray intimates in the article on the dubious Mistassini, printed in FOREST AND STREAM last November, which first prompted my comments.

It may be admitted that the country intermediate between Quebec and Mistassini Lake, or for that matter the whole region from the North Atlantic coast to Hudson's Bay, is not scientifically or statistically known, but it does not follows that it is a *terra incognita*, because the average tourist and school boy don't know of it. When a young man first strays from home the world seems large to him, and new; and I have no doubt that there are lots of people to whom some portions of the Adirondacks, for instance, are essentially as wild and problematical as the Mistassini country. With regard to the loose talk and aimless speculation about the "Lost Lake" and its extent, its phantom-like characteristics, and what not, I may say that I saw the same sort of rubbish written about Lake Nepigon 18 years ago, about the time of the first Canadian Pacific Railway surveys and the search for silver back of Silver Islet on the mainland, when neophytes in travel and woodcraft endeavored to make their pioneer experiences as heroic as those of the Argonauts. I am sure that some of your readers will recall to mind the statements printed then—how no one knew the extent of the lake or even its shape and environment, and that it was supposed by many to be larger than Lake Superior, the same as is now said of the mysterious Mistassini.

Lake Superior is always the accepted standard of size when these indefinite lacustrine bodies come into popular notice, notwithstanding the comparative littleness of the earth. And all this time my good friend Henri Le Ronde, Hudson's Bay factor, was living in luxury at Nepigon House, and the trail that led up from Red Rock to his post was beaten by shoe packs as hard as a floor. I have been over lots of these Hudson's Bay trails, from the Saskatchewan in the Northwest Territory to Rigolet and Nor'west River in Labrador, and they are all alike; and there is always some poor exile of a gentleman at each and every post who is familiar with conventional ways and knows how to entertain like a prince, isolated there for years, but by no means "savage," unless gently so. But Mr. Chambers knows all this, perhaps as well as I do. He is old enough to be informed at all events, even if he has not been far away from home. Why, the Canadian Pacific Railway, between Prince Arthur's Landing and Winnipeg, runs for 500 miles through a more "savage wilderness" than the desolate Mistassini country. The old Dawson route and the Pigeon River route along the southern Minnesota boundary are equally as savage and would be no better known, but for the immigration of 1871-6 into Manitoba. During the Riel rebellion of 1885 volunteers for the western campaign were surprised to find the people of the Northwest Territory living in substantial houses, with newspapers printed in principal villages, and even the Indians, thousands of them, engaged in profitable farm work. It may be equally surprising to searchers after the unknown to learn that steamboats run up the Yukon River in the season of navigation as often as once a fortnight. But to people who travel wonders become commonplace, and history fails to keep up with the pace of modern progress. Testimony of this sort is as wide as the continent in support of my position that "wilderness" is only a relative term.

Mr. Murray can go nearly nine-tenths of the distance from Lake St. John to Lake Mistassini by canoe, following the old route of the Hudson's Bay voyageurs up the Mistassini River, which rises in the Heights of Land and empties with very considerable volume into Lake St. John. Mistassini Lake is a body of water about double the size of Lake St. John, with four deeply indented bays, two of which open to the eastward and two to the southward. The portage strikes the most southern and western of these bays.

If Mr. Murray wishes to visit the Mistassini country from personal curiosity, or in the interest of natural science, I shall be glad to lend him my mosquito bar and have the meshes fine. I have no doubt his investigations will be of value, but he cannot pose as the original discoverer of what has been known for centuries. All that he can write, or whatever discussion may be provoked in respect to his mission, will bring out information about a region which is practically a sealed book to the public, and it will greatly interest the readers of your journal. More especially will it advertise the lagging Lake St. John Railway enterprise, which is pushing in that direction. It will fill the Canadian country with tourists, as Murray's book filled the Adirondacks. It will line the margins of its sequestered lakes and streams with anglers and campers. It will enliven the desolation, and fill the country with more silver coin than it has seen since the discovery of the Labrador by Cabot, or any of his predecessors. I have no doubt that Mr. Murray and his Canadian coadjutors will smile a very broad smile when they discover the headway already obtained, and the prominence likely to be given, by a discussion so successfully initiated as this seems to have been through the medium of a journal so wide awake and popular as the FOREST AND STREAM.

No wonder that "there is merriment in the ancient capital."

CHARLES HALLOCK.

NATIONAL ASSOCIATION.

OFFICE OF THE NATIONAL ASSOCIATION FOR THE PROTECTION OF GAME, BIRDS AND FISH,
ST. LOUIS, MO., April 21, 1888.

THE fourth annual session of the National Association for the Protection of Game, Birds and Fish will be held at the Mercantile Club, in the city of St. Louis, on Tuesday evening, June 19, 1888.

A full attendance of all the members of the Association is earnestly requested, and all sportsmen are cordially invited to attend the meeting and give to the Association the benefit of their observation and experience.

The Association is desirous that some effective method may be devised to secure the passage, by the Legislatures of the various States, of uniform laws for the protection of game and fish, and the appropriation of such sums as will enable us to employ sufficient police force to insure the observance of these laws.

To all observing sportsmen it has become painfully apparent that the day of sport on field or stream will soon be but a reminiscence, unless aggressive protection is speedily adopted.

To the end, therefore, that we may have the wise action that springs from an abundance of counsel, we earnestly ask all sporting journals to publish this call and to urge a full attendance.

Full information touching the objects and purposes of the Association will be furnished on application to Capt. H. C. West, Secretary, Post Office Box 699, St. Louis.

The secretary will also receive and receipt for dues of members and for all contributions in aid of the Association.

We are authorized by J. G. Schaaf, Secretary of the Missouri State Sportsman's Association, whose address is this city, to state that their annual convention will be held at the same time and place, and that visitors to both conventions will be entertained by one of our local clubs with a five-days' shooting tournament, two and one-half days of which will be open to the world.

W. C. JONES, President.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

THE "CRANESBACK."

ABOUT seven years ago Dr. J. C. Merrill published in these columns a most interesting note on the "Cranesback." This, according to the Crows, from whom Dr. Merrill derived his information, is a small water bird, probably a grebe, which is said to perform its migrations on the back of the sandhill crane.

Shortly after the publication of this note, we alluded to Dr. Rae's observations in the far North, which credited the Crees with a similar story of a small finch-like bird which migrates on the backs of the wild geese. Bearing on the same point is a note by our lamented friend, J. C. Hughes, who found a young sandhill crane unable to fly, under circumstances which pointed strongly to its transportation on its mother's back.

In a recent number of the London *Field*, the well known naturalist, Dr. J. E. Harting, calls renewed attention to this widespread belief among people, civilized as well as savage, and brings together a great deal of interesting matter bearing on the point in question. He says:

"At a recent meeting of the Linnean Society, Dr. John Rae, the well known Arctic traveler, read a paper relating to the birds and mammals of the Hudson's Bay Territories, and in the course of his remarks referred to the assertion of the Cree Indians, both at Moose and York Factory, that a small passerine bird, which was pointed out to him, but the name of which he has forgotten, habitually avails itself of the Canada goose when migrating to get a lift in the same direction, they having frequently seen it fly off from a goose when shot, or shot at, on the wing. All the coast Indians of Hudson's Bay, says Dr. Rae, devote a month or more every spring to shooting wildfowl (chiefly geese), the birds killed forming their entire food for the time. As soon as the geese begin to arrive, the Indian constructs a concealment of willows and grass, usually near a pool of open water, at the edge of which he sets up decoys. When geese are seen approaching, usually flying at a great height, the Indian imitates their call, and the geese, on seeing the decoys, circle round, gradually coming lower down until within shot, when they are fired at. It is from these high flying geese that the small birds are seen to come. If the geese are flying low it is a pretty sure indication that they have already rested on the ground, somewhere near, after their long flight, when of course their tiny passengers would have aligted. The Indians on the shores of Athabasca and Great Slave Lakes—both great resorts of wild geese—and those living on the Mackenzie River, more than 1,000 miles to the northwest of Moose Factory, tell the same story, and from the positive statements which were made to him on the subject Dr. Rae saw no reason to doubt the assertion. So far as he could ascertain, the Canada goose is the only species in North America which thus acts the part of a locomotive, and conveys small passengers from place to place; but in Europe and Africa the common crane and the stork have on every respectable authority been credited with performing a similar friendly office.

"Dr. Lennep, in his 'Bible Customs in Bible Lands,' refers to the many small birds which find their way from Palestine into Arabia and Egypt on the backs of cranes, over lofty mountains and sea, which without such aid it would be difficult to cross. In the autumn flocks of cranes are seen coming from the north with the first cold blast from that quarter, flying low, and uttering peculiar cries as they circle over the cultivated plains. Little birds of different species may then be seen flying up to them, while the twittering of those already comfortably settled upon their backs may be distinctly heard. On their return in spring they fly high, perhaps considering that their little passengers can easily find their way down to the earth.

"In some instances, however, the small birds have been seen to come off the backs of the larger ones, just as the latter were about to alight. An American visitor to the Island of Crete in the autumn of 1878, as related by Professor Claypole, of Antioch College, Yellow Springs, Ohio (*Nature*, Feb. 24, 1881) satisfied himself that wagtails and other small birds cross over from Europe on their southward migration on the backs of cranes; and although on first hearing the statements made, he was extremely incredulous, he afterward, on one occasion, had ocular demonstration of the fact. A fisherman in his presence discharging his flint-lock at a flock of passing cranes, he saw three small birds rise up from among them, and disappear.

"A German author, Adolf Ebeling, writing in the *Gartenlaube*, asserts that he found it currently believed at Cairo that wagtails and other small birds cross from Europe to Nubia and Abyssinia on the backs of storks and cranes, and details the result of conversations which he had with several independent witnesses, all testifying to the same thing. He then proceeds: 'At supper, in the Hotel du Nill, I related the curious story to all present, but, naturally enough, found only unbelieving ears. The only one who did not laugh was the Privy-councillor von Heuglin, the famous African traveler, and, excepting Brehm, the most celebrated authority of our time on the birds of Africa.' On asking his opinion, he remarked, 'Let others laugh, they know nothing about it. I do not laugh, for the thing is well known to me. I should have made mention of it in my work, if I had had any personal proof to justify it. I consider the case probable, though I cannot give any warrant for it.' 'My discovery, if I may so call it (continues Herr Ebeling) I would have kept to myself, even after Heuglin had thus expressed himself, had I not since discovered a new authority for it. In the second edition of Dr. Petermann's great book of travels I find the following: 'Prof. Roth, of Munich, related to me, in Jerusalem, that the well-known Swedish traveler, Hedenborg, made an interesting observation on the island of Rhodes, where he was staying. In the autumn, when the storks came in flocks over the sea to

Rhodes, he often heard the notes of small birds, without being able to see them; but on one occasion he observed a party of storks just as they alighted, and saw several small birds come off their backs, having been thus evidently transported by them across the sea.'

"In the face of such testimony, then, as that above mentioned, and the admission of his belief in the story by so experienced an ornithologist as Heuglin, the conclusion seems inevitable that there must be some truth in it, and it has received some confirmation from a singular observation since made in England. Mr. T. H. Nelson, of Redcar, writing to the *Zoölogist* for February, 1883 (p. 73), reports an occurrence related to him by an eye witness, Mr. Wilson, the foreman on the South Gare Breakwater, at the mouth of the Tees, which bears directly on the question at issue.

"On the morning of Oct. 16, fine and cold, wind northerly, Wilson was at the end of the Gare, when he saw a 'woodcock owl' (short-eared owl) 'come flopping across the sea.' As it came nearer he saw something between its shoulders, and wondered what it could be. The owl came and lit on the gearing within 10yds. of where he was standing, and directly it came down a little bird dropped off its back and flew along the Gare. He signalled for a gun, but the owl saw him move, and flew off. He followed the small bird, however, and secured it, and on taking it to the local bird-stuffer for preservation, learned that it was a golden-crested wren. To see its irregular, and apparently weak, flight in passing through the air on a stormy day, it would never be supposed that so tiny a creature as the golden-crested wren would attempt to cross the sea, or would succeed in doing so if it tried. But that it travels to and from the Continent in spring and autumn is a fact which has been well ascertained by many competent observers. On the coasts of Yorkshire and Lincolnshire, says Mr. Cordeaux, the autumnal migration of the gold-crest is as well known as that of the woodcock, and from its usually arriving just before that species, it is known as the 'woodcock pilot.' The North Sea fishermen assert that these little birds often alight on their boats, and in foggy weather perish by hundreds. The same thing has been observed by Mr. E. T. Booth off the coast of Norfolk. There is, then, nothing so improbable as might at first sight appear in a gold-crest crossing the North Sea and alighting tired on the broad platform afforded by the expansive back and wings of a short-eared owl traveling at slower speed beneath it. At any rate, the fact remains that the gold-crest was seen to descend from the owl's back when the latter alighted, and its identity was placed beyond doubt by its subsequent capture. There is, verily, in heaven and earth much that is still undreamed of in our philosophy.

"J. E. HARTING."

POST-NUPTIAL MIGRATION.

SOME of your correspondents, and those who are looked up to as authority, seem to ridicule the idea of the separation of the mallard drake from the duck during the season that she is caring for the young brood. My observations have resulted in a belief that they separate, in some climates at least, the males going further north when the chosen resting place is not in a cold latitude. My knowledge of natural history and scientific terms is limited. I have no Latin names to spread on this page in showy italics, but the time I should have devoted to books was spent in communion with nature and in the study of the habits of beasts and birds. So, when I tell you why I believe what I assert, you may draw your own conclusions.

When a boy of twelve years I lived upon the shores of a lake that was the home of all kinds of ducks in winter, and its border was the nesting ground of the mallard. So numerous were the nests of this variety of ducks that I gathered forty dozen eggs at one time and shipped them to market. I shipped them by an ox team, as that slow and uncertain means of transportation was the best afforded at that stage of the country's civilization. I committed that crime but once, however, partly for the reason that the remuneration was small, and partly because the incipient honor of the sportsman began to develop about that time. I had become owner of a three-dollar single-barreled muzzleloader, and in fact the two dollars netted from the egg transaction was invested in that gun. I began to shoot ducks, or rather drakes.

One week later incubation was fairly under way, and I frightened ducks from feather-lined nests wherever I walked. How they limped and flapped before me! But imagine my surprise when I discovered not one drake or greenhead on the lake. At some time in the day the ducks would swim about, and their *quack, quack* was heard as usual, but the flat bass of the drake was heard no more. His green head could not be seen, nor could his distinguishing voice be heard. In short, the drake of the mallard species was conspicuous by his absence. I have noticed the same animal disappear many times since. When the female takes permanently to setting, they go.

The same trait of character is observed in one of the many species of the grouse. I am not able to distinguish the family by its Latin name. It is a blue grouse and a mountain grouse, but even my limited hunting ground is the home of three varieties of blue grouse. Well, this species hibernates in the pine forests some 4,000ft. above the sea. He leaves his cold gloomy forest shade in the spring with his chosen mate, and helps her find a place to deposit her eggs in the grass of some rocky cañon where there is a little water trickling over the boulders in the shade of servia bushes or haw trees in reach below. While the female hovers the eggs, in constant danger of coyotes, lynx and foxes, the proud old cock goes back to seclusion and safety, and sits night and day in the solemn murmuring pines. When the downy brood of a dozen comes forth, the mother still guards them from dangers and shelters them from storms without the help of the lazy mate. Before the brood was large enough to fry I have been without meat, and have hunted for the male grouse, preferring to go hungry rather than murder the mother, but never could find him. That caused me to investigate and study his habits, with the result that I discovered them to be as set forth above, and I have demonstrated the facts in many ways in later years. Our prairie chicken, the English of whose name is the meadow grouse of the Columbia, has the same habit to the extent that whole flocks of males retire to places of safety and seclusion, and remain very quiet during the season of incubation and while the young ones are too small to fly.

The moose, elk and deer have a season of sulky moodiness or unsociability. The time in which the males of these animals do not offer protection to the female is in the early winter. Where is the hunter who has not seen from two up to a herd of bucks go bounding away without a doe among them? The grandest sight I ever witnessed was a migrating drove of buck elks on the lava plains of Idaho crowding down from the deep snow, with great antlers glistening in the sun above every head. I counted over 200 and not a doe among them.

ROXEY NEWTON.

BOISE CITY, Idaho.

BIRD NOTES FROM CANADA.

Editor Forest and Stream:

Old King Hiems having released his grasp, the spring wave of bird life has set in, though the snow still covers the ground. I saw yesterday, about 3 P. M., on looking down from Dufferin Terrace, an immense flock of white geese winging their flight, in spite of the northeaster then ruffling the St. Lawrence, toward the marshy flats of St. Joachim, known to gunners as *les Battures Plates;* from thence these hardy tourists, probably fresh from the Bahamas or bayous of Florida, cross over daily to the Dune at Crane Island, occasionally prolonging their outing as far as Seal Rocks—*Battures aux Loups-Marins*—opposite St. Roche des Aulnaies. The *outardes* or Canada geese made their appearance on these famed feeding grounds at the end of March. Goose Island, Kamouraska, Isle Verte and Rimouski are also favorite resorts for *outardes* in spring and fall. The markets are well supplied.

Several of our spring birds put in an appearance this week only, such as the robin, Wilson's snowbird, the song sparrow and the purple finch. The latter is occasionally seen here in winter, and about the 20th of March for some unaccountable reason hundreds invaded my domain at Sellury, and seemed much distressed for want of food, sitting on the house steps and crowding in an ashpit, where the kitchen refuse is thrown in winter. They were accompanied by about one hundred pine grosbeaks, who devoured greedily the frozen crab apples I had left last fall for their winter supply on the trees in my front court. Strange to say, there was scarcely one red one among them. The red ones are supposed to be the old males.

On the 25th of October last my garden for a whole week was overrun with robins and hermit thrushes, busily stripping some mountain ash trees of their crimson fruit. The hermit thrush is a delightful songster. His metallic flute-like notes are sweeter though less loud than those of his European cousin, the Irish thrush. In ordinary years they stop here on their fall migration, one by one. Never yet for the last twenty-eight years that I have been located at Sellury have I witnessed such an invasion.

More anon. J. L. LEMOINE.

SPENCER WOOD, The Grange, near Quebec, April 20.

COL. PICKETT'S ENGLISH SNIPE.

THROUGH the kindness of Major H. W. Merrill we are permitted to print a portion of a letter from our correspondent "P.," dated Mee-tee-tse, Wyo., Feb. 29. He says: "I wrote you in the midst of that cold snap, Jan. 7. The minimum for each twenty-four hours after that date were as follows: —34°,—38½°,—11°,+2½°,+9°,—40°,—46°,—41°,—33°,—8°,+8°,+25°,—31°,—6½°, and then the cold appeared to let up. During the cold days there was no wind to speak of. With these temperatures and a 'blizzard'—that is a north wind of thirty to fifty miles an hour—no animal life could long stand against if exposed to it.

"Well, my jack snipe went through it all splendidly. After the cold let up and during most of the snap I saw them almost daily. When the weather became warm and pleasant they disappeared for more roomy quarters I inferred. Since Jan. 22 we have had a most delightful spell of weather; days warm and pleasant, and the snow entirely disappeared, except on the high mountains, and very little there. Having missed the jack snipe and knowing they must be at some of the open springs, and knowing of some of the open springs on my neighbor's ranch below on Hellroaring River, one pleasant day, Feb. 15, I took my .32cal. along to kill a jack rabbit, on which to feed two staghound puppies that I am raising, and walked down three miles to my neighbor's ranch. After dinner I walked up a mile to look after my snipe. On reaching the springs, *scaipe, scaipe, scaipe,* etc., up flew six snipe, all of them giving tongue except one. There may have been more, for they flew up so fast that I may have missed counting one or two. If six flew up from one locality there were probably more, as there was more open water in Four Bear Creek near by.

"Although this winter has been much colder than last winter, there has been no snow to speak of and a great deal more sunshine, and there have been a great many more open springs. A few days ago on going up through the cañon of this river, at an open spring branch I saw a water wren that, with the jack snipe, should have been on the Gulf. On Feb. 15 I saw a pair of mallard ducks that had evidently wintered near."

A RAINBOW BY MOONLIGHT.

IT was on the 16th of October, 1886, that, rising at an unusually early hour (about 4 o'clock), as a member of the family wished to make an early start to a neighboring city, I chanced to glance out of the open doorway, when I beheld a scene which held me spellbound with wonder and admiration, and which will remain indelibly stamped upon my memory so long as memory lasts.

The splendid harvest moon, with its attendant stars, was slowly descending toward the western horizon; dark clouds filled the eastern sky, from which a bright mist was falling, while over the shimmering river, and towering high above the dark wooded hills, till its apex rested among and illuminated the very clouds above, a magnificent arch had been erected—a rainbow, clear and distinct, yet with colors infinitely more soft and beautiful than any seen by the light of day.

The entrancing beauty of the scene held me spellbound, as it were, till at length realizing that I was selfish in my enjoyment, I aroused the sleeping household, that they might witness a scene the weird splendor of which it is impossible to describe, and which I cannot hope to ever see again. VIOLET S. WILLIAMS.

AN INDIAN PRAYER.—In the April number of the *American Anthropologist* Dr. Washington Matthews gives us the prayer of a Navajo Shaman, or Medicine Man. This contribution to our knowledge of aboriginal faith is a most interesting one, especially because it bears internal evidence of its purely heathen origin, for too many of the so-called religious myths of the North American Indians are mixed up with Christian teachings, and so corrupted that but little reliance can be placed on them. This prayer, which Dr. Matthews's informant stated to be the most potent prayer he knew, is very long, but is so full of iterations that it contains only about one hundred Navajo words. A glossary of these accompanies the paper, which is of extreme interest.

MAINE LARGE GAME.

MOOSE and deer in Maine (with the exception of Aroostook county) have wintered well, and fewer have been killed than in the five years past. Notwithstanding the numerous reports of great slaughter, when we come to investigate most of them prove to be unfounded, except as mentioned above. These reports are circulated by those unfavorable to the law, who wish to make it appear that the laws are not enforced and of no benefit.

The fact is, there are more deer in Maine to-day than there has been at any time for fifty years past. Moose are scarce, but are increasing. Deer are very plenty at this place, where I live. Five years ago they were unheard of. In the Rangeleys the laws have been well observed. People there have learned to know that a live deer is worth more to them than a dead one. Some deer and one moose have been taken alive, mostly by parties who thought they had a right to do so. They have been turned loose, or will be as soon as the snow settles, so it will be safe to let them go. The moose is now at Eustis, but will be liberated at the proper time.

In Aroostook county considerable poaching has been carried on near the border. Owing to its remoteness, difficulty of access and want of means we have not been able to protect that locality as it deserves. We have sent two of our wardens down there, who have just returned. They seized thirteen moose hides and got evidence against fourteen parties, who will be prosecuted at once.

On the whole, the outlook for fish and game in Maine looks well. All we require is an appropriation sufficient to stock her waters and protect her forests, which I think the next Legislature will give us. HENRY O. STANLEY.

DIXFIELD, Me., April 14.

BRANT SHOOTING ON LONG ISLAND.

THREE of our fowlers have just returned from a brief visit to the south side of Gardiner's Island, where they enjoyed good sport. They killed fifty-two brant and several black duck and shelldrakes. Indeed the sport there was better than we have usually found it at Montauk, some ten miles distant.

Perhaps the noblest fowl and the one that affords the best sport along our coast is the brant. It does not pass into fresh bays or brackish rivers, but confines itself to the seaboard and to strictly salt waters, where it gathers its food.

In early November it makes its appearance in the south bays of Long Island and is there at times killed in considerable numbers. We are not aware that it frequents Long Island Sound, or is very abundant at Montauk. In many years of coot shooting on the New England coast we have not met with it and conclude that it passes wide out to sea in its migrations and first falls in with the land on the south side of Long Island and there stops for rest and food. They are shy of passing over a point of meadow, so that the battery gunner, concealed in his box far out on the waters, surrounded by his decoys, has great advantage over the fowler who shoots from some point of the shore. It is a bird that easily falls to shot and does not escape by diving. It feeds only on bars at low tide, its chief food being a green-leaved plant called the sea cabbage, but it also feeds on the long ribbons of seaweed

The first flocks that arrive remain but a few days, and then, collected in large flocks, they rise high in air, and after describing some wide aërial circuits, they strike out in a direct course over the sea, avoiding all projecting points of the coast, and traveling night and day. They are soon succeeded by other flocks, many of which remain with us until the severe weather of late December compels them to a Southern flight. Yet the coot, old squaw, shelldrake and whistlers seem to have been here through all the past severe weather, and have been killed in our bays in great numbers among the ice openings, where the ice itself had formed to the depth of 6 or 8in.

There are several good points on the coast for brant shooting, but perhaps the best one is at Cobb's Island, on the Virginia coast, some dozen miles north of Cape Charles. Mr. Cobb was an old Cape Cod gunner and fisher, who chanced years ago, before the war, to hit upon the little sandy island which now bears his name, and finding it to be an excellent spot for fowling, purchased it for the small sum of $100. He has since greatly improved the place, putting up large buildings for accommodation of city fowlers. Great numbers of bog snipe and of brant and black duck are killed there. We have had rare sport in fishing and shooting in and around the broad waters that lie between the island and the mainland, living only at the latter place.

Brant resort in good numbers to Shinnecock and South bays of Long Island, and in the southeast, deep salt waters of Jersey; but we have seldom seen them in Barnegat Bay, the water being too brackish to suit them.

The breeding place of the brant is far in the north, and they are said to be common in Hudson's Bay. They there breed in thick, inaccessible swamps, like the geese, where they are beyond reach of the guns of the white man and the Indian shooter. ISAAC MCLELLAN.

GREENPORT, L. I.

YELLOWSTONE PARK PETITION.

WE continue this week the publication of the list of signers of the petition to Congress for the preservation of the Yellowstone National Park. The list will be continued in succeeding issues.

THE PRESS ON THE PARK.

WE fully sympathize with the efforts being made by the editors of FOREST AND STREAM to secure Congressional legislation for the preservation of the Yellowstone National Park. The petition which these public-spirited gentlemen are sending out to those who will secure signatures to it, appears elsewhere in this paper. The allegations of this petition furnish ample reasons why the protection asked for should be granted by Congress. Should the destruction of the forests of this wonderful region be permitted, the water supply, the fruitfulness of the soil and the habitableness of 600,000 square miles of territory will be endangered. We may not reasonably argue that our remoteness from that vast territory of our common country whose welfare seems to depend upon the preservation of these forests will excuse us from concerning ourselves about this matter. While the destruction of the natural protection of the sources of important streams which flow through a large section of country might not directly affect us—though this is even by no means certain—it would surely affect us indirectly, and it is therefore a matter about which we cannot afford to be indifferent. In addition to this, we are interested in the preservation of the various species of large game in this country, some of which species have nearly become extinct, and which are said to have found a last refuge in this park. If we are not interested in this matter as sportsmen, then we are inevitably interested as friends of natural science. * * * It is not only our interest, but in some sense our duty to aid by the use of such influence as we may possess in the preservation of every species of useful animal and bird that the Creator has placed on earth. This tract of the public domain, the protection of whose forest and game Congress is asked to secure by suitable legislation, has been set aside as a National Park, and every citizen in the country actually has and should feel an interest in it.—*Newcastle (Pa.) Record.*

CINCINNATI, March 14.—*Editor Forest and Stream:* Send me more blank petitions for distribution throughout the State. There never was a country on earth so blessed in the richness of forests, fish and game as this country has been; and there never was a country so willfully, criminally wasteful of its wealth in that regard as this country has been and continues still to be. Some day it will cost the Government more money to replace this reckless waste in the present than I would dare put into figures now. The very fact that it is necessary to urge by petitions from the people the passage of a bill whose title alone should insure the immediate attention Congress shows that the same indifference to this momentuous subject which has heretofore prevailed still prevails at Washington. It is shameful! No other word can properly characterize the neglect of this great interest. There is no class of citizens who are not concerned in this matter. There seems to be an impression that it is for the benefit of sportsmen alone and a consequent desire to relegate it to them. Not so. Every man in the community is interested. It is a question of national pride, of preservation of natural scenery, combining many of the greatest natural wonders of the country, of preservation of the great game, of life, of beauty, of health-giving refuge, of a national resort, which can be fostered and developed until it becomes a wonder among nations.—GLOAN.

The question is one that interests not alone the tourist and the naturalist; the farmers of the vast section of country which is now dependent upon the Yellowstone for its water supply are directly concerned as to the preservation of the existing forests. Every tree cut down by thoughtless hunters in its fall strikes an indirect blow at the interests of posterity, and therefore it is well that the continuance of the beneficence of the public domain, known as the National Park, should be insured by a law which shall provide for its patrol by keepers or foresters. This movement should also receive the support of all those who deplore the extinction of the game animals which once roamed the western prairies and inhabited the forests of that section. Yellowstone Park now affords the only retreat for the animals that are being ruthlessly slaughtered, and if foresters and game keepers are soon placed in charge of the Park the different species not yet extinct will have an opportunity to multiply and in a measure re-populate the surrounding country. Congress should not fail to give early attention to the matter. Every year of delay is an extension of the implied permit to thoughtless hunters to slaughter game and fell trees at will. And if the game animals which yet exist despite the rapacity of the huntsman are to be protected from extinction, the strong arm of the law must soon be interposed.—*Evening Wisconsin.*

This movement for the preservation of this Wonderland of America comes not one day too soon. We fear it will be too late. The most desirable parts of the land west of the Missouri is being gobbled up by wealthy foreigners, who come here for the hunting season as they go to the highlands of Scotland or the moors. Slowly but surely our own people are losing the most beautiful and picturesque parts of their domain. Niagara has been made the property of the Government to protect it from the Goths and Vandals, and now let the whole country demand in no uncertain tones that this magnificent part of our country be preserved to future generations just as it came from the hands of its Creator, and in its entirety. Let the work be done at once, for surely in this case delays are dangerous. Millions of tourists go to Europe to see the beauty and grandeur of Switzerland, and are well repaid, while right here in our own country are grand mountainss, wonderful geysers and beautiful scenery which cannot be surpassed in all the wide world. Congress will take the necessary steps to preserve all this if there be a sufficient interest shown by the people. The FOREST AND STREAM has done this country much service already, and if through its efforts this Wonderland of America can be secured to us and our descendants forever, it will be the crowning effort of its worthy endeavors.—*Green Bay (Wis.) Advocate.*

The forests of the Park conserve the headwaters of numerous streams which serve to irrigate and fertilize 600,000 square miles of agricultural territory. It is therefore very important to preserve these forests for that reason if no other. But the Park is also the last refuge of many specimens of American large game, which have elsewhere become nearly extinct, especially the buffalo and elk. The Park also contains a magnificent array of natural wonders and splendid scenery, which ought to be cared for and protected from vandalism and money greed. There are several railroads knocking at the doors of Congress for permission to desecrate this beautiful territory with these destructive agencies, and a horde of plunderers are with difficulty restrained from appropriating all its attractions and destroying the last remnants of the noblest specimens of American game. These considerations should interest thoughtful men, and a public pressure should be brought to bear on Congress to enact the necessary laws for the preservation of the National Park.—*Memphis Avalanche.*

The Forest and Stream Publishing Company, New York, have inaugurated a movement, in the form of petitions from all parts of the country, asking Congress to enact a law for the preservation of this Park. The effort should have the cordial support of every citizen. If we can save the original forest and splendors of any considerable body of land, by legislative care and protection, Congress should without delay enact such laws as are necessary to protect this famous national Park from destruction.—*Jackson Daily Patriot.*

Call at the office and read the petition and we know you will sign it, as a matter of course. Don't delay, but come at once, and help by your signature to rescue this magnificent piece of nature's handiwork from the rapacious grasp of the spoilers who have already stolen so many millions of acres of the people's most valuable land.—*Shenandoah.*

The possibilities of the Yellowstone National Park as a pleasure resort are indeed great, but now is the time to be surrounding it with the amplest protection. It is indeed astonishing how soon the most favored locations for such purposes are shorn of half their beauty when

once civilization sets in. Those who have an idea that the great West is practically boundless, will find if they trace the progress of clearing up and settling every year that about the last thing the average settler thinks of is how to secure the greatest amount of attractiveness along with profit. A pioneer has generally no time to be æsthetic. It is for the Government, and for the Government alone, to preserve this beautiful domain in such shape that no matter how many greedy eyes may be cast upon it, it shall remain intact.—*Auburn (N. Y.) Morning Dispatch.*

The lawless trespassing that is going on continually in the Yellowstone Park, resulting in great injury to this splendid national pleasure ground, cannot be too strongly condemned. Stringent measures should be adopted by Congress providing for the severe punishment of the vandals who are waging a war of extermination against the rare species of large game, now in their last places of refuge. We heartily indorse the movement begun by the FOREST AND STREAM—the petitioning of Congress for the enactment of a law protecting and preserving the Yellowstone Park.—*Greensburgh (Pa.) Evening Press.*

SCHULTZE POWDER EXPERIMENTS.

Editor Forest and Stream:

Since the introduction of Schultze gunpowder to the shooting public of the States, I have inquiries from several correspondents as to the behavior of Schultze in the gun barrel as compared with that of black gunpowder, the points upon which information has been asked being, how is it that with an acknowledged slower ignition with the Schultze and a less pressure in powder chamber, the velocity is yet superior to that given by black powder, and also, is Schultze suitable for rifles? And I have been asked to reply in your columns. This I propose to do with your kind permission. The behavior of the two kinds of powder in the gun barrels can be best exemplified by the following experiments:

A 12-bore barrel 30in. long is pierced with holes situated at 1in. and 2¾in. from the breech, *i. e.*, just in front of the powder charge and just in front of the shot charge. In these holes are fitted movable plugs which are connected electrically with a chronographic arrangement for registering minute intervals of time, the registering taking place as soon as the plugs are moved outward by the internal pressure of the gas in the barrel. Electrical connection is also made at the primer, registering the moment the primer is struck by the striker: also a similar connection is made with the trigger, registering the moment the impulse of discharge is given to the trigger. Lastly, electrical connections are made at the muzzle of the gun and at the target, distant 35yds. from the muzzle, giving the moment of time when the shot arrives at the muzzle of the gun, and again when (by specially constructed target) the body of the charge of shot reaches the target. The different stages being (1) trigger to cap; (2) cap to first development of pressure sufficient to start the charge; (3) this again until the charge is fairly started and the pressure is developed at the end of the chamber; (4) the travel down the barrel; (5) flight of shot from muzzle to target; (6) total from pull of trigger to arrival of shot at target at 35yds. range. The experiments were made with Curtis & Harvey's black diamond grain, and Schultze, in shells with weaker and also with stronger primers, the weaker being Eley's ordinary and the stronger Eley's "large cap" shell. The results obtained are tabulated as follows, charge 3drs. powder, 1¼oz No. 6 chilled shot, 270 to ounce:

Kind of powder.	1. From pull on trigger to striker on primer.	2. From striker on primer to ignition of charge.	3. From ignition of charge until shot is clear of chamber.	4. Time of travel down the barrel.	5. Time from muzzle to target, 35yds	6. Total from pull of trigger to target.
	Sec.	Sec.	Sec.	Sec.	Sec.	Sec.
C. & H. black No. 2.	.00220	.00158	.00063	.00169	.11110	.1172
C. & H. black No. 4.	.00220	.00209	.00137	.00204	.11600	.1237
C. & H. black No. 6.	.00220	.00255	.00160	.00215	.12160	.1301
Schultze weaker primer.	.00220	.00366	.00192	.00202	.11540	.1252
Schultze stronger primer.	.00220	.00214	.00175	.00199	.11549	.1235

Remarks—1. The time from trigger to cap is variable under different circumstances with different guns and different shooters, but in this series the circumstances were constant and the time constant throughout.

2. These times show very clearly the effect size of grain has on the speed of ignition of black gunpowder, also how much more slowly Schultze ignites with a weaker primer than when used with a stronger primer.

3. These times show the relative speed of the continued combustion after the first ignition, and it is noticeable how Schultze gives slower time, until clear of the gun chamber.

4. When fairly ignited however Schultze sends the shot down the barrel rather more quick that No. 4 black, producing at the muzzle therefore a better velocity.

5. The mean velocity in feet per second corresponding with these times is in the several instances: Black No. 2, 945; black No. 4, 905; black No. 6, 863; Schultze, 910.

6. The total gives a fairly average time from the impulse of the finger on the trigger until the range of 35 yards is reached by the body of the charge. The slower ignition of Schultze in the powder chamber naturally produces a lower pressure strain on the gun chamber than does black No. 2 or 4. The combustion is continued further up the barrel and the strain is more equally distributed. My own experiments show these pressures to stand at the highest point in the following ratio, taking Schultze as standard: Schultze, 1.000; black No. 2, 1.795; black No. 4, 1.094; black No. 6, .855. Messrs. Curtis & Harvey publish as the results obtained by their experiments: Schultze, 1.000; black No. 4, 1.112; black, No. 6, .905.

An average of these figures would give probably a fairly accurate estimate of the actual relative pressures in a 12-bore gun with 3 drams powder and 1oz. No. 6 shot. How then, with a slower igniting powder like Schultze, and giving less pressure, is the excellent penetration and velocity obtained? From two causes, Schultze gives off considerably greater volume of gas charge for charge than does black, roughly speaking in the proportion of 3 to 2. This would in itself, other things being equal, give an abundantly greater velocity than black, but it is modified by the fact that the temperature of combustion of Schultze is considerably lower than that of black, and by the laws regulating the expansion of gases, the gas from Schultze being at a lower temperature does not occupy the same volume that it would were it at the temperature of combustion of black.

The gases from Schultze, therefore, not depending so much upon heat for their volume, lose less volume in comparison by expansion in the barrel of the gun, and retain throughout a greater proportion of their original force. In short, with Schultze the abundance of gases given off in combustion and the lower temperature at which they are evolved, enable the work to be done with a less initial pressure, and a more equal pressure in the barrel.

Another cause helping to the same result is the amount of solid residue given by Schultze as compared with black, the latter having to project a large portion of its own weight from the gun as solid matter, which virtually adds to the weight of the projectile and diminishes velocity, while Schultze, giving a residue of only 10, as compared with black, 52, has less work to do and is able the better to do what it has to do.

To insure the best results with Schultze it must be used with a fairly strong primer, and though not heavily rammed, must have the first wad well and firmly seated upon it; this wad should fit tightly to the shell, the crimping should be sufficient to make a firm, compact cartridge; and, finally, the gun should be held straight.

Schultze in rifles is not recommended for large calibers, it gives excellent shooting in all calibers up to .400, but beyond these it has not done perfectly in Express rifles, nor does it seem to answer so well in the bottle-neck chamber as in the straight chamber. It is manufactured with a view to meet the requirements of the sporting gun, and is not generally recommended for the rifle, though for smaller calibers it is very useful, and the very slight report produced by Schultze is a great advantage. The only point to notice in loading for rifles is that the bullet should be held by a tight crimp in the case so as to insure the initial resistance necessary to the development of the best qualities of Schultze gunpowder.

R. W. L. GRIFFITH,
Superintendent Schultze Gunpowder Co.

EYEWORTH LODGE, Lyndhurst, Hants.

DAYS AT CADDO LAKE.

A WRITER in one of the back numbers of FOREST AND STREAM speaks of northern Louisiana as "a hunter's paradise." Audubon considered it such in his time, and such it remains to the present day.

Not long since I spent a winter among the lakes and bayous of the Red River country in northwestern Louisiana and northeastern Texas, and I have never found a country more richly deserving the above title. I look upon that winter as one of the red-letter seasons of my life. Having Shreveport as headquarters, lakes Bodeau and Bistineau were within easy reach on the east, and lakes Soda and Caddo on the west. These, with innumerable other smaller lagoons and bayous, furnished all the wildfowl the gunner could desire for winter's sport, while the pine woods and bottom lands afforded deer, turkeys, squirrels, quail, etc., whenever his taste turned in that direction. During the two months following Nov. 15 there were only three days cold enough to inconvenience the camper. There were several rainy days during the latter part of the time. But otherwise the weather was all that could be desired.

With my partner, Jo W., and accompanied by a trusty gentleman of African descent, provided with boat, tent, etc., I made my first camp for the winter on Caddo Lake. Of the sport we had there I will give you a few incidents.

On the north side of Caddo Lake there is an island containing probably one hundred acres, covered with high grass and dotted with clumps of pine timber, which we found to be a favorite hiding place for deer. The island is separated on one side from the mainland by a narrow strip of shallow water. One morning Jo and I went to this island and Jo secreted himself on the mainland where the water was narrowest, while I went round to the opposite side of the island and began to beat up the cover toward him. When about half way across the island, I saw ahead of me the white tail of a deer going toward the neck, and soon after two more broke cover on the side of the island, and swam to the mainland without going to the neck. Soon I heard the report of Jo's gun, and when I reached the neck he had a fine deer ready for the boat. Several mornings after we went back, Jo doing the driving, while I took the stand. Four deer ran off the island, and took the water some distance to my right, but I succeeded in getting within shooting distance just as the last one reached the bank, and stopped him.

One morning we were on a long point of land running out into the lake. The ducks in flying from one feeding ground to another were apt to pass over this point. Jo had a blind under a clump of brush on one side of the tongue of land, and I one on the other side, while Tom, the darky, stirred up the ducks with the boat. Between early dawn and sunrise we had been having fine shooting and had bagged fourteen ducks. Soon after sunrise, as we were preparing to leave for the camp, we heard shooting and the barking of a dog off to the south of us upon the main land, and soon a flock of turkeys flew off and alighted upon a long narrow island about half a mile to the east of us. This island was probably three-fourths of a mile long, and nowhere more than 200yds. wide and in many places not more than fifty, and covered with cypress and gum timber. The turkeys alighted near the middle of it. We immediately got into our boat and went to the nearer end of the island, where I got out, while Jo kept on to the other end, taking a roundabout way and keeping behind some cypress timber. Then we began to advance toward each other, slowly, secreting ourselves behind trees and bushes as much as possible, and keeping a sharp lookout ahead. I had advanced nearly half the length of the island when, peeping around the spreading roots of a large cypress, I saw the turkeys coming toward me, running as though they had heard or seen something behind them. I waited until they came within range, and then selecting the largest gobbler I fired and rolled him over, and as they rose to fly I cut down another. Jo stopped a fine young gobbler that turned in his direction as it rose.

Ducks and geese were plentiful, and we could get as many as we cared for without decoys, so we used none. Sometimes the ducks arrive in Southern waters before the alligators hibernate. At such times the hunter must do his own retrieving, as a nice fat dog suits an alligator's palate better than almost anything else, and if a dog ventures into the water when they are around, it is a doubtful case if he gets out again. I have known valuable deerhounds to be lost by venturing into the water after deer. But a deer can swim wherever he likes and the alligators do not notice him.

I had read of the anhinga, or snake bird or water turkey, but had never seen it until this winter. It is so shy it is seldom that the hunter gets a shot at one. We saw them at a distance several times, but one day we were on a low island watching for ducks, when we saw a flock of these birds coming toward us. They passed within about 80yds. of us, and we each fired two shots at them and one fell.

I had in my outfit a .32cal. Frank Wesson rifle, which I used whenever practicable. One day we started on foot to explore along the shore. Jo, who was an ardent lover of the shotgun, never used a rifle. Seeing me start out with the rifle, he asked what I was going to do with that pea-shooter. I told him that if he did not watch his corners I would bring to camp more game that night than he did. We started several flocks of ducks, but most of them got up too far away for Jo to get a shot. Soon we saw a single duck swimming a good distance away. I asked Jo why he did not shoot it. He replied that probably he could if it were about half as far off. I shot at it with the rifle and killed it. We found several squirrels, and I got five and Jo three. I shot two more ducks and Jo got four.

As we were returning to camp we saw a white crane standing on a point across a little bay from us. "Ah!" said Jo, "how I would like him for a specimen, but we can't get any nearer without going round the bay, and he will be gone before we get round." I replied, "Let us see what the pea shooter will do in this case." The crane was standing with his back directly toward us, with his head and neck in a line above his body. I steadied the little rifle against a tree and drew a bead upon the center of his back, then raised the gun up along his neck to his head and fired. The crane dropped, the bullet cutting the backbone in two just below where the neck joined the body. It was a long shot, and about as good a one as I ever made.

We spent the time very pleasantly, hunting ducks and geese early in the morning and late in the evening, and roaming the woods for whatever offered sport during the day, or lying around camp, cleaning guns, loading shells and keeping things in order generally. Tom was an excellent camp cook, and we lived upon the fat of the land, bread, coffee, game and canned fruit, with sweet potatoes, eggs and butter procured of the neighboring planters.

LEW WILLOW.

THE GROUSE AND THE SQUIRRELS.

II.

Editor Forest and Stream:

We were awakened in the morning by the din made by the little alarm clock; and, as there was sport ahead for us, the first thing we were interested in of course was the weather. Hastily dressing and going to the door we found that there was not a cloud to be seen; the stars were shining brightly, while over the mountain in the west the moon was just bidding us good night—or rather good morning. The gray streaks in the east were growing brighter, and old chanticleer was waking the echoes of the surrounding hills, from his perch on the barnyard gate. The brook, with its frost-trimmed banks, was humming a merry tune as it rippled and gurgled its way down through the old meadow, while from overhead came the *quack, quack*, of a pair of dusky ducks that were on their way to Long Pond, a mile away. Just then the hired man came in with two large pails full of foaming milk and gave us an invitation to help ourselves. Oh you that spend all of your lives in the city; you that think, when you pay seven or eight cents a quart for poor spoiled water, that you have milk to use, if you could have had one good long pull and a good strong pull at the contents of those two pails, probably you would think as I did and as I remarked then, God bless the country and its products. The city is all well enough for business purposes, but as a rule—eleven months in the year—give me the old farm after all.

Uncle John greeted us cheerily with a cordial good morning and said that he was going over beyond the oak lot after some cider apples, and if we wished we could ride with him and interview the gray squirrels, and then ride home with him on his return. Of course we were only too glad to accept the invitation, so after a good breakfast we started.

"Boys," said Uncle John, "did you ever hunt where birds were so plenty that you did not have to take any aim, but just blaze away as fast as you could load?" "No, of course not. Where and when did such an opportunity ever offer itself?" we asked, knowing that something was up by the twinkle in the old man's eye.

"Well," said Uncle John, knocking his pipe against the wagon tire, "it was a long time ago down on the Cape, there came a fearful storm with high winds, and all kinds of water birds were driven inland, and of course took to the ponds for fresh water. Now, the story was told by old Nickerson and I will tell it to you as he told it, the lesson I wish to teach is to shoot at some particular bird when shooting at a flock or flight of birds. Nickerson said: 'The air was so full of birds that it fairly darkened the earth, and as there were so many of them I loaded and fired without stopping to take aim; then rammed down another charge and fired again straight up into the air; then again I loaded and fired, and loaded and fired, and loaded and fired, and then loaded and fired, and once more loaded and fired until my ammunition was exhausted. After I had fired the old gun until she was so hot that I could hardly hold her in my hands and my head was ready to split open with the deafening shock and report, I began to think I could gather up my game and go home. And now, gentlemen,' said he, 'how many birds of all kinds would you guess I had killed?'"

"Well," said Uncle John, "some of us guessed five hundred, and some more, and some less; and finally I asked him point blank how many there were. 'Well, gents,' Nickerson replied, 'I suppose you would hardly believe it, but the fact is I did not kill a blanked bird.'"

Jack carried a .32-cal. Winchester rifle and I was armed with a 27in. Maynard, using the 10gr. center-fire cartridge. Both rifles were mounted fore and aft with the Lyman sights. The sun was just showing himself above the hill as Uncle John stopped the old horse and whispered to Jack, "See that old partridge on the wall." Sure enough, there stood an old fellow, his ruff glistening in the sun not 20ft. away. As quick as a flash of lightning Jack's old Winchester flew to his face, and there was a grand commotion, for the partridge commenced a war dance all over the roadside. Jack was prepared, and, as I think, jumped out of the wagon, but your humble servant, not being prepared for the sudden forward motion which the horse made at the report of the gun, took a header backwards over the seat and landed in the middle of the road. As soon as I could recover my equilibrium enough to look around, I caught sight of Uncle John just disappearing over the hill, his hat gone, and his bald head shining like a billiard ball in the sunlight, while Jack, with the grouse in one hand and rifle in the other, was holding on to himself as best he could and laughing himself to death as fast as possible. Whether Uncle J. or myself made the most ludicrous picture Jack would never say. We soon came up with the team. Uncle J. was all right, and enjoyed the fun as much as we.

We arrived at the "Oak Lot," and jumping over the wall, we were soon seated and watching for grays. I had been waiting perhaps fifteen minutes, when a movement in the top of a tree close by attracted my attention. Soon there was another movement, then a great thick brush whisked around the tree trunk, and the black, shining eyes of a gray squirrel were looking straight at me with a curiosity equal to a black duck's. I kept still, and he commenced to come down the tree. With his quick, jerky motion he would come a little way, then stop; then perhaps he would run back up a little way, and then return. At last he came to the ground and stood within eight feet of me. I took off my hat and shied it at him. "Now go in peace," said I to him; "if you put as much confidence in me as that, I will no harm you." And away he went over the rocks, looking as he ran as large as a half-grown kitten. A sharp crack, accompanied by the ping of a bullet through the treetops over head, told me that Jack had commenced his work, and that I had better look to my laurels or get beaten, as I usually do when I go shooting with Jack; so in a few minutes, when another gray showed up twenty-five yards away, I telephoned him through the little Maynard, and he came down handsomely with his head split.

We worked out through the woods to the orchard, where Uncle John and the "hired man" were, and then commenced on the red squirrels that were destroying the apples. Jack made a run of twelve without a miss, and then missed a hedgehog slick and clean at forty paces. He felt cheap over it, and so I agreed not to say anything about it. So, for mercy's sake, don't you tell of it, for if he should read this, and he probably will, he might show up some of my shortcomings in the line of marksmanship.

At last the team was loaded with apples and we started for home. Uncle John told us to shoot if we saw any game and he would look out far the old horse; so when another grouse was sighted on an old moss-covered stone I trained the little Maynard on to him and clipped his head for him. The old horse did not move an inch when I fired, the report being very light, and when I jumped out after firing Uncle J. and Jack both roared with laughter. But the grouse was bagged all the same. When we reached the cider mill we ate our lunch and filled up on the new cider which came streaming out through the clean white straw of the "cheese" as the pressure was brought to bear upon it by the lever and screw. It was a beautiful day as ever was seen, but toward night when the dark clouds began to gather Uncle J. remarked, "Well, boys, I guess you will have to hunt ducks to-morrow or else stay in the house and shoot at crows that I have baited down in the meadow."

IRON RAMROD.

SOMERVILLE, Mass.

HOW THE DEER HAVE WINTERED.—Indian Lake, N. Y., April 5.—*Editor Forest and Stream:* It has been a good winter for deer, and a bad winter for crusting deer, unless you had a dog, as there has not been crust enough to stop deer. Not over ten or twelve deer have been killed this winter, where over seventy-five were slaughtered last year. There are more around here now than for five years. The deer-eating dog has been running in the woods all winter. I saw where dogs had killed a young doe last week, and eaten half of her up. The owners of hounds let them run loose and kill deer in the winter in order to get them used to it, so that they will run deer in September and October. I saw the first bear track March 28. Snow three to four feet deep in the woods.—PETE.

A CATALOGUE OF PHOTOGRAPHS.—To those of our readers who have traveled in the West, the catalogue of photographs recently issued by F. Jay Haynes, of Fargo, Dakota, will be very interesting. They cover a range of territory extending from the Mississippi to the Pacific Coast, range in size from great 18x22in. prints down to stereoscopic views, and include in their subjects everything from the Grand Cañon of the Yellowstone down to an Indian pony. While the greater part of the thousands of negatives show the scenery of the Rocky Mountains, the Geysers of the Yellowstone Park and the beauties of the Columbia, there are numerous hunting scenes and portraits from Indian life. The man who has hunted or fished or traveled in the West ought to have some of these views, for after all there is nothing that brings back scenes long past like a picture.

A GOOD BAG.—Boston, Mass., April 16.—*Editor Forest and Stream:* I went in to see the birds, a party of five gentlemen, belonging to the Boston Trade Club, got off Nantucket last week. They consisted of 59 brant and about 25 shelldrake and eiders, etc. Is not this a remarkable score for less than a week's shooting? A gentleman belonging to the Chatham Branting Club said it was more brant than they had killed in their spring shooting up to date.—G. W. S.

MASSACHUSETTS GAME LAWS.—An amendment to section three of chapter ninety-one of the Public Statutes of Massachusetts has been proposed in the Legislature, which authorizes the arrest without a warrant of any person actually engaged at the time of such arrest in violating any of the fish or game laws of the Commonwealth.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION held its monthly meeting at the Tremont House on Thursday evening, April 12. Ten members were elected and proposed. The committee on legislation reported that their several petitions to the Legislature amending the game laws had been reported on adversely.

A BAD DAY FOR THE FOXES.—Oxford, Me., April 6.—*Editor Forest and Stream:* On a recent hunting trip, John Rowe, of Poland, Me., D. P. Eaton, Wm. Oliver and L. A. Edwards captured nine foxes in one day. John Rowe shot eight and Edwards shot one. This breaks all fox hunting records in this locality.—JOSH JEEMS.

WOODCOCK HATCHING.—Cumberland Valley, Pa., April 19.—The wet season has somewhat delayed the woodcock in their hatching, the first eggs being mostly destroyed, but now the settled weather finds them fully employed in their domestic duties.—ROBERTS.

NEW JERSEY GAME LAW.

THE Governor of New Jersey has signed the bill dividing the State into two game districts. This changes the laws governing shooting in that State, as will be seen by the text of the bill, which we print below:

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That the several counties of this State be and the same are hereby divided into two sections, to be known as the "northern and southern game sections."

2. And be it enacted, That the north game section shall comprise the counties of Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren; in the counties comprising the northern game section, as named in this act, no person shall take, kill, or have in his possession after the same has been killed, any woodcock, quail, gray squirrel or hare, commonly called rabbit, except only between the fifteenth day of October and the twenty-fifth day of December of any year; any English snipe, except only between the thirty-first day of August and the first day of December of any year, under a penalty of ten dollars for each and every game bird or animal so unlawfully taken, killed or had in possession.

3. And be it enacted, That the section to be known as the southern game section shall comprise the counties of Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Mercer, Monmouth, Ocean and Salem; in the counties comprising the southern game section, as named in this act, no person shall take, kill or have in his possession after the same has been killed, any American pheasant or ruffed grouse, woodcock, quail, gray squirrel or hare, commonly called rabbit, except only between the fourteenth day of November and the twenty-fifth day of December of any year, under a penalty of ten dollars for each and every game bird or animal so unlawfully taken, killed or had in possession after the same has been killed.

4. And be it enacted, That all general acts and parts of acts inconsistent with this act be and the same are hereby repealed, and that this act shall take effect immediately.

Sea and River Fishing.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

TACKLE.

Editor Forest and Stream:

"H. P. U." asks if the automatic reel can be used for minnow casting. The direct answer would be, No, it cannot. I bought one of these reels some five years ago, used it more or less for three years, and then laid it on the shelf. The reel is better adapted for fly-casting than for minnow casting; but even for fly-casting it is by no means as handy as the click reel. Its proper place on the rod is below the hand and on the under side of the rod, and it is so intended. It may be used above the hand, but it is unhandy and awkward in that position.

I will tell "H. P. U.," however, how he may throw a minnow with this reel, if he feels disposed to use it. In putting on the minnow (or bait of any kind) we usually have enough of free line to reach from the end of the rod to the hand, or perhaps a little more. With this length of line he may throw the minnow. It is just like fishing with the line tied to the end of the rod; but it is not casting the minnow in any proper sense of the term. In fishing on a river he can gradually strip the line from the reel, and let the float go down with the current as far as may please him.

He can adopt another plan. He can strip off and coil at his feet a certain length of line, and make a cast in this way, but with the danger of the line coming up in a kink, catching in a guide, and making a wreck of something. With some experience and much care this method of casting may be accomplished with tolerable success from the shore; but if "H. P. U." attempts this kind of casting from a boat he will probably, unless he is a mild-mannered Christian and a high-toned angler, add considerably to the list of "cuss words," already too long. On a certain Fourth of July I was out on the Delaware River at Taylorsville with some college boys on a vacation. We were after black bass and white perch, but got more white cats than either. The day was intensely hot, and it was not long before the automatic refused to work. An examination showed that the hot sun had melted the rubber band on the crank and "made a mess of it." I had to bear a good deal of chaffing from the boys about automatics. They had my other rods and reels, so I made a double hitch on the end of the rod, and went on fishing. A few extra rubbers should be carried in the tackle box with the automatic reel.

On another occasion, on the Susquehanna, I got among some large black bass which proved too much for the automatic. The rather swift current and the weight of the fish overtaxed its ability, and I was compelled to take the line in one hand and play the fish while I worked the reel with the other. It would have been otherwise on the still waters of a lake. I have tried winding up the spring to get more power, but this brings a small fish out of the water as if shot from a cannon, and endangers the tip; in fact, the greatest care is necessary at all times to prevent an accident to the tip. If the crank is thoughtlessly raised for an instant the float or the sinker is at the tip before you know it; and this is likely to happen pretty often while you are learning how to use the reel. No heedless man should be trusted with an automatic reel. It is in the best condition for use as it comes from the maker, and should not be tampered with. One should be careful, too, how he passes the reel to the hand of a curious friend for examination while it is detached from the rod, for if the brake be then raised the spring will uncoil with great rapidity and must be wound up before it can be used again.

The automatic reel may possibly be improved and some of its faults got rid of, but as now made it will very well suit a cool, self-possessed and somewhat indolent man who is willing to fish, as it were, by proxy, and experiences no special delight in a hand to hand tussle with a gamy black bass or a slashing salmon; but for myself I prefer something else. I like to be put in telephonic or direct communication with my bass, and feel his frantic rushes and vicious jerks, and give him a chance for life while I use all my skill and finesse to subdue him, and land him safely in the boat, with gracious thanks for his long and plucky fight. This may be sentiment, but the other way certainly is not.

PETRA.

CUMBERLAND VALLEY TROUT.

CHARLES HALLOCK, in his "Sportsman's Gazetteer," under the head of Game and Fish Resorts, says of Newville: "Excellent trout fishing all around here." And he says truly. There is only one "Big Spring" in this State and that one is at Newville. Anglers have come miles to fish its waters, and their rewards in well filled creels have been beyond their fondest expectations. Statesmen, noted fly-casters and one President of the United States—General Grant—have stood by its beautiful shores, and lured the speckled denizens of the stream from their hiding places 'neath mossy culverts and overhanging banks. It abounds in trout, and at eventide as the insects hover near the water, the expanse of the first, second and third dams presents to the angler's eye a scene once looked upon never to be forgotten. Here may be seen thousands of trout leaping into the air, making the surface fairly turbulent, in their mad rush after dainty morsels.

The first day's fishing at Newville is more of an event than an incident, and as the open day this year happened on Sunday, the fishermen commenced gathering on that day in order to be ready for the morrow. At the Big Spring Hotel were W. W. Abbott, of Philadelphia; Marburgh Keedy, of Hagerstown, Md.; Dr. Vallerchamp, Lerne Lemer, Dr. Moffit, Mr. Johnson, Ben. Kyle, Mr. Young and Prof. Heiges, of Harrisburg; Robt. W. Short Chas. Murdock, of Mechanicsburg; Harry Noble, of Carlisle; Jim Rey, of Newville; and several anglers from New York and Baltimore. Sunday was a beautiful day and the trout were on the feed, but that night the weather made a violent change and Monday opened with an embryo "blizzard," snowing and sleeting far into the forenoon, while the remainder of the day was but small improvement on the first part. It was casting under the worst of difficulties; but at the close of the day the catch summed up nearly 500 trout running in size much larger than last season's first day's return.

Lower down the valley a commendable work is going on. The lovers of the rod and line have been on the alert, and their work is now receiving its reward. Some weeks ago 10,000 brook trout fry were received from the State fish hatchery at Emaus, Lehigh county, by R. H. Thomas, Jr., A. Z. Hade and Robert W. Short, and placed by these gentlemen in adjacent trout streams. Yesterday afternoon Mr. W. A. Dunnington, of United States Fish Hatchery at Wytheville, Va., arrived at Mechanicsburg with eight tanks of California rainbow trout (*Salmo iridea*) for Robert W. Short, the secretary of the Cumberland Valley Game and Fish Association. They were received at the depot by Mr. Short, R. H. Thomas, Jr., and A. Z. Hade, and placed in Trindle Run, Trout Run, Yellow Breeches or Minne Mingo and Cedar Run. The placing was under the personal supervision of Mr. Dunnington, the messenger in charge, who won the hearts of our local members of the craft by his genial courtesy and the kindly manner in which he answered the interrogations put to him. When the great distance the fish were carried is considered, the fact that there was but one dead trout proves conclusively that Mr. Dunnington is thoroughly equipped for the great work in which he is engaged, and is the right man in the right place.

At Cedar Run, Trindle Run, Silver Spring and Trout Run fair catches of trout were made on the opening day. The largest fish, weighing 2¾lbs., was taken at Cedar Run. The finest creel of fish the writer saw was brought in by Mr. J. D. Miller, who took them from Cedar Run.

The indications point to an unusually fine bass fishing in the Connoduguinet Creek this season. The largest bass taken last season in this stream weighed 7¾lbs., and caught by a farmer with a clumsy hickory pole.

Through the active efforts of the Game and Fish Association and the Rod and Gun Club, we seldom hear of a scarcity of fish, but our fishing is becoming amazingly better, and the fish pirates and the pot-hunters are rapidly being relegated to that pillory of public contempt in which they should have long since been placed.

ROBERTA.

MECHANICSBURG, Cumberland County, Pa.

THE POTOMAC.—Washington, April 23.—After a number of years of dearth and doleful predictions of a permanent depletion of the Potomac River, the herrings struck in here last week in such immense quantities that it does not pay to send them up the river from the seines to market. In one day a quarter of a million of herring were netted, besides 11,208 shad, three sturgeons, and 236 bunches of miscellaneous fish. White perch are in great abundance, and black bass more numerous in fresh water up river than for many years before.—CHARLES HALLOCK.

KENNEBEC SALMON.—Notwithstanding the reports that Kennebec salmon are in market and have sold as high as $1.50 per pound, the Belfast, Me., *Republican Journal* says that not one salmon has been caught in the Kennebec this year.

WHERE IS THE REMEDY?

HOW frequently the very persons whom one would think should be the most interested in protecting the trout are those who are the immediate cause of their destruction.

In Delaware county, N. Y., there is a brook that is about perfection for trout, and, were it not for the many natural safeguards which surround it, it never could have withstood the continuous and outrageous abuse it has undergone each spring for several years past and have any fish left. I remember when in an hour's casting one could almost fill a 12lb. creel with fish that would average nearly ¼lb., but now nothing but fingerlings are to be had. This is how the end has been attained: As but a small proportion of the inhabitants living on or near a stream of this kind are in any way so fixed that they can accommodate strangers for any length of time in even ordinary comfort, it naturally falls to the lot of these few to entertain the angler when he comes their way. They immediately become the envy of those whose worldly goods do not offer the same advantages, and the result is that a dog-in-the-manger feeling prevails. Visitors suffer in consequence. Now, the moment the law is up the disappointed ones go to the stream and catch everything they can, and in any manner that best serves their purpose, so that in a couple of days there is hardly a trout to be had worth saving. This method of destruction is practiced in order to prevent those city chaps from having any sport, and consequently they debar their better-circumstanced neighbors from getting the dollars from those chaps in the future. Their success is generally complete, and as the size of the catch is only limited by the immediate supply, they have a pleasant and inexpensive way of getting square. Of course, the six-inch law was not made for them, and they care as little for it as if it were not on the books, knowing full well that it will not be enforced against them.

There is, however, a still greater evil than that, as it means utter extermination of the trout. I refer to the pickerel fiend, that lout who, from selfishness or some supposed grievance, will deliberately put pickerel in a trout lake, knowing full well the consequences that inevitably must ensue. He starts on his evil mission like a thief in the night and commits the diabolical act unseen by any one, and were it not for his tongue, might remain unsuspected. It may be a month, or a year, before the damage that has been done is discovered, but by putting this and that together, you conclude that such a man is the culprit, and the chances are that you have hit upon the right one, but the proof! How are you to get that? The deed is done, and you are without redress. I have in mind two instances where this outrage has been perpetrated. It is sickening to think what will become of a beautiful and well-stocked lake in a couple of years. The spawning grounds at the outlet are yearly so thick with fine fish that they can be counted by the hundred at a time. Some of the most beautifully-marked and best-conditioned pound and a half trout to be found in the State have been taken from this lake. There are many there yet, but how long will that last with those fresh-water pirates introduced? As an instance of how prolific the waters have been, the owner related how two gentlemen, without moving their boat from the spot where it was first anchored, caught nearly seventy fine trout on the fly between 4 P. M. and dark, one afternoon in the early part of May, a couple of years since. Judging from the hundreds that I have seen breaking in an afternoon, I do not hesitate to believe his statement. I still hope this spring to have one more try at them, and expect it will be the last.

Of what use is all the law in the world in such cases? The millennium is yet very, very far away, or man would be less selfish and spiteful than he is, so we probably must content ourselves with things as we find them. To remedy such an evil requires something very radical indeed. Can any of your readers suggest a practical way out of the difficulty? BIG REEL.

MAINE FISHING WATERS.

Editor Forest and Stream:

The fishing for trout and salmon in Maine is near at hand, and although in this vicinity there is yet three feet of snow, and the lakes and streams are blocked with ice, yet I think the season bids fair to be as early as usual. The ground is pretty free from frost, and a few warm days will settle the snow and ice. Thinking that it may interest some of your readers and lovers of the rod and line unacquainted with the localities where good fishing may be had, and being a lover of the art myself and not desiring to possess the whole world, but willing to share with a brother of the craft, I take this opportunity of giving through the columns of your paper some of the best fishing resorts in Maine, and the seasons of the year most favorable for success.

First comes the salmon fishing at Bangor, which usually begins about the 1st of May and continues through June, May being the best month. The fish run from 10 to 30lbs. These waters are located within the limits of the city of Bangor, below the water works dam. It is in very rough, rapid water, and the bed rises and falls about 8ft. The fish are fresh run from the sea, and are very strong and vigorous. All are caught with fly.

Next comes the landlocked salmon fishing at Sebago Lake, which is good as soon as the ice is out, usually about May 1, and lasts till into June. They are caught by trolling near the mouth of Songo River, and the fish run from 4 to 16lbs., but I have seen them up to 25lbs. The large fish are seldom caught with hook and line. We also get some brook trout there from 1 to 4lbs. Neither are very plenty.

Next come Moosehead and Rangeley lakes. These are usually clear of ice about the middle of May. From then till June the fish are mostly taken by trolling; later with a fly. Landlocked salmon are also becoming quite plenty in the Upper Rangeley, and run in size about the same as trout. At Moosehead the trout run from 1 to 5lbs. In this lake are also togue or lake trout, from 2 to 20lbs., also whitefish. All are caught with hook and line.

In the vicinity of the Rangeleys are Kennehago, Parmachene lakes, Seven Ponds and many other small ponds, where plenty of small trout from ¼ to 2lbs. can be caught at any time during the open season. All the places are on the direct route via Rangeley, via Phillips and Farmington. Weld Pond is another in Franklin county, twelve miles from Phillips or Wilton on the M. C. R. R. In this we get trout 1 to 4lbs., salmon 2 to 6lbs., also plenty of pickerel are caught by trolling and with fly. There are many other small ponds too numerous to mention, of which I shall be happy to give any one unacquainted with Maine waters any information I am able. At all of these places I have mentioned good accommodations can be had and at reasonable rates. HENRY O. STANLEY.

DIXFIELD, Me.

JEFFERSON COUNTY NET BILL.—April 20.—*Editor Forest and Stream:* Under the heading "A Bad Bill," you call attention to Assembly Bill No. 722, introduced by Assemblyman Comstock of Jefferson county, and state that it is in your opinion a bad bill and should not become a law. It gives me a great deal of pleasure to be able to assure you that happily there is no danger that it will become a law. It has been recommitted to the game law committe, and probably will never emerge from it. Any law which allows net fishing in the St. Lawrence River, is a bad law. The Anglers' Association of the St. Lawrence River, of which Mr. W. W. Byington is president, was organized about six years ago for the purpose of enforcing the game law of the State and preventing net fishing in the St. Lawrence River. It secured a membership of about three hundred persons, each paying $5 a year; with the money derived from membership it has hired game protectors to patrol the river, seizing and destroying the nets wherever found. A great many nets have been seized and destroyed, some of them very valuable ones. When the organization was first formed, there were scarcely enough fish left in the river to restock it. To-day, the fishing is as good as any one could reasonably desire. One year's netting would destroy the labors of the past six years. Thousands of people now visit the river every season with great pleasure and profit, and a number of hotels and cottages have been erected. The summer residents pay a large sum yearly to Jefferson county for taxes, they furnish a home market at New York city prices for all the produce the Jefferson county farmers can raise, and they employ several hundred Jefferson county men and women as oarsmen and house workers, and yet Bill No. 722 emanated from Jefferson county. The St. Lawrence River is probably safe for this year, but it won't do to forget that "eternal vigilance is the price of liberty."—C.

THE BAIT QUESTION.—Some time ago we published an account of the Roosen process of preserving bait, mainly intended for the commercial fisheries, and said that trials would be made soon. On Monday last two casks were opened in the warehouse of Mr. E. G. Blackford, New York city. Mr. Schultze, the agent in charge, who came to this country to introduce the process, had invited several gentlemen to be present and Dr. J. H. Kidder of the National Museum; Capt. J. W. Collins, of the U. S. Fish Commission; Mr. A. R. Kidder, of New York, and Mr. Fred Mather were present. Mr. Blackford ordered the cask, which was sealed in New York on Feb. 24, to be opened first, and several medium-sized cod were taken from it in apparently fair condition and were sent to Commissioner McDonald, in Washington, to be cooked. The other cask contained herrings, packed in Sweden last February, which were spoiled. If this method can be made perfectly successful it will be of great benefit to the ocean fishermen, whose bait often spoils, involving much expense.

WILLIAM MILLS & SON.—We have the catalogue and price list of this well know firm of fishing tackle dealers, for 1888. It opens with a chapter on fishing by Henry Guy Carleton, the humorist, who deals with the subject in a view which differs somewhat from that of Izaak Walton. The catalogue is quite an extensive one and contains a few novelties. It is sent on receipt of ten cents, and is well worth it.

FLOATING FLIES.—We have just seen some fine specimens of floating flies, made by Kewell Bros. of San Francisco, whose advertisement appears in another column. These flies are intended for use dry, a mode of angling that will no doubt soon find favor in this country, especially where the trout are educated and shy.

Fishculture.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Every person who it sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

THE MENHADEN QUESTION.

POSSIBLY because the FOREST AND STREAM and Commissioner McDonald also think the menhaden spawn in the bays, Captain Church dealt leniently with me. Who knows what he might have said had he found me in less reliable company? He says they spawn at sea: is this from actual observation or on the supposition that because they go south full of spawn it necessarily follows that they must spawn at sea? The doubt he wishes to cast upon the idea that these fish spawn in the bays, seems more applicable to his statement of the case, when we consider the great difficulties attending an ocular demonstration of his theory. If they do not spawn on the nearby coast, which he has far from proven, where do the myriads of small fish come from of an inch and a half to two inches in length that we find in the bays?

To quote Capt. Church; "'Big Reel' makes a statement in regard to Spanish mackerel which carries its own refutation, for men don't give away 25 fish worth a dollar each, etc." Now it does nothing of the kind, simply because those very Spanish mackerel were a gift, and this is quite capable of proof still. There may possibly have been a moral payment made, in the shape of some sort of a promise, but as Capt. Church only refers to dollars we will not go any further into what the reasons for the promise were. The question as to whether these steamers take Spanish mackerel or other food fish for fertilizing purposes is best left for others to decide. Accurate information, stripped of all personal interest, is as much needed now as it ever has been in order to decide that question. This leads us to inquire what was done with the balance of the catch of Spanish mackerel, weakfish, etc., to which I referred in my letter of March 12 last. Were they taken to market? Let us see. The steamer in question, after completing the haul went southward. Now as Fulton Market (which was the nearest) is in a directly opposite direction, was it not a little singular that they should take that course, when any one else would have made the best time possible the other way, in order that the fish might remain fresh long enough to be marketable. Is the hold of a "bunkerman" the best place to keep fish fresh? and as we are asked to believe so much about this question in general, from the company's standpoint, it is not an impossibility that some interested person will rise and tell us that it is preferable to fresh sea water. And yet they do not take food fish for fertilizing purposes!

I am nobody's champion, but do want to see a proper restriction put upon this method of wholesale destruction, and although the lane may be a very long one, we must in the end come to the turning. BIG REEL.

Editor Forest and Stream:

I had concluded when sending you an article which appeared in your paper of the 22d ultimo, to refrain from further trespass on your columns on this subject. The effrontery evidenced in his article in the current issue of FOREST AND STREAM, by your correspondent, Capt. Church, I cannot let pass unnoticed. If I interpret his somewhat obscure periods aright, he concedes to your readers no greater intelligence than he manifests in his article. He avows that he is the champion of "fin fishing," meaning, I take it, of the fraternity of menhaden oilmen. He, then, voices the sentiments of that class of men.

In this article he writes: "'Big Reel' says the bays are the natural spawning places of the menhaden, which is a mistake * * * they spawn in the open sea in winter." Are these words written in jest? If they are not, I challenge him to harmonize them with his reply to the question propounded by Prof. Goode in 1873: "Where do these fish spawn and when?" Answer: "I know they spawn on Narragansett Bay." I say, out on such inconsistencies. His knowledge on this point, indicated in his answer to the above question, is supported by the answers of many of his associates. The Hawkins Brothers: "In heads of bays in the spring." Benj. F. Brightman: "In all the inland waters and rivers * * * in Narragansett Bay, in May." Geo. W. Miles: "Along the shores and rivers." David F. Vail: "At the heads of bays generally." Others, not in the oil business, answered this question. Capt. F. J. Babson: "Chesapeake Bay, Long Island Sound and the waters adjoining." Capt. Benj. H. Sisson: "The old fish go stealthily into all the shoal water and bays, deposit their spawn and milt." Capt. John Washington: "In the brackish waters of all the rivers and coves."

I ask Capt. Church when he changed his views as to the location of the spawning grounds of the menhaden? I ask him to indicate the consistency between his present statement and that of the past, and of those of the gentlemen cited? In answer to a similar question Capt. Church is on record in this wise: "But we have abundant evidence that they do spawn in this bay from the fact that often we take in our nets bushels of their spawn." It is true that menhaden do spawn, in part, at places other than those enumerated, but that fact affords no pretext for Capt. Church's denial of facts known by himself and others.

Capt. Church's attempt to discredit his own answer to Question 32 is a failure. Every one knows that menhaden in the form of chum or on the hook are bait and nothing else. It is useless to bandy phrases on that point. The Captain, however, in answering the question, "To what extent do they (menhaden) suffer from the attacks of other fish?" etc., used the words, "They are the bait or food of most every fish," it is fair to presume, advisedly, and in appreciation of what was required to answer a question whose meaning, to wit, What other fish eat or feed on them? was clear.

I quote again from the Captain's article: "Bank and shore fishermen who fish for halibut, cod and haddock, use large quantities of menhaden, neither of which are ever seen in company feeding on live menhaden. If they consumed yearly five thousand barrels of that fish by having it fed to them by the fishermen, is it food or bait?" I think I have succeeded in gathering from that statement the intention to convey the impression that halibut, cod and haddock take menhaden only when presented to them as bait. If I am right, I also ask him to explain his recorded words touching this point; "Codfish also catch them."

I object to Capt. Church's assuming anything as to what I think on this or that matter. It is sufficient to consult your columns for my views expressed therein. I thought Capt. Church's views relative to the abundance of food fishes were wholly centered in the man and boy from Wood's Holl. He again quotes the man, but leaves out the boy. I was mistaken, however, for on reading on I found he doled out something like 800 striped bass to the anglers of the West Island Club in 1887. Whew! Mr. Editor, you may go down into my pasture next summer and pick 800 huckleberries; I'll give them to you gladly. Let us see how this lavish supply pans out. The first bass taken last season at West Island was a 22-pounder, by Mr. D. B. Fearing, on June 24. It is safe to presume that fishing was prosecuted on the island for 80 days during the season. The result of computation would give an average of ten bass per day. I will not attempt to figure the fraction of a fish that thus fell to the lot of the West Island anglers, per day, in 1887.

Dear sir, twenty-five years since it was no uncommon thing for fishermen on the rocks at Newport to catch their weight in striped bass at a single fishing. This evidence as to abundance of food fishes looks very much like proof of their paucity.

We will lay by in some convenient place these 800 bass, together with the man and boy from Wood's Holl to be further added to, probably in proof of the abundance of food fishes.

Note well this truism of Prof. Goode: "When he brings upon his table bluefish, bonitas, weakfish, swordfish or bass, he has before him usually menhaden in another form." Is this also a mistake? Now, if the presence of menhaden was, so far as research could discover, disconnected from and without bearing on the supply of food fishes, the operations of the oil men would not to-day be the subject of inquiry or discussion.

The opposite conditions obtaining, however, these operations are brought into prominence with peculiar significance. They are *sui generis*, and are sapping the life from a great economical resource and disturbing the harmony of nature.

Capt. Church quotes a statement of mine, that "my aim is and has been to avoid misstatements, and to so write as neither to mislead, misinform nor mystify," etc., and adds that this has also been his desire and intention. How near has he come to fulfilling his desire? He has sought to convey the impression that bluefish do not feed on menhaden; he has stated that they do. He has stated that menhaden are rarely found in the stomachs of food fishes, and that they are not the food of food fishes; also, that they are the bait or food of every fish. He has sought to lead your readers to the belief that menhaden do not spawn in the bays, and has stated that he knows and can prove that they do. He has stated that food fishes are not found among schools of menhaden and that they are. He has stated that cod is never seen feeding on menhaden, and that codfish also catch them.

This conflict of views, or change of front, is not of long standing. Prof. Goode, referring to the circular of inquiry of 1873, stated that "there being no ulterior object, such as future legislation," the answers thereto were without intentional misrepresentation. Perhaps the changed condition of affairs is responsible for these recent asseverations.

ARTHUR MARTIN.

WASHINGTON, D. C., April 14.

THE PENNSYLVANIA COMMISSION have just completed very praiseworthy and satisfactory work at the Erie station in that State. Of the 15,000,000 whitefish ova received from the Government station at Northville in January, almost that entire number of well conditioned fry have been placed in Lake Erie at various intervals from April 7. The final distribution of 2,000,000 were taken out several miles in the lake on one of the local tugs last week. Mr. Henry C. Ford, president of the commission, Mr. James Verner Long, corresponding secretary, and Mr. A. S. Dickerson, one of the western members, accompanied by Assistant Superintendent Carey, made the excursion with the last quota of whitefish fry, and witnessed their placing in the lake. This successful work has been very gratifying to the gentlemen of the Pennsylvania Commission, and certainly very acceptable to the large and growing fishing industry of Lake Erie.

CLACKAMAS SALMON HATCHERY.—U. S. Commission of Fish and Fisheries. Portland, Oregon, April 14, 1888.—*Editor Forest and Stream:* I think it will be a gratification to those who are interested in salmon hatching on the Pacific coast to know that the Oregon and Washington Fish Propagating Co., the former owners of the Clackamas Salmon Hatchery, have made a free gift of the entire property to the United States. The transfer was made yesterday and Clackamas Hatchery now becomes one of the stations of the U. S. Fish Commission, and will doubtless be regularly operated by the U. S. F. C. in future, for the benefit of the Columbia River.—LIVINGSTON STONE.

FIXTURES.

DOG SHOWS.

April 23 to 27.—Second annual bench show of the Baltimore Kennel Club, Baltimore, Md. Frank Hall, Manager.
April 24 to 27.—Interna tional bench show of dogs of the Cincinnati Sportsman's Club, Cincinnati, Ohio. Geo. H. Hill, Supt.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6104.**

NEW HAVEN DOG SHOW.

IF the New Haven Kennel Club's fourth annual dog show has not been a financial success, it is not the fault of the management, for a better managed show has seldom, if ever, been seen. The preliminary details, however, should have had more attention; perhaps the worthy secretary, knowing that only a limited number of dogs could be benched, and having a promise of as many as the building would accommodate, did not care to bother himself about the numerous trivial items which tend to swell the entry list and bring lucre to the coffers of the management. I do not know about that, but it seems to me that judges' names should have been announced sooner, and that a list of specials should have been given to the FOREST AND STREAM, *Turf, Field and Farm* and *Sporting Life*. Among the entries returned were those of Miss Whitney, at least I am so informed. This lady is a genuine lover of dogs and I would have felt inclined to fit up a corner somewhere for her exhibits. The number of dogs shown was 283, and the quality in proportion to the number of entries was decidedly better than I have ever seen elsewhere in this country. The exhibition will probably be known in the future as "the quality show." Spratts Patent did the benching and the whole of the arrangements were complete on Monday afternoon, so that when dogs arrived at the building there was no confusion nor fuss. Everything was in apple-pie order and the manager, Mr. J. B. Robertson, Jr., deserves a word of praise for his untiring efforts in behalf of his club, the dogs and their owners. Dr. E. C. Ross was a most efficient veterinary, and I am much pleased to see that dog show managers are at last recognizing the necessity of appointing qualified men to prescribe for the valuable property intrusted to their charge. There is a wide difference between the qualified and experienced professional man and the hungry nostrum vendor. Americans are rather slow about skinning quacks and bagman judges. When a $2,500 dog dies from the effects of an overdose of chloroform they begin to open their eyes; and when a grand-headed dog like Ilford Caution is criticised as being "short in head," or a good-headed toy spaniel like Prince Napoleon is pegged back for being "short in muzzle" they look around and ask, "Isn't it about time that fellow stepped down and out?" or perhaps they write an anonymous letter to your paper suggesting that in the future specialty judges be engaged. It wouldn't do for everybody to take as much interest and pleasure in skinning bagman vets, judges and critics as I do, but Americans are too easy-going; or perhaps I had better say that they expect the better class of papers to protect them against imposters, which is something they cannot always be doing. How should even the enterprising FOREST AND STREAM know that only a few years ago an individual who recently posed as judge and has now blossomed out as critic for a Chicago paper was pounding away on the anvil of a small Lancashire smithy? How should they know that he never owned, bred or exhibited a dog, or that he was an unknown quantity to every dog man in the British Isles? Let us have competent and honest men to fill important offices of any kind. I have always held and always shall that no reputable dog owner need be compelled to sit still and have his dog physicked by quacks, adjudicated on by bagman judges, or criticised by ignorance. There are too many of these insects buzzing around dog shows, and of course New Haven was not exempt. There will be fewer before very long. Now to the dogs:

MASTIFFS.

There were six exhibits in this class, all good ones, and all winners at Boston. A full and careful criticism of them will be found in my reports of the Philadelphia and Boston shows. Minting won the special for best dog, and I also gave him that for best dog or bitch in the classes judged by me. His most dangerous opponents were the St. Bernard Leila and Mr. Thayer's bull bitch Britomartis. Prizes like this are very unsatisfactory things to award. Every man believes he has the best dog, and the owners of pointers and setters invariably think that all other breeds should take a back seat when brought into competition with their more useful brethren. In judging for such a prize I endeavor to select the most typical dog of his breed. I would place a first-class Italian greyhound over a second-rate setter, or a first-rate toy black and tan over a fair St. Bernard. I doubt if the mastiff lives that can beat Minting, but all the setters and pointers I had in the ring can be beaten; some of them very easily. If shown against St. Bernards of both varieties Leila would be beaten by one or two of the English cracks. Britomartis is probably the best bull bitch living, but she was not in good coat, and all things considered, I feel quite sure that the best dog won.

ST. BERNARDS.

This was not a large class, but the quality was excellent. The winners in the champion classes, Otho, Hector, Leila and Daphne, are worth going many miles to see. In the open class for rough-coated dogs, Kastelhorn II., who was first at Boston, had to give way to St. Gothard III., a new one. He is a dog of commanding size and with a number of good points. Skull well formed, muzzle deep and of good formation, but rather longer than is desirable; stop should be deeper and eyebrows rather more prominent; good expression, although his eyes are not quite right; beautiful ears: fairly strong neck; back a trifle slack; loin would be improved by length, strength and arch; stifles and hocks straight; second thigh weak; light in bone; coat curly and scanty; not quite straight in front; good feet; slightly underhung; moves badly behind and does not stand high enough at shoulder in proportion with height of quarters; single dew claws; shows character and good breeding. Kastelhorn II., first at Boston, is a rather plain dog, undersized, short in body, straight behind, and with bad gait. Miss Whitney and FOREST AND STREAM have been the only ones to notice his very defective forefect, although I see that our bagman judge has been dipping his pen in Chicago ink. Can't expect much from a man that places Duke of Leeds over Leila, Merchant Prince over Duke of Leeds, Hector over Merchant Prince, and Apollo over Hector. These decisions will follow Jim the Penman to his grave and haunt him in the world to come. Still, he looks wise. Prince Barry and Alpine Chief were absent. Leo II., unnoticed, is not a show dog. Bad eyes, squints, poor stop, ears not well carried, a plain, characterless head, bad expression, defective markings, undersized. First in the corresponding class went to Gemma I., the Boston winner. While she is not an Abbess, she is a good-looking bitch, and in the absence of high-class material from the rough-coated class for bitches she will certainly do a lot of winning. She is not bad in muzzle, but should be cleaner below the eyes and a trifle blunter near the nose, and I would like to have seen a skull showing more squareness. Notwithstanding these defects, which are not very pronounced, she has a very much better head than average. Body lengthy and strong, and standing on excellent legs and feet. A ropy ring-tail rather detracts from the finish of good strong quarters. She is a bitch of more than average size, moves well, and carries herself *comme il faut*. Minna, second prize, is a new one to me. Stop not deep enough; eyebrows not well defined; muzzle should show more squareness in profile; cheeks are too prominent; expression not quite right; ears fairly good; stands too low at the shoulder; back a trifle hollow; straight legs; good bone; right forefoot defective, there being a malformation of one of the toes; hocks stright; has double dewclaws; only a second rater. Corrette, first at Philadelphia, was third here, and was sold to Mr. Moore for breeding purposes. Puppies were a bad lot, and I withheld all prizes. Uno would have stood a better chance of winning in the collie class, and Curfew is a small, characterless animal. Wotan, well known, had the open class for dogs to himself. Breeders of smooth-coats must not crow too loud when dogs like Wotan and Petrach can win first prizes in important shows. Thisbe, the small but typical, represented the ladies, and Halloween, an indifferent puppy, pointed in muzzle, domed in skull, light in bone and defective in feet, shoulders and tail, was given second, first being withheld. Leila had no trouble in winning the specials for best bitch and best St. Bernard of all classes.

NEWFOUNDLANDS.

The Boston winners, Miro and New York Lass, were first and second. Both are in better condition than they were. Will somebody please show a decent-looking Newfoundland? I have seen one good one in seven years.

GREYHOUNDS.

The champion class strong with Balkis and Cassandra, the open class weak. Cassandra, very soft in flesh and lacking muscular development behind, may thank her good head and neck and "clever shoulders" for the victory. Tom, winner of second at Troy, was first in the open class, and Black Crook, not first-class in head, heavy in shoulders, long and flat in loin, straight in stifles, defective in hocks, and with a docked tail, was only just good enough for second. How is it that Americans don't seem to be able to breed a good-looking greyhound?

DEERHOUNDS.

The winners, Ramona, Bran, Pride of Heather, Theodora and Duncan, all from Mr. Thayer's kennel, are well known. Pride of Heather was in very low condition, or would probably have been higher in the list than third. Don Roy, unnoticed, is defective in almost every point—a weed. Ramona won the special with several points to spare.

POINTERS.

There were 29 entries in this class and the quality was about as usual. I withheld a number of prizes, some of them from dogs that had won under other judges, and of course a number of exhibitors were anxious to know what was the matter. Not having the time to answer all questions, some of which were very foolish, I have written out a full and careful criticism of the dogs that were not noticed. As is always the case at our shows, dogs of all types were on exhibition. To rectify this growing lack of uniformity of type it has been suggested that a pointer club be formed. If it is to be run by the clique we may very soon expect to see dog shows overrun with pig-snouted Sensations and hippopotamus-headed Jimmies. What are you doing, gentlemen, to let a grand breed of dogs degenerate to the verge of mongrelism? The Chicago editor, who by his stupid advice to breeders, did so much to ruin the breed, now wants to retrace his steps. Says he there is no "uniformity of type." How could there be any? Beaufort, not looking at all well, was alone in the champion class for dogs, but did not compete, and Juno S., who was fully described in my Philadelphia report, was the only champion bitch shown. Of the six heavy-weight dogs, Bang was much the best, being decidedly better than Sachem (placed second) in muzzle, skull, ears, carriage of ears, shoulders, legs, feet, stifles and hocks—a better dog, and one showing far more true character. Mr. Winslow, the owner of Bang, is not in the good graces of the Broadway clique owing to his having protested one of the awards at the New York show, and consequently the reporter and kennelman for the firm has received orders to write Sachem up and Bang down. A nice state of affairs when a man, who never in his life owned, bred or exhibited a sporting dog, is given *carte blanche* to report for the Letter Press, the "Sportsman's Journal." Why, gentlemen, when I was breeding and exhibiting pointers this self-same would-be critic was blacksmithing in a tiny shop in the north of England, unknown to dogmen and to dogs. And the unbalanced editor who employs him wonders how it is that there is lack of uniformity of type in our dogs. Why not have asked why there was lack of uniformity in the setter class in the days of Whitford. Incompetent judges and ignorant and unprincipled critics are responsible for the mischief. It isn't the breeders that are to blame but those that presume to teach them.

Sachem is a son of Beaufort, and Bang a son of Old Bang. Neither is at all my idea of a high-class pointer; they are useful-looking second-raters, nothing more. Sachem's crooked forelegs and defective quarters will always beat him in good company under a judge of the breed. Hartford, unnoticed, has the following negative points: Weak muzzle, prominent cheeks, eyes set too wide apart, ears badly placed and not well carried, very defective shoulders, wide in front, knees very weak, formation of chest entirely wrong, body very shallow, too short between the couplings, stern badly carried, bad coat, the hair of tail being curly, leggy, light second thighs. With these defects before him, the owner will readily see that he does not own a show dog. Zeb, unnoticed, appears to have wintered in the Arctic region. He has taken on almost as much coat as a bear, and I can assure his owner that the standard calls for something different. Brake was transferred to the light-weight class. Captain Bogardus, muzzle not showing sufficient squareness, color of eye too light, too much jowl, throaty, wide in front, heavy in shoulders, tail long and not properly carried, straight behind, light in quarters, lacks character. Brake, first in the light-weight class for dogs, was described in your New York report. He is not first-class, although a much better dog than his sire, Bang Bang. Jersey Bang Bang, second prize, almost tempted me to withhold the award. He has had enough from my pen to last him a lifetime. Blizzard, third prize, is well named; a rather shaky-looking specimen; muzzle not deep enough and rather weak; cheeks too prominent, eyes a shade too light, ears set rather high, neck too short, chest shallow, body should be longer and loin more powerful, shoulders straight and heavy, quarters light, tail badly set and carried very high, light in bone, feet not first-class, knees not very strong, leggy, stands badly; an indifferent specimen. Don Pedro, no stop, ears not well carried, bad eyes and expression—a very poor head, ribs not well sprung, heavy shoulders, rather shallow in middle, coarse in tail, not a show dog. I gave first in heavy bitches to Devon Nell, and in my opinion she should have won at Boston with many points to spare: muzzle, below the eyes, not quite clean, cheeks a trifle too prominent, eyes a shade light in color, carriage of ears not quite right generally, although she can carry them well, neck good length, but showing throatiness, good chest, powerful loin, good legs and feet, Devonshire shoulders, second thighs not quite right, hocks should be more bent and have a cleaner appearance, stern well carried, is a trifle slack behind the shoulder, shows true character and good breeding, does not move well when walking, but goes freely in any other gait. My second choice, Belle of Winchester, is not a crack, but was certainly second best. Her washy color is against her and she is a bitch that might easily be overlooked for worse material: cheeks too prominent; muzzle not showing squareness sufficient; color of eyes too light (not Croxteth eyes, but bad enough); good ears, neck not quite clean, knees not very strong; good body, loin, legs and feet; strong quarters, is too straight from the hocks down and the hocks are not quite clean, stern good, carries herself gaily, lacks true character, has had dew claws removed. Devonshire Countess, third prize, was second at Philadelphia and described in my report. Rosa Croxteth, unnoticed, was second at Boston, so it is quite clear that Dr. Jarvis and myself do not agree on the pointer question. In my opinion the bitch is a rank bad one and I see the Dr. says she is "bad in legs, feet and head." What is a pointer worth that is "bad" in head, feet and legs? To the bad head, feet and legs let us add throatiness, a shallow chest, slack back, wretched loin, most defective stifles, long tail, lightness in bone, bad position of forelegs, legginess, and then we have a correct description of the Doctor's second prize winner at Boston.

First in light-weight bitches was withheld, and Jane, who was first at Waverly and second at Boston, was given second. All that Dr. Jarvis said about her in his thirty-five line report of the Boston show was, "In the bitch class Bonanza, a handsome daughter of Beaufort and Zuba, was first, Jane second and Belle of Maine third." I knew all that from the premium list. Well, the Doctor's report was original; it told you something without making you any the wiser, and unlike Whitford's and Jim the Penman's, was not poached and packed to please the little gang they worked for. The Doctor still lives, for his report does not enlighten anybody on the one question of competency. Whitford, on the other hand, hanged himself in quick time, and Jim the Penman is rapidly following in his steps, although he copies from all the best papers, and like his friend Whitford, assumes to teach those who gave him his first lessons in canine lore. Alas! Jim, the Pittsburgh piece of paper still lives in the memory of the preserver of records. Jane's defects are as follows: muzzle wide, shallow and not sufficiently blunt; color of eyes too light, ears set high and not well carried, chest should be deeper, loin too flat, shoulders rather heavy, gait not correct, carriage of tail not quite right, a bit leggy, lacks character. In other respects she will do. Morianda, unnoticed, nasty yellow eyes, not clean cut below the eyes or sufficiently blunt in muzzle, ears of nice quality, not a bad head, chest too round, short between the couplings, good legs and feet, light in bone, tail carried too high, shoulders not quite right, lacks character, moves well, a neat little brown or liver bitch of wrong type. Queen Bess, skull very wide and heavy, cheeky, ears set high and badly carried, eyes of too light a hue, very bad shoulders, crooked in front, bad feet, fairly good chest, back and loin, straight behind, stern rather coarse; shows character with all her defects, and moves well for a bad-shouldered one. Daisy, light in color of eyes, full in cheeks, not clean cut below the eyes, ears of defective formation and not well carried, face somewhat weak, very throaty, ribs not well sprung, quarters light, second thighs very deficient in muscular development, tail very coarse, has dew claws, coat too long, legs which appear to be strong but handle badly, poor gait; not a show bitch. Wanda, second in puppy class, New York, 1887, has not improved; forelegs wretched, feet open and thin through the pads, light in bone, defective in head, eyes and ears; not a show bitch. I withheld all prizes from the three dog puppies shown. Richard III., full in brow, bad eyes, hound ears, very throaty, bad shoulders, out at elbows, not straight in front, chest very defective, back ribs much too short, loin light, tail well carried, feet not first-rate; has plenty of soft, spongy bone; wide in front; not a show dog. M. Quad, ears set high and badly carried, brow too prominent, very throaty, neck of great length, chest too shallow, loin flat and rather light, tail long and coarse, fair good legs and feet; lacks character, and will never develop a show dog. Sportsman is a winner under other judgment; shoulders very defective, a plain sour head, is underhung, very throaty, not straight in front, fairly good chest and loin, high tail, straight behind, gait not quite right; will do in other respects, but will never be a show dog. Bitches, six entries, were a much better lot, with Lafford Pearl a very easy winner. She is by Hitchcock's Duke of Hessen, and while a promising puppy will never be quite good enough to bar from competition at New York; cheeks rather too prominent, muzzle not showing sufficient squareness, but not bad, color of eyes a shade light, well formed ears fairly well carried, a trifle throaty, neck rather short, back would be improved by more length, tail too high, stifles should be more out with hocks closer, coat rather too long, straight legs, excellent feet, somewhat leggy, moves freely, not well shown, should be heard from again. Clytie, second prize, won first at Troy, and was criticised in my report of that show. Third prize was withheld, Jean, coarse and round in skull, wide, coarse muzzle, not clean cut below the eye or sufficiently deep, expression poor and color of eye too light, ears set high and badly carried, chest shallow, back ribs defective, loin light, not quite straight in front; shoulders, quarters, feet and stern all fairly good, not a show bitch, lacks true character. Daisy's kennel was decorated with a piece of black crape, and her owner is saved the pain of reading a criticism from

my pen. Volunteer, nasty yellow eyes, stop not well defined no eyebrows, pointed muzzle, ears badly set and not well carried, throaty, chest not deep enough, tail long and coarse and not well carried, loin flat, legs not well set and not straight, feet turning outward, lacks character, a very poor specimen. Random Clover does little credit to her distinguished sire, Graphic, flat-sided, light in bone, color of eyes too light, straight from the hocks down, tail too long, shows quality, shown in wretched condition. I gave the special for best dog to Brake, and for best bitch to Juno S.

SETTERS.

These were good classes; in fact, the quality was quite as good as at New York and Boston. Rockingham, Royal Prince II., Cora of Wetheral and Daisy Foreman represented champion English dogs. Rock and Prince were in excellent condition, but Cora was short in coat and Daisy Foreman hog fat. I have never seen the last named so badly shown. She was always light in bone and a bit monkey-faced, and of course these defects are intensified by every ounce of unnecessary weight. Light-limbed, small-headed dogs should be shown on the light side, not fat as pigs. There were nine entries in the open class for dogs, two of which, Royal Kent and Phil Warwick, were absent. Roger, the unlucky but handsome son of Count Noble and Queen Meg, scored his first win. Mr. Donner gave him a c. card at New York last year, when he should have been a very easy winner, being many points the best dog in the class. This year, at the same show, Mr. Davidson placed him second, in my opinion to a much worse specimen, and Dr. Jarvis put Dad Wilson and Gus Bondhu in front of him at Boston. At the last named show he stood out in bold relief from the rest of the class, and Dad Wilson had no business whatever alongside of him. With a little more length and cleanness of head and neck, a better carried stern, darker eyes, and a somewhat better coat, Roger would be the best setter in America. As it is he is few points behind the best of them. Dick Belton and Fairy King had a very sharp tussle for second place; it is a close thing between them. Dick Belton is a big useful-looking son of Yale Belton and was shown in excellent condition—checks too prominent, color of eyes too light, stop not very well defined, eyebrows should be more prominent, expression not just right, ears fairly good, excellent neck, elbows not set quite straight, but not bad, free and well-placed shoulders, strong forelegs, feet should be more arched, good back and chest, loin strong, but longer than I like, falls away too much from the hips down and would be improved by more length between hips and set of stern, stifles too much in, causing the hocks to be thrown out a trifle and legs when brought forward not working quite free of the body, tail carried too high, coat free of curliness, but a trifle woolly, legs and feet well feathered, shows lack (slightly) of true character. Fairy King, third prize, was first at Stafford Springs last year. He is an orange belton, of catching appearance, and with the exception of being rather soft, was well shown; skull well formed, muzzle not quite clean, but much better than average, color of eyes a shade too light, ears rather wide and not carried quite close, neck should be lighter, excellent chest, flat, but strong loin, good hindquarters, excellent flag well carried, shoulders heavy, forelegs not well set, elbows not straight, forelegs not straight, feet should be more arched, too wide in front, good coat, moves well, shows quality; a rather undersized, but useful-looking dog. Duke of Wellington, vhc., is coarse in skull and not clean cut in muzzle, stands down a trifle at the shoulders, back rather hollow, poor expression; useful, perhaps, if not very ornamental. Pride of Orleans, c., stop should be deeper, eyes not right, a plain head, shoulders heavy, stands over some at the knees, loin and quarters might be better, stands on fairly good feet, not a very free mover. Forest Planter, hc., fairly good head, throaty, elbows very much out, flat loin, forelegs not straight, long and straight from the hocks down, stern too high. Yale Belton, unnoticed, is a wreck of his former self, being lame behind, bad in coat and red in skin. I won't call it mange, but if he were my property I would want a separate kennel for him. Bitches were a good class of twelve, the quality being quite as good as at New York. Haphazard, that should have been first at New York, 1887, and also first at Boston, 1888, won cleverly from her kennel companion, Calico, a bitch of similar type. Haphazard is well known to your readers, a sweet little bitch, not perfect in legs or feet, narrow in quarters and defective in tail. (The Chicago Letter Press says it was a close thing between her and Blue Nell at Boston, because Blue Nell was "low in flesh." Wide instead of close, I should imagine. The patent medicine man who collected the notes on sporting dogs at Boston for Jim the Penman should attach his name to his reports and not make the Babylon novice shoulder the blunders of two. A queer "staff" that, Mr. Editor!) Calico is an undersized but smart bitch; muzzle below the eyes not quite clean; stop should be deeper; cheeks a trifle prominent, and indenture up head not well defined; good chest, which would be improved by more spring in ribs behind the shoulders; forelegs not quite straight; feet rather flat and turning outward slightly, they should point straight ahead of the dog; shoulders well placed; good loin and quarters; tail rather too long; coat somewhat short and showing curliness; shows quality. Dixie B., third prize, is a bitch of altogether different type from Haphazard and Calico. She is longer in head, neck and body, and stands over much more ground. Checks rather prominent; muzzle longer than I like and not just right in formation; color of eyes too light; ears might be closer, neck long but not clean; chest capacious and well formed; a trifle low behind the shoulder tops; loin too long but not weak; excellent shoulders; legs not quite straight, but strong; good feet; strong, well-formed quarters; tail too long; not well shown; a bitch of good size and showing quality and breeding. Pearl Belton, vhc., undersized and rather weedy; hocks too straight; out of coat; shows quality. Empress Eugenie, vhc., was described in my Troy report. Sparkle, hc., cheeks and muzzle not clean cut, ears badly carried, expression sour, forelegs not straight, coat in bad condition, shows good breeding. Mena II., hc., cheeky, light in color of eyes, ears not well carried, forelegs not well set, light in bone, weak in knees, feet flat, very throaty, condition poor. Ruby R., c., coarse in skull and muzzle, defective in feet, good in body and quarters, condition low. Countess Veda, c., apple-headed, muzzle not right below the eyes, neck heavy, elbows a trifle out and legs not quite straight, hocks only moderate, coat excellent, condition bad. Blue Nell, unnoticed, bad eyes and expression, short ears set high, bad behind, heavy in shoulders, small and weedy, not a show bitch. Nancy Dawson, unnoticed—nasty light eyes, bad expression—a plain head, feet of wretchedly bad formation, a catchy-looking flat-catcher. Of the four puppies shown Belle was clearly the best, but will never be up to high-class form, muzzle weak, ears rather short, light in bone, legs not well set, not quite straight in front, but should improve, narrow quarters, hocks too close, good middle, shows quality. The second and third prize winners are defective in head, eyes and expression. The third prize winner is of catchy color, but is not nearly so truly formed as the second prize winner. Specials for best dog and bitch went to Rockingham and Cora of Wetheral.

Royal Duke, Beaumont, Vic and New York Belle have been fully described in my previous reports. Since you published my letter about Beaumont and Little Boy, it has dawned on the bagman judge and on the doctor (?) who report for the Letter Press that Beaumont is a good one, and on Saturday next we shall probably be solemnly informed that he is a wonderfully improved dog, and that he should have been placed over Royal Duke for the special. I withheld second and third prizes in the open class for dogs. Tony is sour in head, has bad shoulders and feet turning outward, is light in bone, straight behind, and was shown soft and fat. Black Thorn, catalogued at $35, would be a dear dog at that figure. He has a long plain head, bad eyes, and his color is all wrong. Merle, third prize, is not a good one. Muzzle should be deeper, ears set rather high, legs not set quite right, feet only fairly good, too small and weedy and of English type, coat flat, color good, but there is too much of it; an undersized specimen. Puppies a bad lot, winners defective in head and poor in color. Glen's Girl, unnoticed, is a black and tan English setter. Royal Duke, better in head, eyes, expression, coat and color, and in much better condition than Beaumont, beat him for the special. Beaumont is of better type than Royal Duke, and as I said in my report of the Philadelphia show, will be very nearly the best Gordon in America when he is shown in tip-top condition. This statement was ridiculed by the Letter Press, but the crooked organ (?) will fall into line probably this week. Twenty Irish setters were shown and the quality was above average. Nellie, first in champion class, is well known to your readers, and full descriptions of Ned, Trojan, Rory O'More and Molly can be had by reference to my report of the Troy show. Berna and Lady Fawn were noticed in my Philadelphia report. Had Lady Fawn been in good condition I would have placed her over Berna, as she is a better bitch. My Troy notes on Trojan, Rory O'More and Mollie were copied by the Letter Press of April 14 and given to the public as original. Redstone, first in open dog class, is a big slashing fellow, rather wide and flat in skull, not sufficiently deep in stop or clean in the muzzle. With the exception that he is short in neck and too leggy he is good in other respects. Larry S. was absent. Glenmar II., hc., has fairly good head, eyes too light, ears not quite right, neck too short, light behind and too straight, leggy, light in bone, feet not first rate, condition low. Coghlan, hc., skull heavy, color of eyes too light, too much feather on ears, loin flat and rather light, stands back at the knees, feet not very good, rather leggy, light behind, too long and light from hocks to ground, good tail, beautiful color, good coat, a dog of good size. Lady Clare, hc., in open class for bitches, head flat, muzzle not quite right, light in bone, feet defective, knees weak, tail too long, stands rather low in front, color not rich. Belle Ida, hc., coarse in head, ears too short, rather light in bone, good legs and feet, color not good, coat in bad condition. Fawn, unnoticed, snipy, weedy, undersized, coat and condition bad. Lizzie, unnoticed, wretched head and eyes, curly, not a show dog in any one point. The first and second prize winning puppies may be heard from again, although I doubt if either will ever be first-class. The winner is better in nose, eyes, set of legs and in quarters than the second prize winner, although hardly as good in head and position of ears. Rose, third prize, will never be any better than she is to-day, head weak, eyes light in color, ears not quite right, but may improve, weedy, straight behind, lacks character. Mollie had no trouble in winning the special from Nellie. Neither is first-rate in forelegs or in feet, but Mollie is decidedly better in head and in color and, when I had weighed up their good and bad points, I found the Troy bitch ahead and with several points to spare.

SPANIELS.

These classes were carefully handled by Mr. Hemingway, who is undoubtedly one of our best judges of field and cocker spaniels. The quality, excepting in the Irish and Clumber classes, was excellent; not up to Boston form, but much above average. I gave you a very critical report of the classes at Boston, and, as most of the winners at that show were winners here, I will not occupy more space than is absolutely necessary. Of the field spaniels shown Newton Abbot Darkie, Newton Abbot Jubilee, Newton Abbot Lord, Jerry, Jet, Lady Abbot, Beau and Bridford Ruby are well known to all spaniel men. Pearl Lake Obo, unnoticed in the open class dogs, has cocker head, light eyes, ears set high, and is as curly as a retriever; not a show dog. Black Flash, second in open class for bitches, has light eyes, cocker head, is very curly, and was shown heavy in whelp. She stands on good legs—her best point. One Clumber, or rather white dog with lemon markings, was shown, and first and second prizes were properly withheld. Bad in head, body, legs and tail. Jess, first at Boston, represented Irish water spaniels. Cockers were a strong class. Among champions were the names of Miss Obo II., Chloe W., Obo II. and Shina. Chloe W., in the absence of her kennel companions, won, and later on in the day took the special for best cocker in the show. This is the bitch I placed first at Boston, the bitch that, according to the Letter Press and Jim the Penman, should have been placed behind Dolly Obo. Baby Obo, third at Boston, was the only entry in the open class for black dogs. Bitches were a good class of nine, headed by Beatrice W. and Dolly Obo, both highly commended at Boston in a stronger class. It is a close thing between them, and of the two I prefer Beatrice W., who is better in head, set of ears, forelegs, and in coat. Dolly Obo is underhung, a bad defect in a spaniel. Riette, third at New York, was third here, with Nellie, first at Hartford, vhc. Flossie K., vhc., has fairly good head, eyes a shade too light in color, forelegs not well placed, stifles not quite right, curly, stands too high, in fact is too large. Cleopatra, hc., light eyes, field spaniel head, ears too high, thin tail, good ears, much better than average in legs and feet, good coat, is larger than I like. Mooress, vhc., snipy, eyes and expression not quite right, a trifle out at elbows, coat showing curliness. Jennie, reserve, a trifle snipy, stop not quite right, eyebrows should be more prominent, color of eyes too light, forelegs did not appear to be right, but the bitch was very heavy in whelp and this may have caused her to stand badly on them. Lady of Learning, second at Boston, and Dora, first at Hartford, were first and second here. Pete, unnoticed, is faulty in muzzle, has bad feet, is very curly and much too large. Puppies were a good class of seven, with Novel, a fairly good one, an easy winner. She is a trifle full in cheeks, her muzzle would be improved by more depth near the nose, and her ears are set rather high. She has considerable white on the breast, but in other respects is a good one and should be heard from again. Bijou, placed second, is not right in muzzle or straight in front, and was badly shown. Lillie, third prize, is not a good one, but was properly placed. She is underhung, has Roman nose, light eyes, bad stop and lacks character; good legs and feet are her redeeming features. Obo B., hc., has small yellow eyes, weak face, is light in bone and bad behind. Strong limbs is her best point. Chip, vhc., is neither a field or cocker, and is, of course, defective in head. She is also light in bone and her eyes are not right.

FOXHOUNDS.

This was one of Mr. Elmore's classes. Jerry II., who was given second prize, was the only one shown. He is too short in the legs, round in barrel, wide in front, not first-class in legs or in feet, and has a poor brush; his head is just fair.

BEAGLES.

Little Duke, Twinkle, Lou, Royal Krueger, Racer, Jr., Frank, Leader, Una and Elf are all well known. Rob, commended in open dog class, is snipy, light in bone, loin and quarters, and has poor brush. I am not a beagle man, but he would not be my choice. Little Duchess, third in the bitch class, might be better in head and in carriage of ears, is throaty and longer in body than I like, stands on fairly good legs and feet, has good brush and fairly good coat. I claim to know as much about beagles as Whitford knew about pointers, or Mortimer about the classes he has judged. Our records as breeders, owners and exhibitors are about one and the same thing—won't stand close inspection.

DACHSHUNDE.

Only one entry, a very seedy specimen, weak in head, light in bone, leggy, bad in crook and tight in skin. I withheld the prize, $8, which is far more than the dog is worth.

BASSET HOUNDS.

Bertrand, Cosette and Baylie's Basset were the entries, and Mr. Elmore had an easy task. I do not consider any one of them first-class. Bertrand is rather plain in head, the bitch is leggy and light in bone, and Baylie's Basset has a very plain face. Old Model would have out-classed any of these; still, they are fair.

COLLIES.

There were twenty-five entries in this class and the quality was above average. Scotilla, Jersey Lass, David, Clipper, Royal Monarch, Flurry III., Lorna Thorpe, Glen Rosa and Lady Watson are well-known to your readers. Roderick Dhu, unnoticed, in the open class for dogs, won first at Philadelphia last year under Mr. Terry's judgment. He is prick-eared now and was then, as I pointed out in my report. Glendale, vhc., is not first-class in head or in ears, has bad shoulders, not the best of legs and feet and is all out of coat. Lorna Thorpe, third in the open bitch class, has not improved in coat, which is too short and woolly. Glen Rosa was clearly the best of a fair lot of puppies. She and Royal Monarch, second prize, were fully described in my Boston report. Lady Watson, third prize, was first at Troy. Jane of Castle Rock, vhc., has fairly good head, although her muzzle is a trifle blunt and her eyes a shade too light in color, ears should be more erect, good body, legs and feet, beautiful long brush, well carried. Princess, hc., is full in brow, light in color of eyes and does not carry her ears sufficiently erect. She has good body, limbs and puppy coat. Winsome Lassie, hc., is not good in eyes, forehead, ears or expression, and her coat should be harder. Guy Feathers, hc., is rather short in head, round in eyes and his ears and forelegs could be improved upon.

BULLDOGS.

This was a most excellent class. All of the winners are well known to the readers of FOREST AND STREAM. They are Robinson Crusoe, Merry Monarch, Britomartis, Carmen, Quasimodo, Lion, Beatrice, Soudan and Thespian. I gave the special for best of these to Britomartis, who beats her opponents in head properties and in body as well.

TERRIERS.

I have taken so much of your space for my comments on the pointers and setters that notes on the remaining classes must be brief. In fox-terriers Mr. Thayer's well-known team swept the boards. The champion bull-terriers Jubilee and Maggie May are old faces. Jubilee was in very bad condition and Mr. Dole must look to him or he will have mange in his kennel. Sensation, first in the open class for dogs, is a light-weight, face rather short and cut away too much just before and below the eyes, a trifle cheeky, chest too shallow. In other respects he will do. First in puppy class went to Mr. Dole's Starlight, not a crack, but points the best in the class. Her ears are uncut, and her head to a novice would appear shorter than it is, but careful inspection shows her to be vastly better than the rest of the class in head properties. She stands on a rare good set of legs and feet, carries a rather coarse tail well and is not yet matured in body or as good in coat as she will be. Countess, placed second, is a trifle underhung and rather coarse in muzzle. Duchess of York, placed third, has a butterfly nose and weak snipy muzzle, the worst defect a bull-terrier can have. A fighting dog must, above all things, possess power in the punishing department, or how can he be a good one? The late Jim Hinks, the best judge of a bull-terrier I have ever met, could not tolerate a weak, snipy-faced bull-terrier, and none but the most ignorant of judges would encourage the breeding of dogs that have this defect. Judgment must be used in mating this bitch; she has fairly good body, legs and feet, and a beautiful coat. Royal Rose was absent. Starlight repeated in the puppy class. Dennis and Breda Jim, the only Irish terriers shown, were placed as at Boston; they are well known. Skyes were the best lot I have ever seen in one class in this country. Kirkella and Claymore, first and second at Troy, and described in my report of that show, held the same position here, and Gladstone Boy was a good third. He would have been second but for his weak jaw, not sufficiently erect ears, rather soft coat and uneven body color. He stands plenty high enough, but is a fairly good one—not a crack, though. Kyle Haken, vhc., is neither a prick nor a drop-eared specimen; stands a trifle high, might be better in head and coat, incisors should meet. Countess, vhc., soft in coat and too high, is well known. Only one Yorkshire, a toy, was shown, and it is up to the usual form of Yorkshires as shown in this country; coat much too short, head and leg color all wrong, body color too light, coat not straight.

PUGS.

This class was well handled by Mr. Peck, who made his debut as judge. Dude and Max, the winners in the champion dog class, are well known, especially the latter. This was the first time I have had an opportunity to give Dude a careful examination. What queer reports have been written on the little beggar! His owner must have tittered many a time when reading them. Miss Whitney is the only writer that has supplied a critical description, and as she has owned and bred good dogs, her opinion will, and ought to, carry weight. Jim the Penman has not been trapped this time. I gave him the following as my report on the breed at Philadelphia, and the best he could do at Boston was to copy:

C. H. Mason's report on pugs at Philadelphia.

Thanks to Dr. Cryer this class was well represented. Max, Bessie, Dude, Othello and Vesta make a team which any man might feel proud of.

Jim the Penman's report on pugs at Boston.

Max and Bessie, in the champion classes, and Dude, Othello, Vesta, Myrtle and Sallie, in the open classes, were a team which the most enthusiastic lover of pugs might well envy.

Funny, isn't it, Mr. Editor? Do you wonder that I am getting tired of writing reports for our bagman judge? I cannot agree with Miss Whitney that Dude has good muzzle and defective skull, but in these days it is a treat to find any body that has an opinion and the courage to express it, without poaching the columns of FOREST AND STREAM or any other journal. In my opinion Dude's most prominent defect is in muzzle; it is too small in proportion to the size of his skull, and is pointed; the lower jaw in particular is narrow, not nearly sufficient depth or width of muzzle, small button ears well carried, fairly good eyes, plenty of wrinkle, splendid chest, light quarters, hindlegs much too straight, especially from the hock down; tail fairly tight in curl, but carried in a line with center of back, it should lie close to the quarter; coat longer than I like, good legs, nails and vent not quite black, terrier feet (I prefer the hare foot); a compact, gay little dog of the right size exactly, and notwithstanding his defects (no dog is without), a good one. It is much easier to breed a good big one than a good little one, and Dude is a credit to his breeder and owner, Dr. Cryer. The giant Othello is well known. Like Comedy, he is truly formed, but much too large. I don't like a large pug. The first and second prize bitches in the open class are defective in head properties. The other winners have been out before.

TOY DOGS.

Mr. Philips won all the prizes for toy spaniels with Roscius, Grand Duchess and King Pippin, and Cupid, Miss Van Buren's Italian greyhound, had a class all to himself. In addition to the defects in him noted in my Boston report,

his ears are not well carried generally. The Letter Press gave a very intelligent criticism on this dog in its Boston report. It assumed a wise look and gravely told its readers that Cupid won first.

MISCELLANEOUS.

Pin, a second-rate Airedale terrier, very defective in head, was first, and Spot, an indifferent smooth-coated sheep dog, second. Spot would have to be improved considerably in head, ears and in limbs before he could beat a good one. Zorah, entered as a "Great Dane," is an under-sized, splay-footed flat-catcher—not a show dog in any point, Mr. Cugle. Which and T'other, a couple of Welsh terriers, were first and third in the light-weight class. Which is much the better in head, ears and in coat. Lady Jane, a Prince Charles spaniel, was second. She is too long in fore-face, not first-rate in skull and lacks compactness of body—a second-rater. CHARLES H. MASON.

ADDITIONAL AWARDS.

FOXHOUNDS.—1st, withheld; 2d, R. H. Meachen's Jerry II.; also special for best.

BEAGLES.—CHAMPION — *Dog:* C. F. Judson's Little Duke. *Bitches:* S. Diffenderffer's Lou; 2d, C. F. Judson's Twinkle.—OPEN—*Dogs:* 1st, A. Parry's Frank; 2d and high com., C. F. Judson's Racer, Jr., and Leader; 3d, Hornell-Harmony Kennels' Royal Krueger. Com., F. D. Hallett's Rob. *Bitches:* 1st, Associated Fanciers' Elf; 2d, Hornell-Harmony Kennels' Una; 3d, F. D. Hallett's Little Duchess.—*Puppies:* 1st, Associated Fanciers' Elf.—SPECIALS—Best dog, Frank; in open class, the same; bitch, Lou.

BASSET HOUNDS.—1st and 2d, C. B. Gilbert's Bertrand and Cosette; 3d, E. Sheffield's Baylie's Basset; best, Bertrand.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* Same owner's Richmond Olive.—OPEN—*Dogs:* 1st, 2d and 3d, J. E. Thayer's Reckoner, Luke and Raby Jack. Very high com., A. H. Norton's Rustic. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Richmond Dazzle, Meersbrook Nan and Pluck. *Puppies:* 1st and 3d, J. E. Thayer's Raby Chance and Richmond Tart; 2d, N. J. Winfield's Guess. SPECIALS—Best dog, Reckoner; bitch, Richmond Olive; owned in county, Guess; puppy, Raby Chance; kennel, J. E. Thayer.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Same owners' Jersey Lass.—OPEN—*Dogs:* 1st, Oak Shade Kennels' Clipper; 2d, Chestnut Hill Kennels' David; 3d, A. R. Kyle's Royal Monarch. Very high com., J. Watson's Glendale. *Bitches:* 1st, Chestnut Hill Kennels' Flurry III.; 2d, J. Watson's Glen Rosa; 3d, T. Cleveland's Lorna Thorpe. *Puppies:* 1st and very high com., J. Watson's Glen Rosa and Glendale; 2d, A. R. Kyle's Royal Monarch; 3d, Oak Shade Kennels' Lady Watson. Very high com. and high com. (2), Castle Rock Kennels' Jane of Castle Rock, Princess and Winsome Lassie. High com., H. Forbes's Guy Feathers. SPECIALS—Best, Scotilla; dog puppy, Royal Monarch; bitch puppy, Glen Rosa; kennel, Chestnut Hill Kennels.

BULLDOGS.—CHAMPION—*Dogs:* 1st, J. E. Thayer's Robinson Crusoe; 2d, C. D. Cugle's Merry Monarch. *Bitches:* 1st and 2d, J. E. Thayer's Britomartis and Carmen.—OPEN—*Dogs:* 1st, E. S. Porter's Lion; 2d, J. E. Thayer's Quasimodo. *Bitches:* 1st and 3d, C. D. Cugle's Soudan and Beatrice; 2d, E. S. Porter's Thespian.—SPECIALS—Best dog, Robinson Crusoe; bitch, Britomartis.

BULL-TERRIERS.—CHAMPION—*Dog:* F. F. Dole's Jubilee. *Bitch:* Same owner's Maggie May.—OPEN—*Dogs:* 1st, F. F. Dole's Sensation. *Bitches:* 1st, F. F. Dole's Starlight; 2d, J. P. & W. W. Gray's Countess; 3d, G. House's Duchess of York. *Puppies:* 1st, F. F. Dole's Starlight.—SPECIALS—Best dog, Jubilee; bitch, Maggie May; puppy (2), Starlight.

IRISH TERRIERS.—1st and special, J. F. McFadden's Dennis; 2d, Chestnut Hill Kennels' Breda Jim.

SKYE TERRIERS.—1st and special and 2d and special, E. M. Oldham's Kirkella and Claymore; 3d, Dr. M. H. Cryer's Gladstone Boy. Very high com., F. G. Williams's Kyle Haken and F. P. Kirby's Countess.

PUGS.—CHAMPION—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Dude and Max. *Bitch:* Same owner's Bessie.—OPEN—*Dogs:* 1st, Dr. M. H. Cryer's Othello; 2d, River View Kennels' Chequasset Diamond; 3d, Mrs. Annie E. Hubbard's Mo. *Bitches:* 1st and 2d, Dr. M. H. Cryer's Myrtle and Vic. *Puppies:* 1st, Dr. M. H. Cryer's Sallie; 2d, Associated Fanciers' Bradford Rowdy. SPECIALS—Best, Dude; puppy, Sallie; stud dog, Max; kennel, Dr. M. H. Cryer; get of Bradford Ruby, Chequasset Diamond; owned in county, the same.

TOY TERRIERS.—1st and special, J. Landy's Topsy.

KING CHARLES SPANIELS.—1st and special, W. Phillips's Roscius.

BLENHEIM SPANIELS.—1st and special and 2d, W. Phillips's King Pippin and Grand Duchess.

ITALIAN GREYHOUNDS.—1st and special, Miss Edith Van Buren's Cupid.

POODLES.—Withheld.

MISCELLANEOUS.—LARGE.—1st and special, P. Lawrence's Pin; 2d, Chestnut Hill Kennels' Spot.—SMALL—1st and special and 3d, P. Lawrence's Which and T'other; 2d, W. Phillips's Lady Jane.

SPECIAL PRIZES.

Special for best in Mr. Mason's classes, Minting. Irish setter specials, best, Molly; in open class, the same; dog and bitch puppies, A. W. Pearsall's unnamed; best owned in New Haven, Lady Clare; bitch, the same; kennel, A. W. Pearsall.

"COLONEL BLOOD" IN MASTIFFS.

Editor Forest and Stream:

I must dissent from Mr. Mason's note of warning to mastiff breeders against the blood of the late Colonel. His breeding was not fashionable in the sense of having many distinguished animals closely connected with it, but it comes in direct lines from many famous dogs, like Hanbury's Prince, Exley's Victor, etc. As a sire, his value is found in the third and fourth generation, and it is a fact that very few modern mastiffs of note are not his great grandchildren: Orlando, Hotspur, Rosalind, The Lady Isabel, etc., are out of his granddaughter; Jack Thyr, the sensational winner under Dr. Turner at the last K. C. show, (where he beat Ilford Chancellor, Cambrian Princess, Victor Hugo, etc.) is out of his granddaughter; Idalia, dam of Ilford Coroner, Debonair, Prince Imperial, etc. and Brenda Secunda, dam of Mr. Cook's crack, Ilford Chancellor, are by his son, Twining's Turk. That wonderful puppy of Mr. Edwin Nichols', Dictator, that pushed the dogs in the open class very hard when he was less than a year old, was by his son, Young Colonel; Beaufort is out of his granddaughter, and so on throughout the chapter. I have not specially referred to pedigrees for this, but simply quote from memory those that I can recall. Nor do I think that Mr. Mason's statement that Colonel never got a good one, can be supported. Negress came well within that class, and was the dam of such good ones as The Lady Rowena, Crown Princess, etc., and it is not possible that one can run across his name at every turn, in pedigrees, and the dog's blood be a bad factor. Mr. Mason writes of Ilford Coroner being a rare bred one, yet his dam is Idalia, who was by a son of Colonel. It will not do to assume that because a dog's ancestors are of unknown breeding, his blood is bad. Idalia and Brenda Secunda are cases in point; their stud book pedigree is of the most shadowy character, but after a long and widely extended search, it has been cleared up and is as complete as that of Orlando or Beaufort.

Without wishing to detract from Ilford Caution's value as a stud dog, I must dissent from the statemeat that he is the best we have. Sears's Monarch is a case in point, as I cannot remember of ever seeing such an improvement on the dam as he shows. In every point where she is weak he is particularly strong. I have in mind another case of just the same character, but am not at liberty to mention names. This is the test of a stud dog's value, not what dogs he gets from good bitches, but what he gets from poor ones. I must also dissent from the statement that Caution was the first real mastiff we ever imported; Prince Waldemar, out of a daughter of Colonel, and Lorna Doone, were the truest of mastiffs, barring being a bit undersized, and many years since we imported the best dog of the King litter, and King was the great dog of his day.

As to Nevison and Creole, Mr. Mason forgets that there was no question of type there; it was simply a matter of condition, and I think all hands agreed with the judge that Nevison was much inferior in type, but that Creole was in the worst condition. I remember seeing the trail in the sawdust of the ring left by her teats dragging. I must do the judge the justice of saying that he preferred Creole vastly as far as type went, but the difference in condition was so immense that he had to give it to Nevison. Creole was the truest of mastiffs, everything that one should be, with a real mastiff head and legs and a far truer mastiff than most of the cracks of to-day.

Mr. Mason makes the great mistake of setting up the present fashion of extremely short face as "mastiff type." Say that it is present fashion and no great harm is done, but say that it is a positive characteristic of the breed, and original in them, and it is complete rot, and cannot be sustained by a shred of evidence. Even such a devotee of short face, and so learned an antiquarian as Mr. Wynn, failed completely in establishing this, and by his quotation of Mr. Thompson's opinion of Peeress proves the contrary, as she was decidedly of the long-faced order as compared with modern fashion.

It is difficult to imagine a nobler picture than the photo of Colonel shows, yet this photo scales the head at 12in. long, with a muzzle of 4.2in. to a skull of 7.8in., and the dog really measured 4½in. in muzzle to 7½in. skull, and such a dog winning now would raise a howl to take the roof off the show building.

Fire away, gentlemen, with your worship of snub noses, but mark my words; in five years the weathercock will veer round to its old position, and Colonel, Turk, Nichols's Prince, Wolsey, etc., will be mastiffs, not Crown Prince, Orlando, etc. Then I will have the laugh on you, and until then I can wait. W. WADE.

HULTON, Pa., April 13.

HARTFORD DOG SHOW NEXT YEAR.—*Editor Forest and Stream:* Mr. Wade says in FOREST AND STREAM, "When will Providence and Hartford give another show?" As Mr. Wade is fond of betting, I will wager his usual stake (a rotten apple against a rotten potato) that Hartford gives a show in '89. As you do not in any case hold forfeits we will arrange for another stakeholder. Trusting that your correspondent will not "back water" I shall be happy to make such arrangements as will be sure to please him.—A. C. COLLINS (Hartford, Conn.).

SPANIELS FOR SCOTLAND.—Woodstock, Ont., April 19.—*Editor Forest and Stream:* Mr. Andrew Laidlaw, Woodstock, has sold a pair of cocker spaniel puppies, sired by Master Shina, to Mr. Harry Gordon of the same place, who intends sending them to Edinburgh, Scotland.—S. R.

AMERICAN FIELD TRIAL CLUB.—Cincinnati, O., April 23, 1888.—*Editor Forest and Stream:* At a special meeting of the American Field Trial Club held on Saturday, April 21, it was decided not to run any Derby this year.—C. W. PARIS, Sec.

THE NEW BREEDERS' CLUB already has a membership of nearly one hundred. We are asked to call attention to the fact that those who join before May 1 will be admitted without payment of dues.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

General Burnaby and Becky Jones. By Geo. Langran, Yonkers, N. Y., for red Irish setter dog and bitch, whelped Jan. 10, 1888, by Tim (Biz—Hazel) out of Sally (Chief—Princess Alice).

Queen Buff. By Seymour Van Santvoord, Troy, N. Y., for orange and white St. Bernard bitch, whelped Nov. 28, 1887, by Cato (A.K.R. 5265) out of Belle Meade II. (Noble II., A.K.R. 3273—Belle Meade, A.K.R. 3238).

Molly Stark. By Seymour Van Santvoord, Troy, N. Y., for brindle mastiff bitch, whelped Nov. 18, 1887, by Adam (A.K.R. 4733) out of Lady Zara (A.K.R. 2627).

Warwick. By J. H. Fiedler, Yonkers, N. Y., for red Irish setter dog, whelped Jan. 10, 1888, by Tim (Biz—Hazel) out of Sally (Chief—Princess Alice).

Gladis Noble. By W. D. Reynolds, Mahanoy City, Pa., for white, black and ticked English setter bitch, whelped June 16, 1887, by Noble Dan (Count Noble—Lucy Dean) out of Lucretia Gladstone (A.K.R. 1372).

Narka Noble-Gladstone. By L. M. Thompson, M.D., Mahanoy City, Pa., for white, black, tan and ticked English setter bitch, whelped June 16, 1887, by Noble Dan (Count Noble—Lucy Dean) out of Lucretia Gladstone (A.K.R. 1372).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Vesta—Mack. A. D. Lewis's (New York) pointer bitch Vesta (Tammany—Vision) to Dr. L. Corcoran's Mack (Ned—Gipsey), March 30.

Frisk Obo—Robin. J. White's (Woodstock, Ont.) cocker spaniel bitch Frisk Obo to A. Laidlaw's Robin (Obo II.—Dinah), April 9.

Di—Blue Cap. Hiram Card's (Elora, Ont.) beagle bitch Di (O'Shea's Rattler—Minnehaha) to his Blue Cap (Blue Cap—Blue Bell), Feb. 19.

Cameron's Racket. White, black and tan beagle dog, whelped March 4, 1881 (A.K.R. 4010), owned by A. C. Krueger, Pittsburgh, Pa., March 29, paralysis.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

S. R. B., Kinsman, Ohio.—I have a friend here that has a fine English foxhound, about 18mos. old, that has an enlargement of the neck. This first appeared early in the winter. It commences about 2in. below his jaw and runs down about 4in. on either side of the windpipe. The swelling is nearly 1in. thick in the middle. Are such swellings common in dogs of this breed? What would cause it? He has a heavy loud voice and barks a good deal while hunting. Ans. It looks like enlargement of the thyroid gland. You may give 10grs. of iodide of potash morning and evening in water. Also have an examination made by a veterinary or doctor.

Rifle and Trap Shooting.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

RANGE AND GALLERY.

THE STATE NATIONAL SHOOT.

THE detailed preliminary programme has been issued for the grand shooting tournament of the International Sharpshooters' Union, under the auspices of the Newark Shooting Society, at the Shooting Park, Newark, N. J., July 9, 10, 11, 12, 13 and 14, 1888. Any club may become a member of the Union by applying to the secretary before May 15, and conforming to the following terms, viz.: Contributing a suitable prize to the honor target and a payment of $2 for each member wishing to shoot on the Association targets. Such contributions and payments with names of members to be sent to the secretary before June 20. Members of such clubs, whose names have not been sent in by date named, may shoot on the Association targets by payment of $2 additional. $20 will be distributed. All shooting will be at 200yds. off-hand. The following targets will be used and prizes distributed: Association targets—Honor, stich, American champion. General prize targets—Ring, man, point, American standard.

Honor Target.—Prizes on this target will consist of all contributions from clubs, firms and individuals given for this purpose. The Newark Shooting Society offers as first prize $500 cash. A complete list of other prizes cannot be made until June 20, but there will undoubtedly be many and valuable prizes given. Open only to members in good standing, of clubs belonging to the Union. The target used will be the regular ¾in. ring target. Tickets for 3 shots, $5, which must be taken in conjunction with ticket for stich target. Each shooter can obtain but one ticket. Any rifle of not more than 50-cal. allowed, and any sight other than telescopic or magnifying.

Stich Target.—This target has a 6in. bullseye placed in the center of 12in. black. None but bullseye shots count. The shooter making a shot nearest the center of bullseye takes first prize, etc., open only to members as on honor target, tickets for 3 shots $5, and must be taken in conjunction with ticket for honor target. Each shooter can obtain but one ticket. Rifles and sights as on honor target. Prizes, $1,000; divided into 75 prizes.

American Champion Target.—This target is divided in circles 1in. apart, the black being 10in. in diameter and counting from 15 to 11, the circles in white counting from 10 to 1, open only to members of clubs belonging to the Union using rifles under National Rifle Association rules. Prizes, handsome gold medal and $25 cash, given by Newark Shooting Society for first prize and $275 cash, divided into suitable prizes; also all contributions from clubs, firms and individuals given for this purpose; tickets for 10 shots $5, each shooter can obtain but one ticket.

General Prize Targets.—Open to all comers. Shooters not members of some club belonging to the Union will be obliged to purchase a tournament ticket, which costs $1, if they wish to shoot on any of these targets.

Ring Target.—This target is the usual ¾in. ring target. Any rifle and any sights other than telescopic or magnifying may be used, tickets for 3 shots $2, number of tickets unlimited. Prizes, $1,500; divided into 125 prizes.

Man Target.—This target represents the head and upper portion of a man's body, the whole figure being black, divided into perpendicular lines ½in. wide, the center line containing 20, the extreme line on either side counting 1. Rifles and sights same as on ring target, tickets for 5 shots $2, number of tickets unlimited. Prizes, $1,100; divided into 100 prizes.

Point Target.—This target has a black of 12in. diameter, divided into 3 parts, the inner circle of 3in. diameter, which constitutes the bullseye, the next circle of 6in. diameter counts 2 points and the balance of the black counts 1 point; shots out of black do not count. The shooter making a shot nearest the center of the bullseye takes first prize, etc. Prizes, $1,100; divided into 100 prizes. Besides these prizes the following pre-

miums will be given: For the first 25 points a tournament silver medal, for 125 points additional a tournament gold medal, for each 50 points more $3 cash, the shooter making the most points in his first 300 she shall be declared king and awarded the king's medal, value $100, and $25 cash. Other premiums for most bullseyes each day, also for first and last during festival, and first and last each fore and afternoon will be given. Each shooter can obtain but one silver and one gold medal, tickets for 10 shots $1, number of tickets unlimited. Rifles and sights as on ring and man targets.

American Standard Target.—This target is so well known it needs no descripiton. Open to all comers using rifles under National Rifle Association rules, tickets for 5 shots $1, number of tickets unlimited. The shooter making most points in any 3 tickets to take first prize, etc. Prizes, $850; divided into 50 prizes.

The shooting on above targets to begin Monday afternoon, July 9, and close on Friday evening, July 13.

Team Shooting.—On Saturday, July 14, to begin at 10 A. M., usual 3½n. ring target, open only to teams from clubs belonging to Union. There will be 2 classes of teams, those using rifles under N. R. A. rules, the other using any rifle. Each class to compete only within itself. More than one team may be entered by any club, but no shooter can compete in more than one team in the same class. Teams to consist of 5 men, 10 shots per man, Entrance fee, $15 per team. Prizes, after deducting 15 per cent., the balance will be divided, pro rata, among the winning teams. Half the entries in each class shall constitute the winners, all entries must be made on or before July 12.

P. S.—On American standard target an allowance of 2 points on 5 shots will be giving to shooters using military rifles, sights and ammunition as furnished by the State from which the shooters may come. Special military rifles have no allowance.

A. BRANDOREF, Sec'y,
110 Market Street, Newark, N. J.

BULLARD MATCH NO. 4.

RULES governing the match are as follows: Notice of entries and applications for targets should reach us before May 5, in order that we may make the necessary arrangements to supply all with targets in time for the match:

1. Open to all members of rifle clubs and military companies in the United States and Canada.

2. Competitors to be active members of local rifle clubs, or of any regularly organized military company.

3. Distance 200yds., strictly off-hand, position standing, the elbow may rest against the body.

4. Target, American standard (Hinman).

5. Any officer of the National Guard or regular army of the United States or Canada using the rifle furnished by the State or government, and having the regulation 6lb. pull and regular open sights, as furnished for said military rifles, shall be allowed five points for each score of ten shots. No cleaning between shots.

6. All practice shooting necessary allowed before matches.

7. Each rifle club or military company may enter as many men as they see fit. Scoring shots, each man fifty.

8. To be shot on any of the following days: May 21, 22, 23, 24, 25, 26.

9. Competitors may select whichever of the above dates is most favorable for making their scores in the match.

10. Twenty-five shots only will be allowed on each scoring target, the targets and score cards to be signed by the referee and president and secretary of the club, and forwarded by mail to the Bullard Repeating Arms Co., Springfield, Mass., U. S. A., not later than twenty-four hours after completion of match.

11. Practice shots must not be made on the scoring target.

12. No contestant will be permitted to shoot under an assumed name.

13. Any contestant using a military rifle as issued by the State or government, 6lb trigger pull, with same sights as issued for said rifles, will be allowed five points for each score of ten shots.

14. The referee will test the trigger-pull of all rifles before the matches commence. All the rifles must pull 3lbs., except military, which will be 6lbs. Maximum weight of target rifles, 10lbs.

15. Ties will be shot off and dates fixed by the Bullard Repeating Arms Co.

16. Any sights may be used for target rifles except telescope and magnifying. Military rifles must use sights issued by the State or government for military rifles.

17. The president of each rifle club, and commanding officer of each military company, will appoint a referee who shall see that the above rules are adhered to throughout each competition. In case of any dispute arrising, the referee shall decide in accordance with the above rules, and if still under protest, the referee and the captain of the team shall submit the matter to the Bullard Repeating Arms Co., whose decision shall be final.

18. Targets will be furnished free by the Bullard Repeating Arms Co. on application.

19. The individual making the highest score will be awarded the Bullard Champion Off-Hand Gold Badge.

20. The Bullard Repeating Arms Co. will fix the dates in May and October of each year for the competition for the Champion Badge until won three times by the same person, when it becomes his private property.

Match has been won twice by Mat Gindele, of Cincinnati, O.

BULLARD REPEATING ARMS CO.

BOSTON, April 21.—A good number of shooters were present at the Massachusetts Rifle Range to-day, and the rest match and the revolver match were well patronized. Weather conditions were very poor. The range will be open for rifle shooting next Wednesday. Following are the best scores finished to-day:

Rest match, 200yds.

S Wilder	11	12	12	9	10	12	12	11	11	9—109

R Kendall	9	6	5	6	8	10	7	7	7	10—75

SYRACUSE, April 11.—The following scores were made by members of the Onondaga Rifle Club at their regular shoot to-day. Ten shots off-hand, and 10 at rest, 200yds., standard American target:

Off-Hand.

Fairchild	8	8	6	7	5	9	9	4	7	9—72
Knapp	5	5	10	7	10	5	5	6	6	6—65
Seely	8	6	4	7	4	6	8	8	5	6—62
Zischang	7	6	6	8	8	7	9	8	7	10—73
Koehler	5	5	7	8	7	9	9	7	9	7—74

Rest.

Fairchild	10	10	10	9	10	10	9	10	9	9—96
Seely	7	10	10	9	10	9	10	10	8	9—92
Koehler	9	10	10	9	8	10	9	10	6	10—91
Zischang	10	7	6	10	7	10	9	8	9	10—86
Hanford	8	2	5	8	8	5	4	7	6	9—62
Knapp	6	7	6	4	9	6	7	6	9	9—69
Stillman	6	6	9	7	8	6	6	10	6	8—71

O. R. C.

GARDNER, Mass., April 19.—The Gardner Rifle Club at the last regular meet at Hackmatack Range used the American standard target. The shooting was off-hand, distance 200yds. The totals of the three scores were as follows:

G F Ellsworth	79	86	79—244	B W Rice	57	65	70—195
C N Edgell	87	71	78—236	L Snowflake	57	58	70—185
A E Knowlton	76	81	70—227	J Rainbow	32	51	38—121
F B Edgell	85	68	71—204				

CHERRYFIELD, Me., April 14.—The Cherryfield Rifle Club shot 200yds., off-hand, to-day in a cold and heavy wind. Standard target:

J A Wilson	8	8	5	10	6	10	5	7	6	8—72
Wm M Eaton	7	8	10	10	6	9	5	5	5	6—71
H F Willey	7	7	7	9	9	8	8	7	6	6—74
E E Jacobs	5	7	4	9	3	6	9	7	5	10—65
J W Coffin	3	3	9	3	4	10	3	8	9	8—60
P B Guptill	10	7	7	5	9	10	6	6	9	4—73
E A Guptill	9	7	10	6	8	5	4	6	8	7—70
F J Campbell	5	7	7	5	10	7	4	4	5	7—63
E K Wilson	8	6	9	4	7	5	3	8	4	3—57

OWENSVILLE, Ind., April 17.—The Ballard Rifle Team shot today at 200yds., off-hand, for the gold medal. Standard targets:

W Hoberts	8	7	6	9	3	7	9	6	4	10—69
J Montgomery	4	9	4	9	7	5	7	7	5	5—61
R Speck	5	4	10	6	6	4	7	4	6	10—62
J Stone	4	10	7	5	7	0	9	3	7	5—57
W G Daugherty	0	9	3	7	0	7	5	5	6	5—47

W. Roberts won medal for the first time.

LAWRENCE, Mass., April 21.—At the shoot of the Lawrence Rifle Club to-day there was a large attendance, and some excellent scores were made, 200yds. standard target:

E F Richardson	9	9	10	8	9	10	10	10	7	7—89
O M Jewell	8	10	9	8	10	10	9	7	9	7—87
C M Hill	8	10	9	6	10	8	9	8	8	10—86
M Beal	7	6	6	8	10	6	8	10	8	10—80
W Fisher	6	7	10	8	10	6	7	9	7	9—79
H P Simpson	6	5	5	10	9	6	10	9	8	6—75
J W Bean	10	5	6	8	7	7	10	6	9	6—74
E H Archibald	6	8	7	7	8	10	4	8	8	4—70
A A Philbrick	8	5	9	8	7	6	4	9	5	8—69
R W Babb	8	6	7	6	6	6	4	5	7	6—67
B W Palmer	9	3	3	4	2	4	6	3	4	7—47

GOULD'S PISTOL BOOK.—A. C. Gould, editor of *Rifle*, has gathered into book form much that has recently been published by him upon the modern American pistol and revolver. It makes a book of some 140 pages, with many illustrations of weapons and the manner of holding. He covers the arms themselves with extended descriptions, speaks of ammunition and then of the scores made with a set of shooting rules for revolver clubs. He confesses in the preface that he shares the general belief that it was impossible to do satisfactorily fine shooting with a pistol beyond a few yards, and still more impossible with the ordinary revolver. Tests and experiment and the rousing of a sharp competition all united to prove that there were great possibilities both in the pistol and revolver. Mr. Gould first takes up the American revolvers as a class and very properly condemns much of the cheap shooting junk with which the country is deluged. He takes up in turn the leading makes and gives all necessary information about them in catalogue form. He discusses sights and finds much to condemn; then ammunition, and finds great improvement within a very recent time. Instructive hints are given about reloading ammunition, and then the possibilities of long-range work, even up to 300yds., are considered, with a wind-up chapter on rules and regulations. The illustrations include the best makes of arms, targets to scale or full size, and then a half dozen prominent shots in position. The book sells at $1 and may be had from the FOREST AND STREAM.

NEWARK, April 20.—A meeting of members of clubs formerly constituting the Newark Rifle Association, was held at the Essex Hall last evening. The object was to discuss the feasibility of participating in the July festival. No definite action was taken, the meeting being adjourned to next week for final action, when Essex, Frelinghuysen, Domestic, Plymouth, Warren, Celluloid and Newark amateurs will be represented. It is desired to get together all the "old-timers" of these clubs and arrange for team and individual shooting during the festival.

OTTAWA, April 18.—The Ottawa Rifle Club elected the following officers at their annual meeting: President, Major H. F. Perley, Headquarters Staff; First Vice-President, F. C. Lightfoot; Second Vice-President, Capt. Waldo. G.G.F.G.; Comm'ttee of Management, J. Wright, 43d Batt., Lieut. G. R. White, G.G.F.G., and James Grant; Secretary-Treasurer, E. B. Sutherland; Auditors, J. P. Nutting and J. H. Fairweather. The reports of the retiring officers showed the club's finances to be satisfactory, and Major Perley, who occupied the chair, congratulated the members on their success during the past season. Few changes will be made in this season's programme, but extra inducements will be offered junior shots. It being found impossible to secure satisfactory results at the 600yds. range, that distance will be eliminated from this season's Snider competition, except on the occasions when the 500 and 1000yds. are introduced. The first shoot of the season will be held on May 5.

THE REVOLVER CHAMPIONSHIP.—Paine and Bennett have at last come to what seems a definite plan of a match. They met in Boston on the 18th and it was agreed to shoot a match with revolvers for $1,000 aside, 600 shots, 100 shots a day for six consecutive days, at Springfield, Mass., beginning Monday, June 4, 1888, and ending Saturday, June 9, 1888, at a distance of 50 measured yards, on the standard American 200yds. rifle target, revolvers to be the Smith & Wesson, .44-cal., Russian model, with 3lb. pull, and not over 6½in. barrel; ammunition to be factory-make in unbroken boxes. In addition to the stakes the match to be for the championship of America. The match shall be play or pay, that is, either party failing to observe any of the conditions shall forfeit all money deposited. Five hundred dollars a side has been deposited already. The final deposit of $500 per side will be made May 28. Many gentlemen interested in the match are asking why the entire week's shooting should be confined to Springfield, and they suggest that two days shooting, at least, be had in Boston. It would seem as if the fairer method would be to have two days at Providence, two days at Boston, and two days on neutral ground at Springfield.

WM. V. LOWE, the muzzleloader advocate, has left Syracuse, N. Y., to resume residence at Fitchburg, Mass.

CREEDMOOR.—Under the usual orders the N. Y. State troops will begin open air practice about the 1st of May. The bill providing for the purchase of the range by the State receives very favorable notice in the Legislature, but has not yet become a law.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE TROPHY SHOOT.

IN view of the short notice given and the expressed desire of many clubs to have more time for consideration before entering for the FOREST AND STREAM DECORATION DAY TROPHY, the time for entry has been extended to May 30. Those clubs entering in time to begin shooting on May 15 may do so, and in other respects the conditions of this general test shoot will hold as already announced.

Editor Forest and Stream:

I am in receipt of yours respecting the FOREST AND STREAM Decoration Day Trophy, and I have looked through the terms and conditions; but there are some things I do not understand as fully as I would like to. First—As to targets used; among those allowed are those of the Cleveland Target Company. I assume this to be what we call "blue frocks," as we understand that they are manufactured by the Cleveland Target Company. You say "Atlantic Ammunition Co., agents." Is there any significance to be attached to this part of the description of the targets? What I mean is, must we procure the targets to be used from the Atlantic Ammunition Co., agents? Or can we use the blue rock targets made by the Cleveland Target Co., procuring them direct from the company? Second—As to the direction of the birds thrown. You say "five at a right angle to the right, etc." Do you mean at a right angle to the line from the shooter to the trap? In most matches that I have seen the targets have been thrown half quartering, or at an angle of 45°. Am I right in supposing that your requirement is that they shall be thrown straight out to the right and left? Third—You say, "Prizes to be determined on the aggregate of the best three in five shoots." Do you mean by this that each team will shoot five separate scores and then have the privilege of selecting three scores from the five? I am in doubt about this, because further on you say, "One score only to be shot," "not the best score selected from a series," and then you say "the Trophy score may be merged with that of another match, if previously announced." What is the meaning of this? It is likely that our gun club will enter in this match if we can have a thorough and distinct understanding of all its conditions and requirements. JAS. J. CLARK,

CANTON, O., April 18. Captain Canton Gun Club.

[First—It is immaterial where the targets are purchased, provided they are of the standard makes named. Second—The right angles are from the line running from shooter to trap. Third—Teams have the privilege of taking best three in five shoots. A team may stand on three scores, if satisfied. "Not the best score of a series" means that the shooters may not shoot an indefinite number of birds and then pick out a series of 15 as the Trophy score. The Trophy shoot may be merged in a regular club shoot, as, for instance, the first 15 birds in a 25-bird shoot may stand for the FOREST AND STREAM Trophy shoot, if so announced.]

PHILADELPHIA TOURNAMENT.

THE North End Gun Club, an organization that has now been in existence some seven years, and whose membership number some sixty members, among whom are some of the first citizens of Philadelphia, now propose to have a tournament on May 28, 29, 30 and 31, which will be held at the Gentlemen's Driving Park, Philadelphia. Targets, blue rocks and clay-pigeons. Shooting under the National Gun Association rules. $225 guaranteed ten men teams, $100 to the highest score, $75 to the second and $50 to the third. Fifteen single and 5 pairs double blue rocks. Entrance for ten men teams $15, targets extra. If more than 15 teams enter, the entrance will then be divided into 4 moneys—40, 30, 20 and 10 per cent. All teams must be taken from organized gun clubs. May 28, 29 and 30 will be devoted to club shooting at club traps, 31st to the shooting off of ties.

$50 guaranteed to five men teams, $25 to the highest score, $15 to the second, $10 to the third. Entrance $10, 20 clay-pigeons. If more than 5 teams enter, the entire entrance money will be divided into 4 moneys.

$30 guaranteed to two men teams, $15 to the highest score, $9 to the second, $6 to the third. Fifteen blue rocks, entrance $5. If more than 6 teams enter, the entire entrance money will be divided into 4 moneys. Any shooter can compete in the two and five men team shoots.

$400 guaranteed for sweepstake shooting One purse of $25 in the morning, entrance $1; one purse of $25 in the afternoon, entrance $1; one purse of $50 in the afternoon, entrance $3, each day. Targets, blue rocks and clay-pigeons. If more entrances than the purse guaranteed, the whole to go to the shooters. The management of this tournament claim the right to debar all professionals, such as R. E. Sheldon, J. R. Stice, H. McMurchey, C. W. Budd, Al. Bandle, Fred Erb, Jr., J. E. Miller and A. Meaders.

A. L. LUMB, Sec.
MAIN AND ARROTT STREETS, Frankford, Philadelphia.

CANADIAN TRAP NOTES.

THERE are great preparations going on for the shoots announced for the Queen's Birthday in May, and with fine weather a great deal of sport ought to be enjoyed.

HAMILTON, April 16.—The monthly shoot of the Wildfowler's Gun Club for the cup for which the members are tussling, took place this afternoon. Hamilton blackbirds were used, 25 to each man, and the shooting was at 18yds. rise. The scores were: W. Smyth 21, T. S. Stephens 16, A. Smyth 17, C. Hunt 17, G. C. Hore 16, John Bowson 15, John Hunter 14, H. Davis 13, John Smyth 10, Wm. Fitch 10. The cup has been won once by John Smyth, Albert Smyth and Wm. Smyth, and it will be necessary for one of them to win it twice more before the cup becomes his property. Three sweepstake matches also took place, the prizes being won by T. L. Stevens, G. Hurst, A. Smyth and J. Bowson.

OTTAWA, April 18.—Considerable rivalry exists as to who is the crack shot of the St. Huberts, and to-day P. Thompson and Dr. Alex. Martin met to decide the question at 25 Ligowskys each. T. McLelan and J. Deslauriers also fancied themselves, and entered as a pair against the other two. The scores were: Thompson 22, Dr. Martin 16, McLelan 20, Deslauriers 14. Thompson missed only one in the first 18.

OTTAWA, April 19.—Beautiful weather was taken every advantage of by the Ottawa Gun Club, who shot for the club badge at 15 pigeons each. The scores were: J. Manuel 12, H. Street 11, L. C. Labelle 10, J. Stewart 9, A. Stewart 9, W. Tracy 9, H. Baldwin 7, Dr. McPhee 5, A. Throop 11, Ed White 5. Throop and White, of the St. Huberts, shot by invitation in a sweepstake match at 5 birds each, which was won by Mr. Redmond with a straight score. A. J. Stewart taking second prize after several ties. The St. Huberts also had a sweepstake at 20 birds each, in which the following scores were made: B. Thompson 18, W. B. Noah 10, T. McLean 13, and A. Throop 8. A 10-bird sweepstakes following, Thompson, McLean and Redmond each hit 7 and Noah 6.

BRANTFORD, April 20.—At a meeting of the Brantford Gun Club, held last night, the following officers were elected: Hon. President, C. Grantham; President, T. A. Ramsay; first Vice-President, G. Williams; second Vice-President, W. Baxter; third Vice-President, C. H. Bethel; Secretary and Treasurer, J. W. Hewarth. Grounds have been secured in West Brantford for shooting purposes.

MONTREAL, April 21.—The Athletic club house at Cote des Neiges offered 4 prizes, open to be competed for by green hands, or those never before having won a prize. This afternoon was the date, and under the management of Mr. T. W. Boyd, Jr., who also officiated as referee, the affair was one of the most enjoyable and satisfactory shoots on record. There were 14 entries, 13 being after the prizes and one, the manager of the institution, giving up his chance to the second man. The shoot was at 20 birds, from 2 Peoria traps, at 12yds. rise, each trap being sprung alternately. The shooting was creditable, Lowe and Brown each getting 5 straight birds, the former taking his first 9 straight. All round the showing was first-class for new shots. The score was: J. A. Lowe 13, H. Brainerd 12, N. Bickerdike 12, W. J. Cleghorn 10, F. Rodden 9, Parker 9, E. H. Brown 9, J. Busteed 9, J. Lane 7, J. A. Taylor 5, T. E. Hodgeson 3. W. Rodden, J. Paton and T. Paton also competed. In shooting off for first prize Brainerd beat Bickerdike by a score of 4 to 3. For fourth place F. Rodden, E. H. Brown and Parker had a very exciting struggle. Brown failed in the first string, and it was only after 2 more strings of 5 had been shot at that Rodden won. The prizes were taken as follows: Brainerd first, Bickerdike second, Cleghorn third and Rodden fourth. Another similar shoot will be held shortly with the 5 winners in this match barred.

NORWALK, Conn., April 14.—The first shoot of the Fountain Gun Club was held to-day on the old Pine Island grounds. The club has over 30 members, but the attendance was very small on account of rain.

Three traps, 18yds. rise, National rules. First sweepstake at 5 clay-pigeons:

Capron	11110—4	Aiken	01010—2
Lycett	11011—4	Smith	00011—2
Tafft	00100—1	Lockwood	11111—5

Lockwood first, Lycett and Capron second, Aiken and Smith third.

Second sweepstake at 6 blue rocks:

Capron	000110—2	Aiken	010000—1
Lycett	101000—2	Smith	101110—4
Tafft	000000—0	Lockwood	111111—6

Lockwood first, Smith second, Capron and Lycett third.

Third sweepstake at 5 clay-pigeons:

Capron	01010—2	Aiken	10000—1
Lycett	11011—4	Lockwood	11111—5
Tafft	00010—1	Smith	11110—4

Lockwood first, Lycett and Smith second, Capron third.

Fourth sweepstake at 6 blue rocks:

Tafft	111000—3	Aiken	001101—3
Smith	111100—4	Ferris	100101—3
Capron	001100—3	Lycett	010100—2
Lockwood	111011—5		

Lockwood first, Smith second, third divided.—F. E. L.

JERSEYVILLE, Ill., April 17.—Weekly Peoria medal shoot at 20 singles:

Al Tack	11010001011001111010—11	Chappell	11011111111111101111—18
Hutchis'n	01111 11101011111001—16	Lowe	10010100101101010111—11
Douglas	11111 01011111111001—18	Hansell	11110011010101111110—14
Skelly	11101000101011111110—13	Smith	10111111111111010111—17

Ties on 18 won by Chappell, with 4 to Douglas's 3.

Sweep at 7 Ligowskys, 2 moneys:

Hutchinson	1111111—7	Skelly	1101010—4
Hansell	1111100—0	Douglas	0111101—5
Smith	1001110—4		

Hansel won second on shoot off.

Sweep, same conditions:

Hutchinson	1111101—6	Smith	1111101—6
Chappell	0111011—5	Skelly	1010010—3
Hansell	0101111—5	Douglas	0111103—4

Ties divided.

Sweep, at 5 clays:

Hutchinson	01101—3	Smith	11111—5
Chappell	11101—4	Skelly	10110—3
Hansel	11111—5	Douglas	11001—3

Ties divided. The wind blew very hard and made it difficult shooting. The club shoots every Tuesday afternoon.—HAMMERLESS.

PERTH AMBOY, N. J., April 18.—Mystic Gun Club at blue rocks, 18yds. rise:

Harry Smith	111110110111011—12	Stacy Tuttle	111011111101111—13
L Van Horn	001010011000010— 5	Geo Parnell	111101000011110— 9

EMERALD GUN CLUB, of New York city, regular shoot at Seaview Park, New Drop, Staten Island, April 18. Eight live birds, 5 ground traps, 21, 25 and 30yds. rise, 80yds. bounds, Emerald Gun Club rules, three gold medals:

Wm Glaccum (30)	11111111—8	J H Vass (30)	11110101—6
Geo Remsen (30)	00111011—5	P Butz (30)	01101031—4
Dr Hudson (30)	11111101—7	N Measel (30)	10111001—5
L Gehering (30)	11010111—6	T P MacKenna (25)	01111011—6
J White (30)	01110100—4	Dr Vandegrift (21)	01100111—5
Thomas Codey (30)	10111010—5	J Bade (25)	11101011—6
Martin Cherry (21)	11111010—6	M W Murphy (25)	10101111—6
John Measel (30)	00111101—5	S McMahon (25)	01011111—6
J Sidley (25)	11110001—5	Austin McHale (21)	01111010—5
H Rubino (25)	01100101—4	M McMunn (30)	11111100—6
R Regan (25)	11101100—5		

Wm. Glaccum wins first prize, a gold medal; killed 8 birds straight. Miss and out, second barrel ½ bird, for second, also a gold medal at 25yds., was won by S. P. MacKenna. Martin Cherry wins third prize.

WINCHENDON, Mass., April 19.—The Winchendon Gun Club began yesterday afternoon its regular weekly meet. Each man had a possible score of 10 birds, the work in detail was as follows:

J G Henry	1101101012—7	P S Davis	1110011100—6
H J Lawrence	0011101111—7	A D Lawrence	0111000110—5
F F Hopgood	1101111001—7	E M Whitney	1000101601—4

TOPSHAM, Me., April 23.—The annual shoot of the Riverside Shooting Club, of this place, was held on the Fair Grounds Fast Day, April 19, and although the weather was all that could be desired, the attendance was small compared to what it usually is. The match was at 25 single clays and blue rocks, 18yds., for 3 club badges, and was very much enjoyed by those who participated:

A Q Goud	1111001100111111001101111—18
C H Winslow	1111111010100101111001101—17
M C Hall	1111110101111111100110011—19
S Stout	0001010001150110101111101—14
G E Keen	1111101011100110101000101—15
A E Hall	0101101011110101111101101—17

Ties on 17: C. H. Winslow 10101—3, A. E. Hall 00103—1.—CHAS. GOUD, Sec'y.

CARO, Mich., April 13.—Gun club shoot at 10 Peoria blackbirds, 18yds. rise:

F H Baillie	0011111010—6	B F Nettleton	0011010011—5
J F Harris	0110111110—7	J R Mason	1000111111—7
N Lester	1100100011—5	D Cooper	1111110111—9

SOLOMON CITY, Kan., April 17.—Independent Gun Club at blue rocks, 21yds. rise. Very blustering day, and every break well earned:

C H Smith	1111110100110—10	Jno Kraeuchi	0000110110100011— 7
E E Crooks	0011000011111C0— 7	M Robecker	0111010 0010000— 6
T J Edworthy	1600111001010— 8		

The tie shot off by Crooks and Kraeuchi, miss and out, Kraeuchi won.

SAN FRANCISCO, April 15.—To-day came as near being perfect, from a sporting standpoint, as any they had yet encountered at Alameda Point. The attendance of the Lincoln Gun Club was unusually large, and although the majority of the scores were by no means wonderful, still the marksmen took the matter good-naturedly and attributed their lack of success to the fact that the season was now at its beginning and consequently they were not thoroughly "broken in." The clay pigeons worked to the satisfaction of all. The match of the first class began shortly after 10 o'clock, fifteen members on the score. The shooting was rather commonplace, but Rudolph Wenzel captured the handsome club trophy for the season of 1888 with a score of twelve kills to his credit.

C. Cate	1111010010110—10	Parks	0001000001011— 5
Ford	0011101001C0111— 8	Campbell	1160310011111001— 8
Wenzel	1111011001111111—12	Scovern	1111011100100000— 8
Venker	0001011011111111—10	Mellish	1000101C011710— 8
Lee	0001011C010 101— 7	Fanning	1011010111111010—10
Richter	0100011001110111— 8		

In the second class the scores were slightly better, the trophy being won by Kearney with a score of fifteen straight kills. This is the first time in the history of the club that fifteen straight have been broken, many members going so far as to assert that it was the first fifteen straight clay pigeons that have been demolished on this coast. After Karney came F. Venker with eleven kills to his credit.

Bovee	0100001001100000— 4	Holmes	1101110110110110—11

Karney	1111111111111—15	Brown	1010100110101611— 8

At the conclusion of the regular club shoot, and after the prizes had been awarded, a sweepstake match was arranged for ten single birds, 50 cents entrance, three moneys. There were eighteen entries. Parks won first money, and in a tie shoot-off for second place at three pair of doubles, Bob won with four out of a possible six.

CARVER—KENNECUT.—Denver, Col.—Dr. Carver shot a match against Vick H. Kennecutt, champion of Col. The conditions were 100 live birds, Hulingham rules, except weight and gauge of gun, $100 a side. The birds were only a fair lot, generally easy to kill. At 91 birds, the score was a tie, each shooter having killed 83. As there were not enough birds to finish the match, and as a lively rain was falling, a draw was agreed upon. Mr. Kennecutt was handicapped in his gun—a 10g. Smith hammerless, which would partially open on the first fire, leaving the cap of the second barrel shell above the reach of the plunger.

BOSTON GUN CLUB April 19.—The Boston Gun Club's grounds at Wellington were crowded to-day by more than 150 members and their ladies who came to witness the female shooter, Miss Annie Oakley, demolish glass balls, clay pigeons and Peorias. A better day could not have been wished for. The shotguns used by the lady were two beautiful 20-gauge guns built expressly for her by Charles Lancaster of London, a Spencer repeating 12-gauge, and one Stevens 32-calibre rifle of American manufacture. The varied exhibition of the young lady was voted a great success, and at the conclusion of her work the club's secretary, Mr. David Kirkwood, in a few complimentary remarks presented Miss Oakley, on behalf of the Boston Club, a pair of elegant gold bracelets. Following the exhibition shoot came a contest for sweepstakes. These were: 1, five clay pigeons—Stark and Kirkwood first; 2, seven Peoria blackbirds, Baxter first; 3, five clays, Nichols and Chase divided first, 4, seven Peorias, Swift, Nichols and Snow divided first, 5, three pairs Peorias, Swift, Rogers and Kirkwood divided first, 6, five straightaway clays, Nichols first, 7, seven Peorias, Baxter first, 8, seven clays, Payson first, 9, three pairs Peorias, Kirwood first, 10, five glass balls, Kirkwood and Grew (divided) first, 11, three pairs doubles, Snow and Payson first, 12, seven clays, Swift first.

THE OHIO LEAGUE.—The first meeting of the Ohio Trap-Shooters' League will be held at Galion, Ohio, May 8, 9 and 10. Programmes can now be obtained from the secretary, Mr. George L. Graham, Columbus, Ohio. In the $500 Smith Individual Championship Cup the entrance will be $5 per man in place of $3. The entrance fee total in the coming shoot will go to the League, the winner of the cup, in addition to the honor of being the individual champion shot of Ohio, receiving an order from the League treasurer for the total entrance fee the following time the cup is put up—six months thereafter. The cup is a handsomely engraved gold and silver affair, standing some 30in. high, and in weight alone is worth $350. The shooting for the cup will be at 30 single blue rock pigeons, 18yds. rise, under the Ohio League rules.

WELLINGTON, April 21.—There was a good attendance of gunners at the grounds of the Wellington Club to-day. In the merchandise match Shumway, Stanton and Hart were first with 17. Bond, Sanborn and Baxter second with 15, Swift and Scott third with 14, Chase, Schaefer and Moore fourth with 13, Bradstreet, Brown and Perry fifth with 11, Phelps, Colony, Melcher and Nichols sixth with 10, Conant and McCoy seventh with 8, Snow eighth with 6. In the sweepstake matches the winners were as follows: First, 6 blue rocks—Moore, Scott and Henry first. Second, 6 clay-pigeons—Schaefer and Scott first. Third, 6 blue rocks—Stanton first. Fourth, 6 clay-pigeons—Brown and Bond first. Fifth, 6 blue rocks—Scott, Schaefer and Phelps first. Sixth, 10 clay-pigeons, merchandise match—Bond, Shumway and Sanborn first. Seventh, 10 blue rocks, merchandise match—Stanton, Scott and Hart first. Eighth, 6 blue rocks—Snow and Stanton first. Ninth, 6 blue rocks—Moore, Sanborn and Stanton first. Tenth, 6 clay-pigeons—Moore and Baxter first.

LEOMINSTER, Mass., April 20.—The Leominster Gun Club have held their annual meeting and elected officers for the ensuing year. The treasurer and secretary made very satisfactory reports. The financial condition is good. The club has real and personal property valued at $150. The officers elected are: President, I. F. Graham; Vice-President, A. W. Wood; Treasurer, A. G. Powers; Secretary, R. B. Andrews; Directors—S. M. Harris, E. F. Blodgett and A. McDonald.

NEWARK, N. J., April 23.—The West Newark Gun Club held its monthly shoot to-day at twenty-five Lockport bats each. The scores are as follows: John Adelmann 20, M. Adelmann 21, C. Von Lengerke 24, F. Hilfers 19, B. Ulrich 19, C. Compton 19, F. Schmidt 16, Geo. Disler 14. Afterward two sweepstakes were shot with the following result: First sweepstakes, five birds each, first money, John Adelmann; second money, C. Von Lengerke; third money, M. Adelmann. Second sweep, five birds, first, M. Adelmann; second, F. Hilfers; third, John Adelmann... The West Newark Gun Club has completed arrangements for a tournament of trap shooting, to take place at the grounds on Springfield avenue on May 28, 29, 30 and 31. The main contest will be for three valuable prizes. The first is a large copy in oil of Landseer's "Stag Hunt," handsomely framed and valued at $300. The picture is 36x52in. The other prizes are in cash.

RICHMOND, Mich., April 16.—We have organized the Richmond Gun Club and Game Protective Association with the following officers: I. S. Roberts, President; Geo. A. Bailey, Vice-President; W. E. Walton, Secretary; A. Martin Keeler, Treasurer; W. E. Walton, Captain; Directors—Dr. E. J. Walton, Dr. W. D. Clark, John H. Pound. We have some thirty members, and have adopted the blue rock artificial pigeon for our regular weekly shoots.

LOUISVILLE, April 18.—Fred Erb, of Lafayette, Ind., defeated William Graham here to-day; Erb brought down 78 blue rock pigeons out of 100 and Graham scored 76. April 20.—To-day Erb and Graham shot their second pigeon match under Monaco rules. The score was: Graham 60, Erb 63. It was very windy and raw. Twenty-five birds fell just outside bounds. The concluding match will be shot at Connorsville, Ind., May 2.

NEW HAVEN, Conn., April 18.—*Editor Forest and Stream:* A team of five men, composed of members of the New Haven Gun Club, hereby challenge any five men of any one organized gun club of Connecticut, to shoot a friendly match or for a purse and the championship of the State, the rules and conditions of the match to be left to the accepting team.—J. H. GOULD, Secretary New Haven Gun Club, Box 865.

Canoeing.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div. R. W. Bailey	W. R. Huntington	J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div. Henry Stanton	A. S. Pennington	E. W. Brown, 136 B'way, N.Y.
Eastern Div. L. Q. Jones	Geo. M. Barney	W. B. Davidson, Hartford.
N'thern Div.	A. D. T. McGachen.	W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

A CRUISING MEET.

AS a result of the agitation in favor of cruising that has been carried on in the FOREST AND STREAM during the past winter, the interests of the cruisers are to be looked after this season to an extent that should leave no grounds for complaint in the future. Their wants will be specially considered in the programme of the A. C. A. meet, the general tendency being now to favor the cruisable canoe in the racing; the Northern and Atlantic divisions will have special events for cruising canoes; and the Eastern Division has arranged for a strictly cruising meet as the opening of its season. The matter is now in the hands of Vice-com. Jones, who will be in command, and under his leadership the first American cruising meet in apt to prove a successful experiment. The programme thus far arranged makes the rendezvous at the big club house of the Hartford C. C., on the afternoon of May 26, where a camp fire will be lighted at night. Early next morning the fleet will start down the Connecticut River, a camp being selected in advance at some convenient point. Arrangements will be made for sleeping quarters for all who do not care to camp out so early in the season. Sunday will be spent in camp and on Monday morning the cruise be resumed. By Tuesday noon, or sooner, the last camp, probably just above Deep River, will be reached, and the fleet will camp until Thursday; Wednesday being given up to racing. Those who cannot join the cruise can reach Deep River with their canoes by N. Y., N. H. and H. R. R., or by boat from New York. The programme is a most attractive one, combining both racing, cruising and camping, and canoeists will watch with much interest the success of the experiment. No move has yet been made toward a local meet of the Atlantic Division on Decoration Day, but a similar cruise could be easily arranged. The rendezvous could be at the Horse Shoe, on Sandy Hook, reached by steamer from New York in an hour, then a cruise up the Shrewsbury or Navesink, down and along the Jersey shore of Raritan Bay, stopping for a day to race, and returning by way of Staten Island Sound to New York; those whose time is limited taking the steamer from Amboy or Rossville. Such a course would be convenient to all, including the Passaic River canoeists.

ATLANTIC DIVISION MEET.

Editor Forest and Stream:

I have been pleased to note that among other places suggested by contributors in recent issues of your paper as desirable sites for the meet of the Atlantic Division of the A. C. A. favorable mention has been made of certain points on Raritan Bay.

Having spent two weeks of last summer on a cruise along the Jersey coast from Perth Amboy to the Shrewsbury River, and back again, in company with my old cruising mate "Seneca," I can fully indorse his letter setting forth the advantages afforded by the south shore of Raritan Bay, and especially the immediate neighborhood of Chesequake Creek, as a site for the meet of the Atlantic Division.

He has in no wise overrated the many features which combine to render that point, all things considered, a most convenient and desirable one.

Should the meet be held there, it is more than likely that it will be attended by some of our Washington canoeists.

A letter to you from one of us which appeared in your issue of the 20th of March held out a cordial welcome to such canoeists as might choose to honor us with a visit, and at the same time suggested the selection of some point on the Potomac River as a place for the proposed meet.

The canoeists of Washington are pleased at all times to extend a hearty welcome to their brothers of the sail and paddle, and would spare no pains in their efforts to aid in the success of the meet should it be held on our home stream or elsewhere, but in the desire to air our hospitality we should not allow ourselves to be led into holding out misleading inducements to prospective visitors, or be tempted to exaggerate the meagre advantages afforded by our river for cruising and camping. All are welcome to the best we have, but to my often expressed regret that best is but a poor substitute for what may be had on Northern waters.

We are all liable to err, sometimes, and had your correspondent ("J. R. L.") ever camped and cruised on some of the lakes and streams of the Northern States, or along the coast in the vicinity of New York city, he would have hesitated, in spite of his evident desire that the meet should be held here, ere he indulged so enthusiastically in praising a stream so ill-suited for cruising and whose shores are so sadly lacking in the requirements most conducive to a comfortable and convenient camp.

"Seneca" spent two years in our city, and his opinions of the Potomac, formed after a number of cruises both up and down the stream, coincides entirely with my own.

The Potomac Canoe Club (of which I am a member) has shaken off the drowsiness of the cold weather months, and the house is being put into shape for the approaching season.

The "dissolution" which "J. R. L." erroneously refers to as threatening us is a contingency which we have little reason to fear at present. While our membership is not large we manage to hang together in tolerably good shape and are very greatly worried that the offer (which of course was not accepted) from a party here to purchase our floating canoe house should have given rise to the rumor that owing to financial difficulties we were on the eve of a smash-up.

To counteract any false impressions in regard to our financial affairs which may have been engendered by such rumor it might be proper to add that our monthly dues are about to be reduced from two dollars to one dollar, and that a number of applications for membership are awaiting the action of the club. TONIC.

WASHINGTON, D. C., April 18.

Editor Forest and Stream:

I observe that Dr. Kitchel and "Seneca," have committed themselves in favor of Chesequake Creek as a rendezvous for the Atlantic Divison this summer. Although not a canoeist, I am still a boatman, and so I venture to put in my oar in commendation of their choice. All they state concerning it is true, and more besides. Chesequake has a powerful attraction and mysterious charm for any one who has ever visited it. As for me I can't keep long away from the place to save my life. Those who care for a glimpse of its scenery, may obtain it by looking in the files of the New York *Graphic*, for February 20, 1887, where they will find an illustrated article about the late William R. Travers, who made his home hard by the creek for a number of years. One more word. Girls! Perth Amboy is full of them, and they are all perfectly lovely and bewitching, fond of the water, and they think that a canoe is just too sweet for anything. They adore a clambake, too, and clams are cheap and plenty. Oh, yes; Chesequake Creek is the place for the meet. J. L. K.

PERTH AMBOY, N. J., April 20.

[The committee propose to visit Chesequake Creek and the adjoining shores this week, and also the other proposed site on Cow Bay.]

MALAY CANOES.

Editor Forest and Stream:

Will you allow me to correct an error which appeared in my letter on primitive boats in your issue of April 12. It should have read: "This mode of construction is seen in the Siamese canoe, and in that used by the Malay fishermen." It is the latter which is an open canoe, propelled by a double blade paddle, and not the Siamese. This small Malay canoe deserves to have something more said about it. It appears to be much used by fishermen at Singapore and in the neighborhood, and is, as I said, a very handsome little open canoe. I was so much pleased with its appearance that I bought one, and used it for some time on the rivers of Burmah. My boat, as far as I remember at the period, was 16ft. over all, and but 10ft. on the keel, so, it may be inferred, the stem and sternposts had a great deal of rake. It had, indeed, the "teapot bow" of the old Aberdeen clipper in perfection. It was deep and rather full forward and lean aft, about 3ft. beam and nearly 2ft. deep forward. (Dimensions are only from recollection). It was, as I said, propelled by a long double-blade paddle, and reading a description of the paddle advocated by Mr. C. J. Farham in the *Canoeist* some time ago, I was struck by its resemblance to my old Singapore friend, but the blades of the latter were, I think, still narrower than Mr. Farham's and handle thicker. In using the canoe, the native places himself a little abaft the midships, squatting on his heels after the manner beloved of natives generally, and so abhorrent to the civilized white man; he paddles in the approved fashion and appears to get a very fair pace out of his craft. The mode of construction is somewhat peculiar; the basis of the canoe is hollowed out of the solid log; to this stem and stern posts and four or more stout ribs are fastened, the planking is continuous with the solid bottom. The boat is carvel built (smooth-skin) and mine was as tight as a bottle. Its weight was about a cwt. (estimated), perhaps less. In conclusion I would recommend some canoeist who has a friend in a skipper who voyages to Singapore to ask him to bring him home one of these little craft; he will find it useful as well as curious. C. M. DOUGLAS.

SPUYTEN DUYVIL, New York city, April 15.

NAUTILUS.—On April 7 Mr. Baden-Powell sailed the new Nautilus in a race of the Tamesis Club, on the Thames, against three boats, winning by 2¾m. One of the boats, Arab, was a Clyde lugsail craft, 16ft. 9in. l.w.l., 5ft. 7in. beam, with 600ft. of sail. Lorna, another boat, is a Thames sloop, 19ft. 2in. l.w.l., 5ft. 8in. beam, with about 450ft. of sail. The Nautilus is not the canoe sailed in America, but a new one, 16×30, with lines nearer the American model. The wind blew hard during the race.

BABY MIX.—This fast canoe is offered for sale on another page, her owner having been called away by business.

Yachting.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

THE REIGN OF LEAD.

THAT fine old crusted conservative, the average New York yachtsman, has at last made up his mind that lead is a good thing, consequently he cannot have too much of it; and now the lead craze has set in with a rush that leads one to wonder where it will all end. There was no unseemly haste in the decision of New York on the question; sleepily and with due deliberation she has seen her pet yachts with any sort of inside ballast defeated by lead-keeled cutters; with sneers and derision she greeted the daring attempt of a provincial town near by to build a yacht with a big lead keel; and not until she had been completely defeated by Britain and Boston was she ready to accept the inevitable.

Only a few years ago the fact that a lump of 500lbs. carelessly spiked up under a schooner, so that it dropped off, was magnified into a yarn of gigantic proportions and duly circulated among all true believers in the cobblestone and baled hay theories. A lead keel of 20 to 50 tons, so the yarn ran, had been dropped from a yacht, and yet no difference was perceptible in her sailing. A little later, when New York was called upon to do her best to defend the Cup, the same old women's stories were passed about, and those who paid the piper decided on the old way, no outside ballast.

At last, however, all this has changed. New York has awakened to the great question of the day; lead she must have at any cost, and the fires are lighted under every old pot that will hold metal, the augers throw out their chips merrily, the big bolts are driven home, the torch, the scraper and the plane are set to work, the black paint comes off in long shavings, and the painter gaily slings a coat of white over everything within his reach.

That lead is essential to speed is conceded now by all; but there are two schools of thought here, a wide division as to the best method of its application. Some contend that it is most effective in the form of pigs cast to shape and bolted under the keel; while others hold that the proper method of application is in the form of paint liberally applied to the topsides, most of the scientific arguments advanced on each side being of about equal value. One party holds that to obtain the very best results from a lead keel it must be accompanied by a lengthening of the overhang aft, usually making a bad sheer still worse; while the other side presents equally unassailable proofs that to improve a yacht's performance all that is necessary is to paint the topsides white and to round off and varnish the clumsy black balk of timber which did duty as a bowsprit in the orthodox American yacht.

Still another very important point is as yet unsettled, whether either of these operations can be properly done in New York, or whether it is necessary to success that the yacht should be sent,

at some extra expense, to Boston? Strong arguments are advanced by both sides, but no satisfactory decision has yet been reached. One would naturally suppose that when such a radical alteration of the ballast plan was to be made, the work would be intrusted to a man with experience in such matters, who was competent to calculate the displacement, the center of buoyancy, the center of gravity of the old ballast, and to adjust the new weights accordingly, and this is sometimes done; but, of course, it is only a waste of money. All that is needed is a melting pot, a sharp auger, a few bolts and two or three ship carpenters. To be sure, the trim of the boat may be entirely destroyed, the proper allowance for contraction may not be made and the wood keel may be split so that the yacht will always leak, or the boat may be of such a shoal and wide model that outside lead will ruin her; but then accidents will always happen, and a man must be in the fashion at any cost.

The new tad is now in full swing; from Bay Ridge to Greenport the lead is melting, the chips flying, and white paint is going on as fast as possible. In many cases the addition of a lead keel, if properly done, will greatly improve the yacht; in others it at least can do no harm; but in a very large majority the work is not only done by incompetent hands, but the whole design of the yacht makes her unsuitable for low-lead ballast, and a fairly good boat is ruined forever. One such case we have in mind now, a small yacht of special design, wide and of exceedingly light draft, for a particular purpose, which she has filled most successfully. Now the orders are, lead keel and longer spars. The outside lead and greater draft will completely ruin her for her old work, making her very bad in a sea and at the same time too deep for coasting, while no amount of extra canvas can ever make her other than a cruiser. The whole course of the lead agitation is unfortunately characteristic of New York's stand in yachting matters. Blindly prejudiced in the beginning, unwilling to listen to argument or to study facts and scientific reasons, she shuts the doors on lead keels until the success of Boston compelled a recognition of their merits; and even now she does not understand why they are good or bad, according to the model and the manner in which they may be applied, nor does she clearly discriminate between the value of the pig lead beneath the keels of Puritan, Mayflower and Sachem, and the white lead which ornaments their topsides.

EASTERN Y. C.

THE Eastern Y. C. has at length followed the example of the New York clubs in revising its sailing rules and classes, the committee having presented the following report at the meeting on April 24:

The committee appointed at the last meeting of the club to consider certain recommendations of the regatta committee, and the general subject of classification, allowances and sailing rules, respectfully submits the following report:

The regatta committee has suggested for consideration the following changes in the sailing regulations:

Sec. 2. To so change this section as to leave the date for sailing postponed races to the judgment of the regatta committee, instead of requiring a race to be repeated from day to day.

Your committee is averse to this change, and recommends that the present rule remain in force.

Sec. 15. The regatta committee suggests that the words "at least" be inserted before "half an hour." Also, that after the present clause for starting the first classes of sloops and schooners, the remainder of the sentence should read:

"The remaining classes may be started at such intervals and signals as the regatta committee may direct in their written or printed instructions."

As to these suggestions your committee thinks that any change, leaving the exact moment of the starting signal uncertain, is undesirable, and to make the rule more definite, it is proposed that the second paragraph of Rule 15 be amended to read as follows:

"Half an hour before the start, flags bearing the number of the courses to be sailed, shall be hoisted on the committee's vessel. Twenty-five minutes later (unless a postponement of the start seems advisable) a whistle shall be blown or gun fired and a blue flag hoisted, after which competing yachts shall be amenable to the rules. Exactly five minutes later the blue flag shall be lowered, and a second whistle or gun shall give the signal to start the first class schooners and first class sloops, cutters and yawls. A third whistle or gun, after another five minutes, shall give the limit for these classes. Five minutes later a fourth signal shall start the second class schooners, and second and third class sloops, cutters and yawls; and five minutes later a fifth and final signal shall start the remaining yachts.

With regard to measurement and time allowance, your committee recommends that yachts shall be rated according to the following measurement:

$$\frac{\sqrt{S} + L}{2}$$

This rule taxes sail and length equally instead of taxing length twice as much as sail according to the old rule:

$$\frac{\sqrt{S} + 2L}{3}$$

Your committee having found that the old allowance table contains a number of errors, and believing that the allowances therein given are too small, and give the large boats in each class an unjust advantage over the smaller ones, recommends that a new table of allowances be constructed on the generally accepted principle that the relative speed of yachts is proportionate to the square root of their length, and taking half of the maximum theoretical speed as a basis of the table. The New York and Seawanhaka Yacht Club tables, which have been recently revised and scientifically constructed on the same principle, take for basis only four-tenths of the maximum theoretical speed.

If this recommendation is adopted, the committee recommends that the present rule increasing allowances when races are sailed above certain speeds, be amended to read that in these cases the increase shall be "by one-quarter of the amount given in the table," instead of one-third, as in the present rule.

The majority of the committee recommends the adoption of the following classification:

Schooner classes, as at present.

Sloop classes:
- I. Over 70ft. waterline.
- II. Over 61 and under 70.
- III. Over 53 and under 61.
- IV. Over 46 and under 53.
- V. Over 40 and under 46.
- VI. Over 35 and under 40.
- VII. Over 30 and under 35.

The committee recommends that the following paragraphs be added to the section on classification:

Any yacht which shall have been launched prior to June 1, 1888, exceeding the higher limit in any class by not over a fraction of a foot shall be included in that class.

In case of only one entry in any class, the regatta committee shall place such entry in the next higher class in which there may be a starting yacht.

J. MALCOLM FORBES,
CHARLES J. PAINE,
GEORGE H. RICHARDS.
AUGUSTUS HEMENWAY,
EDWARD BURGESS,
Committee.

The classification is that adopted by the New York Y. C. and likely to be taken by all the clubs; and though the manner in which the whole subject has been handled by the leading clubs within the past year is little to their credit, it is at least something to be thankful for that one common system is likely to prevail. As to the merits of this particular system, it is perhaps as good as any as far as the single-stickers are concerned, and the great point, a uniformity of rules for building purposes, is assured. The action of the E. Y. C. in the matter of time allowance is very important, as the club rejects the New York Y. C. rule, adopted in 1884, and substitutes the Seawanhaka C. Y. C. rule, with its heavier tax on sail. The results of the races of the last three years have failed thus far to answer the very important question, "Are we getting the best possible yacht for the money expended?" but a look at any of the sail plans of this year will show the present tendencies toward lead and canvas, and consequently to expense. It is now generally recognized among the best informed yachtsmen that the tax on sail under the New York Y. C. rule is too light. Whether or no the proper mean has been reached in the Seawanhaka C. Y. C. rule is a question for time to answer; but of all rules thus far tried, that of length and sail area is the most practical, the only question being the relative proportions of each factor. The S. C. Y. C. compels a more moderate sail plan, and is a decided step in the right direction. The revision of the allowance tables is also a much-needed improvement. While all the clubs are making such changes and improvements, it seems a great pity that local feeling and petty jealousies should be allowed to hinder the work by causing each to work independently. The subjects of classification, time allowance, sailing rules and similar matters should be dealt with by a committee of the ablest yachtsmen, selected from all the clubs; in other words, by a national association. In such a way only can the interests of yachting be properly advanced.

A WINTER CRUISE IN THE SOUTH.—V.

[Continued from Page 236.]

THE ice having disappeared from the Delaware River, an occasional warm day starting the nerves to tingle with the first breath of spring, warned us that it was time the Monarch showed herself in the home waters once more to participate in the club events. We made preparations to leave Philadelphia for Norfolk March 12, to bring her home. Fortunately for us one of our party fell ill, and the trip was postponed for one week. On the 13th the famous blizzard struck us, spoiling the first breath of spring business, and stopping all communication between Philadelphia and the outer world, and causing untold damage to shipping all along the coast. Had we started as originally proposed, we would have caught its full effect in the Chesapeake, and if nothing worse happened would have had to lay in harbor for a week.

We finally started on the 17th of March, two of our party being unable to go at the last moment. Those who did accompany me were Messrs. Vanseiver, Yerger and Martin. After a pleasant run down in the Bay Line steamer Virginia, we reached the yacht at 10 A. M. Sunday, March 18, and after a stroll around Norfolk and taking a look at the historic old church with its cannon balls cemented into the walls where they lodged during the war, we made sail at 3 P. M. for Hampton, wind N.E. fresh, thermometer 52°, barometer 30²⁄₁₀. We made an attempt to cross Hampton Bar to save four miles sailing to a point marked on the charts 4ft., the tide being half out, but took bottom, so concluding that the longest way round was occasionally the shortest way back, we, after losing a little time, finally ran up around the buoy as we should have done in the first place, the delay causing us to reach Hampton Creek after dark, so that we were unable to pick up the only buoy leading in. We stood in by compass until we found the water shoaling all around us, when we anchored, being in strange waters; logged 11 knots in 3 hours.

In the morning we found we had worked our way to within a few hundred feet of the mouth of the creek, in a part of the channel about 20ft. wide. The wind had shifted to S.E., making a dead beat for the hundred or more oyster boats inside the harbor, and as we were seriously in the road; we got up anchor and sailed outside the bar out of the way. The largest craft had to give up the job of attempting to beat out, and three schooners anchored abreast moored side by side just where we had moved from, occupying the whole channel. The steamer John Romer could not get in, and had to tow them out to clear the channel. How we got in so far without anything to guide us is a mystery to me.

In the morning we visited the town of Hampton and the Soldiers' Home erected there. Hampton is an active, bustling place, and its merchants are evidently prosperous. The town is thronged with soldiers from the Home, many of whom were selling souvenirs of different kinds. The home is the largest in the country, I believe, and shows care for and watchfulness over the old veterans on every side. It well repaid the trouble of the visit.

Got under way at 11 A. M. March 18. Wind S.E. fresh, thermometer 48°, barometer 30²⁄₁₀. In attempting to lower the centerboard the tackle jammed, and trying to clear it I clumsily allowed my finger to get fouled in the block, and the end of the first finger of the left hand was cut as clean as if done by a knife. Fortunately the bone was not injured. After silencing the flow of blood with such means as were within our reach and tying a tourniquet on the finger, we ran in and anchored off Fortress Monroe, where Dr. Brooks, the surgeon in charge, bound the wounded member up, and after ordering me upon no account to use the hand, allowed me to depart.

Dr. Brooks's gentleness and skill was so much greater than I had any reason to expect, that it was almost a pleasure to be treated by him. While I do not care to be compelled to be under a surgeon's care again, yet if I must I sincerely hope I may have the good luck to fall under the care of such an one as Dr. Brooks. It is to this accident that the delay in completing this log is due. I steer with one hand now.

We spent several hours walking around Fortress Monroe, trying to find out the difference between a fortress and a common every-day fort; as near as we could make out it was larger, and was entirely inclosed and had a deep moat with 6ft. of water in it all around; if there are any other reasons they were not visible.

Fortress Monroe is a show spot, and is about the only fort on the Atlantic seaboard that is garrisoned to speak of; it is kept in fine order and is on account of its proximity to the Hygeia Hotel, a favorite place with young lieutenants. The day before our visit a mid-Lenten German had been given at the hotel, and a list of the participants which I received contained the names of ladies from almost the four quarters of the globe, and of lieutenants by the score, but not a name of a male civilian did I see; which either indicates a lack of such people or that the uniforms cut the others out; which, I cannot pretend to say; but I fancy the presence of such an array of dancing men is one of the most effective causes of the popularity of Old Point Comfort with the fair sex.

Just outside the fortress is a park filled with cannon, their carriages and round shot. The railing of this park is made from barrels of old muskets with bayonets attached. It makes an effective and at the same time decidedly military fence, and at once attracts the attention of all new comers.

Like all our coast defenses, the fortress is sadly deficient in artillery of any value. The embrasures bristle with guns, but, with very few exceptions, they would be worthless in modern warfare.

A day could profitably be spent at the Point, but our limited time forbade, and we made sail at 12:45. As we rounded Old Point Comfort the wind came cold and raw from E. We quickly gathered in topsails and considered the question of reefing, as there was half a gale blowing. Wanting to make all the time we could, we held on to full sail until, when in sight of our harbor, the jib lashing to the jibboom gave way, the sail going up the mast; when we took it in and lowered peak to balance. A few minutes repaired damage, and we entered the Piankatank River with flying colors and dropped anchor at our old anchorage behind the point at 5:30 P. M., having sailed 40 miles in 4¾ hours. Logged for the day 45 miles.

Tuesday, March 19, opened up with a nasty drizzle, had a few visitors and shot a few ducks; concluded to wait for the rain to cease, which it did at 5 P. M. Got under way at 3:45, wind S.E., fresh; thermometer 42; barometer, 29⁸⁄₁₀, and falling. Found the sea burg gone from the mouth of the river; one effect of the blizzard. We found signs of its passage all along. At Norfolk two small craft were lying on the beach. My captain told me that during the blow when the tide was ebbing, holding her broadside to the wind, the Monarch rolled until her cabin trunk was in the water on each side. The crockery closet attested the fact. All the seamen I talked to said it was the worst blow in their experience.

We met wrecks all along the bay. A schooner was lying ashore in the Piankatank, and as we sailed out a tug was towing in a waterlogged schooner stern first, her bow being deeply sunk. We found the inner buoy at the mouth of the Great Wicomico displaced, and as a result ran aground on the bar—a lee one, and a heavy sea running. I thought it was a job for a new keel at least, but our usual good luck favored us, and a half hour's work got us off. This bar is a very bad one; we had four fathoms of water within a cable's length of where we were aground. We finally dropped anchor in Cockle's Creek, a famous harbor in the Great Wicomico, at 8 P. M. Logged 23 miles.

Wednesday morning opened with a drizzle, which shortly turned into a heavy rain and prospects of a storm. The barometer fell in the course of the forenoon to 29⁴⁄₁₀, so we concluded to spend the day in getting acquainted with the people. First sent ashore after milk, when we found that stock raising was not a business in the vicinity. We visited six farmhouses to raise a gallon of milk, and no one was anxious to sell. Every farmhouse had a fish net hanging in the yard, while the path to the water was always in a better condition than the one to the public road, every farmer being also a fisherman and travel being usually by water.

A few inquiries made it evident why we had taken ground in entering the river. According to the chart and buoy list, there are only three buoys leading into the Wicomico, yet there has been a wreck buoy off the mouth for several years which is not on the list. According to the list, all should be can or nun buoys, yet the wreck and first black buoy are spars. We in the dark picked up three buoys, not being able to distinguish the color, and then headed north, as we should have done according to the chart, whereas there being really four buoys, we should have stood in for the fourth. In this case we would not have found it, as it sank early in the winter and has not been replaced.

The fifth lighthouse district covers the Chesapeake Bay, coast of North Carolina, and Albemarle and Pamlico sounds and tributaries. These have over 1,500 buoys in addition to the lights, and this number should be doubled. There are, I believe, only two buoy tenders for all this territory, the most extensively navigated in our country, consequently the buoys are constantly off their stations, and a stranger is easily led into trouble. Either this district needs subdividing or more help should be granted it.

About noon heavy clouds banked up in the west accompanied by thunder and lightning, and the half dozen or more vessels lying near us began preparing for the squall; we concluded to get away from our exposed position, so ran up the creek about a mile to the settlement under jib. We had hardly dropped anchor before the storm broke over us, and so quick the shift of wind that the yacht could not swing to it quick enough, and the fierce bursts of wind taking her broadside, careened her to her scuppers, although she had no sail up. After the first burst of the storm was over, which was from due west, the wind again shifted to N.W., the thermometer falling rapidly from 50° at 2 P. M. to 28° at 6 P. M. Heavy rain fell, which by 5 o'clock changed to snow, of which over an inch fell. All the vessels in the outer harbor which could get up had by this time followed our example and were now anchored around us. After getting everything snug we started out to visit the town, which is a Venice on a small scale, all traffic being conducted by boats. The creek has half a dozen deep but short arms branching out in every direction, making detours of several miles necessary to get around them if travel were attempted by land. We are still in doubt as to the name of the settlement. There is a steamboat landing on each side of the creek, and the steamer time tables speak of them as Timb's Wharf, Va., while the natives speak of the place as Timb's or Reed's; several told us it had no name, but was in Northumberland county, Va. The only document we could secure was a billhead of E. W. Reed & Son, manufacturers of fish guano and oil and dealers in general merchandise, who are the largest traders in the place and they claim to hail from Fairport, Northumberland county, Va., but not another man of the score or more we put the question to gave us this name. The postmaster says the name is Timbs Landing and he ought to know, as his name is Timbs and he is the second largest trader in the place. Mr. Timbs, by the way, kindly furnished us with the latest Northern newspapers and all the reading matter at his disposal as soon as he heard we were out of news. The mails are brought in and communication with the outside world maintained by the steamer Joppa which stops at each wharf twice each week both up and down. There is no railroad nearer than Washington, D. C.

Besides the two general stores, each of which are connected with a fish factory, there are four other fish factories, two marine railways, a blacksmith shop, two sail and rigging lofts, and a surgeon in town; this sums up the industries, I believe. The last I found after some difficulty, in order to get my wounded member dressed. There is another physician four miles off, a barber eight miles away, and a small town which has among other things an opera house in which "Ten Nights in a Barroom" was to be played the night after our arrival. This fact we ascertained from the commotion visible in the demeanor of the local gallants. The town is ten miles off. There is also a saloon four miles up the creek, but this is considered a vulgar hole, as every man of standing in the community keeps his own barrel of whisky on tap for his own and his friends' use.

There is more vessel property owned on the creek than at any other port of its size on the bay, twenty schooners and three fishing steamers being in port while we were there, and these are not half of those owned on the creek, the fish, guano and oil business in summer and oysters in winter keeping a very large fleet always employed. Just at present the food fish business is the most profitable, and is increasing year by year. It extends only through the months of March, April and June, yet during these months a fish pound will return from $600 to $1,200 net profit to its owner. This year forty new pounds have been set, some reaching out to 22ft. of water. These pounds are very annoying to small boats navigating the bay, while the excessive number of fish they catch are depleting the stock, and the State Legislature at its last session tried to prohibit them, but the bill was defeated. A curious accident happened just before our arrival. The steamer Joppa in a heavy fog ran through a pound on which, however, the nets had not yet been set. She had a brand new hawser which had cost $60 passed through a rear chock, the loop hanging over the rail. As she rose and fell in the swell, the bight of the hawser fell over a stake in the pound, and catching, the whole hawser was drawn out. It was unnoticed by the people on the steamer, but was recovered by the fisherman when he went to set his net. He refused to hand over to the steamer because it broke down his pound, and there the matter rests, and probably will until the steamer pays him enough salvage to repay him for the loss to his pound.

Mr. Wylie, the blacksmith, is also a pound owner, one of the largest and in the deepest water; he keeps a steam launch to run out to his pound in calm weather, which is nine miles from the creek, consequently the other fishermen who have no launches regard him as a bloated bondholder and think he should not be allowed to introduce such innovations. He visited us on the yacht and gave us many valuable points on game and fish, and like everybody we met down this way, did everything in his power to make time pass pleasantly.

In consequence of the blizzard of March 14, 15 and 16, the most active business of the place for a week before our arrival was launching vessels. As we passed into the outer harbor we observed two pungies and a schooner loaded with empty barrels to be used for shipping fish to Baltimore, were aground hard and fast, and when we got up the creek two more were sticking there, while heaps of ballast showing above the shallow water here and there told the tale of the storm. We were informed that although nearly twenty schooners dragged ashore on the first day of the storm, none dragged on the second day simply because they all got there on the first.

Work was going on preparatory to launching one of those aground as we entered the harbor, so we had an opportunity to see the whole process. The schooner in question had gone on bow first. She, the schooner, already afloat were moored off the stranded schooner's stern in the form of a fan, each with its two anchors firmly planted its full cable length off shore. Each had a cable leading from her stern to the stern of the stranded schooner; the wind being off-shore, the stranded schooner raised her square sails and trimmed them out by guys to the bowsprits; each of the assisting schooners raised a little sail; then, when all was prepared, the crew of each schooner manned her windlass, and to the sound of a song all heaved in unison. Then, although the stranded schooner was a pungie drawing 6ft, of water and was nearly high and dry, she slowly moved astern, and in less than an hour after preparations had been completed she was afloat in deep water. The entire fleet then started on to the next schooner. The crews all assisted each other in this matter with the exception of the schooner loaded with barrels which had first gone ashore on the opposite side of the stream to which she was lying when we came in, and had swung off at high tide. Her captain was so jubilant over the success of his unaided efforts that he rendered no assistance to the other schooners ashore. The next day the high wind caught his barrels and drove him ashore on the opposite shoal; then the other captains' turn came and they rendered him no assistance. He had been ashore ten days when we arrived and had no prospect of getting off without the aid of a tug.

Thursday opened with a rain squall, overcast sky and high N.W wind. Nearly an inch of snow lay on the deck, and the roar of the surf could be plainly heard across the mile of sand separating us from the bay, distinctly informing us that we had no business outside. At 8 A. M. the thermometer was 22° in what sun there was, while the barometer had risen to 30⁴⁄₁₀, so concluded to make the best of it, and visited the stores and swapped lies with the boatmen present. I rather think we had the best of it. Thursday was stormy day, so from noon until the steamer arrived at 9 P. M. both wharves were thronged with boats and wagons of every kind, loaded with fish and oysters from the Wicomico and Little River, as the Little Wicomico is called. The Little Wicomico has its mouth at the mouth of the Potomac, and is a beautiful body of water, in many places 40ft. deep and half a mile wide. Its water, never having been polluted by fish factories, is pure, and produces the finest oysters raised hereabouts. Unfortunately there are only 2ft. of water over the bar at its mouth, so that it is not navigable; and all its products and supplies come through Cockles Creek, although as an arm of each stream approaches within a half mile of each other, only a short portage is necessary. The bar at the mouth of the Little Wicomico has a deep bight in it, and occasionally small craft trade into the river by laying in this bight and lightering their cargoes. This bar is of a small, beautiful white sand, and almost as hard as iron; it furnishes almost absolutely no hold for an anchor, and an easterly or northerly storm is certain destruction to any vessel anchored in this trap. The inhabitants are full of gruesome tales of disaster at this point, and tell me that the majority of wrecks along that stretch of shore have occurred in that bight. It seems to me that a heavy mooring sunk in the bight would be of great value to small craft trading there.

Friday was another wretched day, the wind shifted to the west several times for short periods, renewing our hopes, but as suddenly dashing them to the ground by shifting back and not staying long enough to knock down the sea; so that we lay at anchor all day. The thermometer did not rise above 40° all day, and the barometer seemed rusted into place at 30⁴⁄₁₀. We had the mouth of the Potomac to cross, 10 miles from point to point, and as the course of the river is N.W., a N.W. wind draws down a stretch of 50 miles; add to this the deepest water in the bay, in places 22 fathoms, and a strong tide out of the river joining that in the bay, forming deep chops, as nasty as we have along the coast, and no harbor outside of the Potomac itself until the Patuxent is reached, 20 miles above the Potomac, and you can judge of the reason small craft rarely cross the river in a N.W. blow. We

concluded not to, yawl boats having a decided cash value in Philadelphia.

Saturday, March 24, opened with the sun trying his best to break his way through the heavy clouds, the east wind having broken down the swell. Thermometer at 8 A. M. 35°, barometer $30^{16}/_{100}$. Made sail at 7:30 and beat out of harbor dead to windward, with four pungies and a small schooner whose captain had done some tall talking the day before, and who got under way as soon as he saw us making preparations. We had two reefs turned in when we came into harbor, so kept them in until we had a chance to see what it looked like outside. All the schooners carried full sail. Notwithstanding this, we held them all readily except the schooner which started out to do us up. He slowly but surely gained on us. As soon as we were outside we shook out the reefs and bid them all good-bye, and by noon we had sunk every one of them.

Shortly after getting outside the wind went up to N.E., with occasional relapses into its old quarter, N.W., making a dead beat up the bay. We passed Smith's Point Light, lower point of Potomac River, at 9:30, and at once fell into the chops, where we caught a licking. We were flooded until we were nearly across, one wave after another washing us. Not long, steady swells, but nasty little suits that would hardly support a yawl boat, and let the yacht sink right into them. However, we had company, for there were a dozen sail in sight and every one was taking a wetting. Passed Point Lookout at 11 o'clock, and now a regular northeaster set in. We had made an attempt several times to set topsails, but now they were quickly gathered in, and for seven hours we hung out occasionally reefed and then whole sail; for unless we got 20 miles to windward it was turn tail and run. Finally at 6 P. M. we rounded Cedar Point, and starting sheet soon ran in behind Plum Point Light, Patuxent River, where we dropped anchor amid a fleet of thirty-seven sail, of all kinds and sizes, all waiting for a southerly wind. Sailed by the log 78 knots, but made on our course only 40 knots.

During the day we had race after race, but distanced everything, even to a 250-ton schooner, although this last is not remarkable, as there are very few coasting vessels that can work to windward except under favorable circumstances. When light they almost invariably wait for a fair wind. The wind which brought us to the Patuxent would have carried the waiting fleet nearly to Baltimore had they gone to windward as well as we did; yet they preferred to wait for a better one. CHAS. L. WORK.

OSWEGO Y. C.—The backward season promises an abrupt ending soon and the delay in starting in will cause the faster movement of scrapers and replacing of fag ends; bringing our sightly craft out into the sunlight in time for a spin or two before starting on the opening cruise. The Cricket will appear with 8ft. added to her length. She will probably be yawl rigged and it will puzzle her old friends to recognize her as she drops her hook in the ports along the south shore. She will no longer be the chubby little Cricket, but will rise and fall on Ontario's bosom with the ease and precision of a ship of the line. The ex-commodore has a full list of warm friends who delight to accept his hospitality for an afternoon sail or an extended cruise. Two of Oswego's former yacht owners expect to leave soon, one to New York; and the Rochester will receive the best looking sailor in our fleet, a tar that when rigged out for a cruise would grace the deck of a Cape Horner; he is every inch a yachtsman and his loss will be felt. The Katie Gray will bid adieu to dry land in time for the Decoration Day cruise. The Ella has been sold to a popular young dentist here, who will take pride in keeping her in best possible form and force her to the front on regatta days. The familiar piratical-hulled Laura, which shaped her course into our harbor one breezy rainy night in May, 1882, from Kingston, will stir up the waters of Onondaga Lake the coming season. If the passengers on the trains bordering the lake see something go by we can tell them now it will be the Laura. The Merle, our Burgess beauty, is ready for a victorious season, and we wish to say right here that for the leaders in the approaching summer, we nominate the Merle and the Madge. The Iolanthe would be likely to try a heat with the winner. Thus we would have the compromise sloop, the deep, narrow cutter and the light draft sloop. A match race would prove much more interesting than the circuit regatta. By the way, we notice that our neighbors on the higher lakes have a good word to say about the extraordinary speed of their boats. Without appearing to exalt ourselves, we wish to state that we have strong reasons for believing that the Enright, Fanchon or City of the Straits are no match for the Merle, Iolanthe, Katie Gray or the Kingston Laura; we hope to be able to have our convictions tested.—K. G.

MONTGOMERY SAILING CLUB.—Second weekly cruise, April 22, 1888, Norristown to Indian Creek and return, distance 5 miles, weather clear and cool, wind brisk northerly:

	Length.	Elapsed.	Corrected.
G. W. Bowers, tuckup	15.00	1 20 45	1 20 45
Playford, tuckup	15.00	1 22 06	1 22 06
Flying Eagle, tuckup	15.00	1 23 00	1 23 00
Elsie, ducker	15 00	1 38 27	1 28 27
Ino, ducker	15.00	1 48 15	1 38 15
J. S. Frith, tuckup	15.00	1 40 03	1 40 03
Priscilla, tuckup	15.00	1 41 42	1 48 02
Igidious, tuckup	15.00	Withdrew.	
Pennsylvania, hiker	16 00	Withdrew.	
S. J. Querner, tuckup	15.00	Capsized.	
Warren, ducker	14.00	Capsized.	

Priscilla lowered sails and went to the assistance of the S. J. Querner after finishing the course. The Igidious enters protest against Flying Eagle for forcing her to pass to leeward, the former being on starboard tack. The Warren ran into Igidious and capsized. The latter dropped her sail and took the Warren's crew aboard. The Igidious was the leading tuckup at the time and claims her right to sail a race with the G. W. Bowers for first place. Judge, William Alcorn.

DEATH OF DR. LORING.—Dr. E. G. Loring, the owner of the three cutters that have in succession borne the name of Mignonette, died very suddenly on April 23, from heart disease. He had been to the foot of Seventy-fourth street, New York, to make arrangements for launching the new Mignonette, and while waiting for a car on his way home, fell to the ground and died before an ambulance could be summoned. Dr. Loring was one of the leading oculists of New York, being associated for some time with Dr. Agnew, who died last week. He was born in 1840, and when quite young visited Europe and studied medicine in Bologna and Florence, afterward graduating from Harvard Medical College. Dr. Loring was a thorough Corinthian, devoted to yachting, and a part of every season was spent in cruising between New York and the Maine coast in the small cutter so well known to yachtsmen. He was a member of the Seawanhaka, Larchmont and Eastern clubs.

THE ABOLITION OF RULE 8.—The following British clubs have voted in favor of the abolition of Rule 8, concerning centerboards: Royal Northern, Royal Thames, Royal London, Royal Ulster.

CORINTHIAN Y. C.—The first semi-monthly race of the club took place on April 17, from Cooper's Point to Chester buoy and return, a distance of 28 miles. The boats crossed the line in the following order: Item, 10:41:30; Cook, 10:41:45; Wilkins, 10:41:50; Allmond, 10:42; Anderson, 10:42:15; Russell, 10:42:30; H. Clay Funk, Class 1, having no competitor went over the course with the judges, Lawrence W. Kelley, James Freeman, and the reporters. Lower buoy, Item, 12:13; Allmond, 12:13:45; Wilkins, 12:14:15; Cook, 12:15; Russell, 12:19; Anderson aground on Block bar and out of the race. Home stakeboat, Item, 2:36:45; Wilkins, 2:37:30; Cook, 2:39, Allmond, 2:43; Russell, 2:56. Wind N.W. fresh. Best time 4.04.15. This virtually opens the yachting season on the Delaware. On May 1, second and third class boats will sail over the regular afternoon club course, from moorings to and around Petty's Island, return and repeat, a distance of 18 miles.

CYTHERA-NONPARIELLE.—On April 21 the steamer Delaware arrived at New York and reported passing a yawl on Thursday, 250 miles south of Sandy Hook, and there were hopes that the vessel might prove to be the missing Cythera. On the same afternoon, however, the yawl Nonparielle, owned by Mr. Sanford B. Pomeroy, arrived at Staten Island from the West Indies, being the yacht sighted by the Delaware. Nonparielle has been cruising in the West Indies for the past two months, with her owner and friends on board. On April 7, when the steamer Barracouta sighted a yawl, she in another place, running before a S.E. wind with all canvas set, so that it was not she that was seen. Several steamers have arrived from West Indian ports since the Barracouta, but nothing has been heard of Cythera.

SEAWANHAKA C. Y. C.—On April 21 Fleet Surgeon J. West Roosevelt delivered his first lecture, speaking at length on the disinfection of yachts and the proper and improper methods, the lecture being illustrated by microscopic views of bacilli. The lecturer also spoke of sunstroke and similar diseases that yachtsmen are liable to, with the remedies. The final lecture will be on April 28. Capt. Taylor's lecture on harbors will be given on May 5, and on May 1 the graduating exercises of the navigation class will be held. To-night a special meeting will be held for the purpose of making some changes in the rules prior to the publication of the annual book. The classification lately adopted by the New York Y. C. will also be offered for adoption.

RESOLUTE-RAMONA.—Great changes are being made in the old Resolute under the direction of A. Cary Smith. She is now on Downing & Lawrence's railway, next to Poillon's, where her old stern has been replaced by a long English counter, her plumb sternpost has been cut away to a rake of 60 degrees, with a deeper keel, some 10 tons of lead being added. The stern is a very good job, having been carefully framed and the pieces stowed on deck before the yacht was hauled out, so that it could be put together without loss of time. With a new round bowsprit in place of jibboom, the Ramona, as she will henceforth be called, will not be recognized as the once famous Resolute.

CRUISING.—Mohican, s. y., Mr. Wm. Clark, sailed from Newport News on April 18 for St. Michaels, whence she will proceed to Glasgow... Loando, s. y., Gen. E. Bird Grubb, arrived at Norfolk on April 20 from Morehead City, N. C., and sailed on the same day for Old Point....Magnolia, s. y., Mr. Fairman Rogers, sailed from Charleston, N. C., for the North on April 19.....Nirvana, schr., Gen. Perkins, arrived at Nassau on April 11 from Havana.... Lancashire Witch, s. y., left Port Limon, Costa Rica, on April 10 for New York, with the Earl of Scarborough on board. She will call at Progreso, Vera Cruz and Philadelphia.

NEW YACHTS.—Lawley & Son will begin at once a 29½ft. sloop and a 19ft. cat from Mr. Burgess's designs....Mr. J. Borden will build a 25ft. jib and mainsail boat for Boston owners, to be ready by May 30....Gen. Paine's son, John B. Paine, has sold his Burgess cat Wraith, and will build a keel sloop 23ft. 6in. l.w.l. and 9ft. 6in. beam from his own designs.

CHESAPEAKE BAY Y. C.—Officers for 1888: Com., Col. F. C. Goldsbrough; Vice-Com., Col. Edward Lloyd; Treas., Wilfrid Bateman; Sec., J. G. Morris: Governors of Club, Messrs. Johnson, Barry and Wheeler.

SOAP.—The story is now told that the grommets in Volunteer's sail for the reefing lacing were all plugged with soap to lessen the windage. The same was done with Thistle's sails a few days before the races.

ARIEL.—Though it was reported that this famous little Scotch cutter had arrived in New York the report was untrue, as Vice-Com. Stevenson has not purchased her and does not expect to do so.

CORINTHIAN Y. C., THAMES, ENGLAND.—This club has arranged a very complete programme of races for the year for yachts of 10 tons and under, sailed by Corinthians.

MAJEL, sloop, lately sold to Com. G. H. Newell, Rochester Y. C., will be launched this week and will soon leave Boston for Rochester, via New York and the canals.

WHIM, schr., Mr. W. G. Brokaw, will have 6ft. added to mainboom, mainmast and topmast, 4ft. on main gaff and a lead keel bolted on. Poillons will do the work.

CLUB BOOKS RECEIVED.—We are indebted to the Cedar Point Y. C., of Saugatuck, Conn., and the Hyde Park B. C., of Chicago, for club books for 1888.

ANACONDA, sloop, Mr. J. G. Prague, is now at Poillon's, where she will have a lead keel added. She will give up the single jib for a double head rig.

HILDEGARDE, sloop, will be rigged with two headsails, her mast being moved aft. Mr. Burgess will superintend the alterations.

QUINCY Y. C.—At a meeting on April 21 it was decided to purchase land on Hough's Neck and to build a club house to cost $1,800.

NEW YACHT FOR CLEVELAND.—Lyman Bros. are building at Cleveland a cutter 19ft. 4in. l.w.l. with board beneath the floor.

NEW FISHERMEN.—The design for a new fisherman which Mr. D. J. Lawlor is now at work on will be 92ft. l.w.l.

THISTLE.—It is positively certain that Mr. Jas. Coates has not purchased Thistle, and she is still on the sale list.

FORTUNA.—Mr. Hovey's schooner has been planed off and newly coppered and will soon be in commission.

BRIDESMAID AND ATLANTIS.—The ocean race to Madeira was won by the Bridesmaid by about 7 miles.

TROUBADOUR, schooner, Mr. Lucien H. Smith, has a new bowsprit, 4ft. longer, and a double head rig.

THISTLE, sloop, Mr. Wm. Ziegler, has a new bowsprit 7ft. longer than the old, and a double head rig.

RAMBLER.—This schooner was offered at auction last week, but no one bid the upset price of $4,000.

WAYWARD, sloop, Mr. F. Beltz, has been lengthened 5ft. aft, by Bayles, at Port Jefferson.

EMPRESS, steam yacht, Mr. F. A. Schemerhorn, has had her rig changed to a brigantine.

LOTUS, schooner, Mr. Daniel Appleton, has had her mainmast replaced by a new stick.

MERLIN.—This little cutter is advertised for sale in another column.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

N. C. R., Birmingham, Ala.—Write to J. E. Thayer, Lancaster, Mass.

POCHUCK, Newburgh, N. Y.—Write to H. W. Huntington, 148 South Eighth street, Brooklyn, E. D., N. Y.

A. L., New York.—What is the trigger pull in the revolver competition at Wimbledon? Ans. The conditions require a 4lb. pull.

W. N. C., Damariscotta, Me.—Where can I get landlocked salmon to stock a lake? Ans. Apply to your State Fish Commissioners.

G., Pittsburgh, Pa.—1. The book is the same. 2. Except in coat and color, the Siberian wolfhound resembles the Scotch deerhound.

J. M.—Do you believe that landlocked salmon will do well in our Vermont waters? Ans. The fish should thrive in the latitude of Vermont.

R. J. H., East Orange, N. J.—Mastiffs are registered in every number of *A.K.R.* There are five volumes; price per volume, $1.50; bound, $2.

MARY POWELL.—Will you kindly inform me through your FOREST AND STREAM whether any boat under 70ft. in length beat the sidewheel steamer Mary Powell? Ans. Your question is unsigned and therefore unanswered.

J. A. W., Toronto.—Would you kindly let me know where I can purchase feathers for trout fly dressing? Ans. They can be had from game dealers in the large markets, of most any city. Also of A. B. Shipley's Sons, Philadelphia.

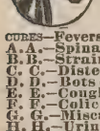
S. W. I., Boston.—The addresses you want are Charles Lancaster, 151 New Bond street, London, Eng., T. W. Watson, 4 Pall Mall, London, Eng. We do not know that they have American agencies. You had better repeat your previous questions.

J. L. S., Madison, Ga.—What can I get Brown's "Taxidermists' Manual" for, and will you be so kind as to tell me who I can get supplies from? Ans. We can furnish it, price $1 cloth, 50 cents paper. For supplies write to J. F. Kannofsky, 369 Canal street, New York city.

P. P., Poway, Cal.—1. How large have rattlesnakes been known in the United States, and how many species are there? 2. Is there a horned rattlesnake in Arizona or elsewhere? 3. What is the Gila monster? Ans. 1. We have seen a rattlesnake over 6ft. long, but cannot say how large they grow; there are at least six or eight species known. 2. No. 3. A large lizard found in the Southwest; see FOREST AND STREAM, Vol. XXIX., p. 24, Aug. 4, 1887.

W. S., New York.—1. What is the best part of Pennsylvania for trout fishing and lake fishing for bass and pickerel? 2. What is the best bait for such fishing? Ans. 1. For trout go in Pike county and the adjacent counties. The State has few lakes and for bass and pickerel Lake Erie is the best. 2. Trout can be taken with angle worms or small pieces of fish, for bass use helgramites, crayfish or minnows. Pickerel can be taken with minnows, alive or dead.

J. S. S., JR., New York.—1. Could you inform me whether I could find good trout fishing at Lackawaxen, Pa., and also as to the way in getting there? 2. How long a trip it is? 3. Whether by the second week in May the fishing would be with flies or bait? Ans. 1. There is sometimes fair trouting in this vicinity. Take the Erie R. R. 2. The distance is 111 miles and takes nearly six hours. Consult time tables. 3. The season should be good then, but it is impossible to forecast it.



R. H. B., Jamestown, N. Y.—At one of our fish markets here they have striped bass (bought in New York city) and black bass (bought in Buffalo, N. Y.) for sale. Is it illegal to sell those fish now, even though they may have been imported from an other State, and if not, may not bass be taken from this lake, sent into Pennsylvania and returned here and legally sold? Ans. The law permits the sale of salt water striped bass at all seasons. Black bass can be sold if caught outside the State. There are plenty of the latter in New York markets now, but it is claimed that they come from the South. If a dealer wishes to evade the law he might do as you suggest, if it would pay him to do it.

J. W. T., Boston, Mass.—How should minnows be kept in order to transport them three miles and keep them alive during the day? At what temperature should they be kept and at what degree will they go on their backs? I had some put in a few air-tight jars, some lived seven or eight days, and one lot survived twenty-one days, while other lots only lived a few hours. Ans. We do not understand how fish can live in an air-tight jars after they have exhausted the oxygen in the water, and therefore we have no faith in this process. We would advise using as large a can or pail as possible, and put in it such water plants as grow with submerged leaves. Give access to the air and wrap the vessel in a wet blanket to promote outside evaporation, which will cool the water. If there is plenty of motion to the water inside they will get oxygen, if not, pour it back and forth every half hour. Most of the tackle shops keep buckets for this purpose, and they usually have an inside perforated bucket which can be hung in the water when fishing. Avoid sudden changes of temperature. If the water gets up to 80° it will not sustain any fish, especially those taken from cool water. Observe the temperature from which they come and try and keep them as cool, or a few degrees cooler than that.

BOOKS RECEIVED.

HISTORY OF BASE BALL.—We have received a copy of "Sphere and Ash, a History of Base Ball," by J. C. Morse. It is a pamphlet of more than 62 pages and consists chiefly of matter which has already appeared in the Boston *Herald*. Among the subjects treated are notable records by early clubs, contests for supremacy in the sixties, tones of the early organizations and games conspicuous for extra innings. It is illustrated by portraits of well known players. J. Spofford & Co., Boston, Mass. Price 25cts.

The Audubon Magazine BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

Forest and Stream Publishing Co.,
NEW YORK.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. end post office order to the Publisher, 182, Strand, London, England.

Map of the Adirondacks.

The best and most complete map of the Adirondack region ever published.

PRICE, POSTPAID $1.00

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." As the general appearance is the same, it is easy to be deceived. These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

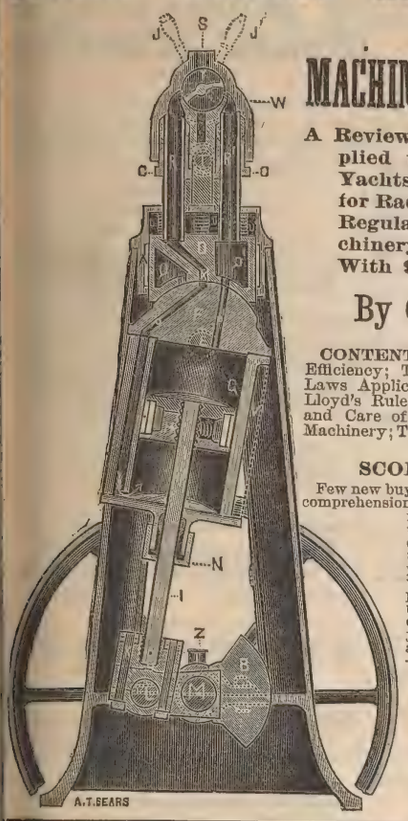
New York State, Diamond Watch Charm Trophy, costing	50.00	N. C. and S. C.,	"	"	50.00
New Jersey State, " " " " " "	50.00	Ga. and Fla.,	"	"	50 00
Penn., Md. & Del., " " " " " "	50.00				

The above Trophies and Badge are to represent and establish the Amateur Championship of each locality named. We shall do all within our power to guarantee fairness and satisfaction to all.

Must be shot at Blue Rocks. To gauge your skill in shooting you can only do so by using a bird that is **STANDARD IN FACT BUT NOT IN NAME**, it is the **BLUE ROCK.**

Yacht and Boat Builders, etc.



Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.

Forest and Stream Publishing Co.
NEW YORK CITY.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.×27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,
40 Park Row, New York.

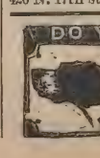
These puppies combine the blo of the ideal bench show form, with the highe field qualities on sire as well as on dam si Robert le Diable is the only pointer in Ameri that is champion winner on the bench and f in the field. Will sell at $25 each for war room if taken soon. Address T. FRANK RI ERS, 19 Prospect st., Bridgeport, Conn. ap12,2m

FOR SALE.—SIR DASH (A.K.R. 1549) Dash III. ex Roberto Laverack, black white, a grand stud dog. Price $30. Also Nel Elgin (A.K.R. 4078) black, white and tan, by Har Elgin ex Nettie H. Price $30. Both are gre bargains; full pedigrees. DR. J. R. HOUSEL, apr19,tf Watsontown, Pa

COCKER SPANIELS.—ALL AGES A colors; bitches in whelp; prices low. HANDSOME BROOK KENNELS, apr19,2t Franklin, Delaware county, N.

BARGAINS.—DONNA GLADSTONE (GL stone—Donna J.) 2yrs., handsome and ever marked black, white and tan. Price $35. L Bondhu (Gus Bondhu—Rodreka) 9mos. old, evenly marked black, white and tan head, ticked body; a perfect beauty. Price $25. Sat faction guaranteed or money refunded. Addr D. A. GOODWIN, JR., Newburyport, Mass

CLUMBER SPANIELS.—TWO PURE BR puppies for sale, 12wks. old, full pedigr apr19,2t W., 215 Beverly street, Toronto



MASTIFFS & BLOODHOUND

Mastiff puppies of various ages sired by B from imported and show bitches. Also ord booked for choice pups from the great bitch Minnie, sired by Moses, winner of the challe cup for the best American bred dog or bitch. A orders booked for pups, full brother and siste Moses. Also imported bloodhound and blo hound puppies for sale. J. WINCHELL, Fair Haven, V

FOR SALE.—ONE FIRST CLASS GORD setter dog, 21 mos. old, a beauty, full gree. A rare chance for a good dog. Addr MT. PLEASANT KENNELS, P. O. Box 335, Bedford, Mass.

FOR SALE.—A NUMBER OF WELL BR and well broken pointers and setters; dogs boarded and broken; satisfaction guar teed. Address H. B. RICHMOND, Lake Mass. sept2

FOR SALE.—THE LANDSEER KENN offers choice bred Scotch Deerhound English greyhound puppies, bred only from st of well-known field qualities. These are aristocrats of all dogs. DR. VAN HUMME 420 N. 17th st., Omaha, Neb.

DO YOU WANT A DOG?
DOG BUYERS' GUIDE,
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them. Mailed for 15 Cents.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 3, 1888.

VOL. XXX.—No. 15. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

SEAL AND SPARROW BOUNTIES.

WHILE the Massachusetts Legislature has passed a bill offering a bounty on seals killed off the coast of that State, a bill similar in character is brought forward in New York State providing that a price shall be put on the head of the English sparrow.

These proposed measures are noteworthy examples of the tendency toward interference with the balance of nature, which is so common in this land of crude legislation. The Legislatures of two great States have taken in hand a subject about which very little is known, and with the utmost nonchalance are attempting to legislate about it as if problems which puzzle the most accomplished naturalists were to them very simple matters. One of the most unutterably asinine acts ever passed by a legislative body in any country was enacted last year by the Legislature of the State of New York, when it passed the bill making it a misdemeanor to feed or harbor the English sparrow, but that act will be almost equalled in folly if it should put the proposed bounty of two cents a head on this bird as is now proposed. It has been pretty clearly demonstrated that the English sparrow is hurtful to grain crops, that it drives off useful birds and does little or no good in the way of destroying noxious insects. We do not doubt that it would be a benefit to the country if this species could be exterminated; but the evil can never be sensibly abated by putting a bounty on the heads of these birds. Such a course will add very seriously to the burdens of the taxpayers, and will not materially reduce the numbers of these pests. Moreover, it is likely to result in the destruction of a vast number of our useful birds, whose heads will be turned in as those of *Passer domesticus*. The average man cannot distinguish between the European sparrow and many of those finches which are indigenous to the soil, and the probable destruction of the latter, in case such a law as the one in question should be passed, is one of the most serious evils of the case.

The question of the seal bounty is somewhat different. It is well understood that the seals eat fish, and it is assumed that the damage to our fisheries resulting from this diet justifies the destruction of the animals. No one knows whether this is or is not true; and the policy of a bounty on seals is a piece of unwise legislation, wholly unwarranted by our existing knowledge of these animals or of the relations which they bear to the other inhabitants of the sea.

The folly of hastily attempting to legislate a species out of existence and of interfering with the balance of nature has been more than once demonstrated of late years. Besides being a foolish and entirely useless proceeding, it is also a very expensive one; and if New York and Massachusetts want to enter into competition with Pennsylvania, Wyoming and Montana in senseless attempts of this kind, these two States will no doubt purchase their experience at as dear a rate as did the others in the case of the "gopher" and hawk bounties, already alluded to in these columns.

THE YELLOWSTONE PARK BILL.

THE Park bill is still in the hands of the Public Lands Committee of the House of Representatives, and the date at which we may expect it to be reported to the House is wholly uncertain. It is understood that some changes will be made in the bill which will necessitate its being sent back to the Senate. One of these is insisted upon by the Billings, Clark's Fork & Cooke City Railroad promoters, who desire to build their road up Clark's Fork Cañon to that "busted mining camp," Cooke City. These promoters urge that this cañon is the only practicable way to Cooke, and demand that something shall be cut off from the northern part of the proposed addition, so that Clark's Fork Cañon may not be within the Park. It is understood that they began by urging that this northern boundary be moved south eleven miles, and that when this was assented to they asked for fifteen miles, and then for twenty. In fact the more that was granted them the more they demanded. This corporation, we believe, has not yet received from Congress its right of way through the Crow Reservation, and it is doubtful if the road will be built for years, if ever. Indeed the opinion is expressed by many people that this right of way is only desired for the purpose of issuing bonds, which may be marketed at some price or other.

The need for a railroad from Billings or any other place to nowhere, *i. e.*, Cooke City, is a mysterious want not to be comprehended by the average person. The twelve persons who wintered at Cooke last season can hardly be expected to ride enough on the road to pay interest on its bonds, to say nothing of a dividend on its stock. The Rocky Fork Railroad now in course of construction will, if it is ever finished, give Cooke its outlet.

FIELD TRIAL RULES.

SINCE the inauguration of field trials in this country at Memphis, Tenn., in October, 1874, there have been each year important changes in the running rules, and undoubtedly other changes will be made for many years to come. These changes have been made as experience has shown that the rules were unsatisfactory in their working, and much brain power has been expended to produce a set of rules that would invariably give to each dog his proper place when the final heat was finished. The present rules of the Eastern and National Field Trial Clubs are a great improvement over those of the early years and seemingly they are very nearly what is needed, but cases will undoubtedly arise in the future as in the past that are not provided for, and consequently injustice may be done in deciding the point even under a liberal construction of the rules by the most upright of judges. We are often told by the judges that under the rules they were obliged to decide as they did, and more than once they have openly stated that but for the rules the decision would have been different. It is true that no very glaring injustice was done; but as we are all anxiously seeking for the very best of everything, especially dogs, it is eminently proper that we should strive to eliminate everything that tends to place one dog over a more deserving but less lucky competitor. Just how this is to be accomplished is a problem of the future; that it be speedily solved is the earnest desire of all who have the interests of field sport at heart.

Competent judges—and surely none others should be selected—are capable of deciding upon the relative merits of competing dogs without the aid of any hard and fast rules. Why not, then, give them full control of dogs and handlers and send them afield with simple instructions to place the animals under their charge in the positions earned by their performance? We are writing, of course, only of those rules and instructions that govern the judges while performing their duties, believing that the abrogation of these rules, or at least their essential modification, would prove of benefit, and that such change would be satisfactory to all concerned.

SNAP SHOTS.

THE disputes as to the true discoverer of America and the authorship of Shakespeare's plays sink into insignificant consequence compared with the new topic for debate afforded by Lake Mistassini, that more or less mysterious body of water in the Northern wilds. Those who contend that the situation and topography of the lake are well known adduce the evidence afforded by geographical charts, and one correspondent informs us that he has personally explored Mistassini and mapped it, and he sends us the map which we print to-day. On the other hand, in the face of such testimony, the counter side with doughty spirit affirm that all the maps are inaccurate, that the lake has never been explored. Be its waters known or unknown, commonplace or mysterious, Mr. W. H. H. Murray has proclaimed to the world that he proposes to discover them this summer; and there is little ground for hesitating to believe that Mr. Murray will do precisely what he says. A region need not be a *terra incognita* to be discovered by Mr. Murray. The Adirondack wilderness had been explored and written about long before Mr. Murray ever set foot in it, nevertheless for thousands and thousands of people "Adirondack Murray" was in a practical way the first, original and only discoverer of the North Woods. And if his fancy shall not have given over its play, nor his imagination abated, nor his pen lost its wondrous cunning; if Phantom Falls shall be found pouring their dashing waters into Mistassini; if through brush and brake on its borders half-breed guides shall slosh about, adherent to the tails of mighty bucks; in short, if Lake Mistassini, seen before by other eyes and described before by other hands, shall be seen with Murray's eyes and painted in Murray's glowing colors—if all this shall transpire according to programme, the champions, who are now so valiantly contending for the commonplace Mistassini, may as well lay aside their weapons. The Lake Mistassini of the Canadian Geological Survey may be down on the map; but the Lake Mistassini of "Adirondack-Mistassini Murray" is not there, nor will it be until he himself has placed it there.

An important bill before the New York Legislature is one introduced by Mr. Platt forbidding any railroad from building or operating its line on land owned by the State within the forest preserve. The object of the measure is to shut off the projected railways which lumbermen contemplate extending to the very heart of the wilderness. The construction of these roads means the destruction of the hardwood forest; they will be built, if permitted, for that very purpose; and where the lumberman's ax cuts its way fires too will follow, as they have in numberless and extended tracts of the Adirondacks already, converting the blessed woods into stretches of bald and barren rocky desolation. The Platt bill should become a law despite the maneuvering and machinations of the railroad lobbyists.

The citizens of Bangor are just now having what has come to be an annual season of jubilation over the return of the salmon of the Penobscot. The first fish were killed by Messrs. F. W. Ayer of Bangor and George McMahon of Brewer, on April 26. Four other fish were hooked by other fishermen on the same day but were lost. The Bangor salmon angling is within the city limits; the waters are practically free; and all anglers who take their fish in a legitimate way will be given a cordial welcome. It is in truth a new order of things when salmon fishing may be enjoyed so near home.

The Park petitions are coming in. Several additional lists of names are given to-day, and they will be continued until completed. The sentiment of all sections is shown to be strongly in support of the Vest bill.

The FOREST AND STREAM'S new offices are at No. 318 Broadway, corner of Pearl street.

THE ROCK CLIMBERS.

XVIII.—IN THE HANDS OF THE POLICE.

DAY after day the men sat about the fire listening to the howling of the gale, or tried to ascend the mountains, wading through knee-deep snow. The weather was bad. The frozen particles of sleet, driven horizontally by the keen wind, struck the face with stinging blows which felt like the lashings of a thousand tiny whips. The roar of the blast was ceaseless during the day, though often the wind fell at night, and it was calm until a little after sunrise in the morning. Sometimes the morning and evening would be fair, but for the greater part of each day it snowed or rained, and always the west wind roared among the mountain-tops. Once or twice they were treated to sunrises that were surpassingly lovely. To the west of camp, and not very far off, were the snow-covered mountains whose vertical walls were pierced by narrow valleys which ran far back into them. Some mornings the rising sun tinged the clouds in the east with pink and gold, and as the light grew stronger this color grew deeper, until it became almost blood red. This was reflected on the snow-clad mountains that bounded the western horizon, and gave them, from summit to base, a most brilliant rosy hue. This display lasted until the sun rose, when it gradually faded.

The trip planned by the Rock Climbers had not been completed. They had intended to go further south, to Two Medicine Creek, but the weather made them feel doubtful about the wisdom of such a move. A few days before reaching Cut Bank, they had come across two woodchoppers from a ranch down on Milk River, and by one of them had sent a note into the Agency, asking Joe Kipp to send them some provisions, for in some particulars their stock was low. They still had plenty of flour and fresh meat, but the coffee sack was growing light. The Indian by whom the provisions were to be sent did not come and the weather showed no sign of improving. At last one day came a very heavy fall of snow and it turned bitter cold. It was time to start.

Early next morning the wagon was packed, and by 10 o'clock on the 16th of November, a start was made for the railroad. After going perhaps ten miles down the creek, they came to the level prairie where there was but little snow, but over which the cold wind blew with terrific violence. All day long they traveled, and just about sunset, came to the South Fork of Milk River, two or three miles above Sam Bird's ranch, which they reached after dark. The river was still open, but slush ice was running in it, and a few days more would freeze it up.

Bird's cabin was 16ft. square and was pretty well occupied that night, there being already three men, a woman and a baby in it, besides uncounted dogs, cats and chickens. Myron made the travelers welcome, and they slept there that night. The dogs having been turned out there was just room for the eight human beings, the chickens and the cats. If there had been one more person the cabin would have overflowed. The Rock Climbers spread their beds on the floor, the cats crept in with them and the hens cached themselves under the table. It was all as comfortable as you please. About midnight, however, the rooster under the table woke up, and from that time, until day, it seemed that he crowed every five minutes, and as the men were not used to this kind of music, it made their sleep a little broken. It would have been a base return for the hospitality extended to have got up and captured the noisy fowl and then wrung his neck, but the impulse to do so was strong and hard to be resisted. The occasional weeping of the baby completed this nocturnal concert.

It had been cold enough before, but during the night the temperature had fallen still further, and in the morning when the men were out gathering the horses it was found that the river had frozen so hard that the horses could walk across it without breaking through.

This was the end of the Rock Climbers' trip. Jack had his reasons for going no further, and left them here, while Yo and Appekunny, with little besides the former's personal belongings in the wagon, started back to Lethbridge to get to the Canadian Pacific Railroad. It was full thirty miles to the crossing of the St. Mary's, where there is a station of the Mounted Police and a road house for the accommodation of travelers, and the ride was long and cold. On the way they met a Piegan Indian, who had been visiting at the Blood Agency, and toward night, after crossing the Boundary line between the United States and Canada, two of the three Mounted Police stationed at the crossing. They seemed very nice, gentlemanly fellows, and chatted pleasantly, giving and taking the news from either side of the line. As the wagon was being unhitched at Kent's, one of them called Yo aside and inquired his name and business, asking also whether he had any whisky with him.

One of the principal duties of the Mounted Police is to look out for whisky traders. The sale or having in possession of whisky in the Northwest Territories is prohibited by law, the penalty for its infraction being from three to six months imprisonment and a heavy fine. As is usually the case where the sale of intoxicants is absolutely prohibited, men are wild to obtain them, and as this is not always possible, they make use of all sorts of curious substitutes. Two years ago whisky in these Territories brought $20 a gallon or $5 a bottle, and as this same liquor in Montana Territory only cost $2 per gallon, it will readily be seen that there was a good profit in the business of smuggling liquor across the line. The only men who can engage in this trafic are those who thoroughly know the country and who are willing to take desperate chances, for capture by the police means confiscation of the cargo, wagons and horses, a term of imprisonment and a fine. The prospective profits of the business have induced many men to go into it, and so successful have they been that at present the price of whisky in the Territories has fallen from $20 to $6 or $7 per gallon.

The Mounted Police are ever on the watch for these illicit traders. They scour the country looking for men or trails, and make frequent captures. Sometimes the traders make a hard fight for freedom, but usually, if the police appear, the men interested take to their heels, letting their property be captured. When Yo was asked if he had any whiskey with him, he laughingly replied that he hoped to get that on the Canadian side of the line, and the officer, apparently satisfied with the reply, rode off.

The next morning, long before light, the animals had been brought in and hitched up, and Appekunny and Yo drove away. The distance from the crossing to Lethbridge by way of Fred Pace's was not far from seventy miles, but they had learned by inquiry that, by going by way of Brown's and George Houk's, this could be shortened to less than fifty. Neither of the men had ever been over this road, but after much questioning they had determined to try it, notwithstanding the fact that the high plateau over which the trail led was cut up by many wagon roads which might mislead them.

They traveled on without misadventure, reached Brown's, thirteen miles, before the morning was half over, and then turned down the river to the crossing. The stream here is wide and looked deep, flowing with a sullen treacherous oily current that seemed rather threatening. To Yo, who was on horseback, it fell to try the ford, but before doing so, he stripped off all the extra coats which he had been wearing as protection against the cold, so that in the event of a slip or a stumble which should throw him out of the saddle, he would be in a position to reach the shore on his own account. The river was bank full, frozen hard for some little distance out from either shore, and the slush ice was running fast, a fact which caused Caribou, the horse, some uneasiness. When they got out toward the channel where the water was halfway up the animal's sides he would prick up his ears and try to prance sideways to avoid the masses of ice which came bearing down upon him. They looked alarming enough and would have made trouble had they been solid, but as soon as they crushed against the horse, they divided and passed on either side of him. A good ford was found, the river safely crossed and the wagon climbed the long hill and kept on its monotonous way over the level plateau.

Meanwhile there had been hurrying to and fro at the Police Station on the St. Mary's. About nine o'clock that morning, a mounted man had ridden up to the station, and after some little conversation had said to the Corporal in command: "Well, those fellows rather played it on you, Corporal, didn't they?" "How do you mean?" said the Corporal, pricking up his ears. "Why," said the man, "that team that came in last night driving four—two little mules in the lead. They had made a cache of whisky back in the hills, and came in here with the story that they were a hunting party. Then, after dark, they went back and raised the cache—one barrel of fifty gallons and one of seventy-five—and started out for Lethbridge. They must be well on their way now; too far for you to catch 'em. I tell ye they're shrewd ones, you bet." And the honest granger threw back his head and laughed heartily.

The Corporal said nothing, but glared for an instant at his interlocutor, and then with a call to one of his men rushed away to the stables. Horses were backed out of their stalls, saddles and bridles jerked down from their pegs, and in less than five minutes the Corporal and his man were in the saddle, riding like mad across the river to take the trail of the "shrewd ones," and, if possible, catch them before they had disposed of their liquor. The honest granger sat on his horse and watched them with a twinkle in his keen gray eye as they flew across the level bottom and disappeared up the ravine which the road followed, and then turning to the remaining policeman he said, "Well, I hope they'll catch the cusses," and lifting the reins on his horse's neck, rode away over the bluffs.

Yo and Appekunny continued their slow march over the yellow prairie, where there was nothing to look at save the old buffalo trails, worn deep in the ground, but now grass-grown and slowly disappearing. Where it was possible they trotted, but the mules were lazy, and when Yo would ride upon one side of them to brush them gently with the pole which he carried for that purpose, they would turn away from him and get out of the road. Still, their progress was fairly good. It was some time after noon when Yo noticed far behind them on the road two dark specks which could only be mounted men, and gradually as they drew nearer it was seen that one of them had a red coat on. He said to Appekunny, "They're police, and after us; drive on as fast as you can," and he dropped behind the wagon so as to see what the officers had to say. Before very long the sharp pounding of hoofs behind him gave an excuse for looking back, which he did with a smile on his face, and saw the two officers just behind him, their horses covered with foam and presenting every evidence of having been ridden very hard. Yo nodded, and his salutation was answered by the command "Stop that wagon, I want to search it." The order was peremptory, and for a moment Yo felt rather provoked, not being very much accustomed to being ordered about. Then the absurdity of it all came over him and he whooped to Appekunny, and raised his hand and the wagon stopped. "After whisky, I suppose, Corporal," he said, laughingly. "Yes, unload, please," was the reply, but the officer looked a little troubled. "Cast off the lashings, Appekunny," said Yo, "we may as well give up," and presently the ropes were loosened, the tent which covered the load pulled off, and the contents of the wagon exposed to the view of the Police. As the Corporal saw the skins, the sheet iron stove, a trunk, some bags and two or three boxes, he saw also that he had been imposed upon. As a matter of form he looked into one box and the trunk, and then signified that the lashings might be fastened again. Then he sat for a while on his horse with his face turned away, looking over the limitless prairie, and presently he told the story of his ride and what led to it. It was apparent now that the honest granger was himself a whisky trader, and wanted to get the Police out of the way so that he might run his cargo by the station, and that the Rock Climbers' outfit had given him just the opportunity that he wanted.

Notwithstanding his disappointment, the Corporal throughout was as civil and pleasant as possible, and the men, appreciating his feelings, concealed as far as possible the amusement which they felt. This officer by his courage and alertness has made himself a terror to the whisky traders and other evil doers who come into his territory, and has the reputation of being one of the very best men on the force.

After a little talk and a smoke, the Police turned about to ride over again more slowly the ground which they had covered in such hot haste in the morning. Yo and Appekunny went on their way toward Houk's, and at dusk crossed the river and drove up to the house. The next day they reached Lethbridge, and parted. The Rock Climbers would climb no more. Yo.

The Sportsman Tourist.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

PETE, THE DOG WITHOUT A PEDIGREE.

I.

MANY years ago, along in the forties, there was an immense tract of wild land between Lycoming county and the State line to the northward, and this land was so rocky, sterile and broken that it seemed unlikely ever to be settled on as farming land. As to any value for lumbermen, why there was practically little timber save hemlock on the tract, and at that time hemlock was worthless. Wherefore the entire tract was left in the hands of nature and the tax collector, who usually sold a few thousand acres every year for taxes, the same being sold and resold again as the would-be speculators grew sick of their non-productive possessions. But it was very fair deer pasture and bear range, though the best hunters seldom went there, because it was so remote and inaccessible for teams that all packing in and out must be done on foot, and it was more than deer was worth to pack it out. That was the verdict of the average Pennsylvania still-hunter, who was wont to consider himself disgraced if he spent time on a huut that didn't pay.

I taking a very different view of the matter, it is no marvel that the "Block House Woods" became my favorite stamping ground. It was here that I could bury myself in the forest for weeks at a time without seeing a human face or hearing the crack of a rifle, save my own. True, it was a tough all day job getting there and making camp for the night; but once there, I was free as the bluejays that pecked about the camp and talked to each other in the most musical jargon of the stranger who came there to feed them crumbs and meat. There was little small game in this region, and the sombre hemlock forest seemed to repel all song birds. I never saw nor heard a bluebird, thrush nor robin in those gloomy reaches. Jays, wood wrens, pileated woodpeckers and red squirrels, with an occasional pine marten or a stray hare comprised all the minor animals to be found there. The large mountain cat, a species of lynx sometimes attaining a weight of 60lbs., was more plentiful than desirable. He was bold and impudent to a degree, and would climb small trees and steal venison within ten feet of my sleepy head. Sometimes a solitary raven came flopping over the tops of the hemlocks, croaking dismally. But he always had his knapsack packed for a more genial region, and did not stop.

My objective point was in the wildest part of this forest at the "Chestnut Shanty," a very comfortable cabin, built years before by an old trapper who nosed out this location as a promising ground for bear and

marten, of which more anon. To reach it I usually hired a man to take me as far as wheels would reasonably go and then slung the knapsack for a hard four hours' tramp. If I happened to get a little off on compass points, which I was apt to do in cloudy weather, the four hours might mean six with added weariness. To make such tramps pleasurable one must needs be young, hardy and an eager hunter, all of which I was in those days. I prided myself on going light, but could never reduce the duffle for a week's hunt much below 25lbs. For two weeks I allowed about 5lbs. more. Not a heavy load you will say. But try it for half a day, up and down steep mountain spurs, through tangles of laurel, shin-hopple and brier patches, over and under fallen logs and all the debris of swamp and forest. I'll wager you would welcome a glimpse of the low roof that covered the Chestnut Shanty.

But "'Tis not in mortals to command success," and it has happened on one or two hunts that I hunted faithfully all the week and came into camp at dark on Saturday with the same bullets in the gun that I had driven carefully home on Monday morning. Better hunters than I am have had the same hard luck without being in the least discouraged thereby.

It is thirty-six or thirty-seven years ago that on a bright November day I climbed over the tail-gate of Farmer B.'s light wagon and swung the knapsack for a weary tramp to Chestnut Shanty. It was within an hour of sundown, when reeking with perspiration I deposited knapsack and rifle in the Shanty and proceeded to make a lively fire against the huge hemlock trunk that served for a back log.

And all that afternoon I had been thinking how grateful a modest nip of old Bourbon would be from the little flask that I knew was riding safely rolled up in my blanket. And so, when the fire was doing its best and the camp kettle was simmering and singing sweetly, I unrolled and spread the blanket, lay down on it with the knapsack for a pillow and drew the cork from the little flask with a sense of luxurious ease and perfect contentment. For a few minutes I indulged the pleasure of anticipation and then placed the flask where I thought it would do most good. Great heaven! There was no taste of whisky about it, but on the contrary a sickening flavor of rain water. I held the flask to the light and discovered a huge bloated angle worm floating about in the tepid water. And I had packed this piece of concentrated villainy twelve miles, to my own confusion! I did not swear; there are griefs too great for words, but I was nearly heart-broken. And I remembered with bitter regret that I had been fool enough to leave the ready-packed knapsack under the very noses of Ben and Lewey, two red-headed onion-eyed practical jokers, who never missed a chance of "hanging it on to" me, as they graphically expressed it. Ah, well, I suppose there are men in Wall street who could lose a hundred thousand dollars with less feeling of vexation and disappointment than that little joke cost me. I know I lounged all the evening on the fresh browse, watching the bright camp-fire and the shifting shadows of the dark hemlocks beyond and thinking what a fine addition to the picture would be a couple of well-stretched red-haired scalps slowly drying by the fire light. I never got even.

On the following morning I was out at early daylight, and hunted as long as I could see the sights on the rifle, but the leaves were too dry and noisy. I did not get a shot. And on the next day it was still worse. The bright sun and gentle west wind dried the leaves into a rustling forest carpet, which, although I hunted in moccasins, permitted the deer to hear me more than a hundred yards distant. And the second day was even as the first—a blank.

The beautiful weather and glorious autumn hues were some compensation for poor hunting, but a man is not a cow to eat leaves, and when one is, at much trouble and travel, in a deep lonely forest, a little venison seems about the right thing. And so I was glad when, on the third night in camp, there came a steady, light, warm rain, that made the leaves like wet paper, and early in the morning I was again out on Chestnut Ridge, with a fair show for a successful day's hunt. And it was on this day that I made the acquaintance of Pete—an acquaintance that ripened into friendship, much to the advantage, I think, of both dog and man. I had been hunting all the forenoon with no success, and had taken to a log for rest and the chance of a stray deer, when a slight rustling in the leaves caused me to turn quickly but quietly, and there I saw a strange animal coming in on my trail that I scarcely recognized as a dog. But a dog it was, and, at first sight, a most unpromising cur he looked. Thin to emaciation, bow-legged, low on the ground, long-bodied, with a head too large, and muzzle disproportionately long and strong, a dingy, faded, red coat which covered a skin that seemed only a loose bag for holding a lot of looser bones, and he carried a pair of mismated ears, one of them standing "cocked" while the other lapped meekly over the side of his head and in two parts, having evidently been torn in a fight, also, his muzzle was marked with scars in a dozen places, and his chest was simply immense for a dog of his size. It was safe to infer that a lack of courage was not among his failings, and there were points about him that any hunter would be sure to note. A dingy, worn streak around his neck showed that his days had been largely spent at the end of a rope, doubtless because he was given to wandering off on independent hunting trips, and he was "orderly" or he would have gnawed his rope. That he was a plucky, indefatigable hunter was certain, else he would not be found lost and starving in the depths of such a forest, and I judged that he had got fagged through following a bear too long and too far. Had it been a deer the race would have been on better ground, and would have ended in time for him to back-track himself out. Anyhow, there he was, a gaunt, hollow, starving canine reality. And, as he planted himself on his haunches and looked me appealingly in the face with a pair of full, intelligent brown eyes, I felt that no hunter with a heart in him could go back on such a dog, though it cleaned out the last crumb in his knapsack. Grudgingly I took out the frugal lunch in my pocket and fed him by small instalments—to make it go further. The morsels vanished like snowflakes in a camp-fire, and he looked hungrier than before.

I thought sadly of the scanty store in the old knapsack as I rose from my log and started for a still-hunt to camp, with a hope that my new-found friend might somehow help me to a deer. He did. He came to heel of his own accord, and crept along with the stealthy, noiseless tread of a cat. I noticed, too, that he kept a little on one side, where he could have a clear view past my legs, and he was all alert of ears, eyes and nose. "This looks well, if he don't break," I muttered; and we went on thus for may be a mile, when I felt a decided nudge at the calf of my leg. I thought it accidental, and paid no attention to it; but a minute later I felt it again, more decidedly, and then I looked at the dog. He was a picture of animation and excitement, and was trembling with eagerness. His large bright eyes glistened as he looked me in the face, with his head turned knowingly a little aside, and then pointed with his long muzzle to a thicket some two hundred yards ahead. The hunter who did not understand such a dog would be dull indeed. Of course there was big game in easy distance; but how the dog would behave in roading up to it was the question. Well, he behaved admirably; nothing could be better. Keeping a few paces in advance, he crept slowly and noiselessly along, with his nose pointing steadily toward his game, until we were near some large rocks, when he sank silently to a crouching position and came to a dead point at the rocks. I thought he must be mistaken, and that the game must be in the thicket beyond; but he was right. Just as I had crawled on to the nearest rock and straightened myself to an upright position, a big doe sprang from the shelter of a bigger rock and went for the thicket at her best speed. It was so sudden that I was a trifle rattled at first, but I pulled myself together with a passing thought that now, if ever, the camp had some need of venison, caught the bead fairly on the white hair, and sent in two bullets in quick succession. At the second shot I saw a hindleg swing helplessly out of place, and the next instant the dog flew by me like a red streak, showing unlooked-for speed and gaining rapidly. I thought then, and still think, that he only broke when he saw that it was to be a three-legged race on the deer's part, and he could end the race by a minute's sharp running. In fact, before I had finished reloading there arose the agonizing bawl of a deer in its death struggle, and when I reached the spot the doe was dead, with the dog still at the throat, drinking like a starving savage of her life blood. It was cruel, I admit it. I felt somewhat like a savage myself. But the camp was out of meat, and here was "man's best friend" in starving condition, while I too was hungry for venison. I cut off the head and gave it to the dog to gnaw while I dressed the deer, hung up the forequarters, and fitted the saddle for toting to camp.

When I had succeeded in seating my load where it would ride easily, with the rifle resting across the legs in front, I gave the word and we started for camp, the dog not forgetting to bring along the head, which had a way of slipping from his jaws every hundred yards or so. My load, too, grew heavy long before reaching camp; but we made the shanty without a rest, and with an hour of daylight to spare. And when the saddle was hung in a tree a little back from the fire, with juicy venison steaks broiling and a pot of strong green tea simmering over the bright coals, the whole made a sylvan picture that does not need photographing. As for the dog, he was too busy with the head to pay much attention to anything else; and when supper was over, and the camp had relapsed into silence, his teeth could be heard grating on the hard skull from beyond the back-log, making a most discordant accompaniment to the silvery murmur of the little rill back of the shanty; so I called him in and tied him to a corner of the shanty with a light tump rope. He took it patiently and without a whine, settling himself in the warm glow with a long-drawn sigh of canine satisfaction. Then I wondered what his name might be, for you can't get on well with a nameless dog or man in camp. To call out "Mister Man" or "Doggy, Doggy," is ungenial and subversive of all good fellowship. So I tried him with half a score of the most common names in vogue with still-hunters, pronouncing them at intervals and in an ordinary tone, but he took no notice until I spoke the name of my old-time favorite still-hunt dog, Pete. At once he sprang to his feet with such an eager, inquiring look as proved that the name, if not the exact thing, was near enough to it for all practical purposes. And from that time, so long as he was with me, he was only known as Pete.

The new partnership opened auspiciously for both dog and man. We had met as strangers at noon, and at dark were lying full-fed by a bright camp-fire, with more venison ahead than we were likely to use, for which I freely gave the dog full credit, and it struck me that I had found a canine bonanza. Imagine a dog that will wind a deer half a mile to windward, will lead you up to it unerringly, and end by crouching within shot and making a dead set on it. Such a dog was Pete. I hunted faithfully from dawn till dark during the next three days, not that I cared to get another deer, but to test the dog and learn all his peculiarities; and I was never more interested in any phase of woodcraft.

His list of accomplishments as a hunter was not a long one, but included the most important points, and he was very thorough. His trick of nudging me to call my attention to the fact that he had winded a deer was a point on which he never failed, and it might be placed to the account of instinct. But when I purposely refrained from noticing his signals and he plunged his muzzle into the calf of my leg, taking at the same time a fine, sharp nip that raised a blood-blister, why, that was plainly reasoning. It was simply saying, in the only language he could command, "There, take that. Now wake up and 'tend to business."

It was when I shot, however, that he showed his best dog wit and wisdom. On such occasions he would stand erect on his hindlegs, watching the effect of the shot with his keen eyes, and if he saw the cut hair fly at the crack of the rifle (as it always does when a deer is hit), he was off like an arrow. Evidently he understood that to wait until the gun was reloaded and a slow-going man had time to examine the track, was giving the deer a long start, when, by rushing the race at once he might end it in a short half mile. I thought this the highest development of canine reasoning that had ever happened to come under my observation, and any dog trainer will see, on a little reflection, that it could not have been taught. He must have evolved it from "the depths of his inner consciousness." When the shot happened to be a miss, and it happened often enough, Pete was all broken up and became decidedly comical. He would stand on his hindfeet, tiptoeing and craning until the deer had taken the last inch of its tail out of sight, then drop slowly to all fours, give me a look of sad reproach, and come to heel in a dejected, woebegone manner that was highly amusing.

And he had his failings, even as a hunter. For instance, no matter how promising the day or how plenty the deer, the fresh trail of a bear or a mountain cat would start him off without a moment's warning. The mountain cat was his favorite aversion. It was to this animal that he was indebted for most of the scars that ornamented his muzzle and missmated ears, and he hunted them with undying spite and vigor; also, with notable success, owing to the fact that he always roaded up to them silently and pounced on them unawares, usually closing before the astonished cat could make the nearest tree. Of course the cat would fight itself free in a few seconds, for nothing short of a powerful mastiff can hold a fullgrown mountain cat, but all the same it was ready to tree at the first chance after such a surprise and scrimmage. I got an inkling of Pete's ways on the cat question as we were skirting a dense, tangled windfall on the second day's hunt, when, without a sign of warning, he suddenly broke and disappeared like a flash. For a few minutes there was silence, and then, from the densest part of that dense, briery thicket there arose a great racket. The sharp angry bark of the dog was punctuated by the snarling of a cat, while an occasional shrill yelp showed that the dog was not having it all his own way. Then the racket settled down to steady, persistent baying, and I tore my way through laurel, shin-hopple and briers, to a spot where the dog was raving with bloody nose and ears, at the foot of a gnarled hemlock, while a sleek mountain cat was calmly taking in the situation from a comfortable seat some forty feet above. A minute later the cat was on the leaves with a bullet through his head, and Pete was getting satisfaction by shaking the carcass to his heart's content. The cat was a fat young male, and would hardly scale less than 40lbs. I took off the skin neatly for casing, and also took the tenderloins and a ham to camp; for the meat of a young mountain cat, or a panther, is sweeter and juicier than venison. If you doubt this, try it the first chance you have. I may mention just here that there was a bounty of 75 cents on these cats, and a prime pelt would bring as much more, which made the animal worth saving with most hunters. But he was mainly hunted down through a feeling of hatred and vindictiveness, being decidedly the worst enemy the deer has to look out for.

His trick of crouching on an overhanging limb by a runway and dropping on the first deer that passes is very deadly, and I think he never misses his "tip." I have followed the trail of these deadly struggles several times, both on leaves and light snows, and it always ended by finding several conical heaps of leaves, under one of which was sure to be found the remains of the deer. Just why he should cache his venison under one heap, and then be at the trouble of scratching up four or five more round about it, is one of the things no fellow will ever find out. If it is done for a blind it must be a decided failure, as any carnivorous animal would detect the right heap at the first sniff. But all the same he does it, and the panther always does the same thing, as every old still-hunter knows. And neither of them will hunt or go far from the spot until his larder is exhausted. His mode of life at such times is very simple. He goes to his cache with the first gray streak of dawn, fills himself to repletion, then to the nearest running water for a drink, thence to his lair, sometimes in a straight course, but often in a zigzag, roundabout way, probably intended to throw out any chance pursuit. He only takes one meal daily, and passes all the hours of daylight dozing supinely. When found under such circumstances he is easily treed by a sharp dog, for he dislikes to go far from his game, and will often take the nearest large tree, waiting like a feline idiot to be shot, when he might easily knock the dog out with one blow and make his escape at leisure. It was the thorough knowledge of these traits and habits of the feline tribe that rendered the extinction of the panther so easy to the old-time hunters of northern Pennsylvania.

Felix concolor is never very plentiful anywhere; his modes of life require a wide range of forest, and he breeds slowly. But there was a time when he was probably more numerous and more evenly distributed along the mountain spurs of the upper Susquehanna than any other range in the United States, and I could name half a dozen old hunters, each of whom had a record of seven to twelve "painter scalps," and all of them, with one exception, sleep with their fathers. The panther is extinct, or nearly so; but the game-destroying, deer-killing mountain cat is a diabolical certainty and unknown quantity, not so easily gotten rid of. And all these discursive remarks on the cat question were induced by the recollection of a little circus that Pete and I had with him on the head of Bear Run. I started in to tell the story, but this paper is already long enough; if it be found readable as well, I may try my hand on the story in a future number.

NESSMUK.

LAKE MISTASSINI.

OTTAWA, April 25.—*Editor Forest and Stream:* Having read the correspondence in the columns of the FOREST AND STREAM in relation to the great "unknown" Lake Mistassini, and seeing my name mentioned in Mr. E. T. D. Chambers's communication of April 19, I think it but right to say a few words on the subject. So far I have not taken the trouble to correct Mr. Murray's statements, not being in favor of newspaper controversy, and I only write now to let your readers know that the special correspondent of the Boston *Herald* has either been sadly misled by certain persons in the ancient capital who are loth to acknowledge their "second Lake Superior" a very ordinary body of water, or he is making a big thing out of nothing, as some special correspondents will do.

Mr. Chas. Hallock, in his letter of March 22, is in the main correct as to the size and position of the lake, and the manner of reaching it. Having been over the ground, I can supplement his advice to Mr. Murray. Reaching Blue Point, Lake St. John, as Mr. Hallock advises, Mr. Cummins of the Hudson's Bay Company will provide him with guides who can take him by either the Ashouapuouchouan or Mistassini rivers to the height of land, crossing which he can descend one of the small streams to the lake.

There are over twenty men, Frenchmen, half-breeds and Indians, who have been as far as the Hudson's Bay

Company's post at Mistassini, but only the men who were with me, Prosper Cleary, Jr., Paul Lemieux and Thos. Lejarin, have been around the lake; and he can, I think, hire any of them to go with him.

The trip from Lake St. John to Mistassini should be accomplished, with good canoemen, in three weeks at the outside, the distance being from two hundred to two hundred and fifty miles, according to the route followed, that by the Chef branch of the Ashouapruouchouan being the shortest. Two weeks on the lake will be sufficient to solve the problem as to its size and another week will bring him back to Lake St. John, covered with glory, and from there he can send to the world at large glowing accounts of his wonderful discoveries. Or if sufficient glory be not obtained he can descend the Rapid River to James Bay in two weeks, cross the bottom of the bay to Moose Factory, which will probably take a week, owing to the almost certain chance of being wind-bound on the way. From Moose he can ascend the Messinaibie River to the C. P. Ry. at the height of land in two weeks more, and thence return home when he pleases. By application to the director of the Geological Survey he can furnish himself with maps of the whole route and so dispense with the services of a guide. This whole trip has been done quite easily by Prof. Galbraith, of the Toronto School of Science, in 1882 or '83, and myself in 1885.

I inclose with this letter the official report of the exploration. The statements therein made regarding the size, etc., of the lake are all from actual measurement and personal observation, and not taken from the "Relations of the Jesuits" or from Indian stories, as are the data on which our friends of the ancient capital have built up their romance of the great inland sea. From the report you will see that Lake Mistassini is a long, narrow body of water, lying between N. lats. 50° and 51° 24′ and W. longs. 72° 45′ and 74° 20′. A long point at each end divides it into two deep bays; between the points, and seemingly a continuation of them, is a chain of islands with shallow water between them. These practically divide the lake into two parts, the water being very deep everywhere else, with bold rocky shores. From the head of the N. E. bay to the head of the S. W. one the distance is nearly one hundred miles, while the average breadth of the main body is about twelve miles. The surrounding country is well wooded with small spruce and poplar chiefly. As a sportsman's resort it will never be popular; there is nothing to shoot, the Indians in the vicinity have exterminated all the deer. Ducks and shore birds are altogether wanting, owing to the absence of proper feeding grounds, as is the case with most of our Laurentian lakes. The lake teems with large whitefish, lake and brook trout, pickerel and pike, and good sport can be had with spoon and minnow; but as fishing of as good character can be obtained much nearer civilization, I would not advise any one to go so far for it.

A. P. LOW, Geological Survey of Canada.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Natural History.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

BULLSNAKE AND WHITE WOLF.

I AM encamped in the deep forests on the carboniferous hills of Young county. My temporary shelter is a small cabin of a single room, full of cracks through which many things can creep. This morning, an hour or two before dawn, a heavy rain storm descended upon us, and the air grew quite chilly. While lying in my comfortable little bed listening to the howling of the wind and pouring of the rain, I felt a strange movement in the bed. It was not the movement of an earthquake, or of a whale, or of an elephant; yet I immediately recognized it as a movement of a very moving nature—one that might involve terrible consequences. I felt it again, and it was not only in the bed, but under the cover with me. Just at this juncture I felt something very slick and of a somewhat cold nature move against my hand. The time for action evidently had come, and I did not deliberate what action to perform, but performed at once. With one fell bound I vacated that bed and landed in the midwhole of the floor with such a thump that the cabin shook all over. In a moment my lamp was burning, and seizing a club I approached the bed and cautiously pulled down the cover. There lay a snake beautifully coiled up, with his head somewhat uplifted, licking out his tongue at me. He was about four feet long. He looked at me and I looked at him. He made no motion as if he would run and neither did I. I thought I spied a gentle and confiding expression in his eye, as if he said: "You need not be alarmed; if you will not hurt me neither will I hurt you. If you will be my friend, I will be yours." I threw my club aside. I perceived that my bed-fellow was a bullsnake, almost precisely like the rattlesnake in markings, but in no other respect like that monster. He is without fangs, without poison, and of a gentle, playful and amiable nature. He grows eight or nine feet long. I said unto him that he and I should be friends; that he might not only dwell with me in my cabin, but that if he liked, he could sleep with me in my bed. Having said that much, I carefully spread the cover over him and told him to sleep on. And he did so. But I did not go back to bed to him. I sat by my table and read a few chapters of St. Paul, who, of all authors, is my favorite. How logical, how forceful, how grand and ennobling he is!

On returning from breakfast I brought one of my fellow-workmen with me to show him my friend and bedfellow. When I drew back the cover there he lay, perfectly quiet and content, but licking out his tongue. My fellow-workman was dumbfounded. I then put the cover back again. A few moments ago my snake descended from the bed, in a quiet way, as if entirely at home, and is still probably somewhere in the house. He was probably engaged in hunting mice when the storm came up, and becoming chilled in the changed atmosphere, he found my bed pleasant and concluded to sleep with me.

FOREST AND STREAM some time ago informed me that the bullsnake is *Lotophis bellona*. That seems to me a misnomer for the bullsnake. I have no Latin dictionary with me, but suppose that *bellona* means "warlike," or something of that sort. Now, the bullsnake does not appear to me to be in the least warlike, but very amiable and peaceful. He eats rats, mice and birds, and will steal eggs from the hen's nest, but he does not specially war upon these things. So do I eat mutton chops, and beefsteaks and hens' eggs, but I do not war upon sheep, steers or hens. On the contrary, I treat them with great consideration and kindness. It is in order to change the name of this snake; and I suggest the name *Lotophis tayloreus*, inasmuch as I am probably the first man that ever slept with one of them.

My letters to FOREST AND STREAM on the wolf have been much read in this country, and the result is I am much visited by lovers of wolves. One of these tells me that he saw a few days ago a very large lobo that was perfectly white. He said that he was splendid to look at, and that he could not possibly be mistaken that he was a wolf. Since then I have heard of others who have seen this wolf within a mile or less of my camp. Such a thing as a white wolf I had not heard of before. I have told some young men that if they can rope him and secure him uninjured I may be able to sell him for them to the Central Park museum for a snug figure. They think of trying for him. N. A. T.

YOUNG COUNTY, Texas.

ARE HAWKS DESTRUCTIVE OF GAME?

Editor Forest and Stream:

In your issue of March 17, you do me the honor to publish a brief article on destructive hawks, with the editorial query whether I include in one group Cooper's and rough-legged hawks. In the kind of group I was making, as it were, a company of thieves, they are included. I was writing avowedly for sportsmen and practical shooters, and not for the purpose of airing my acquaintance with technical terms fetched out of a convenient term-book, so to speak, of which I have several at hand; works of the older ornithologists; all that Dr. Coues has written; Jordan's Manual, etc. Now comes after me your correspondent E. M. Evans (whether Mr., Mrs. or Miss I am ignorant), and thinks "it may prove interesting to me to know that the slate-colored hawk does not exist as a species." How then does he exist? I am aware that the slate-colored hawk, as described by Wilson and by Grim, technically designated *Falco pennsylvanicus*, was based on miniature specimens of sharp-shin. There are three hawks commonly known to the sportsmen and shooting men as Cooper's hawk, sharp-shin and slate colored or blue hawk. This last is known to those who profess and call themselves scientists as *Falco columbarius*. All three are often confounded as one by shooting men as "partridge hawks," sometimes also as "pigeon hawks"; yet those who make a distinction divide them as above. All three are excessively destructive, as is well known to all—shooters, scientists and would-be scientists.

As to the rough-leg, your correspondent says it is the most indestructive and useful of hawks, and fetches out of Audubon the quotation that the great naturalist "never knew it attempt a more considerable feat than to seize a lethargic frog at the water's edge." I have, Mr. Editor, if Mr. Evans and Audubon have not. Audubon also says he never saw this hawk west of the Alleghanies. I have, and it is now known to be not of uncommon occurrence there. I take issue with all who defend the rough-leg hawk. Three times in my life, once something over a year ago, and west of the Alleghany, I have shot this hawk in the act of devouring a ruffed grouse. The same fact has been reported to me by friends whom I know were as competent to know what they saw as Audubon himself. I have seen it take and destroy rabbits, squirrels, partridges, larks and various other birds, besides poultry, and especially I have seen it more than once devouring woodcocks, and from what I know of its haunts and habits I believe it to be especially destructive of this somewhat rare and rapidly diminishing in numbers, and most splendid of game birds. For this reason largely I desire to see this hawk put out of protection of the law, and a price on its head. The rough-legged hawk will prey on anything from a dead horse to a field mouse, a lizard or a "lethargic frog." Will any naturalist seriously defend the proposition that a rough-legged hawk, or any of our large hawks known or belonging to the buzzard group, will sit on a perch and allow a covey of partridges to stroll beneath, or a mother woodcock and her brood to waddle by unmolested, while he awaits the appearance of a "lethargic frog?" No nonsense in my opinion was ever more ridiculous. If hawks are shot where there are no game birds, and where field mice, frogs and lizards abound, no game birds and plenty of these lesser vermin will be found in their craws, as it does not require a Solomon or a so styled "trained scientist" to know. Before now men of science (*ex professo*) have shed much ink to show why a thing is and must be so, which at last has turned out not to be so.

Your correspondent advises that I leave this question to those competent to pursue it with accuracy and justice, (including himself?) instead of disseminating my erroneous opinions and promoting ignorant and cruel prejudice to the sacrifice of much precious and useful life. To adopt his own way of putting it, I suggest that it may prove interesting to him to know that I have succeeded better as a giver than as a taker of advice. To style a body in one breath ignorant, incompetent, cruel and foolish, is just a bit uncivil. But your correspondent having so delivered himself, falls to writing of the "precious and useful lives" of a lot of hawks. It may further interest him to know that whatsoever opinions he may have formed of myself, my competency, cruelty, etc., I regard them with indifference, but when he begins to write in that kind of style about hawks, I think, if not beneath it, his opinions are beyond all doubt not above criticism.

I am not a new convert to the idea of the legal protection of fish and game, and of insectivorous and song birds. As a sportsman, when there were no game laws, I always observed strictly what I deemed natural close seasons, and never shot sick meat. When my native State of Virginia was known as District No. 1, General Canby commanding, I wrote to that officer a protest against the wanton destruction of bird life in his dominion, and while he did not notice me or my letter, he did issue an order having the force and effect of a game law. As soon as the Legislature sat, I sent them the draft of a game law, which passed in one House and failed in the other. I persevered, notwithstanding the discourage-

ment of many who said nothing would be done. I urged the matter, and at the next session what I believe was the first, certainly one of the first, of our State game laws was passed almost exactly as I wrote it. As soon as a movement for international protection was made, I joined it and became chairman of the committee on habits of species. I am still heartily in favor of protection where legitimate, but I am opposed to the protection of any hawk save only the sparrow hawk, and this because of what I know about hawks as the result of direct personal observation, not merely upon stuffed skins and pictures and technical names, but upon birds of prey in a state of nature, lying in wait, and pursuing and seizing their prey. To be told that I am incompetent to understand facts of a perfectly simple nature, mere matters of eyesight, is too absurd to be offensive. I may as well be told I am not competent to identify one of the hens in my own yard, as that there is anything too wonderful for me or that I cannot understand in the anatomy of a common hawk, or the school jargon of a technical description and name of one. Such writing, however, on the part of scientists by profession and would-be scientists, does tend to disgust and alienate some whose aid and countenance are important to the success of any movement for the protection of bird life from useless slaughter; a movement most commendable and humane, and worthy to be encouraged by all sensible and humane people. Rude violence in opposition, no less than absurd and hysterical frenzy in advocacy of one's own notions, may and will disgust sensible people even with the opinions of scientists of unquestioned ability. The question of the utility or destructiveness of a species varies infinitely with locality and season. A species may be harmless or even useful at all seasons, except during a few weeks or even days in the year, during which it may be immensely destructive, sometimes literally destroying a crop in less than a week. There are many sides to such questions, no one man, nor any one set of observers, are competent to settle them out of hand, and in the mean time no man should be rudely treated for opinion's sake. M. G. ELLZEY, M.D.

SPRING BIRD NOTES.

BUFFALO, N. Y., April 27. — *Editor Forest and Stream:* Although the birds were some ten days ahead of time, the vegetation has been quite laggardly; but we have now had some very warm days.

The birds have manifested much anxiety to get at the serious duties of the breeding season. The cold nights must have resulted disastrously to many. On April 22 Prof. E. E. Fish found at the park a newly made robin's nest containing four eggs. It had been deserted. The white-throated sparrows, purple finches, wood, Wilson's and hermit thrushes, etc., are here. The white-bellied swallows were seen in the city to-day. The bats are on hand, not to be behind the birds which they ape.

Both species of the crossbill have been shot near here this month, that is, the American and white-winged. The pine finch was shot at Collins, Erie county, on April 14.

One of your correspondents, Mr. J. L. Davison, of Lockport, N. Y., a few days ago sent me five specimens of the yellow-bellied woodpecker and the fox sparrow. The first bird, he stated, was killed by flying against a window. Regarding the fox sparrow (*Passerella iliaca*), your readers may remember the discussion regarding it carried on in FOREST AND STREAM between Mr. Davison and the late Prof. Charles Linden; Mr. Davison held that it was abundant in the spring migration, and quoted many instances of seeing large flocks. But as Prof. Linden thought, it seems to be quite rare about Buffalo (see FOREST AND STREAM May 5 and 19, 1887; pp. 320 and 367). Mr. Davison says in his interesting letter that the bird which he sent me was one of a flock of a dozen. This was on April 19. Mr. Davison reports securing a marsh hawk in the "blue plumage." He shot him just out of Lockport on the 19th, on the highest ground in Niagara county. This is unusual. A son of Mr. Davidson had a red-throated loon (*Urinator lumme*) sent him on the 19th. EBEN P. DORR.

LAKE LINDEN, Mich., April 26.—I saw the first swallow to-day. Robins and blackbirds are reported to have been seen, although this is rather early for them, especially as it is a very late spring. No ducks nor geese have put in an appearance yet. Partridge (ruffed grouse) have wintered pretty well.—G. A. R.

MASSACHUSETTS, Ayer, April 24.—Spring is very cold and backward, which makes the birds feel homesick. During a 5-mile tramp the other day I started several partridges. Think they wintered well, as we have not had many deep snows in this section.—W. F. F.

HABITS OF THE MOUNTAIN LION.

Editor Forest and Stream:

In your issue of April 19, I noticed a letter from Rifle Creek, Colorado, stating that there have been many arguments in that camp over the question, "Can a mountain lion climb a tree?" This brings to mind some past experience. While leisuely riding over a cattle range in Mendocino county, Cal., some years ago, I was aroused from a somewhat absent state of mind by the barking of a dog in the distance. I at once turned my horse's head in that direction. On coming up to the dog I found him barking furiously under a large madrone tree, and some 20ft. above him on a projecting limb, was a large panther, or mountain lion, as it is called in the western country. Having no fire-arms with me I encouraged the dog, and putting spurs to my horse, galloped some half a mile, within hailing distance of a settler's cabin, and after considerable hallowing, got a reply. Informing the "old man" what was up, he returned to his cabin and soon appeared in company with his son, rifle in hand. The panther was killed by a shot in the head, and the dog had considerable sport in worrying a dead lion. The tree from which the panther was shot, was about 18in. in diameter and nearly perpendicular, with no branches lower than the one which he was on.

Again, while riding in the same section of country and crossing a flat ridge of black oak, I saw something sitting under a tree some distance from me, which looked like a dog. Dismounting and tying my horse and sending my dog in, in a few moments he was barking under an oak tree. On going up to him I saw a panther lying at full length on a limb some fifteen to twenty feet above me. I had no trouble in killing him, and in less than half an hour his hide was on the saddle beside me. This tree had branches lower than the one on which he was lying.

I have known panthers when pushed by dogs in a densely wooded country to jump from one tree to another and thus baffle their pursuers for a long time. I consider the panther the most cowardly of the brute creation (the Indian excepted), having known one to get into a sheep corral in the night and kill from twenty to thirty sheep, and before an hour's sun the next morning to be treed by a little "yaller dorg" and killed with less trouble and time than it would take to kill a red squirrel.

My opinion, based on a rather extensive experience, leads me to believe that panthers can and do climb trees, but seldom to any great height. E. T. D.

POUGHKEEPSIE, N. Y.

Editor Forest and Stream:

Your correspondent "P. B." asks if mountain lions climb trees. In a recent conversation Col. J. C. Haines, of Seattle, W. T., told me, in answer to my question, that the mountain lion and panther of the Adirondacks are one and the same animal. If so (I never saw a mountain lion) there can be no doubt that they can climb any tree. The panther has a claw as long and sharp as an eagle's, but much stronger and of solid bone. No "nail" like the bears. He can still-hunt a deer to perfection, and will get to the top of the biggest hemlock lively when a good dog is at his heels. J. H. R.

CANTON, N. Y., April 20.

[There is no doubt that the "mountain lion" is the same as the cougar, panther and puma. Nor is there any doubt in the minds of most men of their ability to climb trees. But who has seen them do it?]

EAGLES BREEDING IN CONFINEMENT.—East Toledo, O., April 23.—My pair of eagles are still breeding in captivity. March 17 the female laid an egg; March 18 there were two eggs in the nest. April 22 one bird was hatched; April 23 there were two young eagles in the nest. The time of incubation this year is 36 days. They appear to be more smart and lively than those hatched heretofore. The eagle hatched April 26, 1886, is a very fine bird and measures from tip to tip across the wings 7½ft. The eagle hatched May 1, 1887, is a male bird, not yet one year old and measures over 6½ft. from tip to tip. The eagles are stationed out in the open air and in the coldest weather. They are always ready for a fight. I have some chickens that go inside of the cage nearly every day; the eagles are very friendly with chickens, they never harm them; but let a cat or small dog go inside of their cage and they are bound to have a feast. I have been paying boys 10 cents apiece for cats all winter.—HENRY HULCE.

TRA-LA.

"THE flowers that bloom in the spring, tra-la!"
Are not yet up to that sort of thing, tra-la!
For the frost and the snow,
Have belated them so,
That the tips of their noses are all they can blow.

Then the birds who so merrily sing, tra-la!
Have each tucked his head under his wing, tra-la!
And they say that really
To speak their minds freely,
They wish the "Old Nick" would take General Greely!

It is all very well to explore, tra-la!
Where no man ever ventured before, tra-la!
But we'd like to know whether
It pays altogether,
To seek the North Pole and bring back such cold weather?

I would like to suggest in my rhyme, tra-la!
That he find the Equator next time, tra-la!
That his wandering feet
From some region of heat,
Bring back something better than snowstorm and sleet!

How joyfully then would we sing, tra-la!
As we welcomed the coming of spring, tra-la!
If the sun had the power
With each morning hour,
To open some bud, or unfold some new flower.

NEW HAMPSHIRE, April 22. VON W.

Game Bag and Gun.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

GUN CHAT.

WASHINGTON, D. C.—*Editor Forest and Stream:* In one of your recent issues, a correspondent solicits information regarding the performances and possibilities of 20-gauge shotguns as compared with guns of larger bore, and as I have had some experience with guns of that and other calibers, perhaps what I have to say on the subject may be deemed worthy of a place in your columns.

Besides being the happy possessor of a tolerably large armory of rifles of all the leading makes and calibers, I am the owner of five shotguns, as follows: One Remington No. 10, right barrel modified cylinder, left barrel full choked; one Westley Richards No. 12, both barrels modified cylinder; one of the new Winchester repeating shotguns, No. 12 (single barrel), medium choke; one Geo. Hemenway No. 16, both barrels full cylinder; and one W. & C. Scott & Sons No. 20, both barrels full cylinder. All of these guns have 30in. barrels, with the exception of the Winchester repeater, the barrel of which is 32in. in length, and they have all (except the last named, which I got last season after they came out) seen considerable service in my hands.

They are all hammer guns, for I do not like the so-called hammerless, although I have tried my best to be in the fashion and look upon hammers pretty much in the light of old flint locks, as some of our fancy sportsmen do. As for me, give me a good hammer gun, with solid strikers and otherwise properly equipped, as they are turned out by leading makers in this country and abroad, and I do not know that I would care to change it for a $400 hammerless self-ejecting Greener, after I had become attached to it. For guns that have given me good sport and proven themselves accurate and trustworthy in the field and at the trap, cease to be, to me, the inanimate objects which they really are, but become personal and tried friends, so to speak.

For woodcock, grouse, quail, rabbits and upland shooting generally, I prefer my little (not quite) six-pounder No. 20 to any of my other guns. And the reasons are not far to seek. I can tramp around with it from sun up till sunset without getting tired; the loaded cartridges (U. M. C. shells, charged with 2¼drs. black powder and from ¾ to 1oz. of shot) are small in bulk and easily carried in the pocket; the recoil, though the gun is so light, is very slight; and the concentration of the shot results in a better pattern than with a No. 10 full choke barrel, using 4drs. of powder but same weight and number of shot, up to 30yds. At longer ranges the No. 10 full choke has, of course, the advantage, owing to the much larger charge of powder, and at all ranges, short or long, the No. 10 also gives better penetration. But my little No. 20 possesses sufficient of the last-named quality to make it effectually killing for all the purposes for which I use it, and it will make no more cripples than will a No. 10 under the same range and circumstances. In other words, for close shooting up to between 30 and 35yds., at birds and rabbits, it performs fully as well as, if not better than, the full choke barrel of my No. 10, which weighs over 9lbs.

A friend of mine, who resides in northern New York, and has spent many seasons hunting deer in the Adirondack region, always uses his No. 20 for shooting deer, and performs well with it, using four or five layers of buckshot between the wads. The concentration of the shot in a No. 20 gun, whether using large or small shot, is, of course, owing to the small bore and comparatively great length of barrel, which "bunches" the shot. For this reason, I prefer my No. 16 Hemenway for shooting reed birds, ortolan and English sparrows, when (as sometimes happens) I am after them, for the No. 16 scatters just sufficiently to make it a splendid gun for that kind of shooting. I have found 2drs. of "Quick Shot," black powder with 1oz. of No. 9 or 10 shot, the most suitable charge when gunning in the marshes for reed birds and ortolan. This No. 16 weighs only about half a pound more than the No. 20, and is a splendid gun in all respects. I purchased it in London in 1878, and it is to-day as good as new.

If, however, a person can afford only one gun, then my advice to him is to purchase a No. 12 of some standard make, not to exceed 7½lbs. in weight, and with 28 or 30in. barrels, of the so-called modified cylinder pattern. This is a peculiar form of choke, extending further into the barrels (from the muzzle) than the regular choke. In my Westley Richards the barrels begin to taper about 10in. from the breech, but the taper is very slight and quite even, without any annular shoulder or offset near the muzzle, as in a regular choke bore, such as my Remington. Such a gun will fill the bill for all-around work better than any other size, as far as my experience goes. It will do (by proper handling) for canvasbacks (and they are pretty tough shooting, though tender eating), and also for reed birds. You may shoot deer with it, as well as rabbits, simply by using the proper cartridges. In fact a No. 12 gun is, in my opinion, the gun best adapted for general purposes, covering, as it undoubtedly does, the widest range of usefulness.

But if shooting ducks (or at least at ducks) be your favorite sport, then, by all means invest in a No. 10, with a good, full choke in its left barrel, which will stop a cripple at 75yds. with 4½drs. of powder behind 1oz. of No. 4 shot. One ounce, and never more, is my standard charge for all my guns except the No. 20, in which for woodcock I reduce the charge to ¾oz. I know that it is quite customary to use 1⅛oz. of shot in a No. 10 gun, propelled by from 4 to 5drs. of black powder; but I, for my part, invariably obtain the best results with a single ounce and no fraction. This extra quarter ounce left out reduces the recoil very perceptibly, increases the penetration, and in a chokebore, which bunches the shot, does not practically diminish the chances of hitting, for it is the lead and not the powder which produces recoil. I have not myself tried the experiment, but I think that I would be safe in asserting that in a No. 10 gun 5drs. of powder with 1oz. of lead will give less recoil than 4drs. powder and 1⅛oz. of lead. The highest powder charges I ever use is 4½drs., and I know from experience that there is a very marked reduction of recoil in using that charge for propelling 1oz. of shot as compared with 1⅛oz. of shot.

With cylinder-bores, of course, the case is somewhat different, as they are apt to scatter. An increased quantity of shot will make a larger pattern, with a given quantity of powder. I get better results from 1oz. of shot than from ⅞oz. in my No. 16 (using 2drs. of powder in each case); but when I add, with the same powder charge, ⅛oz. of shot (that is, 2drs. of powder to 1⅛oz. of shot), I lose in penetration and trajectory what I gain in area of pattern. This is not remedied to any perceptible extent by increasing the powder charge with ½dr.; on the contrary, I simply increase the penetration slightly, and invariably get the best results with my standard charge of 2drs. of powder to 1oz. of shot. I am, of course, speaking of close-range shooting, say between 10 and 15yds.; for the longer ranges more powder is, of course, necessary.

Finally, a word about the Winchester. That is the cheapest of my guns, as I only paid $25 for it, whereas the other four are rather high priced, the Remington having been built to my special order. So far, I have tried it on geese, ducks, quail and rabbits. I use from 3½ to 4drs. of powder with it, but never deviate from my standard of 1oz. of lead. It is a good shooter, no doubt about that; but has, in my opinion, two drawbacks. In the first place, it does not "come up" well, owing to the peculiar shape of the receiver and stock; and, secondly, it is very difficult to load the magazine (which only carries five cartridges) if you fingers are stiff and benumbed. The Winchester repeating rifles are easy to load, even with the fingers a little rigid; but it is a hard job to get the five-shot cartridges down through the receiver into the magazine. This must be remedied before the gun can be called perfect; a swinging magazine, somewhat on the plan of that dainty little new .22-cal. Colt lightning magazine rifle, would, it seems to me, remove the objection. It behooves the Winchester people to look into this.

My experience with trap shooting is very limited; but such as it is, I do not hesitate to recommend a No. 10 for that purpose. Though only an amateur of questionable skill, I have done some good work with my Remington, after getting warmed up to it; but the credit is due, probably, more to the gun than to the shooter, for a better gun does not exist. I am not interested in the Remington Company, or any other arms company for that matter, but on the principle of "honor to whom honor is due," I want to say a good word for the Remington shotguns. They are not "boomed" as many other makes are, but for quality and performance they are, as far as my experience goes, fully equal to the very best of American and foreign makes. Place a good man behind my Remington No. 10 at the trap, whether at clays or live birds, and I will guarantee its performance.

Guns have been a hobby with me from boyhood, and hunting is, and always has been, my favorite pastime ever since as a twelve-year-old youngster I hunted bullfrogs in father's meadow ponds with a Flobert rifle. Unfortunately I am not a skilled marksman and miss more birds than I bag; but I do my best, and what I lack in skill I make up in enthusiam. At the rifle range, too, I have had some experience, and I number some fine rifles among my "goods and chattels." I have experimented to determine trajectories, powder charges, weights and shapes of bullets, pitch of twist, different styles of action (having invented same myself), kinds of sights, etc., etc., and in a future paper may have something to say on that subject too, if I have not wearied the reader too much by telling "what I know about guns."

LOUIS.

A TEXAS STYLE.

A CORRESPONDENT, whose letter has been delayed in publication, wrote in March, from Decatur, Texas, describing the ways of the thrifty Texas gun and game dealers:

I wrote you last spring about the destruction of the grass plover here by pot-hunters, who would drive over the prairies in wagons and hacks and shoot the plover on the ground. I inclose you a circular from a gun dealer in Fort Worth, Texas, that is encouraging this bloody destruction of our grass plover, and in the spring when the birds are on their way to their breeding grounds:

$100,000!

NOTICE!

HERE IS A CHANCE FOR SOMEBODY.

The above sum of money will be paid to anybody who will ship

200,000 DOZEN PLOVERS

this season. I am paying 50 cents a dozen for them. Tie by the legs and in bunches of three dozen, and ship by express—I pay the express charges. Birds must be fresh or not accepted. Parties within a radius of one hundred miles can easily ship if they are careful to get them off in good time. Be sure and write the name of the shipper on each bunch, and the number of birds in each to prevent mistakes. Parties living in towns where I have no agent can arrange with me to buy their ammunition and pay for it in birds.

Dow birds are worth 75 cents a dozen. They are a size between the curlew and plover, with a long bill. Ship all you can, gentlemen. I wish you all good sport. Respectfully,

DEALER IN GUNS AND SPORTING GOODS, FORT WORTH, TEXAS.
Established 1885.

P. S.—Last season three men and a team made $350.00 in thirty days, outside expenses, shipping me birds. They are shooting again this season.

These circulars are not only sent to our business men to procure their help, but they are scattered promiscuously over our city to encourage every pot-hunter who can procure a gun of any kind to join in the wholesale destruction, as Mr. Arthur Stert proposes to arrange for the payment of their ammunition and pay the express charges on the birds. I suppose that every town within a radius of one hundred miles of Fort Worth is flooded with these circulars, as they claim that the plover can be easily shipped that distance. Missionaries are certainly badly needed in this country to work against such heathenish work.

We have no deer nor turkey, and the quail seem to be very scarce. I suppose a few trapped quail have been sold in the city. Grass plover and doves are being destroyed without mercy. I saw a pot-hunting son of Ham strolling through our streets last June with an old musket on his shoulder, and a large bunch of doves swung over the muzzle of it. They were probably shot from the nest, as I heard of them being shot in that way at different times.

FOREST FIELD.

A SCRIMMAGE WITH A BUCK.—One man, on a snowshoe trip in quest of lumber in the vicinity of Richardson Lake, did not catch his tame deer the other day. It seems that he came across deer tracks, which tracks he followed, not a great ways, to other tracks, and soon into a yard of six or eight deer. He singled out a good-sized buck, and ran him out of the beaten paths, where the deer had trodden down the deep snow, into untried snowbanks. The deer stood it for a while, then showed weariness, and finally fight. The snowshoeist had the advantage, till he approached too near, with the idea of catching the buck by the antlers. "Great Cæsar! That deer was up in a moment, and you bet I'll never take hold of a live deer again. I'd rather try a streak of lightning, with hoofs as sharp as jack-knives. The snow flew so that I couldn't see the critter, but could feel him, and if 't hadn't 'a' been for the snow I believe he'd 'a' killed me!" The animal resisted, and showed fight with both hoofs and horns. In the scrimmage the deer became entangled in the snowshoes, and tore them completely off the hunter; in fact he came near destroying them. Leaving the hunter to slump in the deep snow, the deer took his departure. It cost some loss of time to repair damages to snowshoes and clothing, and the lumber prospector will hardly attempt to catch another pet deer.—SPECIAL.

THE CEDARS, Oakdale, L. I., April 25.—An engine on the Long Island Railroad started fire on my preserve to-day and burned over three hundred acres of heavy timber. It was a sight to see the rabbits that came from the heavy cover; large numbers of them must have been destroyed, also some quail.—ALFRED A. FRASER.

YELLOWSTONE PARK PETITION.

SPORTSMEN'S ROD AND GUN ASSOCIATION OF NEW ENGLAND.—The first meeting of gentlemen interested in the formation of a new fish and game association to be located in New England, with headquarters at Boston, Mass., was held at the Bromfield House, Boston, Monday evening, March 26, at half past eight o'clock. A call, signed by Mr. Chas. F. Danforth, of Boston, had been issued and in response to the same about fifteen gentlemen were present. These gentlemen agreed to associate themselves together and to organize a new association interested in the lawful taking of fish and game, the perpetuation of sports with rod and gun, and sociability; at a subsequent meeting held the second day of April, the name "Sportsmen's Rod and Gun Association of New England," was adopted, as well as a constitution and by-laws. The following gentlemen were chosen for officers: Pres., Chas. F. Danforth, of Boston; Vice-Pres., Leopold Babo, Jr.; Sec'y, Richard O. Harding; Treas., Eugene W. Babo; Executive Committee, (Chairman) L. Babo, Jr., Wm. G. Lash, Frederick W. Clark, Jos. W. Marmaud, E.W. Babo; Membership Committee, (Chairman) R. O. Harding, Chas. P. Varney, W. G. Lash; Toastmaster, Saml. N. Cohen. The President's address is 20 Kilby street, and that of the Secretary, 304 Washington street, Boston.

GROUSE IN MICHIGAN.—Lowell, Mich., April 23.—I have taken a little pains to find out how partridges have wintered in this locality. I have taken a walk in two different directions, and not over one mile from the village; the first morning my dog put up three partridges, and the next he put up twelve; and yesterday a friend and I walked out about four miles, and the birds went whizzing through the air in every direction. I am unable to state how many were put to flight, perhaps fifty or more. They are very tame, not offering to fly out of the trees as I approached, until I got in under the tree or sapling and hit the trunk with my hand. I saw twenty-eight wild geese fly over one day last week, the first I have seen this season; they never stop in this vicinity long enough to ever get a shot at them; they go further north. From all accounts so far as heard from, all game birds have wintered well, and the prospects for rare sport with the birds this fall are quite flattering.—C. D. P.

RESULTS OF THE BLIZZARD.—New York, April 27.—*Editor Forest and Stream:* A letter is before me written by Hugh C. Smith, of East Moriches, Long Island, dated April 23, 1888, in which the statement is made that the shooting has been very poor on account of the blizzard. I quote from the letter: "That storm seemed to break the whole thing up; after the storm was over the life saving men on the beach found lots of ducks frozen to death. This is a pretty tough story to tell but such is the fact." Have any of your correspondents noticed this result from the blizzard of March 12? Possibly they may have, and in that case their accounts would be interesting. Can we not hear from them?—ROB'T B. LAWRENCE.

A MINISTER who traveled in Iowa, to protect himself from the storm and gratify his love of the beautiful bethought himself of a skunk robe. He purchased at a good round price forty prime skins, paid $3 to have them tanned and took them to a manufacturer in a neighboring town to have them made into a robe. Agreeing upon the price, he gave the man $6 to purchase the lining with. When he returned for the robe he was informed that the skins had been spoiled in tanning and had been thrown away. After standing around awhile as if waiting for something he made some remark about the $6. "Oh," said the man, "I charged $6 for throwing them away."—X.

TOWANDA, Pa.—*Editor Forest and Stream:* A party of three sportsmen from this place, consisting of Chief of Police Dimock (who, by the way, is also our fish and game warden), Joe Ochs and Geo. Fairchild, tried their hand at wild ducks by floating down the river and shooting from the boat, starting point being Milan, eleven miles above Towanda. On arrival home they had made a bag of four ducks and a mink. Reported seeing only sixteen. Two more were killed opposite this place by other sportsmen the same day.—SUS. Q. HANNAH.

VERMONT.—Ferrisburg, Vt., April 24.—The first robin was reported March 29; March 30, bluebirds and song sparrows; April 3, phœbe bird; 12, meadowlark; 18, flicker (high hole); 22, purple finch and slate-colored snowbirds. Trappers and pickerel hunters tell of a good many ducks in Little Otter, but I am glad they bring none home to show. It is said that an otter was killed lately in Monkton, the next town east of us. If true it is an uncommon event in these parts, but I have heard no particulars.—AWAHSOOSE.

MICHIGAN.—Argentine, April 26.—The birds are here in great numbers; the quail are singing their courting songs, and the outlook is very good, better than for some time. The Michigan game warden law is rather a poor stick in this vicinity. The appointment seems to be made for political purposes in this county; but we live in hope of a better condition of things.—W. H. S.

WISCONSIN AND ILLINOIS SPRING SHOOTING.—Madison, Wis.—Wisconsin is vigorously enforcing the law prohibiting spring shooting, while Illinois is slaughtering them in every township in the State, which makes it very hard for us to enforce the law; but we live in hopes that legislative bodies will gradually develop intelligence to consider and act as they should on this important question. —A. M. D.

VINTON, Iowa, April 23.—Prairie chickens have wintered well; the fields are full of them and the prospects for a great crop of young was never better. But few ducks have been seen; they either did not come or did not tarry long on the way. Quail are scarce; the hard winters have killed them out.—L. S. K.

GOLD DUST LANDING, Red River, La., April 16.—This last week I had two very successful hunts for turkeys. I yelped up a gobbler each hunt, and killed him in fine style. They averaged each 22½lbs. net. Will write the hunts up for you soon.—G. D. A.

DOG, DEER, WIRE FENCE.—A deer pursued by a dog dashed into the village of Elizabethtown, Essex county, N. Y., and broke its neck against a wire fence.

THE ALBANY GAME LAW MILL.

[Correspondence of Forest and Stream.]

ALBANY, April 25.—The Legislature is now so nearly at its close that nearly every game bill has been introduced. It will be of interest to take account of stock, and see just what the bills are and where they are situated; so that if any one wishes to help or hinder, he can write to his Senator or Member before final adjournment on the 11th of May.

The numbers which precede the description of the bills refer to their introduction and printing. The first number in every instance is the introductory number. If there is no second number it means that the bill has not yet been printed. If there are one or two numbers after the first number, they refer to the numbers of the printed bill or bills:

SENATE BILLS.

14, 98, Langbein (same as Hadley, Assembly 95), the game code from Robert B. Roosevelt. In the Committe on Game Laws.

54, 288, 464, Coggeshall, providing that woodcock and gray squirrel and partridge season shall be only during September, October and November; that no snare or bird lime shall be used; and that the wild duck season shall begin April 1. In committee of the whole.

65, 8, 356, Sloan, relating to sales of land which belong to the Forest Preserve. In the Assembly.

124, 289, 465, Coggeshall (same as Assembly 232, McAdam), making the close season for duck, brant, etc., from March to September. In committee of the whole.

276, 524, Foley, amending the hatchery laws so as to protect Mill Creek. On third reading.

347, 182, 268, Hawkins (same as Assembly 683, Hunting), ceding lands under water in Huntington Bay, Long Island, to the trustees of that town for the cultivation of shellfish. On third reading.

390, Hawkins, amending the revised statutes relative to lands under water. In the Committee on Commerce and Navigation.

403, 247, 466, Coggeshall (same as Assembly 801, from the Game Committee), providing for the appointment of fifteen fish and game protectors and for as many districts. In committee of the whole.

417, 248, 348, Deane, prohibiting pound-net or purse-net fishing in the Hudson River from March 15 until June 15. In the Assembly.

528, 539, Coggeshall, amending Section 640 of the Penal Code in regard to dredging for oysters. In committee of the whole.

Appropriation bill, providing that the appropriation of $30,000 for the Forest Commission may be used as it is desired, instead of for specified objects. To the Governor.

ASSEMBLY GAME BILLS.

95, Hadley (same as Langbein, S. 14) the game code from Robert B. Roosevelt. In the Committee on Game Laws.

113, 531, Ainsworth, extending till Dec. 1 the time for killing deer. On third reading.

165, 717, Fort, changing the time of killing woodcock from Aug. 1 to Sept. 1. On third reading.

188, 895, Flaherty, allowing sportsmen's clubs to participate in the shooting of all animate things. In committee of the whole.

205, Roesch, making it lawful to shoot robins and blackbirds on Long Island and Staten Island between Oct. 1 and Jan. 1. In the Committee on Game Laws.

222, 718, White, repealing the act of 1887 allowing the use of fyke and other nets in Keuka Lake. In the Senate.

232, 1,085, McAdam (same as Senate 124, Coggeshall), making the season for duck, brant, etc., from March to September. On third reading.

242, 740, Husted, relating to the conveyance of the Creedmoor rifle range to the State. In committee of the whole.

245, Knapp, placing Delaware county under the general law for the shooting of woodcock, the close season being from January to August. In the Committee on Game Laws.

248, 209, 451, Hadley, permitting the lease to private parties, for pleasure purposes, of small plots of land in the forest preserve, the limit not to exceed five acres. To the Governor.

348, 150, Cromwell, for the protection of menhaden and other fish in Raritan Bay. In the Senate.

416, Brownell, relating to judgments procured by fish and game protectors. In the Committee on Game Laws.

438, Brundage, giving the district attorney of Steuben county discretion in regard to prosecuting complaints against violators of the game laws. In the Committee on Game Laws.

452, Prime, extending to Nov. 1 the time for hunting deer. In the Committee on Game Laws.

454, 481, Haggerty, allowing dumping anywhere within a radius of twenty miles from the New York City Hall. In committee of the whole.

497, 282, Cromwell, amending Sec. 640 of the Penal Code so as to stop the stealing of oysters. In committee of the whole.

513, Hadley, providing for a superintendent of fish and game protectors. In the Committee on Game Laws.

532, 301, 851, Tallmadge, protecting oyster beds in Kings county from steam dredges. On third reading.

595, 1092, Sheehan, allowing the possession and sale of pike, etc., that have been taken outside of the State. In committee of the whole.

599, Hadley, permitting deer killing from Aug. 15 to Nov. 15 and permitting hounding from Sept. 1 to Oct. 5. In the Committee on Game Laws.

622, Saxton, extending the time of rabbit shooting from Feb. 1 to March 1. In committee of the whole.

624, 374, Husted, allowing clubs to sell to members real estate and buildings, and to convey the same by deed. In the Senate.

627, Hunnting, for the protection of the robin. In the Committee on Game Laws.

634, 722, Comstock, giving special privileges to residents of Jefferson county to fish in the St. Lawrence River. On third reading.

683, 911, Hunnting, (same as Hawkins's Senate 347) ceding lands under water in Huntington Bay, Long Island, to the trustees of that town for the cultivation of shellfish. On third reading.

699, Brownell, making the deer season in Hamilton county from Aug. 1 to Dec. 1, and permitting hounding between those dates. In the Committee on Game Laws.

701, 723, Thompson, allowing a State bounty of two cents for every English sparrow. In the Senate.

784, 512, Brundage, making the time in which it is lawful to catch salmon trout including the months of September and October. In the Committee on Game Laws.

785, 483, Hunnting, to promote the planting of oysters in Suffolk county. In the Senate.

801, 511, the Committee on Game Laws, (same as Coggeshall's Senate 403) providing for the appointment of fifteen fish and game protectors and for as many districts. In the Senate.

805, 834, 1093, Savery, protecting bullheads, eels, suckers, sunfish and perch in the Seneca River from May 13 to June 15. On third Reading.

848, Tallmadge, making the season for quail, hare and rabbit Nov. 15 to Jan. 15, and allowing privileges for killing eagles, songbirds, etc., by the owner of the premises. In the Committee on Game Laws.

862, 970, Aldrich, forbidding the catching of salmon or lake trout in Lake George from Sept. 1 to Feb. 1. In the Committee on Game Laws.

887, 1034, Maynard, providing for a fishway in Chittenango Creek On third reading.

936, Cornwell, requiring all dogs to have a collar with the owner's name upon it, or suffer the death penalty. In the Committee on General Laws.

964, Knapp, including Delaware county in the forest preserve. In the Committee on Ways and Means.

1,010, 732, Endres, providing protection for homing pigeons. In the Senate.

1,090, Cromwell, for the protection of planted oyster beds. In the Committee on Game Laws.

1,096, Cromwell, allowing an engineer and a clerk to enforce the act for the protection of shellfish. In the Committee on Ways and Means.

1,110, Fort, prohibiting the fishing for bullheads in Lake George between April and July. In the Committee on Game Laws.

1,124, 845, Savery, regulating fishing in Seneca River. In the Committee on Game Laws.

1,148, 662, granting to Durant Murray Island in Raquette Lake. On third reading.

1,166, Fuller, making the brook trout season (for Chenango county only) from April 1 to Aug. 1. No kind of fish may be caught between Jan. 15 and May 1 except as above. The woodcock season to be Sept. 1 to Jan. 1; and no quail to be killed for five years. In the Committee on Game Laws.

1,210, Platt, exempting Dutchess county from all the game laws. Reported adversely and killed.

1,213, 904, Hunnting, prohibiting the shooting of ducks, etc., from steamers in Gardiner's and Peconic bays. On third reading.

1,234, 989, Platt, protecting the forest preserve from railroads. On third reading.

1,237, 991, Aldrich, allowing the catching of black bass in Friends Lake (or Brant Lake), Warren county, between Jan. 1 and Aug. 1. On third reading.

1,242, 993, Brownell, for the erection of fish hatcheries in the several towns of the State (but more especially at Indian Lake, Hamilton county). On third reading.

ALBANY, May 1.—The only bill relating to game matters which has yet become a law is the one by Assemblyman Cromwell relating to lands under water in Raritan Bay. Considerable progress may be recorded upon the game bills in the Legislature during the past week. Gen. Husted's bill turning the Creedmoor rifle range over to the State is in committee of the whole in the Assembly, and is likely to be reached before very long. The Assembly committee on game laws has reported the Aldrich bill and the Ainsworth bill. The Assembly has passed the Maynard bill providing for a fishway in Chittenango Creek. The Assembly has passed the Ainsworth bill (noted above) extending the season for hounding deer fifteen days later than it is at present. The Senate has passed Mr. Hawkins' bill giving the right to cultivate oysters in Huntington Bay, Mr. Murphy's bill amending the Penal Code relative to oysters, and Mr. Foley's bill relating to the fish hatchery on Mill Creek.

One day last week there came up in the Senate Mr. Hadley's forest commissioners' bill, permitting the lease of small pieces of land in the forest preserve. Mr. Erwin explained that parties had erected camps, cottages, boat houses, etc., on public lands, and the present question was whether they should be allowed leases or be removed. Mr. Kellogg thought the bill a dangerous piece of business, giving the commissioners altogether too many and general powers. The forest preserve had been established to keep lands together, and no permanent intrusion on them should be allowed. Mr. Sloan said that the forest commissioners had been appointed to preserve the forests. He did not think they would neglect their duties or do anything to endanger the forests. The bill was ordered to a third reading.

Sea and River Fishing.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

WINTER SALMON.

Editor Forest and Stream:

The following facts regarding the habits of salmon have lately come to my knowledge and will, I think, be interesting to some of the readers of FOREST AND STREAM.

Bellisle Bay is an inlet or bay on the St. John River in New Brunswick. About twenty-eight miles above the mouth of the river, the water may be called fresh, though at very high tide it might possibly be slightly brackish. There is but little current. The bay in the winter season is heavily stocked with pickerel, chubb, suckers and other small fresh-water fish. For the past four or five winters parties living there have been taking considerable quantities of bass in nets set through the ice. In so doing they caught some salmon, so many in fact that one man determined to fish for the latter on a more extensive scale. He obtained a license from the proper offices and commenced operations in the latter end of December last. The *modus operandi* is as follows: He cuts a hole through the ice large enough to get the net through, then cuts several smaller holes in a line about 10 or 12 feet apart and with a pike pole catches the end of the net rope and passes it from hole to hole until the entire length is set under the ice. The fish generally strike in in the night and next morning he cuts open the holes and draws the net up. From the time he commences fishing up to the end of March he had taken upward of two hundred salmon, for all of which he found a ready and profitable market in Boston.

When taken in the early part of the winter the fish are comparatively poor and dark colored, but as the season advances they rapidly improve and are now exceedingly fat and well colored. The stomachs of those examined are full of young fish, and a pickerel six or eight inches in length was taken from the mouth of one of them. A gentleman here, an old and experienced salmon fisherman, had one of these salmon sent to him a few days since. He says he never saw a brighter nor fatter fish, though when it was boiled he thought he could detect a slight earthy or ground flavor peculiar to salmon that have been long in fresh water. I have always noticed the same in landlocked salmon.

I am inclined to the idea that the Bellisle Bay fish belong to a late run of salmon, which enter the river late in August after the close of the legal fishing season, that they then ascend the river, deposit their spawn, and on their way back to the sea, finding an abundance of food in the bay, remain there for the winter and in the spring continue their journey to the salt water. There is a late run of salmon in all our rivers. Are they a different fish from the early runners; I mean do the late running fish always run late, or do they ever enter the river early enough in the season to become available to anglers or during the legal netting season? If not they are valueless unless taken as in Bellisle Bay. I would like to hear what the salmon anglers think about them.

FREDERICTON, New Brunswick. I. HENRY PHAIR.

INDIAN RIVER POMPANO.

MARIETTA, Ga., April 23.—I send an extract from a letter lately received from my old fishing companion, B. C. Pacetti, at Halifax Inlet, describing the fishing at Jupiter Inlet, South Florida. While to the young and ambitious angler the tarpon is becoming the favorite object of pursuit, there are many of the older and less vigorous class who would enjoy the fishing for pompano, here described by an expert. I can myself indorse Mr. Pacetti's estimate of this fish, as a most vigorous fighter, as well as one of the choicest fishes on the table. S. C. CLARKE.

PONCE PARK, Volusia County, Florida, April 15.—I arrived home a few days ago from Jupiter and the Indian River Inlet with Mr. J. C. McFerron and Dr. Lewis Deihl, from Louisville, Ky. We have the best record for pompano ever made in this part of the world with rod and reel. We caught in three days ninety-nine pompano. On one day that we caught fifty-four pompano, we caught eighty-eight other fish—bluefish, cavalli, and ladyfish. Pompano fishing is worth more than all the fishing I have ever experienced. There is nothing in the fish tribe that can equal it for game, one of 3lbs. will take fifteen minutes to land. I was so interested to give them a trial, that I caught ten in a short time. They take the bait and run like lightning, and you seldom lose one, their mouths being tough.

We also caught with a shark line a monster jewfish which must have weighed 500lbs. We also caught snappers of 7lbs., also large grampus and seatrout and bass; our largest bass weighed 24lbs., and bluefish of 5 to 7lbs. One party at Jupiter told us that two days before we arrived they caught 144 bluefish, in one day.—B. C. P.

GOING TO GUINEA.—I.

I PRESUME the reader has some time in his life been told to "go to Guinea." It may be he has not attempted to follow the advice. I congratulate him if he has not. I speak from experience. I have tried to go to Guinea. This is how it happened:

On a summer day at Sandwich, N. H., while exhibiting my fly-rod to a local angler and explaining the mysteries of fly-fishing, he remarked: "You had better go to Guinea." "Sir?" I observed. "To Guinea Pond, I mean, Parson," he replied, "where you can get trout weighing two or three pounds, which I kinder calcerlate would twist that little rod o' yourn into a knot you couldn't untie." "Thank you," I responded, "I shall be glad, if ever this rainy weather breaks, to profit by your suggestion." "But ,"continued my brother angler, "it's a mighty hard place to find; you'll want a guide. The pond is over beyond Guinea Hill, between Mt. Israel and Black Mountain, it's a long rough way to it, but when you get there, if the trout are in bitin' mood, you'll be well paid. On the first fair day, if you want to go, I am the man to show you the way, and will show you that an alder pole and an angle worm will beat that gourd stick of a rod and them flies all out, when you come to the sober business of fishing."

"My friend," said I "you are my man; the first fair day—may it come to-morrow—is the time. With such a prospect I will go with you even to Guinea."

The next day was rainy. The day after was rainy. The day after that was rainy. Sunday came and that was rainy. Nine of us were prisoned in a farmhouse. No blue was to be seen in the sky; there was blue enough, however, in the spirits of our party. Monday came, and brought no improvement in the weather. On the eighth day my spirit rose within me.

"Friends," said I at our lugubrious breakfast, "man was not born to be the victim of circumstances. There comes a time when he must rise out of his unfavorable environment." "What's up now?" asked one of our party. "What's up?" I replied, with a touch of heroism, "I am happy to tell you I am determined to conquer this weather. I will this day, though another flood is coming, as I half believe it is, go to Guinea." For awhile the company was speechless. The silence was at length broken by Johnny, aged twelve, with the question, "May I go?" "Yes, Johnny," said I, "you may go." "Certainly, said his mother, "he may go; you will be well mated; only my wonder is that a boy of Johnny's mature years should wish to do so absurd a thing on such a day as this." That settled it; I was now fully determined.

After breakfast I said to our Yankee host, "Can you drive Johnny and me to Guinea Hill this morning?" "I can," said he, "but I kinder think— "Yes," I broke in, "I know what you think; you think we don't know what we are about; and really this dogged weather has pretty much taken our senses away; but to Guinea we are going nevertheless." Half an hour afterward we had started on our four mile drive.

"Really, now, Parson," said our host, after we had driven a mile in the rain, "really now, you don't know what you have undertaken. You've a bigger job on your hands than you reckon on. There is trouts in Guinea Pond; but you won't find 'em. Them that professes to know the way to the pond says that hunting for the nest of a settin' hen is easy compared to findin' that place, even when the sun shines." I own I felt a little dampened, not in my ardor, but from the rain dripping down my back under my rubber coat, dropping into my neck from my host's umbrella.

Arriving at the base of the mountain my host bade us good-bye, after it had been agreed that he should come for us at six o'clock in the afternoon. It was then nine o'clock in the morning.

We knocked at the door of the solitary rude farmhouse. I had fondled the hope within myself that I should find at this house some unemployed farmhand who wouldn't mind a wetting and could show us the way to our destination. An old lady came to the door at our knock. In answer to our question, she told us all the men folks were absent, attending the trial of a suspected horse thief.

"Can you tell us the way, madam, to Guinea Pond?"

"Bless you, no; nobody could tell you. Thirty years ago I went there once, and have never wanted to go since."

"How far is it?" I asked.

"Well, it is two and a half miles to the old mill site; when you get there you are right by the pond; but unless you know how you can't find it. A party that went up there last fall got lost and stayed in the woods all night, and they had a guide at that, a fellow who had been to the pond three or four times."

"Is it hard to find the old mill site?" I asked.

"Well, I guess you could find that, it is an open road all the way; it used to be traveled a good deal before the mill was burnt. When you are there, the pond is not far."

I then held a council with Johnny. "Johnny," said I, "I am afraid we are in a pickle. I would rather give an honest man an honestly-earned dollar than not find Guinea Pond, but I have a suspicion it is going to be a hard thing to do. What do you say; shall we wait here till night, or go on?" "Go on," he said. There was in him the true spirit of boyhood.

We started. Our way led first through a field, then into a pasture; up through the pasture into woods; through woods and through brakes and briers to an opening, which proved to be an old orchard. There our road ended. We reconnoitered. We found the cellar of an old house; then we understood the situation. We were on a long-deserted farm, fast going back to its primitive state.

The rain had held up thus far on our foot-journey; it now began to pour again. We might have mused awhile; we might with our imaginations have rebuilt that house and peopled it, and followed with our mental eye the struggles of the occupants against their hard surroundings till their hope was broken and some died and others fled. We didn't, however. We wandered around the opening for half an hour trying to find the way out. We found a path; it looked like a cattle path; it was the best we could do—we took it. Presently the path forked; we followed the bigger branch. It forked again. A fog came down; presently we had no path all. We wandered on, trying to find some trail. I began to realize how the lost babes in the woods must have felt. "Johnny," I said, "we are lost. Sit here on this log with me and rest a bit; then we must pick our own steps backward." At that moment, however, the fog lifted a little; we saw a clearing, and soon found ourselves back at the orchard at the precise point where we had left it. We had spent an hour on our detour. Then we searched for another path, determined not to get on a cattle trail again. At last across the orchard, we found a road into the woods. Once more we started. Through brakes and brush and water; sometimes through running streams; with the spruces and hemlocks dripping their burden of rain-drops upon us—we waded and tugged. It had long since ceased to be play with us; it was wearying work. Up, still up. I looked to see Johnny yield in despair; I almost hoped he would, but when I asked him how he liked it he said: "Oh, it's as good as going in swimming."

"Johnny," said I when I had pulled through a stretch of mud, "come here; do you know what tracks those are?" He looked and thought they might be a cow's tracks. "Look carefully, Johnny, did you ever see a cow have such claws as made that print? Johnny, there has been a bear along here this morning." "A bear!" and Johnny did look a little pale. "Do not be afraid," said I "there are bears in the mountains, but you need never be afraid of them. If we should see this one—I hope we shall—he will run from us; there is something in human nature, even in a boy, that strikes terror to every wild beast, bears included." I had a new admiration for Johnny when he did not even even propose to turn back.

Well, we arrived at last at the charred remains of an old mill. We had begun to think we should never find it; we had been three hours in search for it; we breathed a little easier when we sat down on a wet log and made fresh calculations.

"Johnny," said I "according to what we have been told, our difficulties are now to begin. Guinea is not far from here, but the way to it is a mystery. Now I have a theory. You see this stream, it appears to me it must flow from or flow into the pond. We had better follow this stream one way or the other; there is no path to help us, as we were told; now which shall we do, go down the stream or up?"

"Up," said Johnny.

We began the climb. The brook was well stocked with darting trout, but I had started for the two or three pounders; I would have those or none; so my rod remained in its case. We came to walls hard to scale; we were scratched and tangled in the brush; we leaped dangerous precipices. An hour we kept on; the way, if possible, grow worse and worse. The stream, as we neared its source, lessened in size, till I was reasonably sure its source was some spring on Mt. Israel, up which we were in fact climbing. Then Johnny from, sheer exhaustion, began to falter; he made no complaint, but I saw some signs of discouragement on his face.

"Johnny," said I, "we should have followed the stream down instead of up; we've made a mistake this time. Now let us find a place under some roof of rocks and eat our lunch."

There was, for the boy, magic in the word. He had forgotten that I was carrying such an article as a lunch in my new creel. His face brightened.

That lunch! It was put up in a hurry in the morning, and had not been looked at afterward. The ingredients, as far as I recall them, were boiled eggs, sandwiches, doughnuts, crackers, apple pies and cookies, all done up in a newspaper. It was a little unfortunate that my new fish basket, while sufficiently tidy, was not water tight. Our lunch had been well soaked. In fact it was a hash. The crackers and cookies had become dough; the pies had spread themselves on the doughnuts; the wet newspaper had insinuated itself into everything; the salt for eggs had dissolved and seasoned the whole. Even in a boarding house might occasionally be seen a more artistic hash than that was. There was one good thing about it, however—there was plenty. It was not, of course, such as Heliogabalus delighted in; but I could eat another such, provided I was equally hungry. One of our discomforts in eating was the want of spoons.

"Johnny," said I, after we had rested ourselves awhile, "it is certain now we are going to be beaten to-day. My only hope is that by following the stream up a little further, we shall come to the pond. Six of our nine hours are already gone. We shall have no time for fishing, even if we find the pond. Let us go on for half an hour, and then acknowledge ourselves defeated and retreat."

For half an hour more we climbed. Now through gloomy dripping gorges; now over fallen trees; now wading the stream. Then we turned our faces downward. We both had a touch of home-sickness. At six o'clock that afternoon we met our host at the base of the mountain. There was a merry twinkle in his eye when he asked us, "What luck?" "Good luck," said Johnny, "we saw a bear's track and didn't see any bear."

That night our company at the house tried to poke fun at us. We saw no point in their joke. Going to Guinea with us was a serious business. Nevertheless, after we had changed our sopping clothes for dry ones, and had eaten a hearty supper, Johnny and I pledged ourselves we would go to Guinea yet.

Some days later we did go. We found the pond and brought home some big trout. That, however, is a story yet to be told.

I point the moral of this section of my narrative. Advice is cheap. To tell a person to go to Guinea is easy; to go is a different thing. OSCAR F. SAFFORD, D.D.

THE THIEF MIGHT HAVE RETURNED IT.—West Chester, Pa., April 10.—*Editor Forest and Stream:* "The Angler's Guide to Michigan," about which I wrote a year or so ago, I sent to an official of the Canadian Pacific Railway, who had his satchel stolen on the train, and my MS. with its other contents. I kept no copy, and have never yet mustered sufficient courage to rewrite it.—J. H. [We had been looking for the publication of this book; the information it contained would have been of decided value, and its loss is to be deplored.]

THE CANANDAIGUA ANGLERS' ASSOCIATION organized last January, is in a prospering condition. The president is Dr. Chas. T. Mitchel, whose angling verse has often graced our columns.

LOUISIANA.—Gold Dust Landing, Red River, April 16.—Began fishing the past week. Had fine success with white perch and black bass.—G. D. A.

THE AUTOMATIC REEL.

Editor Forest and Stream:

It may be of interest to your readers who have not tried the automatic reel to hear the other side of the question. All who have reported so far advocate their use. The writer has seen them in use in actual fishing, and has also used one himself, but does not like them. Have known, in more than one instance, of the line becoming so badly tangled upon the reel that it had to be cut off in consequence of it being taken in too fast by the spring.

Also have known of many large fish being lost by too great a tension on the line, for the more line a fish takes out the stiffer the spring becomes, and at seventy feet or more the line comes off the reel so hard that if a fish wants more line he is very likely to break away. I also object to the weight of the reel in question. The music of the click reel is, to me, a part of fly-fishing, and I would not sacrifice it for all the automatic reels ever made. A click can be arranged on the automatic, but if the click is worth speaking of it interferes with the working of the reel, and besides seems altogether out of place.

After several years' actual fly-fishing for large trout in Maine, where I have used and seen used all kinds of reels, and also for bass here during the summer, am satisfied that a good click reel is the best possible reel for such fishing. N. A. PLUMMER.

BRATTLEBORO, Vt., April 20.

Editor Forest and Stream:

I notice that "Petra" does not think highly of that compound of window-shade roller and fishing reel, called "automatic." If the mechanism were good the principle is wrong inasmuch as a spring is called in to do the work of the hand. I have tried this reel and have no further use for it. The spring is strong or weak, according as it has been wound up by taking off line. So far we have heard only its praises. "Petra" drew it very mild, he might have compared it to a compound machine which is liable to get out of order when wanted. PESCA.

SALT-WATER FISHING ABOUT NEW YORK.—At present the flounder is the only attraction to the class of anglers who can only run down to the bays for part of a day; but in the course of a fortnight it is expected that sea bass will appear, and then more and better fishing will be had. Few not familiar with the facts have any idea of the number of men who leave the city every day for Jamaica Bay, Staten Island, Sheepshead Bay and the East River, most especially on Sundays, to fish for flounders. Last Sunday morning we stood at the door of the railroad station at Long Island City and counted the men who passed to the trains during the quarter hour between 8:45 and 9 A. M., and they numbered 107. How many went over the Long Island Railroad by earlier or later trains, we have no idea. Most of these men looked like mechanics, and had their lunches, sandworms, and were unmistakably flounder fishermen. Others, perhaps twenty, looked like men belonging to some of the numerous Long Island clubs where trout fishing is the attraction, and no doubt they did, as several of them were known to us as club men. But the salt-water fishermen outnumbered them five to one; and in conversation with some of the latter we learned that the flounder season had been good, but not up to the catch of two years ago, which they remembered as a great flounder year. Down on the New Jersey coast the striped bass have appeared, and in some parts the fishing is good, but this is too far for the average city mechanic to go.

THE NIAGARA.—Buffalo, N. Y., April 27.—The perch in the Niagara River are biting freely in certain localities. Early in the week a friend tried near the head of Grand Island and at Frenchman's Creek. He caught none. His brother went to Burnt Ship Creek, near La Salle, and returned with a good mess. Cayuga Creek at La Salle is said to be swarming with bullheads. Ducks fly down the river occasionally. This end of the lake is not yet free of ice.—EBEN P. DORR.

RUN OF ALEWIVES ON LONG ISLAND.—On Saturday last the alewives began running in the streams at the eastern end of Great South Bay, and great numbers were being taken for food in the little brooks where they go to spawn. Men and boys were dipping them up on most of the south side streams.

THE MENHADEN QUESTION.

Editor Forest and Stream.

I have been much interested in the discussion of the "Menhaden Question," and have been sometimes tempted to take a hand in—more in the interest of natural science, however, than in behalf of either party to the controversy. In the heat of argument one is apt to lose sight of underlying principles, so that in discussing the causes of absence or diminution of fish life, it is well to inquire and observe, as Prof. Baird and a few others have done, what effect absence of food, changes of temperature, injections of hot or cold currents, storms, phenomenal tides, and physical submarine disturbances in near or remote localities, have upon the movements of fishes, their presence here at one time and their absence at another, and their sporadic or periodical superabundance or dearth.

We know what effect drouths, famine, and extreme physical and meteorological disturbances have upon men, birds, and animals, and certainly like conditions affect marine creatures quite as sensibly. It may be submitted, in general terms, that it is easy to account for the erratic movements of fishes on what may be called general principles, even if we cannot trace direct and immediate causes. The food of fishes is comprised in vegetable and animal diet, of forms gross and most minute, and these sources of subsistence are liable to be temporarily removed or permanently destroyed by causes such as have been suggested. By similar causes deserts are formed on land and fruitful tracts laid waste. Severe storms will devastate great submarine areas, uprooting all organic matter, and even displacing vast masses of rock, causing land to disappear or emerge, and changing the contour of entire regions. Temperature is a most potent co-efficient or factor in the disturbance of marine life, though some forms are far more sensitive than others to changes of climate

Some fishes will endure hunger far better than others. There are varieties which will subsist for months without food and without losing health or flesh apparently, while others survive but a few days when deprived of food; some species feed less freely in hot summer weather than when the temperature is more moderate; many do not feed at all during the winter months. It will thus appear how much fish are affected by especial conditions. Nevertheless, it may well be questioned whether, in great ocean bodies, it is possible to exterminate or eradicate species so long as they have the ability and impulse to migrate at will to regions more congenial than those which are being temporarily disturbed. The instinct of propagation requires their return to natural breeding places whenever the normal conditions are restored, and anadromous fish can not be induced to breed in deep water, nor will pelagic fish adopt the ocean bottom for their home. And so, from one cause or another, we are liable to find scarcity of this or that variety in localities where abundance has been, and a plethora where dearth has been; and therefore, when the broad unqualified assertion is made that this or that species of fish has been exterminated, whatever causes may be assigned, and however direct and positive the proofs may seem, we had best refer to the record and ascertain whether actual facts will bear the assertion out. If over-fishing is possible to deplete forever the ocean reservoir and littoral pasture grounds and breeding places of food fishes, then the waters of Norway, the Caspian Sea and China should have become barren long ago. Nay more, the Yang-tse-kiang ought to be without a finny denizen, since for a thousand miles of its length a huge dip net is to be seen every hundred yards or so on either of its banks, and thousands of fishing boats swarm from early morning to late in the evening. Yet, fish is very cheap and everywhere for sale at only two or three cents a pound. Vast numbers of lakes or sloughs are left when the annual floods in this river subside, as in our own Mississippi, and they are said to be simply alive with the finny tribe.

I must confess that I have been very sensibly impressed by the statements of fact presented by your very intelligent correspondent, D. T. Church, of Rhode Island, which are based upon data which cannot be controverted; and comparing these with such as I have been carefully collecting myself, I am prepared to join with him in the denial that food fish are growing scarce on our coast, not to speak of an isolated section or sections, but of our entire extensive coast-line in the aggregate, stretching from Florida to New Brunswick. Let me submit a few published figures extracted from the current news of the papers:

Striped bass are caught in greater quantities than ever before in the vicinity of Richibucto, New Brunswick.—*January, 1888.*

Very many striped bass have been caught this season from the ferry piers and others at the lower extremity of the city.—*New York paper, November, 1887.*

It is estimated that the three menhaden fishing steamers at Somers Point caught during four days last week about three million menhaden. . . . A party of Long Branch fisherman caught over 500lbs. of bluefish on a trip last week.—*Newark Sunday Call, Oct. 17, 1887.*

Bluefishing at Bay Head, N. J., has surpassed that of any season that can be remembered. It is estimated that eleven tons were caught last week with hook and line.—*New Jersey paper, 1887.*

The schooner H. B. Griffin, from the Grand Bank, arrived to-day with 240,000lbs. of codfish, her third trip this season. Her aggregate catch was 800,000lbs., the largest amount ever landed by any vessel of the New England fishing fleet.—*Gloucester Dispatch, Dec. 4, 1887.*

The mackerel catch up to the present month is the smallest on record. The catch this year is 73,330 barrels, against 323,714 in 1885.—*American Grocer, Nov. 10, 1887.*

Dates of like kind relating to the same and other kinds of fish have already been furnished to the FOREST AND STREAM by Mr. Church, showing fluctuations throughout a period thirty years; and in this connection it is interesting to note fluctuations of the same sort in our great inland lakes, a remarkable dearth occurring in 1886 and the year before, and succeeded last year by a remarkable superabundance, especially of whitefish and herring, so that the net profits of the two largest fish houses of Sandusky, Ohio, aggregated $100,000 apiece. Obviously these recurrences are in accordance with laws of nature, in connection with which human agencies comprise an almost insignificant factor—as insignificant in fact, and as ineffectual, as the incessant war upon the bobolinks and blackbirds of the rice fields of South Carolina and Georgia, where millions of them are killed every year without appreciable diminution of their numbers.

Analogous facts, and just as significant, can be adduced in regard to the movements of pigeons, ducks, geese, crows, snowbirds, woodcock, paroquets, etc., etc., but these are not relevant to the subject matter of the present paper.

CHARLES HALLOCK.

WASHINGTON, April 16.

Editor Forest and Stream:

Now Thomas Clapham comes to the front as an authority on fish, and without knowing it, argues our side of the question, for he says: "Menhaden are often for many days prevented from entering Peconic Bay simply by the schools of bluefish lying in wait for them at its entrance," which is exactly what we have been stating right along, that menhaden and bluefish don't keep company with each other for the reason without question that if they did it would mean destruction for the menhaden. We know by experience that when bluefish make their appearance among a body of menhaden that they (the menhaden) are soon missing. Menhaden have about as much love for bluefish as sheep have for wolves. The menhaden is the best known bait for crabs, lobsters, halibut, hake, haddock and mackerel, neither of which I presume Mr. Clapham will contend keep company and feed on schools of menhaden. It is also a nice bait for striped bass, bluefish and codfish, and all these at times feed on them when they happen to be in their vicinity, but neither follow and keep company with the menhaden for the purpose of feeding on them, which is the case with sharks and whales, for they are often found in large numbers for months at a time feeding on single bodies of that fish. It is a fact known to all practical fishermen that the menhaden is the best fish bait known, and we know and should like to prove to our adversaries that not a single food fish known to our markets depends on the menhaden for its daily food. Mr. Clapham without question has a correct knowledge of grammar, but his knowledge in regard to menhaden leaving Long Island Sound, and food fish being scared by purse seines, etc., shows dense ignorance of the subject under consideration.

DANIEL T. CHURCH.

TIVERTON, R. I., April 19.

SHORT LOBSTERS.—Since the State of New York repealed the law forbidding the sale of lobsters under 10½in. long the markets are full of baby lobsters, which are sometimes termed "grasshoppers." The short lobster law is still in force in Maine, however, and the Belfast *Republican Journal* says: "Commissioner of Sea and Shore Fisheries Counce of Thomaston is making war on the dealers in short lobsters, and is determined to stop the traffic. Warden James Bailey has been actively engaged in the service of the Commissioner since March 1 and recently made a seizure of over 1,100 short lobsters at Woolwich, and within two weeks captured four more different lots in Portland. Warden Bailey lately visited a large number of cars at Pemaquid, removed the short lobsters and liberated them. He says there would be but very few short ones if it were not for the smacks which proceed along the coast and purchase all they can find and urge the fishermen to save their catch of illegal length for sale. The short lobsters are largely shipped to Boston and New York on the steamers."

THE PACIFIC SALMON FISHERIES.—Capt. J. W. Collins, of the U. S. Fish Commission, will soon visit the Pacific coast to investigate the condition of the salmon and other fisheries. The San Francisco *Bulletin* says: "Every year the condition of the salmon fisheries of the Pacific coast is a subject of public discussion. The problem of keeping up the supply to the requirements of the canneries is constantly presenting itself. It has been demonstrated to the entire satisfaction of all persons interested in these fisheries that the natural means of sustaining the salmon run are insufficient, and that to keep up the supply artificial propagation must be resorted to every year. The wholesale destruction of ripe salmon during spawning season has for years had an injurious effect on the Sacramento fisheries. The Columbia River fisheries seem to be suffering now. The use of the salmon wheel on that river has seriously damaged the fisheries. The fish have no chance to ascend the river with such an instrument of wholesale destruction working incessantly in their path to the spawning grounds. Fishermen are consequently turning their attention to the rivers of Alaska, where the same methods that have depleted the Columbia and Sacramento rivers will no doubt be employed to supply the canneries. The Frazer River used to be one of the most famous salmon streams in the world. The Indian tribes inhabiting British Columbia, which, previous to the smallpox epidemic of 1862, numbered over 50,000, drew the principal part of their winter's supply of food from its waters. The salmon run in those days was so great that the banks of the great river at many points would be lined with the bodies of the fish that had been crowded out of the water while the shoal pushed its way eagerly up stream to the spawning grounds. Lately, however, it has been found necessary to restock the river with salmon fry artificially propagated. The Fish Commissioners of Oregon intend placing 5,000,000 young salmon in the streams along the Oregon coast this year. The young fish are to be obtained from the Government hatchery at McCloud River, in this State."

BUFFALO CREEK.—Wellsburg, W.Va.—We are raising money to construct fishways over two dams on Buffalo Creek. The dams are of stone and about 12ft. in height.—ROBT. WHEELER.

FIELD VS. SHOW DOGS.

OMAHA, Neb., March 24.—*Editor Forest and Stream:* I have bred and hunted with the Scotch deerhound for thirty-three years and am to-day by long odds the oldest breeder of this breed in America. When I was but a mere boy of twelve years, living in the Blue Mountains of Pennsylvania, a Scotchman came to the village near which I lived and started a watchmaking shop. He brought with him from Scotland a brace of deerhounds, a grand dog and a bitch of smaller size. After he had lived there but a short time his father died in Scotland, and he was compelled to return to his native land. He came to our farm and gave me the brace of deerhounds and his horse to keep until his return next year, and if he should not return I was to keep them. He left and was never heard of. Near our farm was living Mr. Solomon Snyder, a great fox and deer hunter, who always had a small pack of from four to ten good foxhounds. I was the possessor of a good young horse and two deerhounds, with a strong desire to become a mighty hunter. The Scotchman had initiated me into hunting with the deerhounds. Snyder would kill the fox for the fur and the deer for the market. I told him if he would give me one-fourth of the skins and one-fourth of the deer caught by my dogs ahead of his foxhounds, I would always agree to join him of Saturday during the winter months or while school lasted. This he refused, saying that his dogs could catch anything that my shaggy curs could catch. On the following Saturday my uncle and I went to the mountains early to see what chance we might have at a deer. Before we got to our ground we heard at a distance the grand chorus of Snyder's pack of foxhounds. We know they were running either a fox or a deer and that by going to a certain pass between two mountains we were sure to see the game crossing.

The valley between the two mountains was about three-quarters of a mile wide, and was occupied by David Sheafer, a farmer. We reached there and decided that I should remain at the lower side with one of the deerhounds, uncle to go to the upper with the other, and both to turn the dogs loose at the same time the moment the game came in sight. While my uncle was still riding away from me a lordly buck stepped out into the clear and jumped the fence within 200yds. of me. The deerhound saw him before I did, and tore away from me with collar and rope on. I lustily called to my uncle, and as he turned in the saddle to see what I wanted his deerhound also saw the deer and broke away in the same manner. They caught and killed the buck before he reached the opposite side of the field. We dressed our deer; and as we were putting it on my uncle's horse the foxhounds and their owners came out of the woods on the opposite side. Snyder now said if I would show him that my dogs could catch and kill a fox before he could cross the Sheafer farm, he would be willing to give me one-half of everything we could catch during the winter. I told him to trot out his fox and I would stay, while my uncle would take half of the deer to Snyder's home and the other half to our home. He took his pack and made a circuit of four miles before he let his dogs into the timber. It was some time before I heard the pack, and it took till late in the afternoon before they began working toward the open ground where I was stationed. Just before dusk the fox appaered, and away went Bevis and Sheila. He came out not over 50yds. away, and they caught him before he had run 200yds. That fixed our partnership, and we killed thirty-one red foxes and three gray and five deer before March 1. That pair of deerhounds lived to be thirteen and fourteen years old, and raised four litters of puppies.

Some years ago when I became the owner of imported Oscar and Olga, I began to attend the dog shows with my dogs. Oscar had the misfortune of being game enough and having all the grand qualities of the breed sufficiently to take hold of anything in the game line; and while at Belle Meade breeding farm, near Nashville, Tenn., he took hold of a buck too large for a single dog to handle easily and had his foreleg broken by the buck running him against a stone fence. By good care the fracture healed, but being in the large joint the joint was stiff, anchylosis having taken place. This condition gave him a slight limp on that side. Now, when this grand and gamy dog came into the ring beside dogs that had never even seen a jack rabbit and had not the courage of the common street cur, yet because Oscar had a limp in his walk the judge told me that it counted against him. I have hunted my dogs very hard year after year in the Rocky Mountains after all sorts of game, and on the prairies of Kansas, Nebraska and Colorado, after wolves, until there is hardly a whole dog among the lot. One of my best bitches had an ear torn down by a wolf. Another had a piece of skin and flesh taken out of his neck, leaving a bad scar. A number of them have had nearly every toe dislocated or broken, leaving them badly disfigured. Now, should I take this lot of dogs to a show, the judge would say, as Mr. Kirk did of Oscar, a grand dog, shows great breeding; this bitch, although a typical bitch, has one ear down; that one is a grand large bitch, but has bad feet; the other has a scar that disfigures her. Now, the dog that wins over these is a nice little deerhound, about 26 to 28in. high, instead of 29 to 32; has never seen a wolf or a deer, has done nothing but follow his owner down town and ran away from every cur dog that looked at him, just as he would should a wolf turn on him on the Western plains. An honest Eastern breeder recently wrote me that he had some very good-looking deerhounds of his own breeding and some that he paid a long price for, but he was fully satisfied that should any of them see a wolf they would run away. He wanted me to breed him a puppy for a stud dog.

Whenever the A. K. C. will make a rule that any disfigurement of a dog obtained in the field shall not count against him on the bench, I will patronize the shows liberally. I think that such defects caused by work in the field should always entitle a dog to win over a dog his equal in every particular point. For example take my deerhound, imported champion Mac, winner of five first and seven champion prizes on the bench before he ever saw any game. When I bought him from Mr. Kelly eighteen months ago he would run with my pack up to a wolf and stand by until the rest killed it. He soon learned what was expected of him, until now he will kill any wolf on the prairie, and he has become so savage that I can't keep him in my kennel with other dogs. During the past winter running on frozen ground he broke two of his toes. Is it justice for the judge at a bench show to say he has defective feet, while before he was worked his feet were perfection? I hold that a dog equal in bench show points and with a good field record ought to win over the dog without a record. Whenever a dog appears on the bench showing defects caused by breeding or disease, I say rule him out, but give the working dog a chance.

Q. VAN HUMMELL, M.D.

BERTIE AND SIR COLIN.

Editor Forest and Stream:

The inspired statement below which appeared in *Sport*, of Montreal, March 28, 1888, reflecting upon me in connection with my exhibition of a Yorkshire terrier at the Westminster Kennel Club bench show of May, 1887, is false and malicious, and the result of mendacious jealousy, and I have reason to believe emanated from parties who conceived and prompted the idea which I did not carry out as they expected. Following is the article:

A matter, reflecting, I regret to say, very discreditably on Mr. John F. Campbell, of Montreal, has been brought to my notice. It appears that in the spring of 1887 he borrowed a Yorkshire terrier, Bertie, from Mr. Thomas Kelly, also of Montreal, and entered him under the name of Sir Colin and as his own property (contrary to Rule 2, A. K. C.), at the Westminster Kennel Club show, held in New York. The dog won first and special prizes under this incorrect designation. Campbell wired to Kelly that Bertie had won, thus acknowledging that Sir Colin was an alias, and a Montreal paper at the time published a correction to a former statement, in it saying that the dog belonged to Kelly and not Campbell. Bertie is now in Mr. Kelly's possession, but Campbell has kept all the prize money won by him, and refuses to acknowledge in any way his illegal entry.

The facts are: I purchased a Yorkshire terrier dog named Sir Colin from a friend in England, who agreed to ship him in time for the W. K. C. 1887 show. I entered the dog accordingly on the 18th of April. On the 29th of April I received a letter from the party in whose charge the dog was on shipboard, saying Sir Colin had died on the passage out. In this dilemma I made known my disappointment to one of the parties who, I believe, has contributed to this attack upon me, and he suggested that I should see Mr. Thos. Kelly and borrow one of his dogs and exhibit it as Sir Colin, and no one would be any the wiser, the entry could remain as it was. I did see Mr. Kelly, borrowed his dog Bertie to substitute him for Sir Colin, but I did not practice the deception which these parties suggested. On the contrary, I wrote to Mr. James Mortimer, the superintendent of the Westminster Kennel Club show, telling him of the death of Sir Colin and asking leave to substitute Bertie instead. The show was to open on the 3d of May, and there was no time to receive an answer before my departure. I went to New York, and on my arrival there Mr. Mortimer hailed me, saying, "I got your letter, Johnny; that's all right," and later on he said to me, "Our catalogues are printed, it will have to stand as it is; mention it to the judge when you go in the ring," or words to that effect. Thus the arrangement was made for the substitution of Bertie for Sir Colin.

Bertie won the first prize, which was the only one offered; there was no special prize for Yorkshire terriers, as misrepresented in *Sport*. The prize money was $10, which would not cover my outlay for entering him and paying his expenses. When Mr. Kelly gave me the dog he said, "He is your property until you return," and he then appeared to fully recognize that I was entitled to anything he had won to recoup me for my trouble and expenses. I restored him his dog in much better form than I had received him, and with new prestige, all of which he was then delighted with, judging from appearances and statements then made.

Since then the "green-eyed monster" has taken possession of him and his little clique of prompters, and this piece of misrepresentation is the result, which they have followed up by sending copies of the article to a number of breeders both in the United States and Canada, to whom I am well known, with the intention of injuring me, but which efforts, I am happy to say, entirely failed in their object.

I have only to add that I have every reason to believe that if this matter should come before the proper authorities, the superintendent of that show before whom I laid my case at the time will defend my action, and show that I did not practice the deception which my slanderers planned.

JOHN F. CAMPBELL.

MONTREAL, April 23.

DEATH OF CAMERON'S RACKET.—Pittsburgh, Pa.—*Editor Forest and Stream:* Labors connected with my recent removal to this city have prevented me from performing sooner the sad duty of informing your readers of the death of the grand and celebrated beagle dog Cameron's Racket (A.K.R. 4010). He died from the effects of paralysis, on the 29th ult., and my kennels are bereft of one inmate that money cannot replace. It is needless for me to state that I greatly mourn his loss. Cameron's Racket was bred by Gen. R. Rowett, by his Rally out of Louise, and was one of the best, if not the best, of the few pure Rowetts. Surpassed by none in the field, he also enjoyed the coveted distinction of having beaten every crack beagle that has competed against him on the bench, and the list of these dogs comprises most of the best beagles before the public the last two years or more. His winnings are first and special, Cleveland, 1886; first and two specials and special in brace stakes, Newark, 1887; first and two specials and special in brace stakes, Hartford, 1887.—A. C. KRUEGER.

CINCINNATI DOG SHOW.

AT the dog show held at Cincinnati last week under the auspices of the Cincinnati Sportsman's Club there were 362 entries. Major J. M. Taylor, Syracuse, N. Y., judged pointers, setters, beagles and foxhounds, and Messrs. J. H. Naylor and H. L. Goodman, Chicago, Ill., the remaining classes. Mr. Geo. H. Hill, Madeira, was superintendent. Following is the list of

AWARDS.

POINTERS.—CHAMPION—*Dog:* J. R. Daniels's Donald. *Bitch:* Clifton Kennels' Juno S.—OPEN—LARGE—*Dogs:* 1st, M. C. Pierce's Joe; 2d, H. L. Kyler's Leon. Reserve, E. J. Carpenter's Bang Beaufort. Very high com., J. R. Daniels's Lord Graphic and J. H. Winslow's Bang. *Bitches:* 1st, S. S. Seibert's Jingle; 2d, C. E. White's Mollie Faust. Very high com., Dr. J. D. Haynie's Devonshire Girl. High com., Barnes Bros.' Devonshire Countess.—SMALL—*Dogs:* 1st, late E. F. Stoddard's estate's Trinket's Count; 2d, S. W. Pentz's Brake. Very high com., R. C. Anderson's Trinket's Coin and W. H. Wallingford's Reo. High com., O. Stoppel's George Faust. Com., B. H. Hollhouse's Macon C. *Bitches:* 1st, Hartley's Jetsam. C. E. White's Nellie V. Croxteth. Com., J. H. Winslow's Vandalia. *Puppies:* 1st, C. E. White's Fellie V. Croxteth; 2d, withheld. Com., J. S. Moore's Phil Sheridan.

ENGLISH SETTERS.—CHAMPION—*Dog:* No entry. *Bitch:* Absent.—OPEN—*Dogs:* 1st, J. S. Hudson's Dad Wilson; 2d, P. McAvoy's Carlo. Very high com., H. A. Wiese's Blue Dick W., Kuyler & Keely's Blue Peter and H. Hartly's Royal Victor. High com., W. H. Wallingford's Wallingford and Mingo II., and Parvin & Kessler's Doc B. Com., Dr. J. A. Hartman's San Roy, Jr. *Bitches:* 1st and 2d, Syracuse Kennel Club's Lillian and Di. Reserve, J. S. Hudson's Dixie. Very high com., J. S. Hudson's Gathlit, H. J. King's Sportsman's Maid, T. Potter's Glen, J. J. William's Lady Zoe and H. Hartley's Fair Oaks Beauty. High com., H. L. Kyler's Rose of Canada, H. Wallingford's Lady Mingo, W. H. Wallingford's Nellie W. and G. B. Ellard's Florette. Com., W. H. Wallingford's Lady Brandon, Bandle & King's Daisy B., P. B. Spruce's Mattie Lee, W. C. McBriar's Judy, J. W. Jones's Belle Pro, G. H. Welt's Dolly S. and R. B. Caruther's Petite Mary. *Puppies:* 1st, Dr. L. A. Querner's Nell Q; 2d, W. Runnell's Duke of Bourbon. Very high com., S. E. Anderson's Bob Johnson. High com., G. S. Parvin's Ruby G.

GORDON SETTERS.—CHAMPION—W. E. Rothermel's Don.—OPEN—*Dogs:* 1st, S. G. Dixon's Little Boy; 2d, Meadow Thorpe Kennels' Heather Boy. *Bitches:* 1st, W. S. Hammett's Vic; 2d, Meadow Thorpe Kennels' Heather Model.

IRISH SETTERS.—CHAMPION—*Dog:* H. Overman's Norwood. *Bitch:* C. T. Thompson's Nellie.—OPEN—*Dogs:* 1st, W. N. Kulm's Mack N.; 2d, T. S. Fish's Frank. Very high com., L. Martin's Rob Roy. High com., B. L. Frazer's Lennox. Com., Gem Kennels' Sarsfield. *Bitches:* 1st, C. Velton's Lou III.; 2d, F. V. Andrews's Kitty O'Brien. Very high com., Gem Kennels' Ruby Glenmore and Dr. E. C. Kirk's Berna. High com., H. Gebhart's Queen Bee. Com., T. S. Fish's Kate Moore.

MASTIFFS.—CHAMPION—*Dog:* Wacouta Kennels' Wacouta Nap. *Bitch:* Wacouta Kennels' Wacouta Rose.—OPEN—*Dogs:* 1st, C. C. Cook's Moses; 2d and high com., H. J. Groesbeck's Adam J. and Groesbeck's Pluto. Very high com., G. E. Townley's Ashmont Victor, W. A. Mane's Duke, W. T. Simpson's Erie and J. C. Meyer, Jr.'s, Bruno H. High com., J. P. Hanna's Ashmont Cæsar, W. T. Simpson's Chang, Meadow Thorpe Kennels' Prince Imperial and A. Smith's Chester. Com., Sylvan Grove Farm's Romeo and W. T. Simpson's Ben. *Bitches:* 1st, Ardary Bro.'s Jessica; 2d and very high com., H. J. Groesbeck's Yarrow and Ilford Czarina. Very high com., W. T. Simpson's Patty. High com., C. C. Cook's Rena and Gladys. Com., Sylvan Grove Farm's Diana. *Puppies:* 1st, C. C. Cook's Gladys; 2d, Meadow Thorpe Kennels' Prince Imperial.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitch:* No entry.—OPEN—*Dogs:* 1st, R. R. Dunnet's St. Gothard III.; 2d, Meadow Thorpe Kennels' Enterprise. Reserve, F. W. & J. Gerstle's Peter. Very high com., A. Stucky's Nimrod. High com., W. R. Huntington's Chequasset II. Com., W. D. Holmes's Dandy. *Bitches:* 1st, Hospice Kennels' Gemma I.; 2d, A. C. Strobel's Narka. Very high com., O. Ott's Winnie. *Puppies:* 1st, W. R. Huntington's Chequasset II.—SMOOTH-COATED—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, A. Stucky's Perro; 2d, Hospice Kennels' Wotan. *Bitches:* 1st, Hospice Kennels' Thuna; 2d, J. W. Dunlop's Thisbe.

NEWFOUNDLANDS.—1st, Meadow Thorpe Kennels' Prince George; 2d, Associated Fanciers' Nero.

IRISH WATER SPANIELS.—CHAMPION—Excelsior Irish Water Spaniel Kennels' The O'Donoghue.—OPEN—*Dogs:* No entries. *Bitches:* 1st, 2d and very high com., Excelsior Irish Water Spaniel Kennels' Chippewa Belle, Gypsie and Daisy O'Donoghue. Very high com., B. F. Lewis's Jess.

FIELD SPANIELS.—1st and 2d, E. M. Oldham's Newton Abbot Darkie and Newton Abbot Jubilee.

COCKER SPANIELS.—1st, withheld; 2d, P. Demmell's Grand-Ma. Com., Mrs. Dr. E. E. Sattler's Sherry.

GREYHOUNDS.—CHAMPION—Parvin & Pierson's Major.—OPEN—*Dogs:* 1st, Miss Jane Marie Bradford's Royal; 2d, E. Marshall's Middleton. Very high com., Miss Inez G. Smith's Roy and E. Harrold's Skelper. High com., P. G. Marsh's Swift. Com., G. W. Williams's Snowflight. *Bitches:* 1st, G. W. Williams's Catch Fly; 2d, D. H. Stone's Daisy. Com., F. Artman's Fly. *Puppies:* 1st, C. Schwein's Uno.

DEERHOUNDS.—*Dogs:* 1st, W. G. Smith's Terrum. *Bitches:* 1st, withheld; 2d, W. G. Smith's Dauntless.

FOXHOUNDS.—*Dogs:* 1st, 2d, very high com. (4), high com. (2), and com., Cook Kennels' Brave, Roderick, Joe II., Dan, Jack II., Whoopey, Drum II., Streak and Dick II. Very high com., J. Sherlock, Jr.'s Bounce Clayton. *Bitches:* 1st, 2d and very high com. (2), Cook Kennels' Fly, Spotty, Fanny and May Queen.—SHAGGY—*Dogs:* 1st and 2d, A. B. Whitlock's Freeland and Pierce. *Bitches:* 1st and 2d, A. B. Whitlock's Whitey and Maria.

BEAGLES.—*Dogs:* 1st and very high com., Irvington Kennels' Little Duke and Racer, Jr.; 2d, Mrs. Carl E. White's Bugler. *Bitches:* 1st and very high com., Mrs. Carl E. White's Bonnie and Bijou; 2d, Associated Fanciers' Elf. *Puppies:* 1st, Associated Fanciers' Elf.

BASSET HOUNDS.—1st, Idstone Kennels' Fanchon.

DACHSHUNDE.—1st, Idstone Kennels' Prince; 2d and reserve, N. Henchman's Skelett and Schenke. High com., Associated Fanciers' Elc. Com., G. Bauer's Hector and Waldmann.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Brae.—OPEN—*Dogs:* 1st, Meadow Thorpe Kennels' Reality; 2d, Chestnut Hill Kennels' David. *Bitches:* 1st, Chestnut Hill Kennels' Metchley Surprise; 2d and very high com., Meadow Thorpe Kennels' Parole and Blue Berry Girl. *Puppies:* 1st, Meadow Thorpe Kennels' Blue Berry Girl.

FOX-TERRIERS.—CHAMPION—*Dog:* Blemton Kennels' Bachanal. *Bitch:* Blemton Kennels' Village Belle.—OPEN—*Dogs:* 1st, Blemton Kennels' Blemton Volunteer; 2d, J. Englehart's Nettle. High com., B. F. Lewis' Count. *Bitches:* 1st, Blemton Kennels' Verdict. *Puppies:* 1st, Blemton Kennels' Blemton Volunteer. Very high com. and high com., J. Englehart's Nip and Jock.

BULL-TERRIERS.—1st, J. P. & W. W. Gray's Countess; 2d, T. W. Livezey's Kelly.

BLACK AND TAN TERRIERS.—1st, R. Stucky's Sir Wallace.

SKYE TERRIERS.—1st, E. M. Oldham's Kirkella; 2d, Meadow Thorpe Kennels' Victor. Very high com., J. H. Nayler's Drollie and Harrie. High com., Dr. M. H. Cryer's Gladstone Boy.

YORKSHIRE TERRIERS.—1st, Meadow Thorpe Kennels' Fairy; 2d, C. M. Van'Hamm's Vic. Very high com., Lee Spaulding's Betty Williams.

SCOTCH TERRIERS.—1st, 2d and reserve, J. H. Naylor's Rosie, Lowrie Dunbar and Glen Gow. Very high com., T. D. M. Adams's Robert Bruce.

DANDIE DINMONT TERRIERS.—1st, very high com. and high com., J. H. Naylor's Border Clinker, Cromwell, Bonnie Briton and Rosalind; 2d and high com., Meadow Thorpe Kennels' Reiver and Baillie. High com., J. F. Nicholson's Nellie II.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis; 2d, withheld. Very high com., Meadow Thorpe Kennels' Wonder.

BEDLINGTON TERRIERS.—1st, H. J. Schulte's Elswick Lad II.

BULLDOGS.—1st, T. Patlen's Romulus; 2d, A. F. Nash's Dolores. Very high com., J. Teague's Toro.

GREAT DANES.—1st, A. Trinkle's Brock; 2d, C. Grimme's Carlo. Very high com., C. Krieg's Pluto. Com., L. Ehrgott's Ilka.

PUGS.—CHAMPION—Mrs. J. Engelhart's Treasure.—OPEN—*Dogs:* 1st, City View Kennels' Kash; 2d, Dr. M. H. Cryer's Othello. Reserve, C. C. Charron's Don. Very high com., J. H. Shepherd's Sir George. *Bitches:* 1st, C. F. Belser's Duchess; 2d, high com. and com., J. Engelhart's Fussy, Topsy and Bessie H. *Puppies:* 1st, G. Gillivan's Peggie II.

TOY TERRIERS.—1st and 2d, J. Engelhart's Fanny and Baby Pittising. High com., F. L. Scheoerbucke's Ruby.

KING CHARLES SPANIELS.—Absent.

POODLES.—1st, W. Reiring's Prince; 2d, H. I. Shinkle's Lillie. High com., F. L. Scheoerbucke's Lillie.

ITALIAN GREYHOUNDS.—1st, H. Detmesing's Dolly; 2d, Miss Edith Van Buren's Cupid. Very high com., J. H. Armleder's Daisy, Miss Ida Engelhart's Pearl and J. Engelhart's Don. High com., J. Engelhart's Rex.

MISCELLANEOUS.—LARGE—1st, Chestnut Hill Kennels' Spot.—SMALL—1st, W. M. Gleick's Daisy; 2d, P. Gibson's Yeddo.

THE AMERICAN FOXHOUND.

THERE are more organized fox-hunting clubs within a radius of thirty miles around Philadelphia than in all the rest of the United States put together, and yet at the last show held in that city not a single hound was shown from any of the packs.

In questioning several members of different clubs the reason for this lack of patronage, the reply in every case amounted to about the same: "Foxhounds are judged at bench shows according to the English standard, and even when the American type is supposed to be the guide, our worst hounds usually carry off the prizes, so we have given up exhibiting."

It is a difficult thing for a judge, even when giving his decisions under the American standard, to ignore the beautifully marked, sturdy-looking English hounds and award the prizes to the more slender-built and less stylish American type. Yet for practical fox hunting in this country the English dog is almost useless. He has not the nose or endurance to stand the racket. He even pounds his feet sore on the stones and there is no army of whippers-in to put him on the right scent when he loses it. The English hound has been, so I am informed, tried time and time again in Pennsylvania, but found wanting. For tame fox chasing and the aniseseed bag hunt he is perfection, and for dudes who like to ride an hour to show their fine hunting suit, he is in high favor.

According to tradition foxhounds were first introduced into America by that rollicking crowd of cavaliers who came over with Lord Baltimore. At that period of English history the hunting on foot of foxes was just giving way to the more aristocratic chase on horseback. The pace of the old Southern hound (sleuthhound) was quickened by an infusion of greyhound blood.

Evidence of the old Southern hound blood can be seen today in many representative Pennsylvania packs. I have seen old black and tan foxhounds that would hardly disgrace the bloodhound class at the last New York show. Of course they were not so large, but in eye and texture of ear, peak, wrinkle and haw they closely approached that type.

The origin of the American and English foxhound being the same, the diversion of the breed is easily explained. Our English cousins always breed to a standard type, irrespective of field qualities. Their hounds must look alike even if they do not hunt alike. In a new country, where the hunting qualities of a dog are their sole value, the best dog would be naturally bred to the best bitch, no matter if they were totally different in type. In consequence, an English pack is of a uniform appearance, while ours often make a rather motley showing. Theirs have the symmetry and other points that delight the eye, while ours have the hunting qualities that appeal to the huntsman.

As a rule, our best foxhounds have that peculiar cast of face, heightened by the protruding haw inherited from the bloodhound that gives them a rather sleepy look. As an old master of hounds once told me, "My ideal hound is one that at the start has almost to be kicked from under my feet. Notice him in two hours, and a greenhorn would think he would be winded in another half hour, but at the finish he appears fresher than ever, and is as ready next day to repeat the run. A lively hound is apt to be a babbler."

Some of the long runs made by American foxhounds seem almost incredible, although vouched for by perfectly reliable people. It is really a shame that this breed is not better represented at our bench shows, and some effort made to establish a uniform type. S. REICFAN.

"COLONEL BLOOD" IN MASTIFFS.

Editor Forest and Stream:

Mr. Wade's last letter on this subject calls for a reply and shall have one, although I have little time to spare for pen-and-ink warfare. Mr. Wade has not yet advanced a grain of evidence to show that Colonel ever sired a first-class mastiff, consequently my statement that "the Manchester dog never sired a good one" remains intact.

In reply to my advice to breeders, "Keep away" from Duchess of Connaught "notwithstanding the fact that her sire was that truly-formed little fluke Colonel," Mr. Wade writes: "As a sire, his (Colonel's) value is found in the third and fourth generation." Mr. Wade also assures us that a large number of celebrated modern mastiffs are Colonel's "great-grandchildren," among the number being Orlando, Hotspur, Rosalind and The Lady Isabel. Ingeniously and conclusively he proves beyond the range of doubt that the grandchildren excel the children and the great-grandchildren the grandchildren. In other words, the further you get away from Colonel the better-looking do you find the stock. I can assure my esteemed friend that I feel deeply indebted to him for having added so considerably to the weight of my statement.

Mr. Wade has a perfect right to consider the sire of Sears' Monarch a better stud dog than Ilford Caution. May he live to regret his lack of judgment. If Mr. Wade is spared a few years (may he live for aye) he will regret having put his signature to those lines.

In reply to the question, "Which of our mastiff breeders had ever seen a mastiff head before they saw his?" (Ilford Caution's), Mr. Wade writes, "I must also dissent from the statement that Caution was the first real mastiff we ever imported." What is my enthusiastic friend driving at? Trying to adorn the pages of FOREST AND STREAM, or what? Let Mr. Wade name a mastiff breeder in this country who had seen a first-class mastiff head previous to the importation of Ilford Caution. When he has done this I shall be pleased to see him "dissent" to his heart's delight, but not until then.

Mr. Wade's peroration may have sounded very plausible to some persons, but it fell dreadfully flat on me. Here it is: "In five years the weather cock will veer round to its old position, and Colonel, Turk, Nichols's Prince, Wolsey, etc., will be mastiffs, not Crown Prince, Orlando, etc., then I will have the laugh on you, and until then I can wait." The laugh, a very loud one, is certainly on Mr. Wade. In the first place the weather cock never pointed where Mr. Wade innocently enough supposes, and in the second, no man who had ever seen Colonel, Turk, Prince and Wolsey would bunch such a conglomeration of type together and flaunt it as his ideal mastiff. Wolsey was about as much like Turk as Nevison. Colonel bore the same resemblance to Turk that he would to Ilford Caution. Then Prince and Wolsey! Take it back, Mr. Wade, take it back! One dog was long, low and undersized; another long in head, rather high on the legs and too short in back. A third was of average size, tucked up in loin and had short blunt muzzle, with lower incisors projecting and a repulsive expression, while a fourth was just about as much unlike what Mr. Wade has been advocating for years as it would be possible to find.

Let us hope that in the future Mr. Wade will write of dogs, not of photographs. I do not exaggerate in the slightest when I say that his last contribution is within twenty-five points of being as bad as Mortimer on collies. Take it back, Mr. Wade! CHAS. H. MASON.

THIEVING AT DOG SHOWS.

Editor Forest and Stream:

Can you not suggest to the various bench show committees a system whereby one might get back at least part of his kennel paraphernalia from the various shows? We do not expect entry fees, prizes and such luxuries, even when English setters and pointers are given into the tender charge of a breeder of Irish setters to judge; but would like the dogs and crates returned as complete as when sent from the kennels. We took two crates of dogs (4) to one of the largest of the late shows, arriving there at 11 o'clock Monday night. At 7 o'clock on Tuesday morning we were again in the building and found that during the time intervening some one had taken the padlocks off of our crates and retained them, together with sundry kennel chains, etc. We quietly swallowed this, but when some one removes our bench chains from the dogs on the bench and fastens two on one chain, we naturally "kick," and when on top of this, one of our blankets is removed from the dog and confiscated we begin to "howl." It does seem as if this sort of thing could be prevented if proper care was taken by the committees. One does not expect the superintendent to see all that is going on, but he should have some assistance other than the attendants, who care nothing about the dogs or the owners. We have heard of others that have had a similar fate at the recent shows. Can nothing be done?

ROSECROFT KENNELS.

NEW YORK.

AMERICAN FIELD TRIAL CLUB.

CINCINNATI, O., April 28.—*Editor Forest and Stream:* We are glad to give public notice that the guarantee fund requested by the club in order to insure the trials this year has been received and therefore the trials will be held at West Point, Miss., commencing with the Derby, Monday, December 10, 1888. The notice of the club that no Derby would be run was issued in view of the fact that not over one-half of the guarantee was tendered at that time, and knowing that the entries to other clubs closed May 1, it was thought proper and right to all interested to take the safe side, which was done. The requirements of the club having been complied with the trials will be run. In this connection, in behalf of the club, we desire to thank the large number of gentlemen who have come to the front with their $2,000 guarantee (twice the amount asked for).

Like the entries to field trials and bench shows, these responses came rather late, but they are in time and clearly show that sportsmen will back any institution that gives clear evidence of a determination to put field trials in the West on a higher and more honorable basis; which is the fixed determination of the Board of Control of this club.

RICHMOND DOG SHOW.

OFFICE Virginia Field Sports Association, Richmond, April 30.—*Editor Forest and Stream:* The Virginia Field Sports Association are seriously considering a real first class bench show at Richmond, Virginia, next October, in connection with the exposition there. Everything indicates that we will certainly have it. If we do, it will be on a style befitting our organization. The season will be the best, as in October all the cracks will be traveling South in prime condition for field work. We are negotiating now for one of the best managers in the country, and in correspondence with Spratts for the benching, feeding, etc. We will offer as fine prizes as the Westminster Kennel Club, and secure the best judges to be had. Dog owners must rally to us and make it a big show. The Exposition is going to be something fine. JNO. S. WISE, Pres.

THOSE SPRING FOXES.—Ashburnham, Mass., April 27.—I see by this week's issue of FOREST AND STREAM a wonderful record of nine killed in one day by a party of fox hunters in Oxford, Maine. To one who does not hunt foxes this looks like a great day's hunt. To a fox hunter it looks as though they had made out to kill a she fox full of young ones. I for one am certainly glad they live in the State of Maine instead of Massachusetts. In this State by common consent we do not think of hunting foxes after March 1, and we advise those mighty hunters next time they bag a she fox not to allow Josh Jeems to give their name and address, as no real fox hunter wants to know them.—H. C. NEWELL.

THE MASCOUTAH KENNEL CLUB.—*Editor Forest and Stream:* At a meeting of the Board of Directors of the Garden City Kennel Club, on Saturday afternoon, April 21, the name of the club was changed to the Mascoutah Kennel Club, after a tribe of Indians which at one time roamed upon the present site of Chicago. The resignations of Messrs. Walsh and Ward as directors were also accepted, and Messrs. John L. Lincoln and F. C. Farwell elected to fill the vacancies. Mr. F. C. Farwell was elected treasurer, vice Mr. Walsh, resigned, and Mr. John L. Lincoln secretary, vice Mr. Floyd, resigned.—CHICAGO.

DELAWARE FALLS KENNELS.—Jersey City, N. J., April 24.—*Editor Forest and Stream:* On account of my removal to this place, Mr. Wm. A. Poland, of Trenton, N. J., and I have divided the dogs of the Delaware Falls Kennels, Mr. Poland taking Rex Gladstone, Cora and Kate Gladstone, I taking Idylwoof and May Dell.—A. S. HOFFMAN.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

DEATHS.

Frolic. Black, white and tan beagle bitch, whelped Aug. 20, 1887 (Laick's Rattler—Rye), owned by G. Laick, Tarrytown, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

DIANA, Montreal.—The pulsations of the abdomen may be an aneurism; a surgeon could decide this point. We incline strongly to the belief that your dog has worms. For this you should give 30grs. of areca nut powder in large pill form and repeat in six hours. Before commencing to treat, purge with tablespoon of castor oil. Give only milk for three days.

G. S. T., Portland.—A St. Bernard 10mos. old, has no appetite, not even for meat; he seems well, but does not eat as much as a small dog. Has a nice large yard to run in, and had distemper about three months ago. Ans. A healthy puppy should feed well. Try giving him a tablespoon of syrup of buckthorn every morning, and 5grs. quinine in pill form night and morning. Look for worms in the passages.

Rifle and Trap Shooting.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway.

RANGE AND GALLERY.

SYRACUSE, N. Y., April 25.—Onondaga Rifle Club, regular bimonthly record shoot; the weather was warm and sunny, with the wind blowing very unsteady from 8 o'clock; standard American target, 200yds.:

W G Hussey (mil)	10	7	4	7	6	8	8	8	10	6— 74
N H Shafer	9	6	9	7	8	8	7	7	10	2— 73
J Holmes	9	7	7	6	5	8	6	7	8	9— 72
A Keach	6	7	7	8	6	9	6	9	8	5— 71
F D Hart	9	6	8	6	8	6	8	8	6	6— 71

THOMASTON, Conn., April 21.—The Empire Rifle Club held the first shoot of the season this P. M. with three persons. The weather conditions were furious snow squalls and high 5 o'clock wind; 200yds. off-hand, standard target: W. H. Dunbar 74, G. P. North 60, C. F. Williams 50.

April 28.

W H Dunbar	7	7	8	5	6	9	9	10	5	9—75
E Thomas	9	8	6	6	9	8	9	4	9	7—75
Fred A Perkins	6	3	4	4	10	5	7	7	4	8—58
G P North	9	6	5	6	6	7	5	8	3	10—57
C F Williams	3	5	6	5	4	7	6	5	4	6—51

HAVERHILL, Mass., Rifle Club, April 28.—200yds. off-hand standard target:

H E Tuck	8	8	8	9	10	9	10	8	8	10—88
	10	8	9	10	7	9	7	8	8	7—83
A Edgerly	10	10	9	8	9	7	8	8	5	8—82
J Busfield	9	7	9	6	6	7	6	9	9	7—77
J F Brown	6	5	6	9	9	7	10	8	7	9—75
F R Merrell	10	8	8	8	4	9	6	8	5	6—70

H. E. Tuck made a clean score and a run of 16 bullseyes. The weather conditions were fine.

TOPEKA RIFLE CLUB.—Topeka, Kan., April 26.

J L Paine	6	8	10	10	10	8	10	8	10	5—85
C R Paine	7	6	10	9	6	8	8	7	9	10—80
R R Moore	10	7	10	8	7	5	7	10	6	8—80
D N Betts	6	6	10	7	7	5	8	7	10	10—79

A very strong, changeable wind from 3 o'clock made the shooting somewhat difficult. Mr. D. N. Betts is a new member and this his third time upon the range. He bids fair to make a good shot, as his score will show.—T. R.

AN AUSTRALIAN SHOT.—William Faxo Page, the champion rifle shot of Australia, and winner of the grand centennial rifle match recently at Sydney, is coming to America to contend against the best rifle shots in this country.

MILLER RIFLE CLUB.—The second annual shoot will take place at Schutzen Park, Union Hill, N. J., on Monday, May 14. On the ring target fifteen prizes, to the amount of $130, will be divided, open to all comers; first ticket $2 for three shots, reentries $1; tickets unlimited, but only one prize obtainable by any one shooter. The bullseye target is open to all comers; tickets of ten shots $1; tickets unlimited; after expenses of the shoot are taken from this target the money will be divided among the shooters according to number of bullseyes made. L. Becker, President; Frederick Hecking and Charles Judson, shooting masters.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CASTLETON, N. Y., April 25.—Castleton Corners Gun Club, match at blue rocks, 3 screen traps, 18 and 20yds. rise, Hurlingham rules:

Wendelstardt	1111111011111111—14	J McGuire	0111111000010010— 8
W Blake	1011111111111101—13	J Dickemann	0100010101101100— 6
E H Seehusen	1101011110111111—13	A Mayer	0111000100000101— 6

Sweep, 5 clays:

Chappell	11111—5	Hansell	10111—4
Hutchison	10101—3		

HAMMERLESS.

WILLIMANTIC, Conn., April 28.—A series of matches for a handsome silver cup, between teams from the New London Gun Club, the Norwich Shooting Club, Middletown Gun Club and the Willimantic Rod and Gun Club was commenced last fall, when two matches were shot, in which the New London team won the first and the Willimantics the second. The third of the series and the first of the season was shot at Middletown on the 26th, inst., when the Willimantic Club was again the winner by the following score. The cup will be contested for once each month until Oct. 1, when it will become the property of the club having won it the greatest number of times. Six man teams, 25 clay pigeons each 18 yards. Score:

Willimantic.		Middletown.	
Wheeler	24531—17	Roberts	24243—11
Edgerton	21445—17	Pitt	22223—11

C. E. W.

CINCINNATI, April 24.—The Bandle-Wick two days' inanimate target, live sparrow and live pigeon shoot, which opened at the Independent Gun Club grounds to-day, proved a success. The sparrows especially proved a surprise, all being especially fine flyers, and, owing to their wonderful gameness and speed, were the cause of much merriment to the shooters present. The sparrow shoot was the first of consequence ever held here, and it was, thoroughly so, a success. The shooting feature was the tie off-shoot between Roots and McPhee, the former hailing from Indiana and the latter from Kentucky. Local shooters held their own, though many outsiders in the thirteen odd matches shot held their own in a way to demonstrate other shooters existed outside of Ohio. Many shooters present, both local and visiting, are shooting under assumed names.

Match No. 1, 10 single Ligowsky birds, entrance $1: Dodd 7, Heikes 8, Cole 9, Girton 5, Robinson 5, Wick 6, Rogers 8, Muck 6, Clay 7, Bandle 8, Kessler 5, Taylor 9, Powers 7. Taylor and Cole first; ties on 8 divided second; Dod and Clay eventually won third.

Match No. 2, 10 single Ligowsky clay birds, entrance $3: Bandle 8, Girton 8, Clay 6, McPhee 7, Roots 7, Heikes 8, Shott 8, Thomas 5, Dad 9, Richard 9. Ties on 9 divided; Shott won second, McPhee and Roots third money.

Match No. 3, 3 pair Ligowsky clay birds, entrance $2: Bandle 4, Heikes 6, Richard 5, Rotts 3, Shott 6, Taylor 5, Cavanaugh 3, Wick 3, Snider 5, Hart 3, Girton 5, Thomas 5, Miller 5, Brown 3, Cole 4, Moore 3. Heikes and Shott first money; Miller and Richard second; Bandle and Cole third.

Match No. 4, 10 single live sparrows, ground traps, 21yds. rise, entrance $5: Bandle 7, Roots 7, Taylor 7, Heikes 6, Davis 5, Moore 5, Kuehne 5, Snider 6, Girton 7, Brown 5, Thomas 8, Blue Dick 3, Roy 7, Dad 6, Wick 5, McPhee 6, Bower 5. Thomas first money, Girton, Moore, Taylor, second money, Heikes third, alone.

Match No. 5, 10 single Ligowsky; entrance $2: Miller 8, Heikes 10, Taylor 9, Cole 9, Roots 6, McPhee 8, Harris 7, Shott 6, Girton 9. Clay 6, Robinson 7, Guy 6, Dad 6, Richard 7. Heikes first money; Taylor, Cole and Girton second; ties on 7 divided.

Match No. 6, 10 single Ligowsky clay birds; entrance $2: Heikes 10, Wick 8, Bandle 9, Stew 10, Cole 6, Clay 10, Dad 5, Robinson 7, Guy 5, Bing 7, Taylor 7, Ernst 7. Heikes first, Wick second, Bandle third.

Match No. 7, 3 pair Ligowsky clay birds; entrance $1: Heikes 5, Wick 3, Stew 3; Ernst 4, Billy 4, Bandle 4, Shott 4, Guy 3, Murkly 3. Heikes first money, Bandle second, Stew third.

Match No. 8, 6 single blue rocks; entrance $2: Heikes 4, Taylor 3, Shott 4, Kessler 4, Bandle 4, Wick 4, Roderigo 4, Girton 5, Mustin 6, Cole 4, Dad 4, Robinson 3, Blue Dick 4. Mustin first money, Girton second, Bandle third.

Match No. 9, 6 single blue rocks; entrance $2: Heikes 4, Taylor 6, Clay 5, Shott 4, Kessler 4, Cole 5, Roots 4, Girton 4, Moore 3, Bandle 3. Bandle and Taylor first money, Cole and Shott second, Kessler and Heikes third.

Match No. 10, 10 single American clay birds; entrance $2: Heikes 10, Taylor 10, Kessler 7, Roots 10, McPhee 9, Mustin 8, Clay 9, Shott 10, Thomas 7, Bandle 8, Robinson 7, Dad 9, Wick 6, Cole 8, Miller 8, Girton 9, Richard 9. Ties on 10 first money, Richard won second, Cole and Mustin third.

Match No. 11, 10 single blue rocks, entrance $2: Heikes 8, Shott 7, Roots 7, Guy 6, Thomas 6, Richard 5, Clay 6, Taylor 7, Girton 8, Dad 6, Bandle 7, Cole 6, Miller 7, McPhee 8. Bandle won first, Heikes, Girton and McPhee second. Shott and Roots third.

Match No. 12, 10 American clay birds, entrance $3: Wick 7, Bandle 9, Roots 8, Dad 8, Girton 10, Thoms 8, W. Snider 8, McPhee 8, Heikes 9, Guy 8, Clay 9, Taylor 10, Shott 8, Richard 10, Snider 10, Cole 9. Ties on 10 divided, Heikes second, Roots third.

Match No. 13, 6 single blue rocks, entrance $1: Harris 5, Bandle 6, Heikes 6, Clay 5, Keller 4, Stew 4, Blue Dick 6, Guy 5, Shott 4, Bing 3, Peters 3. Blue Dick first, Clay second, Shott and Stew third.

April 25.—To-day closed the two days' shooting tournament given by Bandle and Wick. Not one dispute arose on decision or otherwise during the two days' sport, and the accommodations in every respect were of the best. In the two days forty-six visiting shooters faced the traps, besides the local entries. Fully 800 people witnessed to-day's shoot, and good shooting was the rule.

Match No. 1, 10 American clay birds, entrance $2: Bandle 8, Blue 7, Wick 10, Clay 8, Richard 9, Taylor 6, Dad 9, Girton 8, Miller 7, Shott 7, Heikes 8. Wick first, Richard and Dad second and Bandle third.

Match No. 2, 10 single American clay birds, entrance $2: Heikes 9, Wick 6, Girton 8, Dad 9, Shott 7, Miller 8, Bandle 10, Richard 6, Blue 7, Clay 10. Bandle and Clay first, Dad and Heikes second and Miller and Girton third.

Match No. 3 pair American clay birds, entrance $1.50: Blue 6, Shott 3, Miller 4, McPhee 5, Taylor 4, Heikes 5, Richard 4, Wick 5, Girton 6, Bandle 4. Blue and Girton first, Heikes second, Taylor and Miller third.

Match No. 4, 10 single Ligowsky clay birds, entrance $2: Heikes 9, Dad 7, Blue 10, Clay 8, Bandle 8, Wick 7, Girton 7, Shott 9. Blue first, Heikes and Shott second, Clay and Bandle third.

Match No. 5, 10 American clay birds, entrance $1; Blue 7, Bandle 9, Clay 6, Thomas 8, Stewart 6, Robinson 7, Girton 7, Dad 9, Miller 8, Richard 9, Heikes 10, Cole 9, Skinner 6, Roots 8, Spart 8, Shott 9, Taylor 10, Wick 7, Vincent 8, Wycoff 7. Heikes and Taylor first, Bandle, Shott, Dad, Cole and Richard second, Thomas and Roots third.

Match No. 6, 10 single live sparrows, from 5 ground traps, 21yds. rise, entrance $3: Blue 5, Heikes 6, Cole 7, Wick 9, Girton 6, Hayseed 5, Taylor 8, Shott 8, Burt 7, Richard 5, Ahlers, S. Q., Farrell 5, Gastrist 6, Masoner 7, Thomas 8, Dad 6, McPhee 7, Bandle 6, Skinner 4, Hall 5, Sport 8, Goldrick 9, Blue Dick 6. Goldrick and Wick first money, Thomas, Taylor and Sport second, Cole, Burt and McPhee third.

Match No. 7, 10 Ligowsky clay birds, entrance $1: Bandle 9, Roots 8, Dowdy 9, Sport 5, Shott 10, Burt 7, Goldrick 8, Robinson 6, Dad 8, Vincent 9, Stewart 9, Wycoff 5, Blue 6, Clay 6, Wick 7, Richard 8, Heikes 9, Cole 7, Thomas 9, Taylor 9, Miller 9. Shott first, Vincent second and Goldrick third in shoot-off.

Match No. 8, 10 single American clay birds, entrance $1: Dowdy 7, Bandle 8, Heikes 9, Wycoff 6, Goldrick 9, Green 9, Cole 7, Wick 9, Black 9, Robinson 7, Shott 10, Vincent 10, Miller 7, Sport 9. Shott and Vincent first, Goldrick second, Bandle third.

Match No. 9, 3 pair Ligowsky clay birds, entrance $1: Black 3, Blue 5, Bandle 5, Wick 4, Sport 5, Vincent 4, Goldrick 4, Heikes 6, Dowdy 4, Shott 3. Heikes first money, Sport second and Goldrick third.

Match No. 10, 9 single blue rocks, entrance $2: Dad 8, Hazard 8, Cole 5, Goldrick 5, Black 6, Mustin 8, Wick 7, Clay 9, Hayseed 5, Dowdy 4, Burt 8, Haines 7, Gilligan 4, Roots 7, Richard 7, Bandle 5, Vincent 5, Girton 9, Taylor 9, Blue Dick 6, Thomas 6, Blue 7, Shott 6. Miller 7, Sport 7, Heikes 8. Taylor, Girton and Clay first money, Heikes second Blue third.

Match No. 11, 10 single American clay birds, entance $2: Heikes 10, Cole 8, Sport 7, Black 8, Blue Dick 7, Shott 8, Green 7, Wick 10, Dowdy 7, Goldrick 9, Vincent 10. Vincent won first in shoot-off by scoring 10 straight, Goldrick second, ties on 8 divided third.

Shoot No. 12, miss and out, entrance $1: Bandle 1, Dowdy 3, Skinner 2, Heikes 32, Goldrick 1, Vincent 9, Wick 13, Blue Dick 3, Hannit 0, Wheaton 1, Hayseed 4, Black 8, Shott 32, Sport 14, Blue 2. Heikes and Shott divided money.

CLEVELAND, April 26.—The semi-monthly shoot of the Cleveland Gun Club occurred this afternoon on the club range. Roberts, Powers, Knight, and White were the competitors for the badge in the A. class, and Roberts won after shooting off a tie with Knight and White. Chas. C. Hebbard won the B. class badge. The conditions were 15 single Peoria blackbirds, at 18yds. rise, and 5 pairs of doubles at 15yds. Messrs. Forester, Bell and Held shot with the club:

W Roberts	11 11 11 10 10—22
F Wall	10 11 10 00 11—18
C F Knight	10 11 11 10 11—22
H Lee	10 11 10 10 10—18
D Keys	01 00 10 00 11—15
F Tamblyn	00 01 01 01 10—12
Harrison	00 00 01 00 00— 5
J Heine	10 10 10 10 00—18
M Silsby	11 11 00 10 10—16
J Moser	11 10 11 11 11—15
C C Hebbard	10 11 10 11 11—19
W Tamblyn	10 11 11 11 10—16
D C Powers	10 11 11 01 11—21
J White	10 00 10 11 10—22
A Forester	11 10 10 10 11—19
W Bell	11 10 11 10 11—16
J Held	00 10 00 00 11— 6

Following the badge shoot 2 teams shot at 9 single standard birds, sprung from standard traps, with the following results:

First Team.		Second Team.	
White	101011111—7	Roberts	111011111—8
Wall	110111011—7	Powers	111001111—7
W Tamblyn	111010110—6	Forester	110011001—5

Arnold	110100100—4—37	Held	000101000—1—36

The Cleveland Gun Club has done away with sweepstake matches on days of club shoots.

WORCESTER, Mass., April 25.—The members of the Worcester Sportsmen's Club had a successful meet yesterday at Coal Mine Brook Range. The principal event was the classification shoot, series of 1888. In the classification score each man shot three strings each of clay-pigeons (C.P.) and blue rocks (B.R.), with a possible score of 30. The class score was a possible 10 and the ties a possible 5. Ties divided. The work in detail follows:

	C.P.	B.R.	C.P.	B.R.	C.P.	B.R.	A.
H W Eager	3	5	5	4	4	5—26	10
W L Davis	5	5	4	5	5	5—29	9

C R B Claflin	3	3	2	3	1	4—17	

WASHINGTON, April 20.—The first of a series of twelve matches for the championship of the Capital City Gun Club was shot here Thursday afternoon, 10th inst., the contestants being E. L. Mills, Wm. Wagner and Seymour Cunningham. The conditions governing the championship contest are twelve matches, at 20 single and 10 pairs Cleveland blue rocks, 5 traps and N. G. A. rules. The day was very unfavorable for good scores, a high wind blowing from the southeast in the face of the shooters, the smoke so blinding them as to make it very difficult to see the second bird in double shooting. Mr. Mills has, for a number of years past, been a strong advocate of the 12-gauge gun for trap shooting, and his excellent scores go far toward demonstrating the correctness of his judgment. He shoots a 12-bore L. C. Smith, weighing 7lbs. 14oz., with 3½ drams F. F. F. G. Orange rifle powder, and 1⅛oz. No. 8 Tatham's shot. His opponants both used 10-bores, Wagner a Lefever and Cunningham a Premier Scott. Wagner used Schultze powder throughout the match, while the contestants used it only in double shooting. The next match will occur on May 3. Following are the scores:

Mills	1101111111111111111101111101	
	11 11 11 11 11 10 01 11 11 11 —45	
Wagner	0101100101110111111111111111101	
	11 00 10 11 11 11 11 10 11 11 —39	
Cunningham	0111111111111101011000001001	
	10 01 10 11 10 10 10 11 11 00 —32	
		12-BORE.

NORWICH, Conn., April 20.—The High Rock Gun Club and the Norwich Rod and Gun Club have consolidated under the name of the Norwich Shooting Club with the following officers: Jno. T. Blackstone, President; F. Pattirow, Vice-President; C. R. Butts, Treasurer; H. Potter, Secretary.

ZANESVILLE GUN CLUB, Zanesville, Ohio, April 23.—At the meeting of the Zanesville Gun Club April 16, the following officers were elected for the coming year: Pres., David Hook; Vice-Pres., Ed. Smith; Sec'y and Treas., Wm. Horn; Captain, Dr. J. G. F. Holtson. Regular shoot every Thursday afternoon.—WM. HORN, Sec'y.

A BAT BONANZA.—Ætna, Kan., April 23.—*Editor Forest and Stream:* I know of a cave in the Indian Territory, adjoining this county, which during the summer months contains millions of common house bats; and since they are easily caught, and can be shipped in close confinement; why can they not be used for trap shooting? Think over it. Think how they fly, and that there are no feathers to soil in transportation, and they can be furnished as cheap as clay pigeons and in any quantity. If you think there is anything in it let me know.—S. WAGNER.

WELLINGTON, Mass., April 19.—The twelfth and final contest for the Climax diamond badge, held by J. F. C. Swift, took place on the grounds of the Wellington Club to-day. There was a large attendence of gunners present from the various sporting sections of New England. Eager, Beaudry and Wheeler had each won the handsome trophy twice, and it was almost certain that one of these gunners would carry off the prize. Wheeler proved to be the successful man, but he had to make the fine score of 19 out of 20 birds, as there were three 18s and two 17s. Climax diamond badge match, at 10 clay-pigeons and 10 blue rocks:

Dickey	1111011111	—18
F Swift	1111111111	1030111110—16
Renard	0011000110	1010001000— 6
Chase	1111110010	1101101110—14
Brown	1011111111	1111101011—17
Moore	0111111110	1101101100—14
Schaefer	1111101111	1111011111—18
Bond	1111111111	1110011111—18

Wheeler	1111111111	1101111111—19
Eager	1111011101	0101111101—15
Nichols	1110011101	1111010100—13
Bowker	1101011111	0111010011—14
Baxter	1111110011	1101100110—15

April 23.—The conditions at Wellington to-day were all that could be desired. In the merchandise matches the following scored points: Stanton 19, Sanborn, Swift and Bill 17; Scott, Bond, Chase and French 16; Schaefer, Brown and Grimes 15; Shumway 14, Bradstreet, Hart and Hammond 13; Snow, DeRochmont and Melcher 12; Moore 11. In the Grimes match Capt. J. S. Sawyer was the winner. Six pigeons, Stanton and Schafer 6 blue rocks, Nichols; 6 pigeons, Stanton; 6 pigeons, Moore, Scott, Chapin and DeRochmont; 6 blue rocks, Stanton and Scott; 10 pigeons, Stanton and Swift; 10 blue rocks, Bill, Chase, Stanton and Sanborn; 25 pigeons, Perry; 6 pigeons, Snow and Stanton; 6 pigeons, Stanton and Nichols; 6 blue rocks, Schaefer and Bond; 6 pigeons, Scott and Perry; 6 blue rocks, Melcher, Scott and Stanton. One hundred bird match for purse, between Chase and Dickey, the latter giving Chase 50 broken birds, won by Chase, score 92 to 80. A friendly match was shot between a team from Harvard College and one from the Wellington club. The conditions were 7 men to a team and 25 clay pigeons per man. Following are the scores made:

Wellington Team.

Nichols	1110001101010111111111—18
Swift	1111111111100101011011—20
Perry	1111001111111111111101111—22
Bond	1011001101111010101001111—17
Sanborn	0111101111101111111011—21
Snow	1100100111111111111011101—19
Lang	1111010010000101111100001—14—131

Harvard College Team.

CONNECTICUT TOWN SHOOT.—The gun clubs of Willimantic, New London, Norwich and Middleton, Conn., held a clay-pigeon shoot at the latter city, April 26, and the challenge silver cup was again won by the Willimantic team. The scores, out of a possible 125, were: Willimantic 108, New London 100, Norwich 101, Middleton 89.

HARVARD SHOOTING CLUB.—The following schedule of matches has been arranged by the Harvard College Shooting Club: April 28, Harvard vs. Wellington; May 3, match for the Founder's Cup; May 5, Harvard vs. Jamaica Plain; May 8, Harvard vs. picked team; May 10, Harvard vs. University of Pennsylvania.

MINNEAPOLIS, April 19.—The Minneapolis Gun Club held their regular weekly shoot on their grounds this afternoon. Thirty-seven men participated, and the grounds had every appearance of a tournament. The shoot was at ten singles and five pairs. Some very good scores were made—considering the weather—topped off by the magnificent score of Beck, who broke every bird, tallying 20. He won the senior badge; Lotz the junior badge by a score of 16, and Leonard the amateur badge by a score of 10. The following are the scores in detail:

Johnson	0001011111 11 10 11 01 10—13
Dalton	1001111110 11 10 11 01 10—14
Whitcomb	0101100011 10 10 11 11 10—12
Beck	1111111111 11 11 11 11 11—20
Schuler	0010101110 10 00 00 11 10—10
Legg	1111111110 10 10 10 10 10—14
Cook	1011101101 11 10 00 10 11—13
Marse	1111101010 01 10 10 00 10 —11
Nicholson	1011100111 10 11 10 10 11—14
Haven	1110011011 00 11 00 10 11—12
Brown	1010011100 10 10 10 10 10—10
Ensign	0111111111 11 01 11 10 01—16

Brady	0000111001 11 10 10 11 00—10

SAN FRANCISCO, April 21.—The San Francisco Gun Club was out in full force to-day at the Bird's Point shooting grounds. The sport was lively, and some clever shots were made. The only setback of the day was a strong breeze that carried the wounded birds outside the bounds, and consequently several shooters lost points. Following is the score:

Orr	0110210012—7	Gillette	1011110021—9
Ewing	1210212100—9	Webster	2102001010 0 6
Williams	0001200210—5	Havens	0202012010—6
Jellet	2321022101—9	Wattles	1111010102—9
Swett	2201110010—7	Woodward	1111010210—9
Leviston	0011202002—7		

After the match the usual "freeze-out" games were begun. The admission was $2.50, and in the shoot some of the best men of the field entered for the first contest. They were Ewing, Wattles, Jellet, Gillette, Webster and Pixley. Ewing shot first and killed his bird with the second barrel. Wattles followed, but his bird was a wiggler, and although feathers flew in every direction the second barrel failed to bring it down and the pigeon flew triumphant, though injured, into a neighboring field, where small boys captured it. Webster "froze out" at the first shot, Gillette at the third and Ewing followed at the fourth. The match was then between Pixley and Jellet, and it was very close, both men doing excellent shooting. Finally Pixley's last bird was lost and Jellet won the match and the money. Two more matches were arranged one between Ewing, Gillette, Jellet, Wattles and Webster, which was won by the two latter gentlemen, and another between the same five gentlemen, which was won by Ewing and Webster.

BROOKLYN, April 17. The members of the New York German Gun Club, the majority of whom are residents of Brooklyn doing business in New York, had a day's outing to-day at Durler's Park, Jamaica Plank Road, L. I. This club is an old shooting organization and has been accustomed to shoot on the race track at New Dorp, Staten Island, but, not being satisfied with the arrangements there, they decided to obtain more suitable quarters for their shooting, and finally selected Durler's (old Dexter's) Park, on the Jamaica Plank road. Sixteen of the members were on hand bent on having a day's fun, some of them being on the ground as early as 9 o'clock, and at once commenced to shoot at blue rocks for practice. At 11 o'clock the regular shoot was commenced, the conditions being to shoot in squads at 10 birds each, usual club handicap, for a diamond badge. The birds supplied by Bondan were first class, strong, fast flyers, and a good many escaped, although hard hit. After shooting at 5 birds each an interval of forty-five minutes was held for lunch, during which a band of music that had been engaged entertained the members with some of the most popular German tunes. The full score of the shoot is as follows:

L Schidlo (21)	0001001111—5	J Kuhlman (21)	1010001011—5
H Greither (25)	1011110011—7	F Santler (25)	1001101000—5
A Lucas (21)	0011010011—5	V Schumacher (21)	0101111000—6
J Schlecht (25)	1010011001—5	M Bondau (21)	1010010011—5
A Taylor (30)	1111101011—8	P Garmp (30)	1101110101—7
F Becker (21)	0010100110—4	J Klein (25)	0010111101—5
P Hassinger (25)	1101111110—7	F Pfaender (21)	0111010111—7
J Dannecker (25)	1111000011—6	J Donerfalsen (21)	1011000011—5

After the regular shoot was over F. Pfaender and A. Taylor shot a match at 20 blue rocks each, 18yds. rise, for a good stake:

P Pfaender	11111101111101111011—1.
A Taylor	11101110111010111111—16

TORONTO, April 21.—The match between the Toronto and Montreal Gun Clubs, each on the home grounds, was decided to-day and was an easy victory for Toronto. Teams of 5 men aside shot at 20 artificial birds each, the Toronto shooting being done on McDowall's grounds. The scores here were:

G Briggs	11110110011111011101—15
W Rugg	10111111111111111111—18
A Wyness	11100111111111111111—18
E Sandys	11111011111101111011—18
J Tawson	10110111110011101111—15—84

The Montrealers did not send the individual scores, but telegraphed that the total was 61, so that the Toronto Gun Club won by 23 birds.

Mr. Wm. McDowall has issued bills for his tenth annual shooting tournament. Four hundred dollars in gold is to be distributed in prizes, besides 2,000 shells donated by the Dominion Cartridge Co., a field glass presented by Mr. Chas. Stark, and other articles of value. There are to be five competitions, commencing Wednesday, May 2, and probably lasting until Saturday evening, May 5. The first will be at 10 clay-pigeons, the second at 15 blackbirds and the third at 10 clay-pigeons, the fourth at 20 blackbirds and the fifth for teams of 5 at 15 clay-pigeons each man.

April 24.—The fourth shoot of the West Toronto Junction club for the Stark gun was held on Blea's grounds this afternoon, when these score were made at 20 Peoria blackbirds, 18yds. rise: George 16, Wakefield 15, Clark 12, Baillie 12, Donage 12, Hinton 10. A sweepstakes at 12 clay-pigeons, 18yds. rise, followed with this result: George 11, Wakefield 8, Blea 7, Baillie 6, Hinton 8, Donage 5, Clark 5.

April 27.—In addition to the Toronto Gun Club's shoot at McDowall's grounds to-day, the following sweepstake match was shot at 10 clay-pigeons: Alexander 10, Pearson 9, Riggs 8, Kipp 8, Bugg 8, Pearsall 8, George 7, Clay 6. Beatty 6, McDowall 6. Lush 6. There will be an open blackbird and clay-pigeon sweepstake contest at McDowall's this afternoon at 2 o'clock.

April 27.—The fourth shoot of the Toronto Gun Club for the James gun presented by Mr. Charles Stark, took place at McDowall's grounds to-day. The day was beautifully fine, and, as will be seen, some splendid shooting was done, Dan Blea covering himself with glory by shooting his twenty straight. Following are the scores at 20-blackbirds each, 18yds. rise:

Blea	11111111111111111111—20	George	11110011111111101111—17
M'Dowall	11100111011111111101—16	Gaston	11101111111100010111—15
James	11111100101100011110—13	Black	00111111111111111111—17
Riggson	11111111111100111110—17	Burton	11010000101011110010—10
Pearsall	11111111101111011110—17	Jack	10010031001001111111—17
Clay	00110000101101010010—9	McLeod	11101100001111010010—12
Bugg	00001111111111111111—17	Rand	01100011101111111111—16
Pearson	01111101110111111111—17	Ellis	11111010100010101110—12
Kipp	11010001111111101101—15	Elby	11010001111011001101—11
Wyness	11101011111101110111—16	Jackson	10101011101000100100—10
Felstead	11101011010111001111—14		

KANSAS CITY, April 23.—A shooting match took place this afternoon at the Kansas City Shooting Park between Frank Jones and William Kerns. The match was for $50 a side, 50 live birds each, 21yds. rise, and was won by Kerns by a score of 21 to 19. The score is as follows:

Kerns	01010101010000100001010110110000100000100100—21
Jones	00001010101000010101111010000010000001011001100—19

WINCHENDON, Mass. April 26.—Yesterday eight members of the Winchendon Gun Club went out to their range. Out of a possible 10 birds the following were broken: J. G. Henry 9, H. J. Lawrence 8, E. M. Whitney 7, F. F. Hapgood 6, A. W. Felch 6, P. S. Don 5, A. D. Lawrence 5, F. E. Monn 4.

COLUMBUS, O., April 27.—The beautiful weather to-day brought a large crowd of members to the regular weekly shoot at the Sherman Gun Club grounds. From the start it was evident that a strong effort would be made to foreclose the mortgage held all this season by Mr. Ward on class "A" badge, and after accomplishing this, Messrs. Siebert and Mason had a spirited contest in shooting off a tie on 25 birds, resulting in Mason winning class "A" badge. "Adams" won class "B" badge on a score of 19. The new method of shooting in squads was introduced and met with approval. Heretofore one shooter followed the other, each shooting at 5 birds until score was finished. By the new system the shooters are divided into squads of five each. The first man shoots at five birds and the others follow in rotation until each man in the squad has shot at 25 birds, then the next squad commences and so on until all have shot. The first arrivals are given preference in forming squads. This avoids delay in waiting for late arrivals, and also gives coming late an opportunity of shooting their score on the same conditions as the others. The conditions of the shoot were 25 single blue rocks thrown from five traps, National rules: Black 21, Tansey 14, Siebert 23, Miller 17, Nilru 12, Fields 7, Ward 20, Mason 23, Adams 19, "Brown" 18, H. C. Park 11, Saffold 17, McLeish 14, Sprig 20, Selbach 14, "Buck" 16, Hunt 16. Average 66⅔ per cent.

PASSAIC, N. J., April 21.—The first field meeting of the Passaic City Gun Club was held this afternoon at the club grounds. Mr. Wells, of New York, an expert shot, gave the club the benefit of his instruction and experience, and also did some interesting fancy shooting. Fourteen members participated in the shoot, and in view of the fact that several of them had never before seen a trap or clay-pigeon, the score was by no means discreditable as a whole. The birds used were blue rocks, thrown from three traps, set 16 or 18yds. from the shooters' stand, according to the caliber of the gun used. Twenty birds were thrown for each man, and the following is the score: John J. Bowes 6, Frank Kastell 12, Walston Brown 3, Albert Shaw 10, D. Campbell, Jr., 12, Albert Totten 1, Milton H. Burns 14, Jas. J. Reid 9, John Jelleme 11, W. R. Evans 7, J. A. Getchius 12, Geo. Blankman 1, Arthur F. Rice 5½, W. T. Magee 7. Judges, H. L. Luques and A. Doremus; referee, Geo. W. Demarest. The shooting grounds are very conveniently located and are peculiarly well adapted to the needs of the club, being flanked by a hill which furnishes protection from the wind in cool weather and with ample shade for the hot season. The pleasant club rooms in the Hemion building are being tastefully furnished and the membership is rapidly increasing.

WELLINGTON, O., April 24.—The Wellington and Elyria Gun Clubs held a match shoot here this afternoon, each contestant shooting at 25 blue rocks sprung from three traps, 18yds. rise, Chamberlin rules. The Wellington Club won the match by 25 blue rocks. The weather was cold and cloudy, and unfavorable for fine shooting. The result was as follows: Wellington Club—W. Robinson 17, H. Aldrich 16, B. McKinney 20, C. Avery 17, E. L. Robinson 15, H. O. Briggs 13, W. F. Crosier 15. Elyria Club—C. F. Lee 9, R. F. Hoyle 11, R. E. Mussey 11, R. Hill 16, E. McMahon 14, F. S. Faxon 15, H. J. Lewis 12.

BROOKLYN, April 25.—The Glenmore Rod and Gun Club held its regular monthly shoot at Dexter's Park this afternoon. Seven men contested for the Midas diamond badge, and the shooting was so fine that out of 40 birds fired at only 5 escaped. The following is the score:

John D Bennett	1101111—6	Hugh Littlejohn	1011111—6
W R Selover	1111111—7	P H Reid	1111111—7
Joseph Oehs	1111011—6	George U Forbell	1101111—6
Herman Bechtel	1101111—6		

Reid and Selover having tied, each shot at 3 birds. Reid made a clean score, while Selover missed his second bird. The leather emblem was voted to Supervisor Forbell.

NEW DORP, S. I.—Arrangements are being completed for a pigeon-shooting tournament to take place at Sea View Park, May 15. The shoot is open to all teams within a radius of 100 miles of New York city. The conditions will be 10 men from each club with 10 birds apiece, 21yds. rise and 80yds. boundary. A gold medal will be presented to the winning team.

OTTAWA, Ont., April 26.—There was a good attendance at the weekly meeting of the Ottawa Gun Club on the Rideau range. There was no wind, and the conditions for shooting were the best this season so far. The score, at 15 birds each, was as follows: P. Thompson 15, R. Dalton 13, J. Stewart 12, J. Manuel 11, A. Throop 10, T. C. Labelle 10, W. H. Tracy 9, H. Street 7, Dr. McPhee 6, A. Stewart 5, E. J. Smith 4.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H. H., New Haven.—The description you give evidently refers to the old gyro-pigeon, no longer in the market.

C. S., Hoboken.—The Pennsylvania woodcock season will open July 4. The localities you name are of excellent repute.

E. D. P., Jacksonville, Ill.—Will you kindly inform me where I can obtain a copy of the Montana game laws? Ans. Write to Territorial Secretary of State, Helena, Mont.

E. C., Brooklyn.—A and B kill 4, C 2 and D none. A and B shoot off for first money, A wins. B claims second money. Who wins or is entitled to second money? Ans. If it was class-shooting second goes to C.

W. M. M., Mobile, Ala.—What kind of tackle should I use for tarpum? Ans. Such as is used by striped bass fishermen, a rod of 6 to 8ft., a free-running reel that will hold 600ft. of No. 12 linen bass line, and a 10-0 O'Shaughnessy or 12-0 Limerick hook with a piece of piano wire for a snood.

W. S., New York.—Is there better lake and trout fishing in the Adirondacks than in Pike county, Pa? If so, please say what part and near what lake? Ans. If you mean for lake trout, called also salmon trout, we would say yes, otherwise no. There is good lake fishing for black bass, some brook and lake trout about Raquette Lake; for brook trout go to Meacham Lake in the north, the Fulton chain, Big Moose or Cranberry lakes on the west.

D. P. O.—Would you kindly inform me where we could get a quantity of young German carp, if we could get them for a private pond, or if they can only be had for a public stream? Also what probable cost would be. Ans. Write to Mr. E. G. Blackford, Fulton Market, New York. They can be had for private ponds. He distributes carp for the U. S. Fish Commission, and there will be no charge for the fish. The cost will be the express charges and twenty-five cents for a tin pail.

W. H. J., Argentine.—Will you kindly give me the formula of the Werkersheimer preserving fluid, published some time since in the FOREST AND STREAM? Or if you cannot do so tell me the date of the paper which contains it. Ans. The formula is: In 3,000 grammes of boiling water dissolve 100 grammes of alum, 25 of common salt, 12 of saltpetre, 60 of of potash and 10 of arsenous acid. After cooling and filtering the solution add to every ten litres of it four litres of glycerine and one litre of methl. alcohol. Full directions will be found in our issue of Nov. 4, 1880, Vol. XV., p. 263.

H. H. K., Louisville, Ky.—1. How much water would it require to keep a dozen trout in a healthy and thriving condition, and can they be kept in anything but running water provided it is always kept pure and fresh? 2. What food do they require? Ans. 1. The amount of water would depend upon the size of the trout. They require running water and more of it as the temperature rises above 50°. At 70° they will die if there is not a large flow, and above that degree they will readily die from exhaustion if fungoid growths do not kill them. 2. They will eat worms, chopped fish, liver, and clams. A few trout may be kept in a well, but in an aquarium it is difficult to keep them through the summer.

E. A. J., South Beach.—1. Where do bluefish spawn? 2. At the time of year? 3. And how far north do they? There has been a controversy in regard to the spawning of the bluefish. There are a number of fishermen that never saw or caught a bluefish with spawn as far north as Long Island. They say that the bluefish spawn south and the young ones follow in the course of the older ones. The young ones are often found in the Shinnecock Bay, but are never seen until large enough to take care of themselves, or from 2 to 3in. in length. Ans. I. It is believed by some that they spawn near shore or in the bays of the northern Atlantic coast, but no ripe eggs have been taken by fishculturists, and we have no positive knowledge. 2 and 3. These are answered above.

Yachting.

PROSPECTS ON LAKE ONTARIO.

EVERY now and then the Canadian yachting world is electrified by the notes from Lake Ontario, signed "Port Tack," interested chiefly in the yachts Norab, Iolanthe and the Belleville Y.C. When the Atalanta wins a race she hails from Belleville, at other times she belongs to Brighton or some other out of the way place. The Iolanthe is invincible; in fact no opponent worthy of her steel beyond the Burgess forlorn hope, hailing from Oswego, and even the Merle receives a certain amount of pity, "for model will tell." The poor Merle has her ballast tucked away beneath her keel and cannot dump a thousand pounds or so of it on the dock the day before a race when Old Prob. predicts light weather. The savage contests this summer between the Cuthbert and Burgess types will be of intense interest, especially if "Port Tack" can induce the Laura and Minnie A. to keep out of the way, for these boats have a very unpleasant habit of getting where the Iolanthe would like to be in a race. I have also heard of two or three other boats in the second class, which, if "Port Tack" will permit them, may feel inclined to have a try for a position in the series of races. I refer to the new Psyche and Gerda, not to say anything of the Cyprus and half a dozen other dark horses. Of course the names of Cuthbert and Burgess will be enough to make all other aspirants for honors treinable, but some of these have the presumption to hope that their yachts may have a chance against such a modern type (?) as the Iolanthe. I have not heard directly from the Merle, but no doubt she will be satisfied to admit plenty of competitors, as last year she showed an ability to take care of herself that might have worried even the Iolanthe had she followed the Burgess boat around Lake Ontario.

STARBOARD TACK.

MONTGOMERY SAILING CLUB.—Norristown, Pa., April 29.—The third cruise was to have taken place to-day, but was a failure on account of a lack of wind which was very light westerly, making it a beat dead to windward to the buoy at Indian Creek, 2½ miles. The canoe Sadie took the lead at the end of half a mile and rounded the buoy 17m. ahead of the skiff Gracie, which was second boat. The tuckups Igidious and J. S. Frith rounded the buoy about 5 and 7m. respectively behind the Gracie. The other five starters were tuckups, and being far in the rear, gave up the race. The canoe Sadie was built by an amateur, on the lines of the Notus, and this, her first race, would seem to indicate that she is faster than a tuckup in light winds.—E. A. LEOPOLD.

KNICKERBOCKER Y. C.—This active club opened the season formally on April 28 at the club house at Port Morris, Conn. Barnes firing the gun at 6 P. M., while the club flag was run up. During the winter the grounds have been much improved and a dining hall has been added where members can obtain meals at all times. On Saturday evening the new hall was well filled, the first supper being served there. The evening passed very pleasantly, with toasts and speeches. A very handsome portrait of Ex. Com. Rosenquest was presented to the club, and also a painting of Volunteer, both of which will hang in the club house. Most of the fleet are now afloat and preparing for the first regatta.

BEVERLY Y. C.—This club has abandoned the old measurement, two-thirds length on l.w.l. plus external beam, in favor of a new rule proposed by Mr. Burgess. The bascline, from jibstay to mainsail, is multiplied by the perpendicular, from main boom to highest topsailblock, and the product multiplied by length of gaff. The result is divided by 3, then multiplied by the loadline, and half the result is taken for the sailing length. The main point claimed for the rule is that it is not necessary to know anything about square root, but it would have been better had the club followed the E. Y. C. and adopted the Seawanhaka C. Y. C. rule.

STATEN ISLAND ATHLETIC CLUB.—The yacht department of this club, organized last year, has grown now to a fleet of forty, the largest vessel on the list being Mayflower. The officers for the year are: Com., R. K. McMurray, sloop Æolus; Vice-Com., J. W. Edwards, Playmate; Rear-Com., J. C. Uhler, sloop Siesta; Sec'y, John Whitehorn; Cor. Sec'y, Walter Pendleton; Treas., A. L. Farris; Measurer, R. Steesler; Fleet Surgeon, Anson Carroll, M. D. The club has lately built a basin adjoining the large boathouse erected last year on the grounds at West Brighton, Staten Island.

THE DELAWARE RIVER TUCKUP.

THE Delaware River in the vicinity of Philadelphia is the home of three special classes of sailing boats which have frequently been mentioned in the FOREST AND STREAM, the hiker, the tuckup, and the ducker, all three being peculiar to the locality and used so far as we know on no other waters than the middle Delaware and lower Schuylkill. As will be seen by reference to the FOREST AND STREAM of Feb. 24, 1887, all are cat rigged, but differ in size, the hiker being the largest, a small half open catboat, with about 4ft. 8in. beam for 15ft. length, the same proportion for larger sizes; the tuckup being a few inches narrower and not quite so deep, both with square sterns; while the ducker, fully illstrated in our issue of April 21, 1887, is a double ended shooting skiff, also fitted for sailing. The accompanying plans show a very good example of the present fourth class tuckup, the Priscilla, built last year for Mr. Edw. Stanley, of Bridgeport, Pa., by James Wignall, of Philadelphia. The lines were carefully plotted from offsets taken by Mr. E. A. Leopold, of Norristown, Pa., the boat being enrolled in the Montgomery Sailing Club of that place and sailing in all the races. The peculiar name "tuckup," is derived from the fact that in building the flat keel is not carried out straight from the stem to sternpost, along the finely dotted line B, as would be the case in most catboats of any size, but it turns or "tucks" up, in builder's parlance, to the height of the waterline, as in the Delta, FOREST AND STREAM Cruiser, and the sneakbox; a separate scag being added below the keel. The word came into general use from this construction, and is now applied solely to such a boat as is here shown.

The two boats here described, Priscilla and Igidious, are owned on the Schuylkill about fifteen miles from Philadelphia, and with others sail in the races which are reported every week in our columns, but the home of the craft is in the Kensington district of Philadelphia, near the famous Cramp's shipyard. Here there are several long wharves, lined on each side with rows of two-story boat houses, twenty to thirty in a row. In these houses are stored hundreds of duckers and tuckups, while the upper story of each is fitted up more or less comfortably for the use of the crews, gunning, fishing and camping outfits, with sails and gear, being kept there. On Sundays in particular the wharves and houses are crowded, the boats are off for short cruises up or down the river, or races are sailed between the recognized cracks, handled by old and skillful captains and trained crews. The following tables give very fully the details of the boats:

DIMENSIONS AND ELEMENTS OF TUCKUPS.

	Priscilla.	Igidious.

Priscilla has a keel sided 5in. at rabbet, 6¼in. inside, 1in. thick, stem and sternpost sided 1in., transon ⅞in. thick, ribs 1×¾in., spaced 9in., nails (copper riveted over burrs) spaced 3in. Planking, lapstrake, ⅜in.; deck ⅛in., centerboard ¾in. oak, coaming ⅜in. oak, 3½in. high at point, ¾in. at midships and ⅝in. at stern. Round of deck, 1½in. Wearing strips A A oak, ⅝in.×7-16in., spaced 6in. apart. Thwarts 7in. wide, 10in. above bottom of keel; trunk 11in. high.

Igidious is 3ft. 2½in. wide across stern, with skag 3ft. 4in. long and 9½in. deep; coaming 4½in. high at point, 1in. from midships to stern. Keel 7¾in. extreme width; round of deck, 1¼in; mast step of iron, braced with two rods with turnbuckles. Ribs and fastenings as in Priscilla. Planking ⅜in.

The boats are all lapstrake, very carefully built and copperfastened, and are decked as shown, with about 7½in. waterways, the well extending to the transom. The board is of the dagger pattern, often being much larger than shown, and the rudder is of the familiar barn door pattern, of great length, with tiller to match. The boards are always of wood, but at Norristown steel plates have lately been introduced, an innovation not approved of by the Philadelphia experts, but which will this season be thoroughly tested. Five metal boards of 50lbs. down, one a brass board, are now in use at Norristown. The sailing rules on the Delaware allow 4ft. 6in. beam for a 15ft. boat with five men all told, while the sail is limited to 56 linear feet of bolt rope when new, giving about 180ft. area. This will give 15ft. on foot, 13ft. luff, 8ft. head, and 21ft. leech. In the M. S. C. this rule is not used, the boats being classed together with a penalty for excess of sail area over that allowed. The limit is 165ft. for tuckups, 110 for duckers and 80 for canoes and small boats, the tuckups allowing the others 10 minutes over a five mile course. Any boat may increase her sail by paying 2 seconds per foot per mile, and allowances are figured at the start, so that the first boat home wins. Five men are allowed to the tuckups and two for the duckers, but thus far a crew of three seems to be the best for the former. The

SAIL PLAN OF "PRISCILLA."

boats are handsomely finished, being generally painted outside; and are fitted up with very neat brass work, such as gooseneck, blocks, etc. The mast is stayed by a short boomkin, the topping lifts are double, as shown, and when running the peak is settled a few inches and a man is stationed to tend the lift as the boat rolls very badly at times. It is not uncommon for the boom to rise and fly out on one side of the mast while the gaff lies on the opposite side. The crew are trained to "hike" out to windward with a speed proportionate to the energy with which the command is given by the skipper, but capsizes are frequent.

The boats are modeled and built on a level keel, the level lines being shown in the upper half of the breadth plan, with the corresponding offsets in the table, but when sailing they are trimmed at times as indicated by the load waterline in the sheer plan, to a draft of about 3in. forward and 10in. aft. The waterlines in this trim are shown in the lower half of breadth plan. The displacement in fresh water to the loadline would be 716lbs; while when trimmed to a uniform draft of 7in. it would be 760lbs. The boats are reputed to be very fast, but at this abnormal trim, made necessary by the peculiar balance or lack of balance of sail, their lines are certainly not the best for speed. The curve of areas shows a bow far within a curve of versed lines, while the stern is proportionately short and bulky. It would be an interesting experiment to fit one of the fastest boats with an ordinary centerboard in the proper position, and to readjust the sail plan to the center of lateral resistance at a normal trim.

The sheet is rove from boom end, through block on traveler screwed to transom, thence through two blocks on boom and down through another block in floor, leading beneath the after thwart. In sailing with a crew of three the steersman sits aft with one man on each thwart, so that both can handle the sheet easily. The boats cost about $100 with a 20yd. sail (estimated at 6sq. ft. to the yard) and a 30yd. sail with spars costs about $30. The sail plan was plotted from dimensions furnished, but the area is a little smaller than that measured from the sail when in use, about 203ft. in place of 198ft., as here given. The boom is probably shown a little higher than it really is, but it is fully low enough.

The tuckup came forward some time since in the course of a controversy as to the merits of canoes and boats, but from these lines it will be seen that such a craft is entirely unfitted for such uses as a canoe must be put to, and is purely a racing machine; many of them being incapable of standing up under mast alone without crew on board. None but live ballast is carried in racing on the Delaware or Schuylkill; but it is allowable to "start ballast," and if the wind turns light, at a signal from the skipper one of the crew quietly drops overboard and swims ashore or is picked up by some passing boat, his presence sometimes being ardently desired if the breeze freshens. The record of Priscilla for her first season (1887) is as follows:

June 12—Sixth; 10 starters; 20-yard sail.
July 3—First; 9 starters; 30-yard sail.
July 4—Second; 6 starters. Finished first and beaten by Gracie on time allowance.
July 10—Strong wind; broke tiller and withdrew. In this race several boats were nearly swamped and ran ashore to bail out.
July 31—Second; 8 starters.
Aug. 7—Fifth; 8 starters.
Aug. 14—Fourth; 9 starters.
Sept. 4—Fourth; 10 starters.
Sept. 11—Third; 7 starters.
Sept. 18—Second; 12 starters. Finished first; beaten by Josephine on allowance.
Sept. 25—Fourth; 12 starters.
Oct. 2—First; 11 starters. Had a long lead; beat second boat 6 or 7m.
Oct. 16—Fourth; 11 starters.
Oct. 23—First; 9 starters. A good margin.
Oct. 30—First; 9 starters (9 A. M.). A good margin.
Oct. 30—First; 3 starters (2 P. M.). Sailed off tie, and won by over half a mile, in 1h. 5m. actual sime, the best on record for the course.

THE NEW LADY TORFRIDA.—Sir Wm. Pearce's new yacht is described as follows in the *Field*: "There was launched from the yard of the Fairfield Shipbuilding and Engineering Company, Limited, on April 2, a steel screw steam yacht, built for Sir Wm. Pearce, Bart., M. P., and specially supervised in all its arrangements; being built to Lloyd's highest class, of steel supplied by Messrs David Colville and Sons. She is 216ft. 6in. long, 27ft. beam, and 19ft. depth moulded, and 735 tons. Schooner rigged, fitted with a steam windlass forward, and hand and steam steering gear aft, with a small steering wheel on the bridge amidships. All the deck fittings, usually made of iron, are of manganese bronze. There is a large steel deckhouse amidships covered with teak, inclosing the engine and boiler space, deck saloon and smoking room, and in addition, affording entrances to the cabins forward and aft. The decorations and furnishing are most elaborate. The deck saloon and smoking room aft are floored with parquetry, the seats are cushioned in red morocco, a table being placed at the fore end of the deck saloon. Rich and handsome *portières* are fitted at the after end, separating it from the entrance to main saloon and fore cabins. Abaft this entrance are situated a large pantry and galley, these last-mentioned places being fitted up in a most efficient manner, and having immediate communication with the saloons. The main saloon is a luxurious and commodious apartment, lofty and well proportioned. The fittings and carvings, designed in the style of the Italian renaissance, are of dark mahogany, artistically grouped, and separated by gilt pilasters of a highly artistic character. The hall panels are covered with silk and brilliant brocatelle, in shades of terra-cotta, gold and silver. The furniture consists of a sideboard, bookcase, tables, piano, sofas and chairs, the latter being upholstered in gold-colored velvet, panels of hand-painted tapestry in Louis XVI. style, and electro-oxidized metal work, are fitted into the backs of the piano and other furniture, and form a pleasing decorative feature in the saloon. The portieres are of rich rose silk Venetian velvet, with elaborate bullion borders and fringes. The Axminster carpets are of Persian design on gold ground. A brass stove, chastely ornamented, completes the furnishing of this beautiful apartment. Aft from the main saloon are situated the ladies' cabin and owner's room. The fittings of the former are of walnut, the lower panels being carved in Italian scroll and foliage work. The upper panels are of a floral design, conventionally treated in rich gold satin. This apartment is furnished with wardrobe, writing table, sofas, and chairs in gold velvet. Two ivory panels in the doors especially attract attention from the beauty of the carvings, the subjects being "Morning" and "Evening." The owner's room is fitted up in a manner equally artistic, the walls being panelled with decorated gold leather in framing of pollard oak. Curtains of fine copper-red silk velvet, with elaborate hand-painted and applique borders, drape and screen the conch bed. A large writing table with ottoman seat occupies one side of the room, a mirror being placed above. From the main saloon is a corridor, on either side of which are disposed the guests' state-rooms, of which there are six forward and two aft. The accommodation for the officers and crew is provided aft, and for the former it includes a general mess-room and a cabin for each. The yacht will be fitted with triple-expansion engines. These engines will have two high pressure cylinders, one medium pressure cylinder, and two low-pressure cylinders, making five in all. The high-pressure cylinders are placed above, the medium-pressure cylinder between the two low-pressure cylinders; thus arranged they work a three-throw crank shaft. The valves are all arranged to work by double eccentric and link motion. A piston valve is fitted to each high pressure cylinder, and an ordinary slide valve to each of the other cylinders. The reversing of the engine is effected by one of Messrs Brown Brothers' steam and hydraulic reversing engines. The crank shaft is one forging, and, together with the thrust, tunnel, and propeller shafts, are made of Messrs Vickers, Sons and Co.'s steel. The propeller has four blades, and is cast solid of manganese bronze. Steam will be supplied to the engines by one single-ended boiler, 15ft. 9in. diameter and 9ft. 5in. long, having four corrugated furnaces. The boiler is constructed entirely of steel for a working pressure of 150lbs. per square inch. There will also be an auxiliary boiler fitted on board for supplying steam to the electric light engines, and for other auxiliary purposes. The yacht will be complete and ready for service by the early part of May."

NEW HERRESHOFF YACHTS.—On April 24 at the Herreshoff Manufacturing Co.'s yard, Bristol, R. I., Mr. N. L. Munro's new yacht was launched, being christend "Say When." She is 188ft. over all, 115ft. l.w.l., 14ft. beam and 4½ft. draft. The hull is double skinned, the outer skin of mahogany. The engines are quadruple expansion, of great power, and a speed of 25 knots is guaranteed. The yacht is schooner rigged. The same firm are at work on two 65ft. launches, also for Mr. Munro.

COLUMBIA Y. C.—Com., Charles T. Wills; Vice Com., Albert M. Everett; Sec'y, George Parkhill; Treas., Joseph A. Weaver; Meas., Henry C. Roseman; Steward, Marshall Clarke; Fleet Surgeon, Henry Griswold, M.D. Board of Trustees—R. P. L. Abell, Henry Griswold, Thomas Dimond, Charles E. Simms, Jr.; Charles H. Knubel and J. M. Vail. Regatta Committee—William H. Rowe, George Parkhill, A. M Everett, John H. Kimble and Chas. Dietz.

FENELLA.—The schooner building for Mr. Oswald Jackson, of New York, owner of the sloop Iola, will be named Fenella. She is building by D. O. Richmond, Mystic, Conn., and will be 67ft. over all, 53ft. 6in. l.w.l, 16ft. 6in. in beam and 9ft. draft.

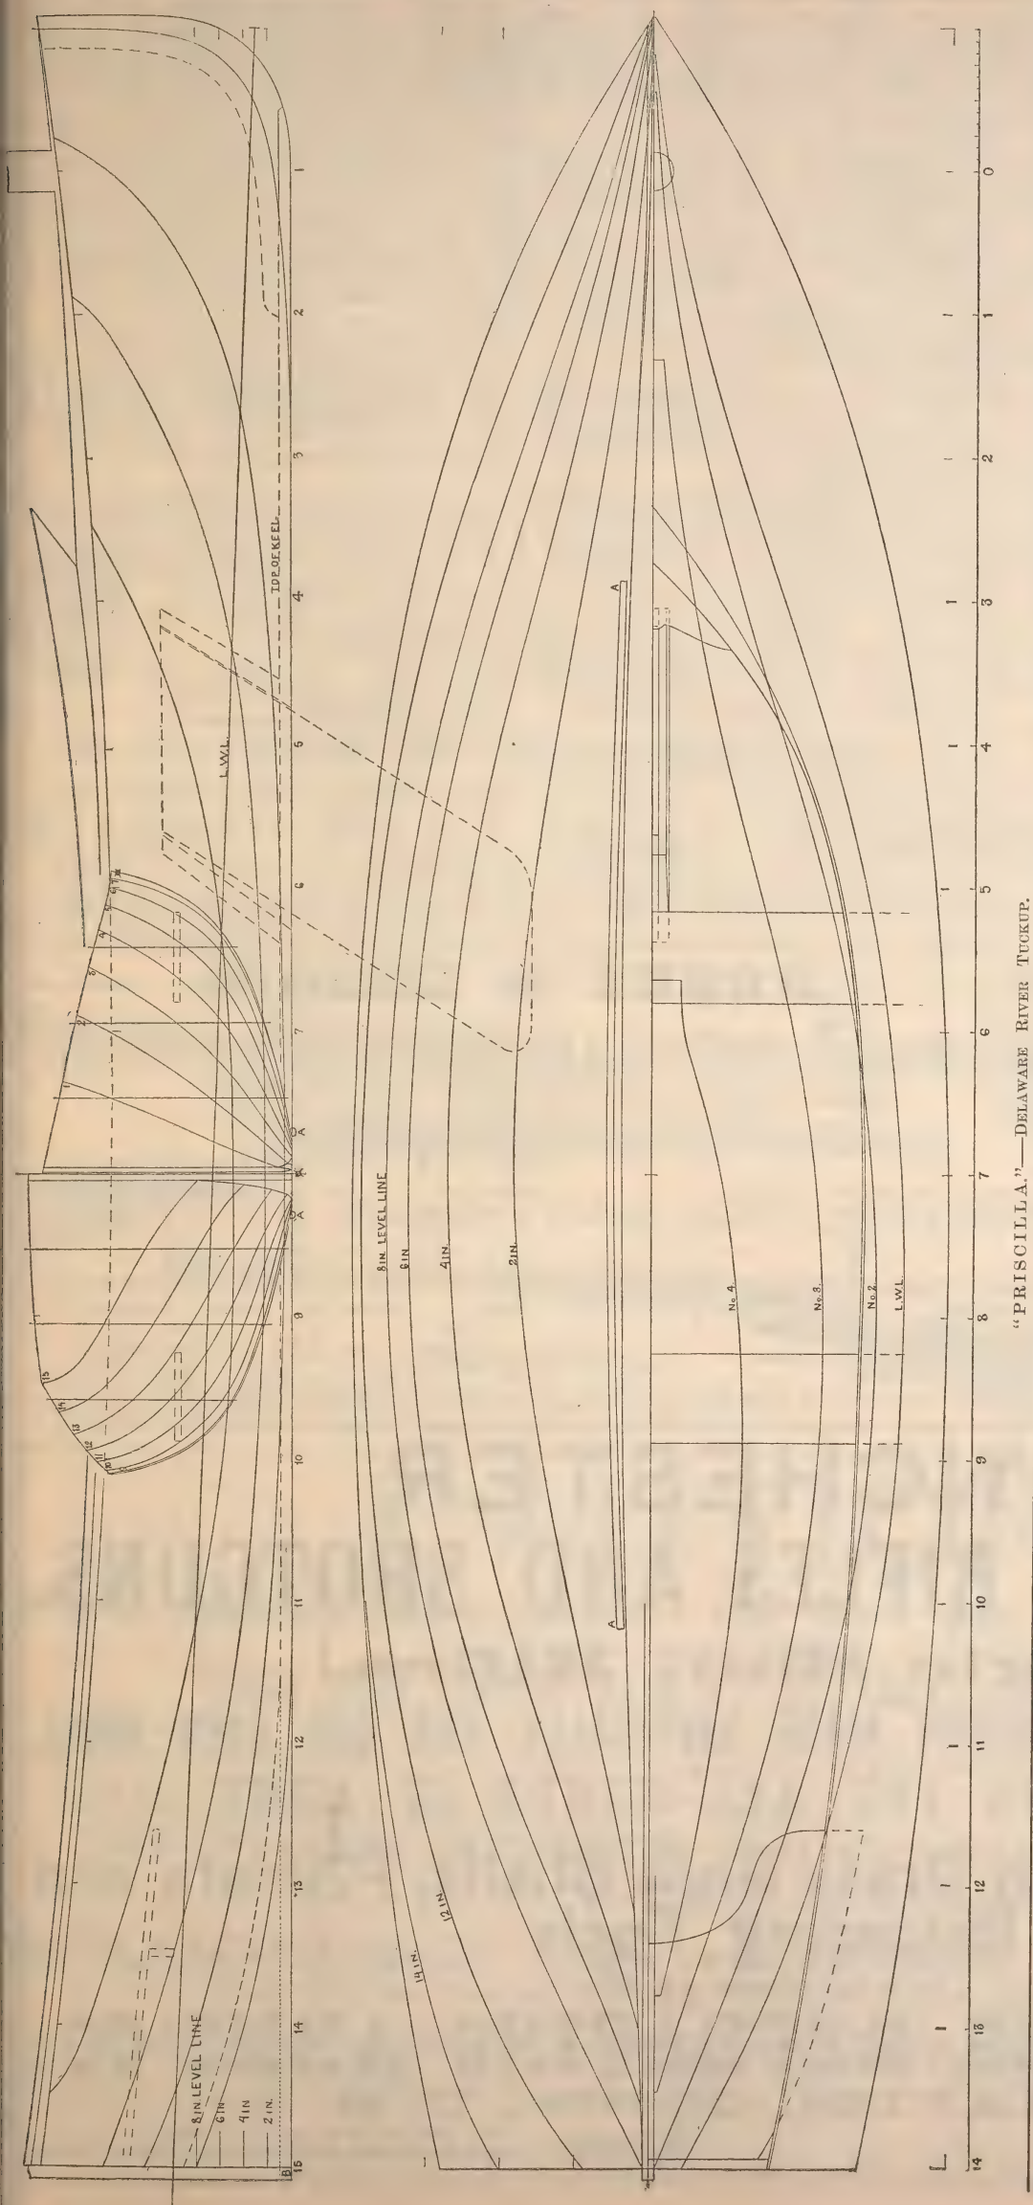
THE FIRST CAPSIZE.—The first capsize of the season, as far as reported, was in the East River on Tuesday, three young men in a sailboat being thrown into the water. All were rescued by a ferryboat.

CRUISING.—Thyra, s.y., Mr. Geo. Beck, arrived at Norfolk on April 26, and sailed next day for Baltimore. Reva, s.y., Mr. Pierre Lorillard, sailed from Charleston on April 27 for New York.

CANADIAN CRUISING.—Dr. John M. Hills, of New York, has chartered the yacht Marguerite of Com. J. U. Gregory, Quebec, for a three months' cruise, with angling and shooting.

HYDRAULIC PROPULSION.—A craft 110ft. over all, now building at Lennox's yard, South Brooklyn, to be propelled by jets of water.

ALERT.—Mr. Henry Bryant's schooner, lately illustrated in the FOREST AND STREAM, was successfully launched on April 26.



VOLUNTEER.—Gen. Paine's yacht was launched from the railway and will lie in Lawley's Basin for the present.

NEWARK.—The little cutter Mermaid was launched at Sey bolt's yard on April 21 and will soon be in commission.

SAPPHIRE.—Mr. John Stetson's steam yacht, designed by Mr. Burgess, was launched at Bath, Me., on April 28.

OCEAN GEM, s.y., Col. Charles Taylor, has received a new compound engine, 14 and 26x16in., at Bath, Me.

FANITA, sloop, is reported as sold to a Boston yachtman.

SEAWANHAKA C. Y. C.—A special meeting was held on April 26 at which some minor changes in the constitution and by-laws were passed. The following changes in the racing rules were also adopted. The classes shall be: Schooners—Class 1, all over 90ft. l.w.l. length; Class 2, all over 75ft. and not over 90ft. l.w.l. length; Class 3, all over 65ft. and not over 75ft. l.w.l. length; Class 4, all of 65ft. l.w.l. length and under. Sloops, Cutters and Yawls—Class 1, all over 80ft. l.w.l length; Class 2, all over 70ft. and not over 80ft. l.w.l. length; Class 3, all over 61ft. and not over 70ft. l.w.l. length; Class 4, all over 53ft and not over 61ft. l.w.l. length; Class 5, all over 46ft. and not over 53ft. l.w.l. length; Class 6, all over 40ft. and not over 46ft. l.w.l. length; Class 7, all over 35ft. and not over 40ft. l.w.l. length; Class, 8, all of 35ft. l.w.l. length and under. Any yacht which shall have been launched prior to June 1, 1888, exceeding the higher limit in any class by not over the fraction of a foot, shall be included in that class. Rule III., Sec. 1.—Substitute following definition of l.w.l. length: "L.W.L. length is the distance in a straight line between the points furthest forward and furthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim, with all her persons on board when the measurement is taken, amidships." Rule III., Sec. 1.—Substitute the following definition of the base line measurement of sail area: "On schooners, cutters and sloops, a base line is to be taken from the center of the tack cringle of the jib or flying jib when set to end of main boom, etc." Rule IX.—Strike out present sections 2 and 4 and insert new sections as follows: Sec. 2.—There shall be no restrictions whatever as to crew in Class 1 of schooners and Classes 1 and 2 of sloops, cutters and yawls. Sec. 3.—In Classes 2, 3 and 4 of schooners and Classes 3 and 4 of sloops, cutters and yawls there shall be no restrictions as to total number of crew, but one professional only shall be allowed for each twelve feet or fraction thereof of length on deck. Sec. 4.—In all other classes of sloops, cutters and yawls, yachts may carry as crew, in addition to the helmsman, one man for every 5 feet, or fraction thereof, of length on deck. Sec. 5.—Stewards and cooks, if they take no part in handling the yacht, will not be counted as members of the crew. Make present section 3, section 6. Rule XIII.—Strike out the whole of this Rule and substitute the following: There shall be no restrictions as to sails excepting that Classes 2, 3, 4, 5, 6 and 7 of sloops, cutters and yawls shall be restricted to topsails which do not extend above the truck nor beyond the gaff end. No club or head yard on spinnakers shall exceed in length one-thirtieth of the l.w.l. length of the yacht and no foot yard or club shall be permitted. The Rule as to boats was amended so that Classes 1 and 2 schooners and 1 of sloops shall carry a 14ft. boat; Classes 3 and 4 schooners and 2, 3 and 4 sloops a 12ft.; and Class 5 slops a 10ft. boat. The treasurer will redeem $750 of the club's bonds. On Saturday evening the second lecture by Fleet Surgeon J. West Roosevelt, M.D., was delivered. The eighth and last of the regular course of lectures will be delivered by Captain H. C. Taylor, U. S. Navy, on Saturday evening May 5, at 8:30 o'clock, punctually. Subject: "Harbors: Their General Characteristics and Classification With Special Reference to the Harbor of New York."

Canoeing.

REMOVAL.

The offices of FOREST AND STREAM are now at No. 318 Broadway

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }

Vice-Com. *Rear-Com.* *Purser.*

Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.

SPRING MEET, 1888—RACE PROGRAMME.

I. Paddling—Class I. Any canoe. Half mile, straightaway.

II. Paddling—Classes II., III. and IV. Sailing canoes. One mile, straightaway. Record.

III. Paddling—Tandem. Classes A. and B. Sailing canoes. One mile, straightaway.

IV. Standing Paddling—Three hundred yards. Centerboards housed.

V. Hand Paddling—Two hundred and fifty yards.

VI. Sailing—Two miles, to windward or leeward and return. Classes A. and B.

VII. Sailing—On the triangle—Three miles. No limit to rig or ballast. Record.

VIII. Sailing—Combined—Two miles. Paddle half, sail half, paddle half, sail half, finishing under sail. Record.

IX. Sailing—Consolation—One mile, to windward or leeward and return.

X. For unclassified canoes—On the triangle—One and one half miles.

Record flag to be given to man winning greatest number of points in II., VII. and VIII.

NATHAN A. GIBBS,
E. H. RICE,
MAXTON HOLMS, } Regatta Committee.

BROOKLYN C. C.—On April 26, at the residence of Mr. F. L. Dunnell, the Brooklyn C. C. wound up a series camp-fires which have been both instructive and interesting. For nearly two hours the room rang with applause and laughter over a lantern exhibition, the most of which represented scenes in canoeing, taken during the summer of '87 by members of the club. During the exhibition Mr. W. Goold Levison, of the Academy of Photography, to whom the club is indebted for the entertainment, gave many valuable hints and showed some beautiful slides, results of his own experience. The large supply of "light refreshments" to which the company were invited was an evidence of the host's knowledge of the fact that the Brooklyn boys are not novices at work of this kind, and it was the next morning before they could be persaaded to "go about" and make for home.

BRITISH CANOEING.

THERE can be no doubt as to "building activity" in regard to canoeing on the Thames; but what may be doing in other centers and in private "yards" is as yet a sealed book; but if, as we may suspect, there is good work also going forward in the country, no doubt shortly some hardy hand will give his fellow canoers an idea of what is being "created" in his district. As usual at this early time of year, a great many new boats are being "talked of," and if all were built it is certain the Royal C. C. accommodation would need to be doubled. As it is, however, a steady refilling of the stocks at Mr. Turk's, as new keel succeeds finished craft, speaks well for coming sport. At the present moment there is in the finishing shop a trio of canoes of about as neat a treble difference without distinction as ever puzzled the political critic of the celebrated "three courses" doctrine. The lines of each canoe are, comparative to past canoes of the same class, straight; not, however, in fact "straight" from a naval architect's point of view.

"Severn's Sister," of the three, exhibits the greatest amount of "design" and study. She exemplifies—if, indeed, example be needed—that, in modern canoe model, nothing now exists between "first class" and "second class," except that second class by R. C. C. rules must be "clench" build. It may be answered, "But second class are limited also to 75sq. ft. of sail and 200lbs. total weight." Quite so; but, except the "clench" build, there is no reason why a second class hull should be raced with success against first class.

Some of the most successful canoes in American racing comply in either or both ways with our second class limits. Pecowsic, for instance, has sailed all her races, getting far and away ahead of other craft, under a sail plan of 72sq. ft., with a beam of 29in., and a total weight considerably under 200lbs.; she has beaten canoes of similar length which carried as much as 120sq. ft. of sail. Then Vesper, of America, was nothing but what could be produced in our second class—a clincher or lap-steak hull, quite light, with a small plate and no ballast, and a moderate sail area.

Then we may turn to Charm in England last season, and what was the general cry-out against her? That she was too small—a mere bottom of a canoe, with a deck jammed on. But she sailed well, and thereby created—well, not friends. Does any man in sober sense believe that, if Charm had been constructed of clincher build instead of carvel, that she would have been appreciably less fast? Charm, under her smaller rig, during the first matches of last season, could not get to the front, but she aitered to 80ft. main, *pro* 40; and, query, would not several of our second class canoes, under a similar increase of sail plan, make a decidedly hot time of it for some of the first class?

It will naturally follow as a question, Why do they make it hotter for firsts? Without hesitation the answer is, Because they are not fitted up to racing mark. Toy shop fitting and construction of steering gear and rudders will not hold under a sufficient press of sail to get the requisite pace. It is no good having a tail if you have not sufficient backbone to wag it. A little closer attention to such detail as deck tiler fittings, yoke ropes and foot straps, will put a canoe further ahead in a race than many feet of canvas would.

Now to return to Severn's Sister. She is presumably intended to be a "second class"—*i. e.*, if, when fitted out completely, she manages to keep within the 200lbs. She is a long, easy-lined craft, of very good-looking model. Her stem has perhaps a little too much of the river rowboat rake about it; but that may be graceful to some educations. She is "clench" built, and the "lands" may be said to hardly exist, so carefully have they been fined down. Her bottom strakes are of oak, and the topsides mahogany. She has an easy bilge, turning out of a good, but by no means flat, floor. Her good qualities will be mainly found in her model or form. The arrangement of her inside is peculiar, and though probably it has "reason" everywhere, it certainly conflicts strongly with many generally appreciated cruising notions. For instance, from the after bulkhead—which is far aft—she is open below deck until close up to the bows, where there is a quasi collision bulkhead. Hence, unless two air tanks are to be carried forward, the canoe, if capsized, would certainly be in a very critical position; for with the center plate, the mast weight, and presumably some baggage all forward, she would tertainly sink so much by the head that the little fore hatch and the mast case would be under water, and the buoyancy of that compartment, small as it is in any case, would be lost in a minute or two by its filling up.

The result would be that the stern end would, so long only as the locker lid resisted the influx of water, stand up like a Maplin Sand buoy; and she would only survive while the hatchway kept clear above water; but it is close up to the bulkhead, hence, as a fact as to displacement, the hatch would probably be partly submerged at an early stage, and all this without allowing the weight of the crew to be on board.

This is pointed out, not as a defect in the boat, but in her internal arrangement. It can easily be remedied by inserting carefully fitted air cases on each side of the center-plate case forward; but, on the whole, practical men will generally advocate that for so small and fragile a craft as a canoe to, as safely as possible, encounter the risks of venturesome voyages, a first principle is that she shall be so constructed as to undoubtedly survive an ordinary capsize in moderate weather. The Severn's Sister is fitted for tandem crew, and displays a lot of room for sleeping accommodation; but, so far, she is only in the "varnishing" stage, hence none of her fittings are in place.

A somewhat similar canoe, but again differing in mode of fitment, is the Isa—larger-looking in hull than many a first class canoe. She has the same, or nearly so, disposition of bulkheads and lockers, but differs in hatchways.

The Isa, like the Severn's sister, is a single-plate canoe, and in each case the plate is very far forward; but probably a good balance of sail will be attained by setting only a small mizen, and having also a powerful drop-plate rudder.

A very different craft is the new Shaughraun—a much smaller boat in looks; for, though her leading dimensions come out not much below those of the other two, she has less bilge and finer and lower ends, which considerably reduces her in bulk. At present she is not fitted for the "crew on deck" position of sailing; but it is a safe prediction to say that, for second class racing, where next to no ballast can be carried—owing to the 200lb. limit—the crew will have to take the deck position. She has comparatively a round floor, and very little of it; and, with the crew balancing out to the windward, she should prove a very fast craft. She is fitted with two center-plates, one forward and one aft; the balance thereby obtained will enable her to carry the comparatively large mizen she has; but it has been clearly demonstrated in practice that the use of two plates, one in front of the other (practically at the two ends of the boat), deadens every moment in maneuvering, and is detrimental to fidding her up to windward. The after-plate, where the canoe is very much cut up aft, is almost an essential in running in a heavy sea, especially if the forward plate is placed considerably forward of the midlength.

The Shaughraun exhibits some of Turk's neatest work, both in build and fittings, and her sails and rigging are all that practical seamanship, apart from fancy work, can desire. She has a narrow well with the coamings running to a breakwater point forward. She has a watertight bulkhead forward, but a very long way forward; hence if she filled by a capsize it would be an extremely doubtful question if she would float for even a short length of time with her crew on board. Her after bulkhead has a door in it, and unless that door can be made and kept perfectly water-tight, it might as well be a grating for all the floating qualities it gives. Of course doors and locker hatches can be made perfectly water-tight by washer sides and screw pressure, but as generally fitted with India rubber they soon become ineffective.

With the modern position of the skipper sitting out on the side deck, with his toes tucked under a batten or strap in the lee bilge, a capsize with the wind abeam or forward of the beam is almost an impossibility with steady wind; and should a sudden squall beam-end the canoe, and the canoe is so constructed as to water-tight bulkheads as to be not more than 6ft. length in middle compartment, all that the skipper need do is to haul down his mainsail (by its downhaul) and to heave the canoe upright by his own balance, and he will probably not get wet above his ankles.

One feature of the second class canoe is supposed to be its comparative cheapness to build, but it must be borne in mind that this is mainly dependent on the mode of building and the nature of the fittings. If a design drawing is to be carefully followed within a sixteenth of an inch, or an attempt thereto; frames or moulds to be actually taken from the body plan and set up a foot apart; the plank made to go as decided by the design, and not as mere "eye" or sweet bend of the plank suggests—a canoe so built, though clincher, will cost almost as much as a carvel ribband-built canoe. She will never look the same finish or model; indeed the model cannot be carried out with any fair degree of accuracy in clincher-build in so small a craft. Clincher-build is also more difficult for an amateur or a house carpenter to mend, should a fracture be made when out of reach of a professional boat builder.

The fittings in the later second-class canoes are an immense advantage on the early craft. Copper keel and stem bands are now fitted; "lifting eye bolts" are added to stem and stern, clutch deck tillers, yellow metal center plates, and when you come to add gratings as floor boards, and cleat racks and drop plate brass rudders, it will be found that there is very little difference in cost between a second and first class canoe. But let a man try sleeping afloat one night in a "smooth skin" and one night in "clencher build." If there is the slightest ripple, the "rip rap" all night on the clench "lands" will determine him never to patronize that build again for cruising, and if not for cruising, what is it good for?—*London Field.*

NORRISTOWN, Pa.—The first regatta of the Norristown C. C. took place April 28. It is the intention to have races every Saturday afternoon throughout the season. There are four races on the programme, but the sailing race for canvas canoes did not fill to-day. The course is one-half mile with a turn. The wind was light southwesterly, making it a beat to the buoy and a run home.

First race, sailing, wooden canoes:	Dimensions.	Start.	Finish.
Gracie, E. A. Leopold	12ft.×34in.	4 10 00	4 20 25
Princess, Chas. Wainwright	15ft.×36in.	4 10 00	4 25 08
Second race, single paddling:			
Bertha, F. H. Preston	12ft. ×26 in.	4 45 00	4 49 45
Vivian, Jay C. Knipe	9ft. 10in.×23½in.	4 45 00	4 50 00
Restless, Benj. Davis	14ft. 3in.×26 in.	4 45 00	4 50 05

The above are canvas canoes built by amateurs.

Third race, tandem paddling:			
Princess, Oscar Brant and Chas. Wainwright		5 27 00	5 31 14
Restless, H. S. Barnes and C. H. Egbert		5 27 00	5 31 27

The prizes are silk flags to go to the canoe winning the greatest number of times during the season. Judge, Benjamin Davis.

PRICE, POSTPAID $1.00.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.

Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.

The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.

The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

The Atlantic Ammunition Company's Amateur Championship Sweepstake Tournament, 1888.

For Sale by all Newsdealers.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 10, 1888.

VOL. XXX.—No. 16. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

SNAP SHOTS.

THE army of didn't-know-it-was-loaded idiots and careless handlers of firearms is increasing so rapidly that any measure looking to a mitigation of the woes inflicted by it is likely to be received with public favor. Congress perhaps acted on this belief when it gave a pension to the widow of Oscar B. Mills. It appears that Mills was an engineer in the Navy, who was killed in 1873 by a neighbor who was trying to shoot an owl. President Cleveland, however, returned the bill with his veto, giving as a reason that death at the hands of a poor marksman attempting to shoot an owl was not a case of "disability or death in some way related to the incidents of military and naval service." It will readily be seen that if every man, woman or child who is maimed or killed by the careless use of firearms is to be made a beneficiary at the expense of the United States Treasury, the surplus will rapidly be reduced.

The case of the dead terrier Sir Colin, which took a prize at the New York show in 1887, some time after his demise, points a moral. The facts appear to be that Mr. Campbell, having learned after the show catalogues had been printed that Sir Colin was dead, wrote to the superintendent, asking permission to substitute another dog for it. On reaching New York he received the necessary permission and the dog Bertie was duly exhibited, judged and given a prize. Now, a year later, the facts come out. There is no doubt that this was all wrong, but it is a perfectly natural result of the lax methods which have prevailed in dog matters ever since the first dog show was held in this country. It is the old story. Every one that is a good fellow may have favors granted him. The idea of conducting a dog show on business principles never appears to occur to the managers. It is time an end were put to this way of looking at things, but there is no hope that the A.K.C. will soon change its methods. We are not able to learn that Mr. Campbell was especially to blame in this matter, but Mr. Mortimer, who took the responsibility for the substitution, certainly was. It is the Westminster Kennel Club, however, which is really responsible for the act of its agent. This body ought to be disciplined, and a suspension from the privileges of the A.K.C. for two years would no doubt teach them and other dog show managers a much needed lesson.

A story comes from Maine that certain poachers who anticipated the coming of the game wardens poisoned a quantity of caribou and deer meat and left it where they thought their pursuers would discover and eat of it and die; and it is alleged that a lumberman did find this meat, ate of it and was, at the time the dispatch was sent, "dangerously ill." All of which is important enough if true, but it sounds very much like the yarn in Monday's papers about a Pennsylvania farmer who left his plow to follow his dog into the woods and returned within fifteen minutes, having killed a wildcat and a bear and captured alive a fox and two coons.

The American climate is responsible for a great deal, according to the dictum of the average tourist who skims over an edge of this country and then rushes home to write his book on America and the Americans. What shall be said of the American waters, when they develop in the carp, brought to them from Europe, a cunning and wariness quite beyond the ready invention and best skill of American anglers? Judge Caton, of Illinois, has succeeded admirably in raising large carp, but he now makes plaint that they are of no benefit to him, for he cannot wile them to the frying-pan. It is now in order for the enthusiastic carp culturists to extricate Judge Caton from his dilemma.

A meeting of shooters interested in providing a shooting ground for trap practice and tournaments in the vicinity of this city will be held to-morrow, as noted elsewhere. The number of those who now shoot at the traps and the number who would participate in the sport if it were practicable are so large that a suitable ground is sure to be well patronized. The meeting should be attended by individuals and club representatives. Boston's Walnut Hill range has been very largely the means of keeping alive the interest in rifle and trap in that city; equally accessible grounds near New York would stimulate the same interests here. It is to be hoped that the project of a shooting ground for New York may be carried through.

The long disputed case of the Monroe Marsh Company, involving the validity of the club's claim to the exclusive shooting privileges on a portion of the navigable waters adjoining its property, has just been decided by the Michigan Supreme Court in the club's favor. The essential part of Judge Champlin's opinion is printed in our Gun columns. The special point involved was of the club's proprietorship in certain lands which at one time formed a portion of the shore or marsh, but have been overflowed by a change of shore line and are now covered by navigable waters. Its title to this territory being determined, the club's property in the game on that territory, *i. e.*, the exclusive right to capture that game, follows as a matter of course. A decision of similar import was recently given in a case involving the riparian right of the Narrows Island Club of North Carolina.

The Hadley bill in the New York Legislature giving the Forestry Commissioners power to lease Adirondack holdings of not more than five acres, was defeated in the Assembly last Tuesday, the opposition maintaining that it would practically give over large portions of the preserve to irresponsible persons. This is partly true, but on the other hand many tracts of land would be leased by individuals and clubs who would protect their territory more efficiently than can be done under present conditions by the State. On the other hand, the lands of the State belong to the people, and there would be great injustice in giving over all the choice hunting and fishing grounds and camp sites into the possession of those who stand ready to gobble them up. Again, the actual results of the proposed system would depend in a great measure on the personal character of the members of the Forestry Commission. The exceptional authority granted to that commission would call for exceptional qualities of integrity and unselfish devotion to the public interest.

The telegraph reports two salmon taken at Bangor last Tuesday, and fair prospects for the sport, as the danger of a high rise of water had passed.

A copy of the first edition of Walton's "Angler" has been sold at auction in England for £195; and the other day a very imperfect copy brought £23.

Entries for the FOREST AND STREAM Decoration Day Trophy match are coming in. The contest promises to be an interesting one. The time for entering will extend to May 31st.

The offices of the FOREST AND STREAM are now at No. 318 Broadway. In the confusion of moving some matters of business may have been overlooked or delayed, and for such we must ask the indulgence of our patrons.

The Park petitions have been so numerously signed that we are compelled, in order to print the names at all, to adopt a more compact style of publication. The roll of signers is a long one; the list will be continued in subsequent issues.

The "last buffalo" has been done to death so often in the last few months, by so many different persons and in so many diverse ways, that its further and repeated slaughter will come within the category of those misdeeds classed as cruel and abhorrent. The "last buffalo" having already suffered so much now deserves a brief respite.

One of the eccentricities or vagaries of the game law tinkerers of Ontario, was the seriously made proposition to levy a tax on every deer killed anywhere in the Province, a license having first been secured by the hunter. The notion that any machinery could be devised for enforcing such a regulation must have originated in a brain where there was little room for practical game protective ideas.

The American Kennel Club and the Hornell Kennel Club have had a disruption and have suspended each other. It was all about Mr. James Watson. At a meeting of the American Kennel Club some months ago the executive committee adopted a resolution declaring Mr. Watson an unacceptable member. The Hornell Club refused to send any other delegate; and at the March meeting at No. 44 Broadway Mr. Watson again presented himself as its representative. He was duly voted out, and Delegate Peshall made one of his characteristically intemperate and flighty propositions, that the Hornell Club be suspended for two years, as a penalty of its contumaciousness, but the more sober sense of the meeting prevailed. At the meeting last Tuesday Secretary Vredenburgh read to the club a communication from the Hornell folks, which was of a more or less derisive character. Whereupon the American Kennel Club arose in its might and declared the Hornell Kennel Club suspended for two years. Having in one way and another gotten rid of the clubs which would not join in its little schemes, the 44 Broadway ring, yclept the American Kennel Club, will now have a smoother time.

SERPENT VENOM ANTIDOTE.

REFERENCE has already been made to the notable series of experiments conducted by Dr. H. C. Yarrow, Curator of Reptiles in the National Museum, in his endeavor to discover an antidote for the venom of serpents; and we have announced the important result of these experiments. An antidote, Dr. Yarrow believes, has been found in the fluid extract jaborandi, made from the South American plant *Pilocarpus pennatifolius*. Trials have apparently demonstrated the efficacy of this injection when administered to mammals; but it has not yet been shown to be of avail in the case of birds. This result of the National Museum series of experiments is of the utmost value to humanity, and it gives us great pleasure to publish from Dr. Yarrow's pen the first authentic and complete report on the subject. The introductory review of former experiments and of the literature relating to serpent poison is given to-day; the full accounts of the Washington tests will follow.

The Sportsman Tourist.

GOING TO GUINEA.—II.

"EXCUSE me, Parson, but I must laugh. That's the way you didn't go to Guinea. Waded round nine hours, and got lost, and nary a trout. Excuse me, I hope it hain't no disrespect, but I must laugh just a little more."

I assured him I considered it no disrespect for him to laugh at my attempt to find Guinea Pond. I could have helped him laugh, if I had felt like it.

His name was Bean—John Bean. The reader will of course know this to be his real name, it is so odd. He was the same knight of the alder pole who had offered, when the weather was clear, to show me the way to Guinea. I had been telling him how Johnny and I, in the storm, had tried to find Guinea without waiting for his help. We hadn't found the pond, but our journey had turned out to be excellent sport. That is, Bean enjoyed it exceedingly.

"Well," he said, after he had recovered his breath, "I came over to say that to-morrow I will show you the way to Guinea, if you wish to go. We'll have a good day; you never see such a sunset as that, when you may not count on a good day follerin'. I reely want to see you try one of them little rods o' yourn on a half-pound trout. Not that I doubt what you tell me, but, as the sayin' is, 'seein' is believin'.'"

The next morning we made an early start. The sun was rising over Ossipee Mountain as we began our four-mile drive. The clouds that remained after the storm were fleecy white: the fields and hills were fresh from their copious baptism. It was exhilarating to have pleasant weather once more. We congratulated ourselves, Johnny and I, that we had had all the foul weather in a lump that we could reasonably expect during our vacation weeks.

I will not delay to describe that delicious morning drive. All too soon it came to an end, and we, the trio of fishermen, Bean, Johnny and myself, began to climb Guinea Mountain.

Bean was in his way a character. Born and bred in Sandwich, and never many miles from home, an industrious, hard-working man, with a large family and no farm, a ready "hand" for all the neighboring farmers who needed his services by the day; he was yet a cheerful man, the one outlook of his life appearing to be the prospect of a day's fishing. Before I had met him he was recommended to me as the man who knew where every trout in Sandwich spent its time. "Yes, Parson," said our Yankee host one day, "he is a big fisherman—bigger even than you are, I guess. Why, that man, if he hadn't no wife and chidren, wouldn't do nothing but fish. He'd git up and go before breakfast and stay all day without his dinner, and then, to get a good string of trout, he'd forget his supper. There hain't no brook around here within five miles that he hain't acquainted with, every inch. And he's a clever fellow, too—as clever as the summer day is long." As we trudged behind him, he became an interesting study to me. In pants, shirt and hat, with low shoes, he had such freedom of body as suited his spirit. He had cumbered himself with no extras whatever. His hook and line were in his pocket; his alder rod awaited him on the shore of the pond. There was nothing to mark him as a fisherman, unless it was his breezy, youthful air. His love of angling was evidently downright enthusiasm. It was the one thing which no man could take from him.

"Bean," I called, when we had climbed half an hour, and he had got almost out of hearing ahead, and Johnny's feet, as well as my own, were beginning to sweat in our rubber boots. "Bean, let us stop here awhile; I want to look at this view." We were soon comfortably seated on the ground, and Johnny and I pulled off our boots to cool our perspiring feet in the sunshine.

We were prepared to observe the rare scenery spread out around us and below. At the northeast the eye rested on White Face and Chocorua; at the east stood Ossipee Mountain, in dreamlike repose, a majestic hill; at the south Red Hill rose, a cap of silvery cloud giving the illusion of Alpine proportions to the stately mound; at the southeast, beyond the slopes of Mt. Israel, on the side of which we were, we could see the dark crown of Black Mountain, the highest of the Sandwich range. Below us at the south, ten miles away, Lake Winnipiseogee lay in the sheen of the sun, the steel-blue water studded with numerous wooded islands, making a picture more like romance than reality. Nearer, dotting the valley, were minor lakes, with glistening faces and verdant shores—rare jewels in emerald settings. The lesser hills of the broad vale were under fruitful cultivation; the white farm houses here and there betokened prosperous thrift. It was a picture in its scope and details to bring despair to a painter's heart, yet inexpressible delight to the beholder. For a time I was lost in the view. I was wakened from my revery by the practical Bean, reminding us it was time we renewed our tramp.

Then up again through the forsaken orchard; up and down through the juniper forest; now wading the streams extemporized by the recent rains; now through stretches of mud, which we searched in vain for more bear tracks—we went hurriedly and hotly on, till we came to the old mill site.

"Now here's where ye got lost," said Bean. "You followed this stream up Mt. Israel; you should have followed it down. But Lord bless you, you'd ha' gone round and round like a hen with her head cut off, if you'd tried to get to the pond that way. This brook is the most bewilderin' thing a sober man ever had anything to do with. The pond is right over there about half a mile, but this brook goes about five miles to get to it, and I hain't made up my mind that it has ever found it yet."

Under Bean's confident lead we started into the brush. Emerging presently we found ourselves by the side of the brook, where it spread into a little pond. I was tempted to try a fly on the luring pool. I jointed my 8-ounce bamboo and whipped the water for a while, more to Bean's satisfaction than my own, for no trout was to be taken from that water. Then we started for Guinea Pond direct. I did not think it worth my while to encase my rod for so short a distance. I hooked the flies through the rings and slung it across my shoulder. Soon of course it got into a snarl; the line had an affection for every twig it came near. The brush grew thicker. The day had become immoderately warm.

"Bean," I said, "how much of this brush have we got to go through? It is getting to be a little hard—for Johnny.

"We'll find a trail soon," said he, not in the least discomposed.

Presently we came to a "lumber slash." This signifies a section of forest where hemlock trees have been felled in the winter, their trunks peeled of the marketable bark and then left to decay. The stumps here were about six feet high, indicating the depth of snow on the ground at the time the woodman did his work; the branches remained on the prone trees, making an almost impenetrable barricade. It is easier getting a comb through a tramp's hair than a fly-rod through such a labyrinth of dry brush. Alas for me that I was in haste. Alas again that it is my fate to wear eye-glasses. Alas once more that Johnny had fallen headlong and sadly scratched his face and torn his jacket. I own I felt embarrassed. When I gathered up my senses for a calm survey, this I found to be the condition of things. My haste had served to wind my line and rod around at least three dozen twigs; my eye-glasses had gone, cord and all; I was corraled by fallen trees. Go ahead I could not; to go back seemed almost impossible. With Johnny's help, however, I recovered my eye-glasses; he discovered them hanging on a limb; I deliberately proceeded to untwist and unsnarl my line and to carefully encase my rod. Johnny, meanwhile, had been calling for our guide.

"Mr. Bean! Mr. Bean!" he called. I soon began to help him.

Bean is not a good name to shout aloud. It contains no vowel favorable for a protracted orotund swell. I expended on the word my utmost resources in elocution. Johnny also showed an astonishing lung power.

No sound but echoes came back.

Then, for convenience to our vocal organs, we changed Bean's name. We called explosively, "Hi-yi-yi-i!" Our voices must have been frightful to the wild beasts. Still only echoes came back to us.

"What are we going to do?" asked Johnny.

"That is what I would like to know," I said. "It is the most ridiculous predicament I have been in for a week. To think of getting lost of a sudden like this. I can't understand what Bean means by leaving us in such style."

"I guess he means to go to the pond and catch all the fish before we get there," said Johnny.

It is never comfortable to feel lost in the woods. It is all the more uncomfortable when you are in a hurry to make the most of a day's fishing. It does not add to your equanimity not to know how you got lost. With a desperate effort, however, we calmed ourselves. We attempted to move on in the direction we assumed Bean might have gone. Whether we were going ahead or back we could not tell. Johnny, I am sorry to say, began to show some signs of temper. I am not certain but I sympathized with him a little. It was, of course, needless. The scratching brush was not to be blamed for tearing our clothes and flesh, and Bean, who had left us to our lonely battle, was not present to hear our remarks.

As soon as we had got to a breathing place we began to call our guide again. We went through the programme, "Bean! Hi-yi-yi-i!" protracting each vowel as long as our breath would allow, and feeling like sailors befogged on the briny deep, we added the resonant, "Ahoy!" and only echoes came back to us. Then we sat down. We couldn't enjoy the view. Scattering trees above, with dry logs and dead brush beneath, do not make a very enticing forest scene. If we could have felt we had any laurels to rest on we might have been more contented. A half hour wore away, three-quarters, it began to be monotonous.

"Hillo!"

Bean's voice at last! It came from a distance. We started again. We had got on perhaps half a rod, when Bean came within talking distance.

Good nature, like consistency, is a jewel. If one don't for the moment feel it, it does no harm to assume it. I gently asked Bean where he had been.

"Sure as preachin'," he replied, "I don't know. I have been trying to find the pond, and I must ha' got beyond it. This beats me all out. There used to be a sort of trail I could foller, but I hain't seen it yet."

Bean came up. We held a council. We knew, at least Bean knew, the general direction of the pond. We proposed to shape our course by the sun. Well, after half an hour more of such difficulties as we had thus far endured, we cleared the lumber slash and then came quickly to the pond.

Guinea Pond! Our elusive goal was reached at last. We had got to Guinea. It was not a remarkable sheet of water to look upon. Snugly ensconced in the thick spruces, it could scarcely be seen more than twenty feet inland. It was perhaps two acres in size. Our adventures, however, were not quite over.

"My soul," said Bean, "I never saw this water so high. Now where is the raft?" Taking a survey he declared it must be in the bushes on the opposite side. "Just wait here," he said, "and I will go around and pole it across."

I proceeded to get my gear in readiness. When I had my rod and line in working order and had also fixed out Johnny for business, I attempted to make a cast from the shore. I waded out, that my line might clear the trees. The water had flowed over a wide space of sward, leaving it shoal enough to wade with rubber boots. The bottom rolled under my tread as I walked, the sward itself was afloat. It gives one a queer sensation to walk on actually rolling ground. I was careful not to stand long in one place for fear of sinking through. I essayed to go further out. I saw about five rods away what might be the outlet to the pond. It seemed clear wading to its proximity. When I had come within casting distance of the right spot the water was within two inches of the top of my waders. I could not stand a moment in one place without even that space being uncomfortably lessened. Nevertheless I made a cast. The flies had no sooner lighted in the water than a trout rose to them.

"What was that?" asked Johnny from the shore.

Before I could answer I slumped through. The cold water instantly filled my boots. "Amen!" I heard Bean shout across the pond. What he meant I didn't know and didn't care. I had at once sunk nearly to my waist. I confidently testify that I did some vigorous treading. I after a while scrambled to the surface. My rod (fortunately I had not hooked the trout) had flown out of my hand when I sank, and was lying some distance from me. I started toward it. At about the second step I went through again. I heard Johnny on the shore exploding with laughter.

"I'll tell of you," he shouted, "you're dancing."

I hadn't thought of such a thing! When I stooped for my rod I went through again. When I had recovered myself a little, I said to Johnny, who was capering on the shore:

"You shouldn't have laughed at me; you should have come and helped me."

"I'll come now," he said.

It was what he had been aching to do. He came toward me on the run, not hearing me telling him to go back, till he had come some two rods from the shore. Here he paused to listen to my appeal. The pause was unfortunate, for he, too, went through. It was my turn to laugh at Johnny; but I hadn't the breath or the heart for it. When I had dragged him to shore we both had time to feel glad.

That was our introduction to Guinea Pond.

"What was you doing, Parson, out there on the mash?" asked Bean, at that moment coming toward us on the raft.

"First tell me what you meant by crying 'amen,'" I said.

"Oh, that's what we Methodists say when we feel glad. Just then I was glad 'cause I had found the raft."

"All right," I replied. "I was out on the marsh treading down the bottom."

"I thought," he rejoined, "you was trying to tread a muskrat out of his hole."

So we went to Guinea! Of course we embarked on the raft and scorched in the sun till our clothes were dry again. Of course we filled our creel with speckled beauties. Of course Bean had the satisfaction of seeing the withe-like rod capture a big trout. He gracefully acknowledged that an alder pole and an angleworm could not monopolize the catch of wary trout. We on reaching home that night were congratulated as having had better than the fisherman's luck. Johnny was not the only boy among us.

The moral of my story: If one tell you to go to Guinea, think twice before you start; but if you start, expect a trial of perseverance and patience.

REV. OSCAR F. SAFFORD, D.D.

LAKE MISTASSINI.

IN his guide book descriptive of the Lake St. John and Saguenay region Mr. W. H. H. Murray has this to say of the Labrador Peninsula and Lake Mistassini:

If you will but glance at the map you will observe that the country north and east of a line drawn from the southern point of Hudson's Bay to Quebec is of enormous size, and those of us who have traversed it to any extent and studied its geography and its strange historic and prehistoric races and traditions, regard it as one of the most unique and interesting sections of the globe. Its physical characteristics are remarkable. It is a land of lakes, of rivers, of forests, of tangled swamps, of wild wastes, of rocky desolation, of strange phenomena.

The country lying between Hudson's Bay and the eastern line of Labrador, on a line drawn east and west, and from the St. Lawrence and Hudson's Straits drawn north and south, is a vast sweep of territory. The distance from Moose Factory, on the west side of James's Bay to Labrador, is as great as from Moose Factory to Washington, D. C. This will serve to give the American tourist some idea of its extent. Père Albanel, who partially trailed across this monstrous wilderness in 1671-2, notes that he met and overcame the opposition of two hundred rapids and four hundred portages, and he began his journey no further east than Tadousac. No white man, as far as is known, living or dead, has ever crossed this country from east to west or from north to south, and save for a few patch-like settlements, as at Chicoutimi and Lake St. John, and a few straggling lumber camps, or fishing stations, it is an uninhabited wilderness of a most savage character, only threaded here and there for short distances by trapping lines. The Jesuit Missionary—Père Albanel, two hundred and fifty years ago drew a trail across it from Tadousac to Hudson's Bay, a single trail through a space as wide as the country between Maine and Lake Erie. The Price brothers have pushed their lumber camps a little beyond Lake St. John in spots. The government some years ago started two expeditions into it that went a considerable distance, but completed nothing; while the Lake St. John Railway and the Provincial Department of Crown Lands have surveyed a score or more of townships or parishes, but beyond the scanty and unsatisfactory glimpses thus obtained, nothing is known of this monstrous forest and wild waste of land. It is a *terra incognita*, as truly so as when it was in popular belief the home of pigmies, of dwarfs, of giants, of headless men and semi-human monsters.

In this connection it is fit to state that there is no map of this region that is worthy to be dignified by such a name. The reason of this is because the first one was drawn from the map makers' imagination, and all subsequent ones have only repeated the first. The charts of the St. Lawrence coast are of course correct, but the land maps are useless. The survey made by John Bignell, Esq., began at Bersimites and ending at Little Mistassini was scientifically conducted, and so far as he went he did his work well. But no map has been published of his survey, nor is there one likely to be. I have the honor and profit of a personal acquaintance with Mr. Bignell, and he has most courteously put his knowledge of the country he traversed at my disposal. He probably knows more of the Labradorian Penninsula in its physical geography, than any other man living, and without his valuable assistance I could never have prepared for the public the splendid map accompanying this volume. In honor of Mr. Bignell, and in acknowledgment of the valuable services rendered his country by a life time of professional labor in her interest, especially by his great exploration from Bersimites to Little Mistassini, and as a protest to the treatment to which he has been subjected by the country he benefitted, I have accredited it to the public with his name. This Bignell map is the only map in existence that is accurate over any large extent of territory. We could have filled the blank space up easily enough, had we not decided to draw the map by what is actually known of the country, and not what is guessed at. There is not a lake located, a river traced, a portage marked, good camp sites designated, or locality of sport

mentioned, that has not been actually visited by Mr. Bignell or myself, or some reliable surveyor, angler, sportsman or guide.

As bearing upon this point and confirming my position, I will introduce the following letter, from E. E. Taché, Assistant Commissioner of Crown Lands, P. Q.:

PROVINCE OF QUEBEC, Department of Crown Lands, Quebec, 27th March, 1888. W. H. H. Murray, Esq., Saint Lewis Hotel, Quebec: Sir—I beg to acknowledge the receipt of your favor of the 25th inst., and to state that, in giving you a list of all the maps showing Lake Mistassini and surrounding country, that have been published at various dates, it would necessitate quite an amount of work, and would after all throw very little light on the subject. I would, therefore, state that before the exploration of the Mistassini Region made some years ago, by the Geological Survey of Canada, and the more recent one performed by Mr. Bignell, had taken place, all the maps that were published of that region seem to have reproduced Lake Mistassini as it is shown on Père Lauré's map. Placing myself at your disposal for all supplementary information that I may be able to give you on the subject, I remain, sir, your most obedient servant, E. E. TACHÉ, Ass't. Commissioner.

In Canada, here, the inaccuracy of maps covering this country and the absence of reliable information touching it, are matters of confession and regret. It has been left to a certain frivolous writer in the columns of the FOREST AND STREAM to discover and proclaim to the world that Mr. Murray and everybody who desires to fetch a trail through this vast region, can find all needed detail geographical guidance in Mitchel's Atlas, published in 1855! So much easier is it to survey a wild region in an easy chair, with the help of an ignorant pen, than with pack on back and chain in hand. As a matter of profound geological and historic interest I have caused at my own expense, transcriptions of Père Lauré's map (1733) of the Mistassini country to be made. From this map, as Mr. Taché says, all subsequent maps, with guesswork modifications and enlargements, have been made. If Lake Mistassinni is where Father Lauré located it, and of the shape and size he gave it, then it is evident that Mr. Low, who claimed in his last report to the Government at Ottawa, to have surveyed it, never saw it, but surveyed some bay of the big lake, or some lake near it, and that the real Mistassini, of which fame through all the northern tribes speak, has yet to be seen and surveyed by a white man. My own feeling is that Father Lauré is in gross error in his chart of the lake, and that there is no such lake as is on his map there. But how he could have fallen into so gross an error, I cannot conceive. But the lake, whether big or little, is not the most interesting natural curiosity of the region by any means, but in it is a curiosity, and a marvel, far more interesting yet, if one may but find it.

Natural History.

SNAKE BITE AND ITS ANTIDOTE.—I.

Experiments With Crotalus Venom and Reputed Antidotes, with Notes on the Saliva of Heloderma ("Gila Monster").

BY H. C. YARROW, M.D.

Curator Department Reptiles, U. S. National Museum.

IN 1654, Francisco Redi, an Italian, of whom Huxley says he was "a man of the widest knowledge and most versatile abilities, distinguished alike as a scholar, poet, physician and naturalist," published the first work extant upon the nature of serpent venom. It was called "*Osservazione Intorno alle Vipera*," and was printed at Florence. In this rare book are corrected many of the popular superstitions and fallacies prevalent at that time. Although little was added to our actual knowledge of the properties of venom and its composition, still the author is entitled to the credit of having been the pioneer in this class of literature. From Redi's time up to the present day, a multitude of observers in this country and abroad have given to this subject much patient study and research, with a view to discover some means by which the suffering and deaths due to serpent venom might be averted.

In 1672 there was published in Paris a volume of 245 pages by Moyse Charas entitled "*Nouvelles Expériences sur la Vipère*," which contained a reply to certain strictures upon his work made by Redi, and it is interesting to note the many curious remedies suggested by this writer, who appears to have placed great faith in what he calls the "*sel volatile de la vipère*," a preparation made by distilling chopped-up vipers, old and young. In 1702 Dr. Richard Mead—afterward physician to George II. in 1827—published an account of his investigations upon the subject of snake poisoning, which is interesting although not of much practical value.

From 1702 for sixty odd years nothing of consequence was published, but in 1767 at Lucca appeared the great work of Felix Fontana, entitled "*Richerche Filosofiche Sopra il Veneno della Vipera*," a work so important that it has been translated into several languages. As an example of the amount of work done by this industrious and learned Italian, it may be mentioned that he performed over 6,000 experiments, employed over 3,000 vipers, and had bitten more than 4,000 animals. His most important discoveries were, first, with regard to the actual position of the poison gland, which is above and behind the fang, Mead and James having declared that the venom was contained in the fang sheath; second, that the venom of a viper was not hurtful to the reptile itself if injected beneath the skin, or if a bite was inflicted by one of its own species; third, that venom was harmless to cold-blooded animals such as leeches, slugs, snails and some harmless serpents; fourth, that viper venom is poisonous to all warm-blooded animals, and fifth, that venom was not absorbed by mucous membranes. It is interesting to note that the conclusions of this distinguished naturalist have been verified repeatedly by later observers.

In 1777 M. Sage, of the Academy of Sciences at Paris, published a pamphlet recommending the use of ammonia in snake bite, which plan of treatment, however, was not original with himself, as it had already been recommended by Jussieu. It was based upon the theory that the active principle of the venom was an acid salt, but Fontana, who later on performed a number of experiments with it, condemned ammonia as useless, if not hurtful. With regard to the acidity of venom, Mr. Vincent Richards states that at first it is acid, but soon becomes neutral, and this fact has been verified by the writer.

In 1796 Dr. Patrick Russell studied the subject of serpent poisoning, and the results are embodied in a book which was published by the Court of Directors of the East India Company. He performed a number of experiments with Indian serpents, and brought into notice the famous Tanjore pill, the principal ingredient of which is arsenic, in which it may be added he seems to place but little reliance, as he recommends in addition either immediate amputation or the ligature. Dr. Russell, it is claimed, was the first to show the error of the popular belief that the mungoose is proof against the venom of the cobra. It is true that if this little animal is left alone with a cobra he is invariably victorious, but if bitten by the snake he inevitably succumbs. It is a curious fact, vouched for by Mr. Vincent Richards, that after the conflict the victorious mungoose gnaws out the cobra's fangs. Dr. Russell's book is interesting as marking some onward progress in the study of venom, but it can hardly be considered as a very valuable contribution to knowledge.

In 1799 a Mr. Boag in studying methods of treatment in snake poisoning, advocated the use of nitrate of silver and nitric acid baths, as well as the salts of mercury, but curiously enough, he seems to place great reliance in human saliva as an antidote, probably because it was recommended by Seneca and the elder Pliny. Arsenic he unhesitatingly condemns as being as dangerous as the venom. He believed that death after snake bite resulted from an abstraction of oxygen from the blood, and to overcome this he proposed a speedy oxygenation of the system by artificial respiration, and other methods of procedure. This gentleman made a number of experiments to prove his theory, all of which were unsuccessful.

In 1801 Mr. John Williams advocated the claims of ammonia as an antidote and gave a history of several cases, which he believed had been saved by this agent, and, in 1809, Dr. Macrae, who was bitten by a cobra, stated that his recovery was due to thirteen spoonfuls of ammonia which he swallowed.

Mr. Breton, in 1825, published the results of a series of experiments with serpent venom, but he was evidently mistaken in his statement that "an innoxious snake can be killed by the venom of a poisonous snake."

In Vol. II., 1826, of the "Medical and Physical Transactions of the Calcutta Society" may be found an article by Dr. Daniel Butler on snake bite, in which he recommends the administration of opium, brandy and sulphuric ether in cobra poisoning, his treatment being founded upon the theory that the heart and arterial system are principally affected, an hypothesis now known to be untenable, as we know that the principal action of cobra poison is upon the respiratory centers. He also recommends the use of the ligature, dry cupping and suction of the wounds, and gives the history of several cases.

Dr. Davy, in 1839, published an account of some experiments with the poisonous snakes of Ceylon, but his studies possess little, if any, practical value.

From this period until 1860 nothing of importance was published regarding antidotes to serpent venom, although it should be mentioned that various papers on the subject of reptiles and their venom had been published from time to time by such observers as Dr. Barton, Mangili, Prince Lucien Bonaparte, Bernard Gratiolet and others. Brainard and Green recorded their researches in 1853, the former publishing a separate essay in 1854.

In 1860 the Smithsonian Institution accepted for publication a work which has become classic, and which appeared in January, 1861. It was entitled "Researches upon the Venom of the Rattlesnake, with an Investigation of the Anatomy and Physiology of the Organs Concerned," by S. Weir Mitchell, M.D.; and this quarto of 117 pages has done more to advance our positive knowledge of *Crotalus* venom than any previous publication. The conclusion reached by Dr. Mitchell, as a result of his studies so far as antidotes were concerned, was that none of those in reports were reliable. About the same time that the work already mentioned was passing through the press, a paper by the same author, entitled "On the Treatment of Rattlesnake Bite, with Experimental Criticisms upon the Various Remedies now in Use," appeared in the *North American Medico-Chirurgical Review*, 1861, V., 269, and gave the results of numerous experiments with so-called antidotes, and in summing up the author recommends no special plan of treatment, but advises the ligature, or excision, or both, with the administration of stimulants; in short, the general symptoms are to be treated according to the indications.

Another essay by the same author appeared in the New York *Medical Journal*, 1868, entitled "Experimental Contributions to the Toxicology of Rattlesnake Venom," and in this Dr. Mitchell corrected some of his views published in previous papers.

Following the essays of Mitchell in 1872 came the magnificent folio work of Dr. Joseph Fayrer of Calcutta entitled, "The Thanatophidia of India," being a description of the venomous snakes of the Indian peninsula, with an account of the influence of their poison and life, and a series of experiments, London, 1872. This work, beautifully illustrated with thirty-one imperial folio plates drawn from life by native artists, is a veritable monument of patient research, and a most valuable contribution to our knowledge of the effect of the venom of the different poisonous snakes, with which India is so abundantly supplied. Unfortunately, so far as mitigating the loss of human life is concerned, the author is obliged to admit that no plan of treatment can be absolutely relied upon, as he tested every known or asserted antidote. In treating a case of serpent bite he would employ ligature, excision and general treatment. A number of other papers have appeared from time to time, all more or less valuable, by such well-known authors as Dr. Shortt of India, Harford of Australia, Brunton and Fayrer, Vincent Richards and others, but in none of them is an account of any discovery of a physiological or chemical antidote to serpent venom, once it is diffused through the circulation.

In 1881, however, Dr. J. B. de Lacerda, director of the physiological laboratory of the National Museum of Rio de Janeiro, electrified the scientific world by announcing to the French Academy of Sciences that he had discovered in *Potassa permanganas* an absolutely reliable chemical antidote to the venom of the *Bothrops*, a poisonous South American genus of serpents. In the experiments which were made upon dogs, the venom dissolved in water was injected beneath the animal's leg, and in from one to two minutes afterward a one per cent. solution of permanganate of potassa was thrown into the wound made by the syringe. In other cases the permanganate solution was thrown directly into a vein, and out of thirty cases only two of the animals succumbed to the effects of the *Bothrops* venom. In some instances the permanganate was not employed until the characteristic symptoms of poison manifested themselves. He formally expressed himself that in this salt we possess an absolutely reliable chemical antidote.

It was not to be supposed that such astonishing results could be accepted without further experiments by various persons, and in 1882 Dr. G. Badolini, of Bologna, repeated Lacerda's experiments and signally failed. Mr. Vincent Richards, of Calcutta, who had been a member of the Snake Poison Commission in India, having learned of de Lacerda's studies, at once instituted a series of experiments to verify if possible the statements made, publishing his conclusions in the *Indian Medical Gazette*, Calcutta, XVII., I., 57, 85. He is of opinion that the salt is not, strictly speaking, an antidote, but that it may prove of service in neutralizing the venom while in the tissues, but is of no service if the poison has been absorbed into the general circulation. In his over one hundred experiments he used solution of cobra poison and permanganate solution varying in strength, and from his well-known careful method of working, great reliance may be placed in his statements. His remarks in summing up will be given further on.

Theodore Aron, one of Prof. Binz's assistants at the University of Bonn, also experimented in 1882 with the permanganate as an antidote to cobra poison, publishing his results in the *Centralblatt für Klinische Medizin*, Bonn, 1882, No. 31, Nov. 18, and states that he saved some animals by its uses, but he seems to attach much more value to the use of a solution of chloride of calcium, for out of twenty-two experiments with this salt, he saved seventeen of the rabbits which had been inoculated with the venom. He also used alcohol, caffeine, atropine and bromine as antidotes, but all failed.

In April, 1882, Dr. Couty, who had assisted Dr. de Lacerda with his experiments in Brazil, sent a communication to the Academy of Sciences of Paris, in which he stated that, after having made experiments himself, he was obliged to conclude that the permanganate had no antidotal effect upon serpent venom; when in the circulation all of the animals inoculated died. De Lacerda, in answering the statement of his former colleague, mentions that a rupture of friendly relations had taken place between himself and Dr. Couty, and explains why the latter had failed, when he himself had almost invariably succeeded. Space will not permit of this being repeated here.

It is but fair to state in connection with the credit given to de Lacerda that Dr. Armand Gautin of Paris, about the same period, in experiments with cobra and rattlesnake poison, came to the conclusion that a solution of caustic potassa acted as an antidote to the venom, and his memoir was read before the Academy of Medicine July 26, 1881.

In 1884 Dr. de Lacerda published in Rio de Janeiro an 8vo. volume of 200 pages entitled *Leçons sur le Venin des Serpents du Brésil et sur la Méthode de Traitement des Morsures Venimeuses par le Permanganate de Potasse*," in which he reiterates his opinion regarding the antidotal value of the permanganate and states that his discovery is "a veritable scientific and humanitarian conquest of which the happy results have been verified a thousand times, not only in Brazil but throughout the world." In closing he says: "It is not for my country alone that I have written these pages, for I hope they will be read in many parts of the globe. It is for this that I appeal to the competent men of all countries begging them to correct any fault or errors I may have made, and to fill up the gaps that may exist in this book." The writer would state that these few sentences of Dr. de Lacerda instigated him to perform the experiments which will be given hereafter.

Much attention, of late years, has been attracted, especially in the British colonies, to the so-called discovery by Dr. Geo. B. Halford of *Liq. ammonia* as an antidote to serpent venom, and while the intravenous injection of this liquid may have originated with him, the substance is one which has been repeatedly tried and failed, even so far back as the time of Fontana. Halford's theory appealed so strongly to the popular mind that in Melbourne, Australia, hundreds of hypodermic syringes were sold to the settlers, who fully believe they held in their hands an absolute antidote to the bites of venomous serpents. Sir Joseph Fayrer and numerous observers have found it entirely useless in cobra poisoning, and Mitchell states that as a stimulant it is far inferior to alcohol. It is only fair to Dr. Halford to state that he reports a number of apparently authentic cases of snake bite in which the patients recovered after ammonia had been injected into the veins. The writer may add that in his experiments with the *Liquor ammonia* the results were astonishingly disastrous. These experiments will be related in another part of this paper.

The action of the venom of the copperhead (*Ancistrodon contortrix*) has been studied in 1883 by Dr. Isaac Ott, of Easton, Pa., and finally has appeared the magnificent study of venoms by Dr. S. Weir Mitchell and Dr Edward T. Reichert, published as one of the "Smithsonian Contributions to Knowledge." So far as the writer knows, with the exception of a few unimportant papers, the subject of serpent poisoning and antidotes has in this review been brought up to date.

(TO BE CONTINUED.)

HABITS OF THE CARIBOU.—North Livingston, Maine.—R. D. K., writing from Danbury, Conn., saying that caribou do not yard in the winter, makes a very great mistake to my certain knowledge. They do not yard until the snow gets quite deep and then they do so, for I have taken them in their yards forty years since, and know positively, without the shadow of a doubt. The caribou is the swiftest on foot of any animal that inhabits the forests of northern Maine. Their skins are the best to fill snowshoes of any other thing known. When the skin is wet it tightens under your feet and never gets loose.—J. A. H.

FERRISBURGH, Vt., April 29.—On the evening of the 26th heard peeping frogs and saw Split Rock Light for the first time; 28th heard grass plover and white-throated sparrow; 29th saw barn swallows. Hepatica has been in blossom ten days, bloodroot five days, adder tongue two days.—AWAHSOOSE.

MOUNTAIN LIONS CLIMB TREES.

CEDAR MOUNTAIN, Wash. Ter., April 26.—*Editor Forest and Stream:* In answer to the question whether mountain lions climb trees, I know of nine instances of their doing so.

In 1873 one was treed by a sheepdog and killed by a Mr. Geyter, on Mount St. Helena, in California.

In 1877 Mr. Russell loaned a dog to a friend of his, who treed and killed two by the aid of the dog, on White River, W. T.

In 1884 Jim Kinsey, a bear hunter, treed and killed two with the aid of five bear dogs in the Bald Hills, Humboldt county, Cal.

In 1887 Dan Boyle, a prospector living a few miles from here, started out with a pointer dog to look for pheasants one morning. He had not gone far, when his dog came down the trail at the rate of sixty miles per hour with a lion in pursuit. Mr. Boyle raised his Winchester and fired, at which the lion sprang to the trunk of a fir tree and started for the top, where he was killed by the gentleman, and lodged in the tree, which was cut down to secure his scalp, which, in this country, is worth $6 or $8.

In 1887 D. Maxwell treed, by the aid of one dog, and killed at least one of the gentry.

In 1887 Mr. Jenkins, living near here, borrowed the Maxwell dog, and treed and killed one.

In 1885 or '86 a German started from a store a few miles from here to go home with a dollar's worth of sugar, a piece of bacon and a pair of boots, all in a sack. Before he had gone far on the trail, he became aware of the fact that he was being followed by a lion. He hurried, but so did the lion, and finally he dropped his sack and started on a run through the woods. Arriving at home he got his dog and gun and started back. He found the sack with the provisions and boots torn to pieces. The dog soon struck the track and treed the animal, when the German commenced to pump lead. At the fourteenth shot the lion bit the dust.

Now, if they won't climb trees, and the tallest and straightest fir trees in North America, I would like to know the reason why? Of course I am going on the supposition that panther, puma, painter, California lion, mountain lion and cougar are but different names for one and the same species of animal. J. C. McK.

Editor Forest and Stream:

While hunting in northern Idaho this year, I was out one day looking for whatever might show itself. I had with me a large mongrel hound trained for cougar, etc. We came on a cougar lying full length upon a log. The cougar and dog made a break at about the same time, and the cougar went up a tree in the most approved style—no springing up to the branches, but climbed up the tree to the second branch. The first branch was thirty feet from the ground, and the tree perfectly straight. He was a small animal and decidedly hungry looking and thin.

I also know of one that was killed from a tree as straight as an arrow, and no limbs lower than thirty-five feet. The tree stood apart from others, so he could hardly have jumped there. He was also small. I also saw one killed this year that was so large that I would wager that he could never have supported his weight by his claws; but as I saw the first one mentioned climb, I know that they can climb if they will or rather have to.

NICA.

TROY, N. Y.

Editor Forest and Stream:

I noticed in your last issue a question as to whether a mountain lion would climb a tree. I have killed sixteen mountain lions, and from experience I should say they rarely take to a tree when they are in the neighborhood of dense brush. But I do know of their climbing trees. As one of my herders was corraling his sheep, a young mountain lion made a dash into the herd and killed ten of them. The herder fired at him almost instantly and slightly wounded him. The dog instantly gave chase and the lion took refuge in the topmost branch of an adjacent tree. I arrived on the scene just as the herder had dislodged him from his leafy perch with a shot from his rifle. HENRY MACDONALD.

CHICAGO, Ill., April 30.

ARE THESE MUSSELS EDIBLE?

IN the Woods of Young County, Texas, April 23.—*Editor Forest and Stream:* The Clear Fork of Braros and other streams hereabout contain great numbers of mussels. The shells of some of these are so large and withal so beautiful that I use them in camp for soap dishes, and would use them for soup plates were they not liable, from their peculiar shape, to tilt over and spill the soup. They are fine for eating scrambled eggs and custards out of with a spoon. 'Tis my opinion that the Fairies and the Pixies set their tables with this ware. However, I have no facts to sustain this opinion, except the fairy-like beauty of the ware and its admirable appropriateness for such creatures. The point that now concerns me most, touching these shells, is this: Are the creatures which inhabit them good food for man? I have been worrying over this question for some time, but have not dared to put it to a practical test by eating them myself. Many times I have been strongly tempted to advance upon them, but my courage failed me and I fell back. Nor could I persuade, though trying hard, any of my fellow campers to make the first break; they all saying that they would freely eat next should I eat first and survive or fail to have an attack of cholera or hydrophobia. The truth is, the creatures that dwell in these beautiful pearly houses are not very pleasant to look upon, being a pale, shapeless mass, flabby and slimy. But they ought not to be condemned for that reason. The oyster, also, is an ugly creature, but there are few things that taste so good. I appeal to my friend Fred Mather. If the mussel is good to eat, I am missing a great many good bowls of soup through ignorance and cowardice. N. A. T.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—Two Japanese deer (*Cervus sika*) male and female, one brown capucin (*Cebus fatuellus*), two red-shouldered buzzards (*Buteo lineatus*), two bluecheaded ground doves (*Starnœnas cyanocephala*), six Venezuela parakeets (*Bolborhynchus lineolata*), one piping crow (*Gymnorhina leuconota*), two laughing jackasses (*Dacelo gigantea*), one red bird (*Cardinalis virginianus*), one lesser sulphur-crested cockatoo (*Cacatua sulphurea*), and one European blackbird (*Turdus merula*). Received by presentation—Two Virginia deer (*Cervus virginianus*) male and female, two opossums (*Didelphys virginiana*), one raccoon (*Procyon lotor*), one bonnet monkey (*Macacus radiatus*), two gray foxes (*Vulpes cinereo-argentatus*), one meadow lark (*Sturnella magna*), one English thrush (*Turdus musicus*), one screech owl (*Scops asio*), two Venezuela parakeets (*Bolborhynchus lineolata*), one loon (*Colymbus torquatus*), three alligators (*Alligator mississippiensis*), two box tortoises (*Cistudo clausa*), one horned lizard (*Phrynosoma cornuta*) and one hog-nosed snake (*Heterodon platyrhinos*). Born in the garden—Two Bactrian camels (*Camelus bactrianus*) male and female, one zebu (*Bos indicus*), one Rhesus monkey (*Macacus erythræus*) and one hog deer (*Cervus porcinus*).

WHICH IS THE WUS?

DEDICATED TO "O. O. S."

A TEENTY tawnty sparrer,
A settin' on a tree,
Mixin' up his song wi' blossoms,
Which jist was bustin' free.
A boy wi' bow an' arrer,
Aout on a huntin' spree,
Knocks him 'n' his song o' blossoms
Tu dumb etarnitee,
Jes' for fun—
An' the's an awf'l fuss!

A harnsome leetle sparrer,
A settin' in a bush,
Mixin' his song o' summer
Up wi' the mornin's blush.
A science-license bearer,
His gretness for tu push,
Sends him an' his song o' summer
Tu everlastin' hush
With his gun—
An' th' haint no awf'l fuss!

Folks 'at vallys birds for singin',
An' luffs tu hev 'em raound,
Sorter blows o' spring an' summer,
A blossomin' in saound,
An' see both killin' 's bringin'
A goneness tu the airth;
Can't kinder help o' askin'
Wi' a sorter solemn mirth,
Jes' for fun—
Which way is raly wus?

DANVIS, Vermont. S. LOVEL AND HULDAH P., HIS WIFE.

Game Bag and Gun.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

Having watched the columns of FOREST AND STREAM for points in the use of the hunting rifle closely for several years, I am somewhat surprised not to see more regarding the .22-caliber; not that so small a bullet is suitable for all kinds of game of course, but for many kinds of game, and some of it a great deal larger than is generally supposed to give up to this tiny bit of lead. I have had an experience of thirty years in the use of the rifle, always looking for extremely fine work in short-range shooting, *i. e.*, at distances less than 200yds.; also many years' experience in making rifles for fine work in off-hand shooting. Those who have lost any grizzly bears, or who know it all may pass this by without reading, as it is not what they are looking for.

I have a pretty thorough knowledge of the effects of a rifle bullet on small game, having used many kinds and calibers from .22 up. It is surprising how a small animal will get away with a .50 cal. bullet when shot through back of the vitals, and how quickly they will stop when shot through well forward with the .22-cal. The game and vermin here in Massachusetts are small, the woodchuck being, perhaps, the largest and most tenacious of life of any thing. Then there are squirrels, rabbits, owls, skunks, hawks, crows, etc., which all come within range of the small-bore rifle, and many times manage to keep just out of range of the shotgun. Any one having good eyesight and nerves that can be controled—against "buck fever" I mean, for many a person who cannot hold a rifle very still will make a good showing at the target—can, with a little practice, become a good shot. And it is surprising to see with how little practice some persons become good shots, taking to the rifle naturally from the start.

There are, however, some things that are in general use that will prevent any one from ever becoming good shots as long as they use them, and it is my object in writing this to point them out without fear or favor from any one. I will not condem anything without cause and have no pecuniary interest in recommending any particular arms or ammunition, but will try to write in a spirit of fair play and justice to everything. I will confine this article to the .22-cal. rifle, to be used for the hunting of small game and home amusement. In the first place what kind of a rifle shall we use? There are lots of cheap imported guns upon the market, commonly called Floberts or Flobert rifles; these we will pass quickly by with this simple advice—let them severely alone. To say that there are no good rifles imported may be saying too much, but our American arms are much better and cost but little more. There is, perhaps, little difference in the many standard rifles of American manufacture as regards the shooting qualities, but as regards the breech action, etc., there is perhaps room for same argument as to which is the best. There is little doubt that the single-shot will give better all-round satisfaction than the repeating rifle, and the short barrel, say 24in., of medium or light weight, will please you better than a long heavy barrel.

Among the better class of factory-made guns with which I have been familiar I will mention the Maynard, Ballard, Remington and F. Wesson. There are several other kinds that appear to be well made, among which are the Winchester single-rifle and the Stevens. The writer has tested all of these and found good rifles among them all, and among them some that were not what they should be. Among the very best shooting rifles the Ballard took the first place; the rifle—which was chambered for the short 3grs. cartridge—shooting so very close that it was almost perfection, while another rifle of the same make was found to be roughly bored and not properly smoothed before rifling nor polished afterward; this would lead badly and cause wild shooting. It is not always safe to be governed by the maker's name on rifles, but like other kinds of goods the purchaser should—if he is not a judge himself—have some one who is posted in such matters select one for him; and a practical gunsmith is the best man to buy a rifle from. Do not trust to what clerks or salesmen in the stores may tell you; nine times out of ten they do not know whether a rifle has a regular or increase twist, whether it is bored smooth and regular or full of "egg chokes" the whole length, nor whether a gun is straight inside or crooked as a rainbow. All they know is that the price is a given sum and that it is a "good rifle, none in the market better;" and when you take it home you find that it will never shoot twice in the same place, and you become discouraged and lay the blame all on yourself, when in reality the most of the fault is in the gun. But to the credit of our American rifles be it said, that the most of them are marvels of perfect workmanship and fine shooting qualities combined with cheapness.

Another thing I would call attention to is the bullet breech caps and conical ball caps. Used in rifles without a short chamber made expressly for them they are a delusion and a snare; they are used in the so-called shooting galleries to a great extent—in the 3-shots-for-5-cents variety of gallery, where the target is placed about 15 feet away and the shooter divides his attention between the bullseyes and the beer. So all lovers of fine shooting, I say, let the Flobert rifle and the breech caps alone, give them a wide berth and save your disappointment and temper.

As I have said so much about what not to use I will give you the benefit of my own experience and tell you what I have had the best success with, and some of my friends (who doubtless have tried to flatter me in regard to the matter) say that some of my targets are the finest they ever saw. For my own private use I have a Maynard rifle, model of '82. This rifle has interchangeable barrels. I have one barrel that takes the .22 c.f. 10grs. powder 45grs. lead. This I use mostly on small game, etc., up to 150yds. I find it far preferable to the larger calibers. I also have another barrel, chambered for the .22 short cartridge. This barrel does good work up to 50yds., making it a good squirrel rifle and very useful for practice around home in target shooting. I have killed upward of 50 English sparrows with this little rifle the past winter and missed but very few. I have heard the .22 c.f. 15-45 Winchester cartridge well spoken of for hunting purposes, but have never tried it.

Regarding sights for rifles I can simply repeat what has been said so many times before, that there are none better than the Lyman rear and front for hunting. Some, however, prefer the Beach front sight for very fine work in the gallery and target shooting.

Don't use the .22 long pistol cartridge. If your rifle is chambered for the long cartridges take it to your gunsmith and have it fitted to the "long rifle" cartridge, or if the twist is sharp enough, the central fire cartridge. The change is easy from rim to central fire in most rifles. The short cartridge may work fairly well in most cases in the long chamber, but there will be some balls that do not go where they should, and for fine work the rifle should be chambered for the short cartridge. The .22 short cartridge has many qualities to be admired, and while the other sizes of rim fire cartridges are to be a thing of the past, the .22 short 3grs. joker is here to stay. In a good rifle it is very accurate indeed; is very cheap and saves all bother of re-loading; it makes a very light report and does not scare your game away if you do not hit it, and one need not be so very careful when shooting around inhabited country. It does not tear up your game badly; and taking everything into consideration I prefer the .22-cal., and I use my Maynard barrels of that size more than all my other rifles put together, and I have quite an array of repeating and single rifles from .22 to .50-cal. The writer would be pleased to give any pointers on this kind of rifle, cartridge or shooting to any of the readers of FOREST AND STREAM who may take an interest in fine work with the .22-cal. The editor knows my address and will furnish it, I think, if a properly addressed and stamped envelope is sent to him to pay return postage. IRON RAMROD.

SOMERVILLE, Mass.

MONTREAL FOREST AND STREAM CLUB.—Montreal, May 1.—The Forest and Stream Club of this city have about closed negotiations for the purchase for the summer club house of Bellaire, the beautiful residence of the late Alfred Brown, a director of the Bank of Montreal at Dorval. The property is picturesquely situated on a finely wooded promontory on Lake St. Louis, the house being large and commodious, with extensive grounds, which contain excellent bowling green, and lawn tennis grounds are tastefully laid out. The property cost its late owner $150,000 and is offered to intending purchasers for $30,000. The membership of the club, which is now limited to thirty, will be increased to one hundred, an act of incorporation being applied for by J. S. Hall, Jr., Q.C., M.P.P. The Forest and Stream Club has Andrew Allan as president, and embracing among its members R. B. Angus, Hector Mackenzie, Duncan McIntyre, L. J. Forget, Frank Stephen, H. Montague Allan, Hartland McDonald, Henry Joseph, G. C. McDougall and Hugh Paton.

ROCHESTER, N. Y., May 5.—The spring shooting in this neighborhood is coming to a close after a period that has afforded considerable sport to those who have no objection to shooting birds at this time of the year. There was a heavy flight of wild fowl along the lake, and unusually good bags were made by some of the local fowlers. Snipe made their appearance in fair numbers about two weeks ago, and comparatively good shooting has been enjoyed by several. The men who were out for snipe report seeing enough of woodcock to guarantee a good supply later in the season if the parents and young ones escape their multitudinous enemies.—R.

PAINTED GOOSE ON THE PLATTE.—Fremont, Neb., April 28.—On Thursday the 26th, I. B. Hickok, one of our successful hunters, was out on the Platte River after geese, and brought home twenty-six, the result of about two hours' shooting. The large bag made is not unusual here, but one of the specimens was an entirely new one for this section, and was quite a curiosity to those who saw it. It was identified as the painted, or emperor goose (*Philacte canagica*), whose habitat is Alaska, and it is the first of this variety I have known of being secured here, although I have hunted geese every season along the Platte for the last twelve years.—ELKHORN.

THE MONROE MARSHES.

[From the Monroe (Mich.) Democrat, April 26.]

FROM the earliest periods the Monroe Marsh has been a favorite resort for waterfowl, so much so that its fame became spread over the whole country, and as this class of game became scarce in the more thickly populated States, sportsmen began to make this locality their regular resort during the ducking season. Our former old townsman, Joseph Guyor, seeing an opportunity to better his financial condition, located a house on the south bank of the lower canal, and "Uncle Joe's Marsh Hotel" became a famous and favorite resort for shooters from the East, South and Canada, and every spring and fall found the house crowded to its utmost capacity with enthusiastic sportsmen. It however soon become apparent that while the shooters were growing more numerous the game was becoming more scarce, and ways and means of remedying this difficulty formed a frequent subject of discussion among the habitants of the marsh. Among the many means proposed to accomplish this it was proposed to stop the shooting after sundown and before sunrise, to limit the number of shots allowed each man, etc., etc., but they were found impracticable without an organization, and it was then the acquiring of a title to a certain amount of the real estate, and an organization of a club was proposed. This idea was considered both by the visiting and home sportsmen for a number of seasons without any result until the year 1880, when three or four visiting shooters placed funds in the hands of Mr. George Dawson for the purpose of purchasing marsh lands and forming a club. It was deemed important that at least a sufficient number of citizens of Michigan be included among the members of the club to allow it to incorporate under the laws of the State, and consequently propositions to join were made to many of our citizens, but the cost seemed to be an insurmountable objection, and so after leaving the subscription book open for more than a year, the organization was perfected without any local membership, and the Monroe Marsh Company was incorporated under the laws of the State of New York with a membership of 25 members, and possessed by lease and purchase about 2,000 acres of marsh, including the Guyor property—subsequent purchases have considerably increased this amount. The prices paid as compared with previous valuations of this property was very large, and many of our citizens disposed of property that before had been worthless, for good prices. A handsome club house and a number of other buildings were erected on the site of the old hotel and such measures as were deemed lawful and necessary to reserve the right of shooting to members of the club were adopted. These regulations became distasteful to many of our local sportsmen who had been in the habit of hunting over this territory at will, and as it became more and more apparent that the Marsh Company were determined to enforce their rules, the feeling against it became more pronounced, until it culminated in the organization of the Liberal Club, whose object was to test the claims of the Marsh Company to certain territory for shooting purposes, and necessarily involving a series of litigations. With this end in view Mr. H. C. Jackson located himself with the usual paraphernalia for duck shooting at a point opposite where the visible boundary between the Marsh Company's property and the lake had been washed away. He was warned off by the company's agent, but declined to go, and consequently was arrested on a civil process. The case was tried in the circuit court for this county in the April term, 1886, and a judgment entered for the Marsh Company. Subsequently Mr. Jackson appealed to the Supreme Court, where the case has been twice argued, and from the fact that no earlier decision was given it would seem that there was a "deadlock" upon the supreme bench until the advent of Judge Long, with him came the break and the establishment of the company's rights to the property claimed, and ends a spirited legal contest that has created much interest throughout the State.

The Supreme Court affirms the judgment of the Circuit Court in giving the Monroe Marsh Company a judgment. The court was divided, Justices Moore and Campbell dissenting. The opinion was delivered by Justice Champlin. It is very elaborate and lengthy, and quotations of the principal points will be sufficient to show its tenor. He says:

This is an action for trespass upon land covered with water. The declaration alleges that the defendant broke and entered and with his boat, oars and paddle in rowing and punting broke down and destroyed the wild rice and grass then growing, and with his gun shot at, wounded, killed and frightened away, the wild ducks and other game then nesting and feeding and other injuries, etc. The defendant pleaded the general issue and gave notice that he would show that the premises upon which the injuries were supposed to have been committed were a common highway and free to defendant, and by virtue thereof, and in the use thereof, he did all and singular the acts complained of, as he lawfully might.

Upon trial of the cause in the Circuit Court a patent was offered in evidence from the United States to the State of Michigan covering the land in question, to the introduction of which in evidence objection was made for the reason that the patent which bore date of the 16th day of August, 1882, was issued without legal authority. The objection was overruled and the patent admitted. The ruling of the court is assigned as error. It is claimed by counsel that the want of legal authority to issue the patent consists in the fact that prior to its issue the land in question was reserved for lighthouse purposes.

There is no competent evidence in the case that the land was ever reserved for lighthouse purposes.

Considerable evidence was introduced showing the present character of the land in dispute, from which it pretty conclusively appears that it bears the description of lands granted by act of Congress as "marsh and over-flowed lands." Plaintiff's testimony tended to show that at the time of the survey in 1850 there was a shore of Lake Erie running along continuously eastwardly of the place where the defendant was when he did the shooting, a distance of more than 200ft., consisting of a sand bank upon which grew a few trees and bushes. East of this bank was Lake Erie and west of it there was an extensive marsh, grown up with weeds, wild rice and rushes and mostly covered with shallow water; through this marsh ran what was known as Sandy Creek. At some time since 1850 the waters of Lake Erie have penetrated through this bank and made a passage at first narrow but increasing in width year by year by the action of the water so that the shore line consisting of a sand bank had been thrown backward and inward and has formed a well-defined bay, with a distance of over 1,500ft. from headland to headland. The shore or boundary between the lake and the marsh does not form a continuous line but leaves an opening at the western extremity of the bay, through which the waters of the lake unite with those of Sandy Creek. This opening is about 795ft. wide and is known as "The Cut."

There was a large amount of testimony introduced to show that this bay as well as Sandy Creek was navigable water and in the disposition made of the case in the court below the fact was conceded that it was navigable and used as such and I shall consider that fact established. It is also a conceded fact that the defendant was in a boat in the navigable waters of the bay, and by the aid of some rushes that grew up through the water and a structure called "a hide" and several artificial ducks as decoys, was engaged in shooting ducks upon the premises covered by the plaintiff's patent. That he was requested to desist and leave the premises by the plaintiff, through his agent, but refused to do so, claiming the right to be where he was and to shoot ducks and game because he was in the navigable waters of Lake Erie.

A point is made by counsel for defendant that at the time the State issued its patent for this land in 1883, the shore had washed away and the bay existed as a part of the waters of Lake Erie, and the mere grant of land could convey no greater rights as to fishing and shooting to the grantee than the grantor had. It seems to me that the plaintiff is unaffected by the changed condition of the shore. In my opinion the grant was effective to pass the title to the submerged land. The patent from the State passed such title as it had and if prior to its date a portion of the land had become submerged by the slow and imperceptible encroachment of the waters of the lake, the State still would be the owner and could grant the bed of the lake to whom it chose so long as such grant did not interfere with private vested rights.

Under other circumstances it might require some legislation to convey. But with regard to swamp lands the legislature already provided for their disposition. Overflowed lands are such as are subject to such periodical or frequent overflows as to require levees or embankments to keep out the water. It does not make any difference whether the overflow be by fresh water or by the rising of rivers or lakes or by the flow of the tides. Can it be doubted that the plaintiff has the right to construct a levee or embankment along the original shore line and thus exclude the water and the public from the premises?

The plaintiff claims the exclusive right of hunting within the territory covered by his patent from the State. He founds this right upon his proprietary interests in the soil under the water. He does not deny that so long as the premises remain in their present condition that the public have a right of navigation over his land, but he claims such right is a mere easement and extends simply to a right of passage over his lands in such vessels as are capable of navigating the waters of the same. He insists on the exclusive right to hunt and capture all wild game while on his own premises and that this right of capture is as much a right of property as the right to make any other use of his own premises.

Since every person has the right of dominion as to the lawful use of the soil owned by him, no man can sport or hunt upon another's land, but by consent of the owner. The defendant claims that he had a right to shoot the wildfowl from his boat because as the waters were navigable where he was he had a right to be there. There is a plausibility in the position which considered in the abstract is quite forcible, and if applied to waters where there is no private ownership to the soil thereunder would be unanswerable. But so far as the plaintiff is concerned, defendant had no right to be where he was, except for the purpose of pursuing the implied license held out to the public of navigating the waters over his land. So long as that license continued he could navigate the water with his vessel. He could seek shelter in the bay and cast his anchor therein in case of storm, but he had no right to anchor his decoys for the purpose of attracting ducks within the reach of his gun. Such acts are not incident to navigation and in doing them the defendant was not exercising the implied license to navigate the waters of the bay but they were an abuse of such license.

It does not follow that because a person is where he has a right to be, he cannot be held liable for trespass. A person has the right to drive his cattle along the highway, but he has no right to depasture the grass with his cattle in the highway adjoining the land of another person. In the case under consideration the defendant had the right of using the waters of the bay for the purpose of a public highway in the navigation of his boat over it, but he had no right to interfere with the plaintiff's use thereof for hunting, which belongs to him as owner of the soil. And this case seems to have been planned to test the plaintiff's right to the private and exclusive use of the land covered by his patent for sporting purposes. As owner of the soil under the water I think he is entitled to such exclusive right and that the judgment should be affirmed.

I may add in conclusion that aside from the ownership of the plaintiff of the *locus in quo*, the only important question in the case is "whether a man has the exclusive right of fowling upon his own land." If he has, it can make no difference with that right whatever whether it be upland or covered with water.

ROYAL HUNTING IN 1520.

AMONG the state papers of the reign of King Henry VIII., there occurs a letter from Sir Richard Wyngfeld to that King, descriptive of a hunting scene of that day, from which the following extract is taken, the only change from the original being in the spelling, which is made to conform to that of modern times:

"Soon after 3 o'clock the said afternoon, he (Francis I. of France) went to hunt for the wild boar, and caused me to go with him, which boar was killed after such manner as here followeth. When he came to the place in the which the boar lay, there was cast off one hound only to him, the which incontinently had him at the bay. And then immediately was thrown off upon a twenty couple of hounds, with three or four brace of mastiffs let slip, all which drew to the bay, and there plucked down the poor boar, and the King with divers others being afoot, with their boar spears dispatched him shortly, and then the King himself, after their fashion, cut off the right foot of the said boar, which done he mounted on horseback, and passed through the forest to have seen a flight to the heron, at the request of Monsieur de Lottryke, unto which disport, I assure Your Grace he hath no more affection than Your Highness hath, notwithstanding the said Seignor de Lottryke, with divers others, do what they can possible to fashion an appetite to be in him, which shall be hard for them to bring about after my conceit.

"All which maketh me to remember my father Tyler, when he sheweth Your Highness of the great pleasures which he finds in his hawks, when it fortuneth them to do well, which I dare not say, is very seldom; but how fantastic they be, he never maketh boast.

"Sir, by all the way, it pleased your said good brother to devise with me, which was in manner all founded of the manner of their hunting by force, saying plainly that he thought the Frenchmen were only they, which were masters of that craft. Whereunto I shewed him that he should have much ado to cause Your Grace to pass him that point, for though it so were that he used the said manner of chasing, and none other, which was a great reason that he might be more skilful in it; yet I assured him that Your Highness with divers such others as you have brought up in the same manner of hunting, I was sure could not be amended by any nation christened, and further shewed him that, though Your Grace had as great delight to hunt by force as any Prince might have, yet Your Highness, used as well, many other fashions of hunting as well to the contentation of such as waited upon you, as for your own pleasure, to the intent that every man might take pastime after his appetite, some with their hounds, some with their greyhounds and some with their bows. In all which sorts of hunting I shewed, to know Your Grace, to have no fellow for the assured and perfect knowledge of all that belonged to that art." EDWARD JACK.

FREDERICTON, Canada.

MONTREAL, Can., May 2.—The Fish and Game Protective Club had their annual meeting this afternoon, and out of a membership of over 300 there were only 30 present. T. C. Brainerd, president, occupied the chair and Jno. Nelson, Jr., acted as secretary. The annual reports showed a balance to the credit of the club, of $530. The following committee was elected: Messrs. L. A. Boyer, T. C. Brainerd, Jno. Nelson, Jr., W. H. Rintoul, J. H. Stearns, Jas. Slessor, H. R. Ives, Selkirk Cross, C. E. Saunderson and A. H. Sims.

LOADING TOOLS.

Editor Forest and Stream:

There seems to be, judging from the various articles in the rifle departments of the sporting papers, a demand for better ammunition than the cartridge manufacturers place upon the market. The writer himself has been "seeking for light" and has come to the conclusion that the only way to get what you want is to load your own cartridges. To do this, it is necessary to possess a set of reloading tools. Now there are "tools and tools," but some of these tools are not what one wishes, when it comes to practical work, and for finish and general neatness of appearance they are sadly wanting.

Some time since my attention was called to the reloading apparatus manufactured by the Ideal Manufacturing Co., of New Haven. That famous bear slayer "P.," whose able articles on hunting and ammunition appeared in the FOREST AND STREAM and other journals in the past few years, employed this company to "build" him a set of moulds for the famous express bullet used by him, and, I understand, has found them "the thing." Wishing some ammunition of this description I ordered a set of the special moulds and reloaders. The reloading tool is the best thing of the kind it has been my good fortune to see, and if any one wishes a tool which will enable him to load cartridges in various ways, this is the thing. Besides the extra finish and fine work on these tools they possess points of utility that no other reloaders on the market have. The double adjustable chamber is of the highest importance, as it enables one to load different balls with different loads, and therefore does not confine a rifleman to one set cartridge. With this adjustable chamber a round ball can be loaded with small powder charge, thus placing the means of practice with a field rifle in the hands of those who must use a limited range. This of itself is of great moment, as if one uses a small caliber, light rifle, and one set of sights for practice. They will hardly find their larger and heavier rifle with other sights the same thing when they are afield.

The express moulds are very finely made, and if the bullets cast by them are satisfactory upon testing, they will prove the thing for large game—this the writer feels convinced they will be, basing his hopes on the experiments and practice of "P."

There is one other little tool made by the Ideal Co. that is worthy of mention, the little shotgun cartridge reloader. While it is now the fashion and custom to use machine-loaded ammunition for shotguns most extensively, I think all sportsmen, especially those who take long jaunts into far away places, need some article to reload shells that is light, compact and practicable. Here we have it, an utensil which does all any loader can—decap, recap, load, close shell and also can be used for a shell extractor if shell sticks in gun. Weight only ten ounces and all in a little box six inches by two and one-half inches, carried in the pocket and always ready; and last but not least, so cheap that any one can afford to own one that can afford to own a gun. PRAIRIE DOG.

DETROIT, Michigan.

UNNECESSARY MORTALITY IN TRANSPORTING NATIVE QUAIL.—*Editor Forest and Stream:* I have for a number of years been trying to get some live quail, principally to try again to breed in confinement, something I tried and partially succeeded in a few years ago; but for the last four or five years I have bought some eight dozen birds, at $4 per dozen, and paid, I think, as much as $1.50 per dozen for express, and I have not been able to save one live bird. What few came through alive died shortly after their arrival. This has been a great disappointment to me, and I know of parties in this vicinity who lost every one of ten dozen quail shipped direct from Tennessee. Mine came from New York. I believe this to be all wrong. It is a loss pecuniarily, those who spend their money for this are enthusiastic sportsmen, and the loss of the birds is felt more than the money. It is cruelty to the birds to be taken in traps and sent on long journeys improperly boxed, with no food, unless a little is thrown in at the start, to be eaten long before the end of the journey is reached, or to become unfit for food; and it is a well known fact that birds suffer more for the want of water than for food, and there is nothing to show that the poor birds have had one drop of water during their journey. Now, let us start with the fact that our native quail are as hardy as their cousins which came from Italy a few years ago. Out of 125 I found only three dead ones. The next year, counting them as carefully as we could, as we released them in squads of six or eight, we made 101, only 100 having been ordered. I think that with proper treatment our native quail can be transported with as little loss as can the birds from Italy. Again, why should it cost me more to transport my birds here from New York and have them all die, than it does to bring them from Italy to New York and have them all live? Start them all dead like any other package and it cost say fifty cents; start them alive and have them all die for want of a little care and it increases the cost three fold. There is great need of reform, and I hope to hear from others who are interested, and that some method may be adopted which will be more merciful to the birds and more satisfactory to the buyers.—JAMES WIGHT.

A BILL which has passed the Senate and is now pending in the House of Representatives provides much needed legislation for the Yellowstone National Park. Existing laws are utterly insufficient to protect and preserve the forests and the game of this great national reservation; and there is great danger if steps are not promptly taken by the passage of some such measure as that referred to that irreparable injury will be done to the park. The destruction of the forests will not only deprive the park of one of its chief beauties, but will endanger the water supply and turn the park into a desert. It will destroy also the refuge for the game which ought to be preserved, not only in the interest of sport, but of science as well. The FOREST AND STREAM of New York has taken especial interest in this matter, and has sent out innumerable petitions for signature, many of which have been returned with a long array of names. Michigan is well represented in the lists as published in the FOREST AND STREAM; but Detroit seems to have been overlooked. This is not as it should be. There ought to be a rousing petition from this city alone as an evidence of the interest taken here in the objects embraced in the bill. Some one of our enthusiastic sportsmen should take the matter in hand at once.—*Detroit Free Press, May 2.*

YELLOWSTONE PARK PETITION.

THE lists of signers of the Yellowstone National Park petition are continued from the last issue, as below:

SUSSEX GAME PROTECTIVE ASSOCIATION.—Hamburgh, N. J., April 30.—Through the efforts of several members of the Hamburgh Gun Club a game protective association has been organized in compliance with the laws passed by the Legislature in 1879, and is known as the Sussex Game Protective Association. The officers are: President, John Linn; Vice-President, H. W. Edsall; Treasurer, John R. Walling; Secretary, Frank Kimble, Counsel, Col. M. R. Kimble; Directors—John Linn, H. E. Rude, Noah H. Margarum, Wyatt W. Pierce, R. S. Edsall, Amos Farber, C. D. Hoffman, Wm. J. Williams, H. W. Couplin, D. B. Ross. Until several years ago any good sportsman visiting Sussex county was sure of a fine string of fish or large bag of game. It is not the case now. The game laws have been unheeded and never enforced against offenders. Resident and non-resident hunters have shot everything at all times, and fykes, nets and dynamite have been freely used in every lake and stream, until it is almost an impossibility to catch a decent-sized fish or shoot a bird in a three-days' outing. Short-billed woodcock (young partridge) dinners are greatly relished by campers at Greenwood and Wawayanda lakes. At Stockholm, a famous retreat for sportsmen, 200 young partridge were killed and taken from the vicinity last year by hunters who were out "woodcock shooting." The leading sportsmen of this vicinity have resolved to stop the slaughter of the game and enforce the laws of the State. All the large land owners have joined them, and the association proposes to make it very uncomfortable for the first offender caught.—SUSSEX.

"THE ROCK CLIMBERS."—The author of "The Rock Climbers" series has received a very pleasant letter from the Corporal of the Mounted Police who pursued and captured "Yo" and Appekunny, as related by "Yo" last week. The Corporal writes from Banff, Northwest Territories, and pays a tribute to the interesting character of the series: "Early in January, from cold and exposure, I got acute and inflammatory rheumatism, from which I have been a helpless cripple ever since. I have been at the Hot Springs for this last two months, and have completely recovered from the rheumatism, but I am a mere skeleton and too weak to stand up. This is my first attempt to write since I have been laid up. All through my sickness and misery FOREST AND STREAM was my greatest comforter, above all the 'Rock Climbers' pleased me best; and I longed for the week to pass so that I could hear more of a place that I am so well acquainted with."

Camp-Fire Flickerings.

"That reminds me."

232.

I ONCE heard my grandfather relate a "bear story" which has ever since slept in my memory until last night, when the effort to tell my share of hunting tales recalled it to mind. My grandfather was one of those pioneers who settled in parts of Oswego, Jefferson and Lewis counties when that region was "a vast and howling wilderness." Into that wilderness he went with axe and oxen, and near what is now the village of Lorraine built his humble log cabin, and cleared several acres of the rich forest land for cultivation. His first crop was corn, and when autumn came he proceeded to garner the luxuriant tasseled grain. With the help of his industrious wife over one-half of the corn was cut and shocked the first day; but that night a bear paid a visit, to the harvest field and made sad havoc with the golden sheaves. Next day the work of harvesting was finished and all the corn was drawn close up to the house, except two shocks which were left down at the edge of the woods for bait. When evening came, the musket was heavily loaded for bear, and my ancestor in revengeful spirit proceeded to watch for bruin's return. Snugly secreted he watched through the long cold night, and not until day had fairly dawned did he lose hope of bagging the game, and return to the house. When he arrived there, however, an aggravating sight met his eyes; his valued corn lay torn and strewed over the ground and half ruined. Bruin had been there regaling himself, while grandfather had been patiently waiting in the cold for him to show up where he ought to have appeared; awake all night in mortal terror of the brute, which several times sniffed through chinks between the logs.

The animal never reappeared; and though my grandfather grew old in that country, he never saw a real, live, wild bear. D. F. H.

OSWEGO, N. Y.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R R., St. Paul, Minn.—*Adv.*

The adventure of Mr. William Lament of Towanda with a broken-legged buck of Sullivan county has been given by nearly all the papers that circulate in this vicinity, and is now in the courts. Mr. Lament found the deer near the road when driving through the Sullivan forests on business, and seeing it made no attempt to escape went to investigate. The buck didn't wish to be investigated and made a very active attack upon Mr. Lament who ran for his life. The deer in following him got stuck in the snow and before he could extricate himself Mr. Lament killed him with a pocket knife. He was charged with violation of the game laws and recently had a hearing before Justice Codding and gave bail for appearance at court to answer. The case will probably be settled, but if the matter is pressed the defense will be that the buck was the aggressor and was killed in self-defense. Another defense, more equitable than legal, is that the injured animal would have died any way of starvation, or would have fallen a victim to the wild cats and wolves that infest the woods.—*Towanda (Pa.) Reporter-Journal.*

Sea and River Fishing.

AN APRIL DAY.

FROM the time we received our new almanac, Will and I had been reading up "the conjectures of the weather," and we had decided that we would start out on our fishing trip on the 23d. Why not, when the "weather man" had told us that the day before we would have warm rains to be followed by variable but warm weather? What a deceiver! That Monday found us stowing our baggage in the carriage that met us at the train while we in our overcoats were blowing our numbed fingers. Weeks before we had made this arrangement, and as fishermen always tell the truth and mean all they say, we were on hand to keep our engagement with W., who had been a genial companion on many a trip in days gone by. Henry with his spanking team hurried us along the valley, then up the mountain. Although the sun was setting we could not resist the temptation to wet our lines in the old milldam, filled with the clear cold waters that hastened down from the Pocono. Here, in times gone by, we had taken some beautiful trout; but not a rise at this time rewarded us, and chilled with the cold north wind that came down through the gorge whistling a November tune, we wrapped the blankets about us and hastened on. As we sat in the tavern that evening the old fishermen smiled over their lager as they looked around and saw our fly-rods and creels. I think we were a little ashamed. Your scribe thinks he heard, almost smothered in the foam of the beer, "What fools!" This was particularly aggravating to him, as he felt the party should have staid at home and not started out with the prospect of having to cut holes in the ice. The others tried to cheer him up by calling his attention to the piping of the frogs, but he insisted upon it that it was a delusion—that the spring call of the frogs was the chirp of the snowbirds as they warned us to "go quick, go quick."

The north wind blew all night and the morning sun was not able to warm up the chilly air—a poor prospect for fly-fishing. Up Middle Creek we went, casting into every promising pool; at noon time, only one fish. Our wagon now met us and we started for the upper waters of the stream. Your scribe has the habit of remembering old acquaintances; he remembered how on a warm June day ten months ago, in yonder pool, shadowed then by the bright leaves of the maple that stood on its bank, a lordly trout had shaken out the stinging hook and bidden him "good day." Quietly now he crawls up to make a more close acquaintance; he looks into the stream; but the ice and the spring freshets had torn away the drift wood that made so grand a hiding place, but the same strong current had laid bare the network of the maple roots; forty feet away the swift water eddied, and there with all his skill he gently laid his fly. Before the line had straightened he saw the flash, and with a quick strike fastened the fish. To its hiding place it turned, but the springy rod held it back; through the deep water it rushed to the head of the pool, so swiftly that the line fairly hissed; a few minutes' fight and his net lifted it out; what a beauty as it lay on the polished wintergreen leaves! Here and there where the stream ran close under the sheltering hill we made new acquaintances but none whose company we so much prized as that of our old friend. Although the sun was high we unjointed our rods and started back to our quarters. So slim the chance of any sport, while the weather was so cold and the waters so clear, that a unanimous vote decided us to turn our faces homeward in the morning. On the way we stopped at the old milldam where W. caught a nice one. We thought that he was so stiff with the frost that he could not get away, but W. assured us that it was a "fair catch on the fly." On Pine Run W. and Will choose to go up stream a way, while I was to start at the bridge. W. soon took a rainbow trout that had grown to measure 7in. in the two years since he had placed 5,000 in the little spring run that emptied into the stream near by. We had poor success as we fished the mile and a half, almost to the mouth of the creek.

A character often written about in fishing stories is the barefooted, tanned and freckled farmer's boy; that very chap I saw coming toward me as I was peering through the bushes to find a place where I could put my flies. His twinkling eyes seemed to be comparing my trim lancewood rod with his birch pole, and the silk waterproof line with the cotton cord that the wind was whipping in the air. He watched me as I cast in the riffles, and chuckled as he saw my line come back empty so often. He thought to himself, "I can beat that," and he did! Going back to the edge of the slashing, he threw in his line; it hardly touched the water when he shouted, "Look'er, will yer?" and a nice trout I saw dangling at the end of his cord. Not only one, but four times did he do it, and that, too, in the very waters I had so carefully fished.

Bless the farmer boy! Under his slouched hat is ten times more wood lore than many of us possess. He can tell you as the warm spring days come where the pheasant is building her nest; how many eggs the quail had yesterday down in the tangled weeds in the old pasture lot; he cannot tell you the name, but he knows that brown bird with spotted breast sitting yonder. In the deep shadows of the woods it sings a sweet song that softly echoes among the great trees like the tinkling of silver bells, while he sits on the moss-covered rock and listens until the shadows turn to darkness; down the old log road he hastens home to dream of the dark woods and green meadows, of the foaming waters that rush by the great rocks, of the deep, quiet pool, barred over with the shadows of the alders and where the trout hide away. Bless the farmer boy!

At the falls below W. and Will joined me. I had been fishing in a pool where the tired waters seemed to rest awhile before they hurried on; it was the very place for the trout to lie under the shelving rocks down in the deep water, but I had only taken a few and they too small to go into my creel. I was disappointed in finding these small ones, for it was a pretty sure indication that no large ones were there to drive them out. W. calls out to me, "I always kill a nice one there." I gave him my place and stepped down into the swift water below. Soon his attractive fly had lured one and after a few casts he had him safely in his creel—one of the largest we had yet taken. Another large one made a single rise, but in vain did W. try to fasten him. I took his place; a few casts and a little black-gnat lured him to his death, and we had the pair. A half mile below in the swift riffle at the head of a little dam Will took the largest one we had yet killed; under the low bending alders he unreeled his line and let it float down; as soon as he checked it a gamy fellow took the fly; it was a hard fight, all the advantage on the side of the strong fish, but Will waited his time patiently, and at last proudly showed his prize and told the story of the hard fight. A little below W. was casting in the dam where a number of large fish were breaking as they rushed for the little dun-millers that were on the water, but they paid no attention to his flies. Close beside him I made a cast, drawing my leader near a dead treetop—a dash, a strike, the bent rod threw back the empty line and the little black-gnat, my stretcher fly, was gone. But W. was soon to have his sweet revenge. Will and I hurried down to the wagon that was waiting for us; unlimbering our rods and packing up, we only missed W. as we were ready to start. We called loud and long, at last the answer came, with it a hearty laugh and "I've got him." W. had quietly slipped back to the dam, and his very first throw brought the prize—the largest of the lot.

Six miles to the railroad and one hour for the drive. The shadows were crawling up the valley, the bright waters of Big Creek flashed in the sunlight, golden clouds curtained the sun as he sunk behind the hills. The day was done and our fishing trip ended. SPICEWOOD.

CENTRALIA, Pa.

BASS IN THE POTOMAC.

SHEPHERDSTOWN, West Virginia.—*Editor Forest and Stream:* Two short letters of mine, published by you last summer, brought to me hundreds of letters from anglers from all parts of the Union, showing the wide circulation of FOREST AND STREAM. The writers asked about routes to this point, accommodations, what flies or bait to bring, etc. My answers brought some eighty of the anglers themselves, many of whom were accompanied by their families; and I have yet to hear of the first one who was disappointed in his visit, although several of them happened to hit muddy water and bad weather. But even those who caught small strings of fish, were so well treated by our people, that they have, one and all, determined to return next season. Those who had good sport were very enthusiastic and vowed that all future vacations should be spent here. Several parties of from four to six persons, from New York, Philadelphia, and other distant points, returned several times during the season. One gentleman from Baltimore fished from here to Harper's Ferry (ten miles below), only whipping the tempting stretches of water, and in nine hours caught ninety-six good bass. He kept none under ½lb., and a large majority were over 1½lbs. He remained at the Ferry, and for four days had splendid sport, when he returned here, and fished a month, averaging twenty-six bass per day, catching them mostly on the fly.

I regret that I did not keep a record of the fish caught by all who came here, for I am sure the average would compare favorably with any returns I have seen published.

I have just heard of a string of twenty-two fine bass, that were caught in December, a mile or so above us, with live minnows. We had a delightful, open winter, which no doubt accounts for the fish biting so late. Our home anglers made a host of new and genial friends among our visitors, many of whom have decided on purchasing building sites and erecting club houses along the river's bank.

I have no doubt that the next few years will see club houses and cheap summer residences all along the river front, as the land can be bought very cheaply, and buildings erected at small cost by native builders, and more beautiful sites could hardly be found anywhere than the lofty cliffs that line our river for miles above this village. These cliffs are high enough to afford magnificent views in all directions, and with the finest of black bass waters flowing at their feet, and a climate perfectly free from malaria, and bracing in the hottest weather, and with neither black gnats nor mosquitoes, I can see no reason why my prediction should not be fulfilled. There are many small farms in the market, and one of these, owned by a club of, say, twenty members, could be made self-supporting by securing a practical farmer who would crop the land on shares, and keep the house in order during the winter.

It would be worth the while of anglers of moderate means to consider this suggestion of mine, since by carrying it out, they could secure a long vacation at a mere nominal cost.

The paper pulp mill at Harper's Ferry has secured the right from both Maryland and West Virginia to open a "float-way" from Cumberland to their mill, down the Potomac. This means a clearing out of all the fish pots or traps that have been obstructing the river for years, and will secure a clear run for the fish from end to end. This is something we have wished for for years.

E. D. BOWLY.

ROCHESTER ANGLERS.

ROCHESTER, N. Y., May 5.—Some very satisfactory sport has been had by the anglers who visited the trout streams on the line of railroads running from this city.

The lessees of the preserves on Caledonia Creek find it well stocked this spring and numerous good days were enjoyed along the stream. Old anglers, who have fished the creek for twenty-five or thirty years, say that the supply of water is diminishing very fast and that its total failure is only a question of time. It is, however, a good stream still, and is likely to witness many a lively contest before the fountains dry up. I suppose that most anglers in this State know that the Caledonia Creek has its visible source in great springs that rise in the town from which it derives its name, in Livingston county, and after running about two miles enters another stream and loses its character as a trout brook. The State fish hatchery is situated on it, and there are also two private preserves from which the lessees and their guests take hundreds of fish every season.

If it be not profanation to speak of such vulgar fish as perch and pickerel after mention of trout, I would say that the season for them has opened around here and promises to be a good one. Thousands of anglers will find all the sport they want with the common fish, from now till October. R.

SUNAPEE TROUT.

SALVELINUS - *sunapeus - stagnalis - oquasso - aureolo*- hybrid-blueback! What is it, gentlemen? You make us skeptical as to what kind of a fish is sulking behind all this fine talk and this long Latin patronymic. The authorities in Washington have classed your fish as a brook trout, and then call it in the same breath *Salvelinus aureolus*. Good; that means it's a brook trout because it isn't a trout at all and carefully eschews all brooks? But it is a brook trout suffering from yellow jaundice and an acute attack of spotted fever. *Aureolus* means that, and that's what we make out of your picture in Spalding's window. Now, I know something about your fish. I've seen it in its spring plumage and in its autumn war paint. I've eaten it in midsummer, and know it to have been caught on the surface of the water, too. It is a noble trout, but when I first visited Sunapee it was not found in the lake. The only variety of trout then known was the *Salvelinus fontinalis*, and I hardly believe that this one sheet of water, deserving as it may be of such consideration, has been favored with a special act of creation at this late day in the Quaternary Age. I don't know what your fish is or who introduced it, or whether a female salmon is likely to fall in love with a good-looking, well-speckled brook trout, about 1lb. heavier than she, or whether bluebacks brought from Maine will lose, after a brief residence in the waters of Sunapee, two rays to the anal fin. I don't know whether bluebacks 10in. long are adult or baby fish—and I don't care. The only fact I am positive about is, that the new fish (which certainly should be dubbed *Salvelinus sunapee* out of courtesy to Col. Webber, of Charlestown, N. H., and Dr. Quackenbos, of New York, who first conferred on it a name, as well as by reason of its association with this single lake) is not aboriginal to this water. Reviewing the articles that have been published on this subject, allow me briefly to collate, for the entertainment of your readers, the statements of those who have felt qualified to advance an opinion.

Among the number who have expressed themselves upon this question, I find that the views of two only have remained unchanged and that, moreover, in one direction alone. Col. Hodge has contended from the outset that the fish are native to the lake; Dr. Quackenbos as stubbornly maintains that they are not. Col. Hodge sought to establish his point through the testimony of a single witness (FOREST AND STREAM, Aug. 5, 1886). Dr. Quackenbos, in reply (Sept. 2, 1886) demolished the evidence in a masterly manner, and adduced the testimony of a score of witnesses, who had fished, speared, and netted in all parts of the lake during a period of from 30 to 50 years, to prove that the trout were of foreign origin. Col. Hodge's reply, in a subsequent issue of FOREST AND STREAM, was a lame attempt to whitewash the character of his witness, and did not touch upon the point in dispute. The hopes of Col. Hodge and of the Washington men (who, as far as the writer can ascertain, have never visited the lake or seen the living fish) to establish the identity of the Sunapee species with trout inhabiting Dublin Pond and other New Hampshire and Maine lakes, have been irremediably shattered. Like the theory of Darwin, theirs is a preposterous "I guess." "I guess you will find them in the great lakes of the north"—but so far they haven't turned up, and all Maine anglers hold they are not likely to. The derivation of an argument from the portrait of a trout printed in a railway guide is a big stoop for science, and simply reveals the emptiness of the argument from analogy.

When the announcement of the discovery of the Sunapee trout was made, scientists and friends of the lake sought to account for the presence of the unique fish in this single body of water. Coupling their knowledge of an introduction of bluebacks from Maine in 1879 with the sudden appearance of a leaden-hued trout never before seen in the State, ex-Commissioner Webber, of New Hampshire, Livingston Stone and Dr. Quackenbos, of New York, contended that the new fish might be "blueback phenomenally developed in consequence of a superabundance of smelt food" (FOREST AND STREAM, April 8, 1886). Dr. Kingsbury, of Philadelphia, pronounced this "quite improbable, if not absolutely impossible." Col. Hodge, of Plymouth, and, we suspect, the keen-witted superintendent of another fishery, hiding in the feathers of a "Screaming Pelican," laughed the theory to scorn. Washington wavered, then coyly lisped "*oquassa*," and for two years the new fish has been so called. Now the sponsors have changed its name to *aureolus*, and in proposing their present theory of origin almost precisely repeat the language of Col. Webber and Dr. Quackenbos. In FOREST AND STREAM, April 22, 1886, Dr. Quackenboss writes as follows: "It would not surprise me at any time to learn that there are in Rangeley Lake *oquassa* trout weighing from six to eight pounds. The bluebacks swarming in the inlets may be the callow offspring of astute giants that spawn upon midlake shoals unknown to the genus *Homo*, and after a few days recede into depths where no lure can reach them. It is as probable that such Solomons among *Salmonidæ* have eluded the vigilance of the Caucasian man for a few decades in Rangeley, as that they have reproduced their species for a century in Sunapee unmolested by the net and spear." After two years of hesitancy, Dr. Bean has adopted this theory himself. Let us not forget in this connection Dr. Hart Merriam's testimony to the large size of *oquassa* trout in the tributaries of the lower St. Lawrence.

Attention is asked to the following vital differences of opinion between Commissioner Hodge and Dr. Bean of the U. S. National Museum, in regard to the origin of this fish. Commissioner Hodge declares, "it is not the result of the plant of blueback trout made by Col. Webber." Dr. Bean states: "I have all along believed that the Sunapee Lake *Salvelinus* is identical with the *oquassa*" (FOREST AND STREAM, Jan. 26, 1888). "It belongs to the group including the European saibling and the Maine blueback." Hodge pronouces these fish aboriginal. Bean unhesitatingly declares, "It will be easy to trace their origin to introduction of bluebacks." As ex-Commisioner Webber made the only plant of bluebacks, there is a remote possibility, according to Dr. Bean's reasoning, that he is responsible for the presence of the new trout in Sunapee Lake. In regard to the size attainable by the blueback, there is as marked a diversity of opinion between the ichthyologist and the Commissioner. Dr. Bean has said: "All the bluebacks in the National Museum, some of which are 10 inches long, have distinct parr marks and are therefore young." Col. Hodge, ignorant of the fact that the fish he was familiar with in Maine were immature, proclaimed "the average weight of an adult blueback to be 3 or 4 ounces" (FOREST AND STREAM Aug. 5, 1886). The imperturbable Bean quietly disposes of this absurd litotes with the counter-statement that "the blueback probably grows as large as the Sunapee trout," *i. e.*, 9 or 10lbs. Hodge offsets this by pronouncing a blueback of 8lbs. "forty times larger than the average and a physiological impossibility under any conditions of food and water" (FOREST AND STREAM Aug. 5, 1886). He is now eating his own words, and apparently glorying in the repast. The points of difference may be briefly collated as follows:

Hodge.	*Bean.*
The new trout are native to the lake.	They were introduced from Maine.
They are not bluebacks.	They are identical with the blueback.
They are not the result of a plant of bluebacks.	Their origin can be traced to an introduction of bluebacks.
Extreme weight of bluebacks, 3 or 4 ounces.	Probable extreme weight of bluebacks, 8 or 9 lbs.

These differences are irreconcilable; when the doctors disagree, the lay reader may be excused for being skeptical.

In conclusion, neither Col. Hodge nor Dr. Bean has proved, or can prove, that this new trout is a native to Sunapee Lake. Dr. Bean frankly admits this. As the day of Pythagoras, with its golden thigh and *Autos Epha* is past, the *ipse dixit* of Col. Hodge will not be regarded as a valid argument even by his most ardent admirers.

RAHWAY, N. J. JAMES COLQUHOUN.

Editor Forest and Stream:

I do not wish to bore you or your readers with too many discussions of the question of the origin of the "new trout," discovered a few years since in Sunapee Lake, but simply wish to make public such information as I can get about it, and therefore send you the following copy of a letter I have received from Mr. A. O. Woodbury, of Newport, N. H., who has always lived near the lake, and fished it constantly for many years. He says:

"In relation to the fish of Sunapee Lake, I must say that I think they are a hybrid between the *Salmo salar* and the *Salmo fontinalis*. I have been acquainted with Sunapee Lake for the last forty years, and cannot learn that any trout, except native trout, have ever been taken from its waters previous to the spring of 1881, when one Thomas Roach exhibited three live trout in Newport, two native and one of the new variety, which I thought at the time to be a sea trout, deposited in the lake by some one unknown to us. In after years I began to see and take them quite often, and notice their markings, which were widely different in color and spots, which you have probably seen described in the publications of the day. In the year 1869, one Moses Gould of Bradford put into Sunapee Lake some fifty fish which he supposed were *Salmo salar*. The next *Salmo* plant was made by Fish Commissioners Webber and Powers in 1879. Now you can plainly see that the last plant could not have produced a fish which I caught in the year 1883, weighing 11½lbs. For we all know that it takes four or more years for a salmon to pass through the three different stages of parr, smolt and grilse, before they arrive to a perfect salmon, which may weigh from 3lbs. to 4lbs. Therefore, this large fish must surely be the offspring of Gould's plant. Some have supposed that the new fish was an overgrown *oquassa*. Now, I think that is an impossibility, for the *oquassa* trout is a small fish when full grown, and it keeps its markings through all stages of its growth, and seldom weighs 2lbs. I have seen and taken the new fish of all sizes from ¼lb. to 6lbs., and have never seen any parr marks on them such as we see on the *oquassa*. Now, if these fish are not hybrids, why have we not some record when they were put into the lake? There are other proofs to me that they are hybrids, that is, the difference in their markings. Some are very white, some are quite gray, with dark spots, some have pink spots, and some are very liable to be taken, if not closely inspected, for the *Salmo fontinalis*. All of the salmon that I have taken from the lake were females heavy with spawn, and in two instances I have taken a male *Salmo sunapee* soon after capturing the salmon, which seemed to be its attendant. I do not think we shall know positively in relation to the origin of the new fish, unless some one has interest enough in them to breed them together, and when that is done I think we will discover the origin of the *Salmo sunapee*. Yours truly, A. O. WOODBURY."

I have copied Mr. Woodbury's letter as written, but must correct the dates. The plant of landlocked salmon by Messrs. Powers and Webber was made in 1877, not 1879, and a plant was made at the same date in Squam Lake, and a 15lb. fish was reported to have been taken from the lake in either 1883 or 1884. I have never been able to procure all the reports of the New Hampshire Fish Commission, but I have the first one of 1866, in which Judge Bellows, then Commissioner, said: "We have accordingly succeeded this spring in introducing into Newfound Lake nearly thirty young landlocked salmon; they were brought from the St. Croix River, or the lakes through which that river passes, in the Province of New Brunswick, under the immediate charge of Mr. N. S. Batchelder of Concord, to whose great perseverance, and the valuable services of Arthur Fletcher, Esq., we are much indebted."

I have never been able to get the reports of 1867 and 1868, but the report of 1869 says, referring to the aforesaid plant: "And in 1867 he obtained about 200 more, as it was understood, though hatched out only the spring before. These were placed in Lake Winnipiseogee, Squam Lake and Sunapee Lake, and will be sufficient, we expect, to stock those waters. This excellent variety of fish was obtained from Grand Lake stream, in the neighborhood of Calais, Maine." Now, whatever these may have been, the eggs were not obtained from a female salmon. Dr. Fletcher afterward admitted at a meeting of the Fish and Game League, in Manchester, that they were raked up from the bed of the river, and that he did not know what they were, and that some which were kept at the hatching house of Robinson and Hoyt at Meridith village had turned out to be not salmon, but trout. Judge Bellows, Dr. Fletcher and Mr. Batchelder are all dead, and I do not suppose we shall ever know more about that matter.

In regard to the later stocking, my records show that Mr. Powers and myself left the Massachusetts hatching house, at Winchester, May 8, 1877, with two or three thousand young landlocked salmon, presented to us by the Massachusetts Commissioners; that we separated at Concord, I taking 1,000 fish to Squam Lake, and Mr. Powers, with the others, going to Sunapee and one or two other ponds in that vicinity. My report for 1879 shows that on April 26, 1878 we placed 6,000 landlocked salmon and 3,000 "blue-backed" trout in Sunapee Lake, and June 3, 1879, 10,000 land locked salmon, 4,000 "blue-backed" or *oquassa* trout, and 2,500 of the regular Rangeley trout were also placed in the same lake. The stocking with landlocked salmon has been kept up continuously since, and through the kindness of Dr. J. D. Quackenbos, 10,000 rainbow or California trout, and 30,000 Scotch or Loch Leven trout were introduced in 1887, so that if the salmon family are inclined to hybridize, there is every opportunity for them to do so. The official records show that both the landlocked salmon and the unknown trout were put in the lake two years earlier than Mr. Woodbury supposes.

I wrote you in January, 1887, in regard to the habitat of the Winninish or landlocked salmon, and quoted an article from Orvis and Cheney's "Fishing with the Fly," written by Mr. W. Thomson, of whose address I am ignorant, to show that the "red trout" of Lake Superior was the same fish. In that article he speaks of numerous natural "cross-bred" trout in that lake, one, a cross between the "red" and the common trout. Can he, or any one else who may see this letter, give us any light on, or proof of, such hybrids?

There seems to me a very strong probability that Mr. Woodbury is right in referring these new trout to Dr. Fletcher's plant of 1867, but at the same time, gathered as those eggs were from their spawning beds, they may have been hybrids from the start. The plant of 1877 would produce spawn in three years, and as they were of the eggs of 1879, some return from them might be expected by 1881, when Mr. Woodbury reports the first one to have been seen.

I heard of a "new trout," from my former colleague, ex-Commissioner Powers, in '83 or '84, I forget which, and he and Mr. Hodge discovered them on the spawning beds in '85. I wrote to Mr. Hodge, some time since, suggesting to him to try a cross between the female salmon and the male trout, which would harmonize with Mr. Woodbury's suggestion and recollections exactly, but I do not think Mr. Hodge understood me, for he writes me, "In regard to crossing landlocked salmon with trout, and especially *Salvelinus aureolus* of Sunapee Lake, is almost an impossibility, there is not vitality enough in the life principle of the milt of the trout to come to maturity. I have no doubt but what it might be done with trout like the Loch Leven, as the eggs sent me from there last winter were about the same size as our Penobscot salmon eggs. The eggs of the *aureolus*, of Sunapee, are smaller than those of the brook trout."

Now I meant the old trout, not the new one, and I wrote Mr. Hodge that the very facts that he had given me in regard to the milt and spawn of the new variety were the strongest evidences of its hybridity of any thing that I had yet seen.

I do not propose in any way to controvert Dr. Bean's anatomical analysis of the new trout, but when the question of its history in Sunapee Lake is concerned, I think my fifty years' knowledge of the lake gives as much weight to my opinion as to that of any one, and I am as sure as one can well be of anything, that this trout has appeared in Lake Sunapee within twenty years certainly, and from any evidence that can be got worth having, within ten. I have "no axe to grind" in this matter, "no friends to reward, or enemies to punish," but am simply seeking to throw all the light I can get on an interesting physiological question. A new trout has been discovered, the question is, Where did it come from? and this I am trying to solve. SAML. WEBBER.

CHARLESTOWN, N. H., April 16.

Editor Forest and Stream:

There is an old saying that "dreams go by contraries," and the angler, of all men, generally finds it so. Visions of big baskets, sunny skies, fragrant hemlocks, etc., precede the realities of rain, slush, and a few fingerlings. But Mr. Hutchinson's sleep-fancy is a phenomenal exception to this psychological rule; and now that the dream has been dragged into the Sunapee controversy, the Washington authorities must be metamorphosed into *oneiropoloi* to interpret the visions that will forthwith be reported.

Mr. Hutchinson's argument in regard to deep-water fishing in Sunapee Lake may seem illogical to some of your readers. He dreamed in 1882 that if he would anchor in 70ft. of water he would catch trout. He acted accordingly and caught a few. Therefore, he is the inventor of deep-water fishing! Is this inductive or deductive reasoning? It is certainly *a posteriori* to the fact; for it is well known that anglers of repute fished in deep water before 1882—but, strange to relate, never hooked a *Salvelinus sunapee*. In 1883, I dreamed I took a steamer and crossed to Liverpool. Accordingly, on April 25, I shipped on the Bothnia, and in ten days was in the Mersey. Ergo: I am the inventor of steam navigation!

Hutchinson's logic is obnoxious to the same general criticism as Col. Hodge's sophistry—it is one big dream.

I trust that the reader will not infer from the raid Mr. Hutchinson represents was made on his rods, that the purlieus of Sunapee are infested with thieves. In the old days, parties from a distance poached *ad libitum* with mesh and barb. Violence was the rule, and anarchy prevailed. I have heard stories of fish stolen from fish thieves, and of heads swollen and aching from stone wounds and bad rum, but all this was a quarter century ago. Even in those rough times two fellows from a neighboring town who found it convenient to appropriate a boat, were hounded down by the people and narrowly escaped Haverhill jail by the payment of a large fine. Since that time, property has been safe at Sunapee Lake, except from possible damage by dare-devils from abroad, confused with alcohol. Such persons, however, scrupulously confine themselves to one or two localities congenial to their tastes. Of the thirty-three miles of shore line, at least thirty-two are free from their visits, while the whole neighborhood has set the stamp of condign disapproval upon all kinds of lawlessness. Ladies and children are everywhere safe from molestation, and as for the native population, it has never been my fortune to meet with a more honest, manly, frank, considerate and obliging people. Eight or ten rods, some of them bamboos worth $30 to $40, belonging to myself and

friends, are exposed on the wall of my carriage-house—which is always open. There are "strangers' rods" for the use of visitors (some fifty or sixty come every week-day to my grounds), and private rods which no one but the owners ever fingers. There they hang, in all their beauty and suggestiveness, exposed to the public road for four months, and no one of the thousands of strangers who have viewed them has ever so much as taken one down from the hooks to examine it. So my experience with rods has been somewhat different from that of Mr. Hutchinson. Is it not singular that his prophetic dream did not prefigure the damage to his tackle, which, after all, as the provisions were badly munched, was possibly the work of an itinerate hedgehog! I trust that Mr. Hutchinson's piece of ill luck will not deter those of gentler instincts from seeking recreation amid the pines and on the pebbly beaches of Sunapee. Anglers certainly will not be indictable for infringement of patent should they adopt this new method of deep-water fishing.

Dream No. 2.—Permit me to answer Mr. Hodge's "brief statement" on p. 250—that "the *aureolus* was caught in Sunapee Lake in large numbers before the introduction of land locked salmon"—with a counter statement equally brief: There is absolutely no evidence that this new trout existed in Sunapee Lake before the introduction of landlocked salmon. Commissioner Hodge first saw the lake in 1883, when he leased from me the right to build a hatchery on my place—at this time he did not suspect the presence of a distinct species of trout. After five years' acquaintance with the lake, the Colonel expects us to believe that he is personally familiar with the last thirty-five years of its history, and that he is justified in making the monstrous statement above quoted. The intelligent angling world has had all of this kind of logic it can stand, viz.: I. Hodge, think so; therefore, it is so. Give us something new, Colonel; the old chestnut is a weariness to the flesh. JOHN D. QUACKENBOS.

NEW YORK, April 23.

THOSE WARY CARP.

Editor Forest and Stream:

My purpose is to seek information rather than impart it.

At the Caton stock farm, Will county, Ill., we have a fish pond well stocked with German carp, which were introduced seven years ago. The pond is supplied with water from an artesian well, which is more than 2,000ft. deep and flows 100 gallons per minute. The overflow not required for the use of the farm is discharged into the pond, this may amount to the half of the quantity above stated. The water when it issues from the will is of a temperature of 65° and has a very appreciable trace of sulphur and iron. The gas showing the presence of sulphur soon disappears upon exposure to the atmosphere.

In the fall of 1885 the pond was drawn off and the large fish taken out and placed in a tank supplied with water from this well to be there kept for future use. The next morning all were dead, while in the pond the fish had always been in apparent health. The gases which had killed the fish in the tank had evaporated from the pond. All kinds of stock prefer this water as it issues from the well, and during the great drouth of 1887 almost seemed to live upon it. They all kept in good condition when the pastures were quite bare of grasses and only noxious weeds were to be found. A large part of the time was spent by the stock around the watering troughs, and it was evident that an unusual quantity of water was consumed by them. I mention this to show that water which was fatal to the fish was healthy and eagerly sought for by land animals.

Now, what I want to know is, how can I catch these fish without drawing off the pond? Without the means of doing this they are of little value to the farmer for domestic use. But for the little fellows the larger ones might be taken with the hook, at least occasionally. The moment a properly baited hook is dropped in the water it is surrounded by a great multitude of little fishes which denude the hook of the bait before a large fish discovers it. Of course, fingerlings are frequently hooked, and perhaps one fair-sized fish is hooked in a year, but that is the extent.

I have faithfully tried the gill-net, the pocket-net and the drag-net persistently, but never has a fish been taken by these means. The truth is these fish are smarter than I am. But few land animals have the cunning which they have to avoid the toils set for them. There are an abundance of large fish in the pond, for they are frequently seen twenty-four or more inches long. The bottom and sides of the pond are of blue clay, and in this they root like hogs in a potato field. In this exercise they seem to especially delight, and so the water is kept more or less roily during the summer, though at times good views into the water are obtained. For instance, when the first gill-net was stretched nearly across the pond with two and one-half inches mesh, Mr. McKinna, the farm manager, lay quietly watching the result. After the water had cleared away, so as to give him a fair view, he saw a carp which he judged would weigh fifteen pounds, cautiously approach the net and feel of it, or as he expressed it, smell of it; and so he went along feeling his way, till he passed out of sight. Evidently the meshes were too small for that fish, though as there were plenty of smaller in the pond, the size of the mesh could not have been the reason why some were not taken.

However, after three weeks' trial with the first, I got another gill-net with 4in. meshes; but with no better success. I then tried a pocket or bag-net, with the same result. Extra weights were attached to these nets, so as to fairly settle them in the soft mud bottom. And yet the large fish certainly passed them to reach the feeding place, for it was surrounded by the net, and yet they appeared there, if not as abundantly as usual, still a considerable number of good-sized fish were there. They burrowed in the soft mud under the net! In no other possible way could they have passed it. The drag-net was tried with no better success.

Well, I say we are fairly beaten by what, I venture to say, is the smartest fish known, at least to me.

Much has been published, not only in the periodical journals but in the reports of Fish Commissions, about the German carp, and always with a laudatory recommendation to farmers in a small way and for their own use; but not one word have I seen as to how they can be taken for this domestic use. If they can only be taken by drawing off the pond, they are of no practical use for mere domestic consumption. Can you help us out of this dilemma?

I might, and indeed I propose, unless you can suggest something better, to make a small storage pond adjoining the main pond and connected with it by a pipe near the bottom, in which the large fish can be placed when the pond is nearly emptied, but I feel by no means sure that these cunning rascals will not beat me at that. If the bottom of this storage pond is paved, for instance, so that they cannot hide in mud and so escape the drag-net, I much doubt if they would do well through the many months it would be necessary to keep them there, no matter how carfully and abundantly they might be fed, and certain it is that without free access to the soft mud they could not winter there. In the spring they must be poor, during the summer they must get fat and in the fall will be in their best condition. The best results most likely may be expected when they are kept in the large pond, if only they can be taken when wanted. This wanting, I fear we must abandon the carp and try some other more stupid fish, that cannot beat us in a trial of wits, perhaps the catfish. JOHN DEAN CATON.

MONTEREY, Cal.

[There are so many carp ponds in this country, and presumably so many large carp have been caught, that Judge Caton should by this inquiry gain the information he is seeking. The California way is to shoot the big fish. Mr. J. M. Stephenson, a sportsman who lives on the Sacramento River, told a reporter of the Sacramento *Record-Union* that he had read the account of a Georgia sportsman, published in FOREST AND STREAM, who went out to shoot plover and came across two carp which he shot; and he went on to say that the sport of shooting carp with a rifle is not a new one in his neighborhood. Last week his son went out and killed sixteen in one day, none of them weighing less than 7lbs. In fact he would not shoot the small ones. Last season a party went out from this place and killed 600lbs. in one day on the overflow of Pitt Lake. Mr. Stephenson describes the sport as wonderfully exciting and interesting to the sportsman who knows how to handle a rifle. The water on the overflow is now about eight inches deep and the season for carp shooting is at its height. If any of the Sacramento sportsmen want to try their hand on carp they should call at Mr. Stephenson's place and they will be directed to the hunting grounds.]

NEW ENGLAND ANGLING.

BEFORE this article reaches the eye of the reader of the FOREST AND STREAM the trout and landlocked salmon season will have opened legally in Maine, New Hampshire and Vermont. May 1 the law is off, but the principal lakes and streams in the northern and eastern portion of these States are usually protected a number of days later by nature. The ice and snow are not gone, and such is the case this year. In fact April has been a very cold and backward month. Oscar Cutting and William Akers, two well known guides on Richardson Lake, were in Boston last week, and they report the snow still two feet deep in Andover, Me., and three or four feet in the lake region. They say that the ice cannot possibly leave the Androscoggin lakes before the 10th of May, and probably not before the 15th. Capt. Fred C. Barker is reported as believing that the ice will be very late in leaving Rangeley and Mooselucmaguntic lakes. Still, he has not said the same to me, and it is possible that he may have been misreported. The Phillips *Phonograph* believes that the ice will be out by the 13th. The average departure of the ice from those lakes is about the 13th, that is, such has been the average during the past 10 years. But way back in the sixties it is reported to have gone out one year on the 20th of April. In 1886 the upper lakes were clear on the 4th and Richardson Lake was clear two days later. Last year, however, the ice did not leave these waters till the 13th. I give considerable space to discussing the possibilities of the departure of the ice from the Maine lakes, but those who understand the amount of interest there is in the subject to the New England sportsmen will readily appreciate the situation. The news of the leaving of the ice is always the signal for sportsmen to take the first trains. Indeed prominent fishermen for trout have frequently departed before the news came, in order to be the first there.

This year the interest, from a Boston standpoint, is hardly as great as usual. Considerable dissatisfaction has sprung up in regard to the fishing in Maine. The repeated reports of poaching and taking trout by unsportmanlike means have had an effect on the ardor of the Boston sportsman, and the result is the formation of at least two prominent sporting societies, for the purpose of controlling lands and lakes and streams in the Provinces. There better fishing is hoped for and for this year, at least, the interest promises to be divided between the Maine waters and the waters of Canada and New Brunswick. A large number of members and shareholders have been secured in these sporting clubs, and it is no more than natural that gentlemen should frequent the waters where they hold an interest by having paid for it. But at the same time the Maine waters may not now be as badly overrun or over-fished as for the past four or five years, and the day of better things may be on the way. But the FOREST AND STREAM is laboring for the only true doctrine—trout enough for the camp table. When the lovers of rod and reel come to that belief, and cease to kill trout for numbers and to send home as poor, and sometimes stinking, trophies, then there will be trout enough in any of the Maine waters for all who will desire to frequent them.

Much interest is manifested in the salmon pool at Bangor, Maine, below the dam, which has become so famous within a couple of years. It is a curious feature that the salmon had commenced rising on April 27 this year, Mr. Fred Ayer, of Bangor salmon fame, having taken one of some 19lbs., and another gentleman another. On Monday several Boston sportsmen were ready to start, but a special, by telegraph, from Mr. Ayer to Henry C. Litchfield, dispelled the pleasing idea. The dispatch said that the water was almost up to the freshet pitch and still rising, and no fishing. It is also true that the water is bound to be high at that point for a couple of weeks, unless a tremendous freshet makes short work of sending down the vast body of snow water there is in the woods above; or that possibly very cold and freezing weather may stop the process of melting. As it is the salmon fishermen have generally given up the early hopes that the story of early salmon inspired. Later the run at Bangor is expected to be an improvement over last year.

There is also a good deal of interest in the landlocked salmon in the Sebago waters. This fishing usually begins several days earlier than the trout fishing in the lakes further north, for the good reason that the ice leaves the Sebago waters several days earlier. The landlockers follow up the smelt, when they seek the streams to spawn, and at that time there is much sport in trolling. Commissioners Stilwell and Stanley are usually there, and both have records for large fish. Portland, Saco and Biddeford sportsmen are also annual visitors to the Sebago. The salmon fishing is usually at its height for a week, beginning soon after the ice goes out. Then it dies away, and finally is done for the season. Not much success has yet been achieved in taking these noble fish with the fly. There is a theory, and doubtless it is a true one, that the fish have year after year been drawn upon so hard at the spawning season, by poaching from small streams where they ascend to breed, that the supply has been kept down, so that there is really little chance for fly-fishing. It is a theory of the Maine Commissioners that the great majority of the large salmon ascend these streams regularly in autumn, and that it is not a difficult matter to destroy nearly the entire stock at that time. There is evidently food enough for a great stock of fish in those waters, and protection at the breeding season would evidently tend to greatly increase them. But the conditions are rather discouraging when an armed band of robbers turn out in the night time, and with blackened and masked faces demand that the keeper of hatching works on one of the best of these streams—demand that he make no resistance—and then proceed to break up the weir across the stream. Then after taking all the breeding fish their wagons will hold, they turn the rest loose, in order that they may go up stream for their neighbors to steal, and take their departure. Such was the fact in Maine last November, at the hatching works at Edes Falls. Such are some of the discouragements the Maine Commissioners have had to encounter, all of which the readers of the FOREST AND STREAM have been informed about at the time. It need only be added here that people who desire to take trout or landlocked salmon at the breeding season are about as filthy as they are ignorant and covetous. An Indian eats the eggs of the wild fowl from the time they are layed till the chicks are grown and hatched, and the same people, with those of lighter skin, but equally disgusting in their habits, desire to feed on salmon and trout when the cavities of the body of the male fish are full to bursting with milt and those of the female with spawn. It is hard to bring such people to see that there are better ways in the management of things than to destroy breeding fish and game simply because it can be done with little trouble.

The Bangor salmon fishing opened again on Saturday, after the lull caused by the high water of the early part of the week. A letter to H. C. Litchfield says, that five were caught on that day and that there is great excitement in Bangor. The letter also invites Boston sportsmen to come and participate in the sport. As already stated the season is ealier than last year, but there is not the least reason in the world why it should not hold out fully as late. This salmon pool is a great boon to Bangor, and thousands participate in the fun. All sorts of outfits are on hand, and some of the crudest of boats are to be found stemming the boiling water. It is a virtue of such crafts that they are generally as safe and strong and staunch as they are clumsy, else the loss of life might come in to vary the programme. On some days last season twenty or thirty salmon were taken, and almost every day double the number taken were hooked and lost. The idea of attempting to land a twenty-pound salmon with a juniper pole and fifteen feet of ordinary twine! But such outfits hooked salmon last year and lost them, of course, though not always. Again the best outfit of tackle that could be selected from the best tackle store in Boston hooked a salmon and lost him. Such is the fun.

The ice still holds firm in the Maine trout lakes, and all the reports indicate cold, backward weather. But the interest with Boston sportsmen increases as the month of May wears away. SPECIAL.

THE FLY-CASTING TOURNAMENT.

THE next fly-casting tournament of the National Rod and Reel Association will be held at Central Park, New York city, May 23. Secretary G. Poey reports that more than $100 worth of prizes have come in already. They comprise:

Split-bamboo fly-rod, value $25; given by Thos. J. Conroy, 65 Fulton street, New York.

One hundred "Forest and Stream" cigars, value $7; Wm. Eggert & Co., 245 Pearl street, New York.

One thousand satin straight cigarettes, value $7; Wm. S. Kimball Co., Rochester, N. Y.

Two sets luminous bait, value about $25; Enterprise Manufacturing Co., Akron, O.

Leonard split-bamboo rod, Fitch handle, value $35; Levison fly-book, value $7; dorsal-fin net ring and handle, $3; Wm. Mills & Sons, 7 Warren street, New York.

Hexagonal split-bamboo fly-rod with patent cork handle, German silver trimmings, and Orvis patent reel seat, value $21; C. F. Orvis, Manchester, Vt.

Two rod canes, each value $3; Syracuse Split-Bamboo Rod Co., Syracuse, N. Y.

Black bass rubber and nickel reel, value $6, and line for same, value $3; Von Lengerke & Detmold, 8 Murray street, New York.

Rubber minnow casting reel, value $15; Ed. Vom Hofe, 97 Fulton street, New York.

Gogebic grilse reel, $3.50; Gogebic sea-fishing reel, $2.25; Gogebic trout reel, $1.75; three Gogebic brass reels, $2 each; Meisselbach & Bro., Newark, N. J.

Two epauleted ventilated coats, velvet collars, each $7; Jas. J. Byers Epauleted Ventilation Co., City.

Set trolling spoons and rubber baits, $10; Chas. Plath & Sons 130 Canal street, City

Four subscriptions to FOREST AND STREAM and subscriptions to other papers.

A FIFTY-POUND MUSKALLONGE.—We have received from Mr. Geo. S. Marsh, General Passenger Agent of the M. L. S. & W. Railway, a photograph of a 50lb. muskallonge caught in the Eagle Waters. The length of the fish was 4ft. 11in., and the girth 2ft. 4in. He is a formidable looking fellow, even stuffed and fitted with glass eyes, and his fellows are waiting in the Eagle Waters to avenge his death by tearing to tatters the tackle of ambitious anglers.

JOCK'S LAKE in the Adirondacks will have added accomodations for anglers this season. The route is by way of Prospect, where train is taken. A. D. Barlow, Jr., of the Lake, thinks that the ice will be out May 15.

TYNGSBORO, Mass., is rejoicing over the discovered presence of mirror carp in one of its ponds. The owner of the pond has been offered a large price for the control of the fishing in it.

SEBEC LAKE.—I would like to tell of a locality I am accustomed to visit, when I can spend time for a trip to the Pine Tree State. I refer to Sebec Lake and its extensive headwaters—situated east of Moosehead about 40 miles, at about the same latitude. The particular sheet of water of this group which I favor is Long Pond. Here are both trout and landlocked salmon, with now and then a togue. The squaretails range from 1½ to 2lbs., the togue from three to twenty. The salmon are small for some reason, rarely going over 2lbs. The abundance of both these smaller fish is the beauty of the place. Excellent accommodations are provided. Within a few miles on every side are small sheets of water where the fish are found in greatest abundance. At Sebec Lake itself the landlocked salmon run much larger, reaching as high as 10lbs. They are rarely taken later than June, but in Long Pond there is good fly-fishing until late in September.—F. K. O. (North Adams, Mass.)

THESE FISH SHOULD BE SPARED.—*Editor Forest and Stream:* I have lived four years near Lake Auburn, four miles from Auburn, Maine; and have had an opportunity to see how the poachers destroy the fish here. There is but one stream in which the fish can deposit their eggs, and I have seen its banks plentifully sprinkled with spawn, from speared fish, after a heavy rain in the month of October. The fishermen in the vicinity are aware of the existing evil, yet they have taken no steps toward preventing it, which might easily be done at a small expense, by erecting a number of pens and preventing the fish from ascending the stream; their eggs can be taken and the fish put back into the water to return another fall and not become victims to the poachers' spears. The sportsmen of Lewiston and Auburn should awake to the fact that they can have at their doors as fine fishing as can be found in Maine.—GAMP.

MATTHEW ARNOLD AS AN ANGLER.—Sir John Millais writes to the *Fishing Gazette:* "It may interest your readers to know that the late Mr. Matthew Arnold was a keen angler. He was my guest at Birnam Hall, on the Tay, in 1866, and was on the water from morning till there was no more light to fish. I was in the boat with him when he killed two fresh-run grilse, (casting) and I never shall forget his delight and pride with which he told me they were the largest fish he ever caught. The run of water which afforded him so much pleasure had no name, so I have since christened it 'Arnold's Stream.' I was looking forward to his returning this season, when I hoped he would kill a salmon. I need not add how charming his companionship was and how thoroughly he appreciated the beauties of the Murthly Water."

THE MILWAUKEE, LAKE SHORE & WESTERN RAILWAY publishes a handy pocket manual of the famous Eagle waters and other fishing resorts in Wisconsin and Michigan reached by its lines; there are maps and detailed information, giving just the information desired. There is also in separate form a compendium of the fish and game laws of Wisconsin and Michigan; and for use in the smoker the managers equip their passengers with little manuals of the rules of poker and whist. All these publications may be had on application to Geo. S. Marsh, Gen. Pass. Agent, Milwaukee, Wis.

THE ART OF FLY-MAKING.—We have received a little book of 33 pages with the above title, written by M. A. Shipley, of Philadelphia. He says: "This short treatise is not intended to be at all exhaustive, but to give some plain, practical directions for tying the flies usually used," etc. It is illustrated, and will no doubt be useful to those who wish to learn the first principles of fly-tying.

METAL LEADERS are a novelty sent us by Messrs. Shipley & Son, of Philadelphia. The wire is very thin, is colored a "dull smoke," and is said to be capable of standing a strain of 3lbs. Months ago a well known angler spoke to us of the possibility of wire leaders, and the Messrs. Shipley have now given the angling public an opportunity to put the material to a test.

SLATE RUN.—Muncy, Pa., May 4.—A party of four started up to the northern part of Lycoming county to try our luck for trout. We fished in Slate Run, which empties into Pine Creek. We had the pleasure of catching 700 in four days fishing, two days' too cold to wade.—J. B. D.

ONTARIO SEASONS.—Brook trout, May 1 to Sept. 15. Pickerel, doré, May 15 to April 15. Bass and maskinonge, June 15 to April 15. Whitefish and salmon, Dec. 1 to Nov. 1 following.—R. P. J.

WASHINGTON TERRITORY.—Cedar Mountains, April 26.—On the first day of April, fishing with bait, I caught 183 trout, weighing 57lbs. Can any one beat it?—J. C. McK.

Be sure and include a box of Hinds' Black-Fly Cream in your fishing outfit. See advertisement.—*Adv.*

Fisheulture.

THE MENHADEN QUESTION.

Editor Forest and Stream:

I have read with great pleasure the articles that have appeared in the FOREST AND STREAM in regard to the menhaden question and it seems that your correspondents have cut out all the work that Capt. Church wants to attend to. The Captain says in his last, that the food fishes are more plentiful than they have been for years. If this is so is it not strange that the hand-line fisherman does not know it and that not one except the Wood's Holl man has ever come forward and testified to the alleged fact? Is it not also strange that if man with his "puny engines" does not make any difference to the amount of menhaden that come along our shores, and his pursuit of them and the amount that are captured by him make no difference to them, that the Captain is not going to fit his fleet this year for the purpose of catching menhaden? Also, if the story is true, is it not strange that last year he made a large sum of money in trap-fishing and stated that he lost it and more too in purse seining? In regard to Mr. Palmer before the Massachusetts Legislature, does the Captain known that the Committee on Fish and Game for the year spoken of, was packed by men in the seine fishing business, and while hardly any one opposed the petition it was killed in committee? Capt. Church thinks it is proof positive that the menhaden is not the food of food fish as the lookouts on the steamers of the oil men have never seen food fish with the large bodies of menhaden which they have come across. Quite different is the testimony of the captains of the swordfishing smacks and the sea bass fishermen, who say that they have seen large schools of bluefish, bass and mackerel following, and also among, the large schools of menhaden which are going east, at from three to forty miles off shore, and also that they have seen bluefish among the schools killing menhaden till the water was red with blood. Swordfish which used to be in shore after food, now are found way off shore after the menhaden.

The pleasure expressed by the hand-line fishermen when the rumor was heard that the menhaden men were not going to fish this summer was very marked, and if the steamers have not had anything to do with driving off the menhaden it seems queer to me that the men that gain a living by fishing with a line should be so pleased.

Let us by all means have the menhaden fishing stopped within three miles of the shore, except for bait, and also try and have a law enacted so that the in-shore end of any trap shall not be set in less than twelve feet of water. If this is done thousands of fish will have a chance to spawn and our rivers and bays will afford a harvest to all who will come and fish as they ought, and not try and kill the goose that lays the golden egg. ACOXET.

Editor Forest and Stream:

It should have been free fishing not fin fishing, and barbarian's spear instead of barbarous spear in the article Mr. Martin quotes from. From the time I was a boy until Baird and Goode stated to the contrary, I had heard and always believed that menhaden came into our bays and rivers in the spring to spawn. The old fishermen used to haul ashore what they called menhaden spawn, and that was what I referred to in my statement to Goode. I know now from observation that menhaden leave our coast in October, November and December in spawn (almost mature) and come back in April, May and June without spawn. As Mr. Martin says I left out the boy, but I did not leave out the fact that after a drouth or scarcity of seabass lasting about thirty years they are plenty again in spite of traps, pounds, purse seines and hook and lines. There is any amount of evidence at hand that striped bass were plenty last season on a long reach of our coast notwithstanding the fact that they have been scarce for several years. Now what is the explanation to accouut for their return if as alleged it was the traps and pounds that caused their absence, for it is a well known fact they have been in full operation every year.

It seems hard work to square in Mr. Martin's mind that a meal of menhaden now and then is not the daily food of bluefish, codfish and striped bass.

Our adversaries in Maine used Mr. Martin's argument against us, but the absence of menhaden north of Cape Cod for about ten years has had no visible effect on their shore fishing.

Providing the popular opinion was correct that menhaden is the daily food of food fish, it would be the business of practical fishermen to find the menhaden and catch the fish that were in their company. DANIEL T. CHURCH.

TIVERTON, R. I., April 5.

HATCHING CODFISH.

LAST December the U. S. Fish Commission established a salt-water hatching station on Ten Pound Island, a small island near the northern extremity of Cape Ann, where there is less sediment in the water than at Wood's Holl, and began work with the codfish. Another advantage that the new station has is its proximity to Gloucester, from which the schooner Grampus can make daily trips to the fishing grounds off Cape Ann, instead of losing time in getting over the shoals about Wood's Holl, which often occupied several days. In the first experiments with cod it was the custom to bring the live fish to the station at Wood's Holl and strip them there, but now a corps of spawn takers board the fishing vessels and take the eggs from such fish as may be ripe, and in this way large numbers of eggs were taken last winter during days when the thermometer was not too low, for it has been proved that severe cold is fatal to cod eggs, as well as to the fish themselves.

The first lots of eggs taken to the new station were killed by cold in the hatching jars, but later takes of spawn were successfully hatched. The newly devised "tidal hatcher" is considered to be the best for codfish, and is, we believe, credited to the inventive genius of Col. M. McDonald and the late Capt. H. C. Chester. This consists of inverted glass jars placed in a box, and kept from its bottom by strips on which the jars rest and which allow a circulation of water under them. A hole in what was originally the bottom of the jar permits the air to pass in or out as the water rises and falls in the box. A stream of water is admitted at one end of the box, and when it reaches the desired height it starts a syphon that soon lowers it, and thus the "tide" rises and falls. A bit of cheese cloth over the mouth of the jar prevents the egress of fish or eggs. The ova of the cod will float in sea water of a certain density, and this has caused much trouble in hatching them in the older forms of apparatus; but in the one just described the change of water comes from the bottom and the eggs cannot escape nor clog the screens. To fill these jars a cork is inserted in the hole and they are turned mouth up and filled; the cheese cloth is spread over the mouth and held in place by a rubber band and the jar is inverted in the water and the cork removed. The syphon can be regulated to give as much rise and fall as is required, or in as many minutes as may be necessary. This apparatus will also be used at Cold Spring Harbor in future operations with cod and lobsters, and one box has already been fitted up there.

The fact that an adult codfish lays a million or more eggs shows that nature has provided for a great destruction of them, either in the egg or after hatching, and this the fish-culturist guards against in the protection afforded by the jars against high winds, rough seas and rains, all of which kill uncounted millions of the tender floating eggs during the many days that they require for development before hatching. Already the results of cod hatching are visible in Gloucester Harbor and vicinity from plants made since 1879, and many fish were taken there where few or none were found before, and the fishermen credit these to the work of the Fish Commission.

America is the first to engage in the hatching of codfish, and the late Prof. Baird firmly believed in its benefits, and under his direction the work was begun. Experiments were made by Prof. Ryder, Col. McDonald, Capt. Chester, Prof. Goode, Dr. Bean, Mr. Atkins, Mr. Mather and others, all of whom have contributed more or less to our knowledge of the subject. The first eggs were obtained from Gloucester, in 1877, and later from Fulton Market, through Mr. Blackford, and sent to Washington and elsewhere, and although the cod is still plentiful it is believed that new fishing grounds can be created by planting them and the range of this valuable fish extended. If this can be done in Long Island Sound there is no doubt of the great benefit of the artificial culture of this fish.

LAKE HOPATCONG, N. J., has just been stocked for the fourth or fifth time with landlocked salmon eggs. No result has come from former stockings.

SHAD HATCHING.—New York, April 24.—*Editor Forest and Stream:* A letter received by me, under date of the 18th inst., from Col. Marshall MacDonald, U. S. Commissioner of Fish and Fisheries, with reference to the prospects of the shad fisheries in the Atlantic coast rivers, states as follows: "Operating under conditions when reproduction of the shad is no longer possible, on an extensive scale, the production has been steadily increased, until in 1887 the aggregate increase is $300,000 in excess of the value of that fish in the catch of 1884, and all the indications of the fisheries now in progress are, that there will be a very large increase in the aggregate of 1887. The catch on the St. Johns River is the largest in years and the catch on the Neuse is almost treble what it was three years ago. The fisheries in the Chesapeake are only now in progress. The fisheries in the lower bay are the heaviest ever known and there is every indication for the increase in the Southern waters being continued all along the coast."—GEO. SHEPARD PAGE.

THE FISHWAY LAW OF CALIFORNIA.—Last month State Senator B. F. Langford, of San Joaquin, was charged before a justice's court at Jackson with violating the law relating to fishways in maintaining a dam on the Mokelumne River, near Lancha Plana on which there was no fishway. The Senator is one of the stockholders in the Mokelumne Irrigating Company, and was fined $250, or one hundred days in jail. The account says he will appeal the case to the Supreme Court.

FIXTURES.

DOG SHOWS.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

FIELD TRIALS.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6202.**

DOG TALK.

MR. FRANK DOLE states that his bull-terrier Jubilee did not have mange at Boston show. The dog was in perfect condition when washed for the journey to Boston, but when taken out of his box the next morning had a rash on him. This yielded at once to cooling medicine.

A less enthusiastic fancier than Mr. Robert McEwen, of Messrs. McEwen & Gibson, the Canadian exhibitors, would feel inclined to withdraw from showing after losing Doonholme and a litter of collies by Bendigo, from distemper, taken home after the Philadelphia show. Mr. McEwen has, however, made his entries for the collie stakes.

Major Taylor has been acting as stakeholder and not with very marked success if the following clipping from a Cincinnati paper is correct: "Constable Krollman yesterday called at the bench show and seized the valuable dog Lillian. It was seized in a suit entered before 'Squire Hornberger by Richard Morgan, of Athens, Ohio, against P. H. and David Bryson. Morgan and the Brysons, it seems, arranged a race between their dogs for $125 a side. The money was put up in the hands of Colonel Taylor. When the time came for the race they could not agree on a referee, and the match broke up. Morgan instructed Taylor not to give up the stake, as he wanted the race to come off. Taylor gave the money to the Brysons. Hence the suit. Krollman served the writ and seized the dog Lillian, and the Brysons claimed that they had sold it to the Syracuse Kennel Club, for $1,500."

The Syracuse Kennel Club is dipping deep into dogs, for, in addition to an alledged sale of Lillian for $1,500, it was stated at the Cincinnati show that the club had given $1,000 for Dad Wilson and $600 for Di, a sister to Dad Wilson.

Syracuse, N. Y., is plagued by a gang of dog thieves. The newly organized kennel club may find it advantageous to look after these fellows in time.

"J. B.," the American correspondent of the *Stock-Keeper*, makes the stupid and inexcusable blunder of confounding Mr. George Washington Childs, of Philadelphia, with Mr. W. H. Child, secretary of the Philadelphia Kennel Club. He also speaks of Mr. Dockraw, the English collie breeder, in place of Mr. Dockrell, an error which might have been detected by our contemporary.

English exhibitors are again in the throes of cocker versus small field spaniel, and their exchanges contain plenty of letters on the subject, which has been very definitely settled here in favor of the shorter-backed cocker.

English papers are rendered particularly interesting by the amount of correspondence they contain on a variety of subjects of interest to dog fanciers. From the *Stock-Keeper* we cull the following:

"From Boston, U. S. A., it is whispered to us that at the recent show there, our occasional correspondent, Mr. Wade, was chatting with an occasional exhibitor recently from these shores. Mr. Wade (being unknown to our countryman) inquired as to two dogs our compatriot took over and exhibited at the New York show, and elicited the rather startling reply, 'Oh, they are not good ones, but I thought I might meet Wade, and he would buy them.' 'Wade' preserved a solemn face, and is now wondering if he is counted a dumping-ground for 'bad 'uns' from this side."

"Our countryman" might have been gentleman enough to give a stranger a handle to his name. Is there any truth in the story? Mr. Wade is not averse to acknowledging a fair hit at himself.

An English exchange says it is sorry to hear of "the grand bull-terrier Baron" being dead. Baron was sent out to Mr. Dole a physical wreck, suffering from paralysis and a complication of disorders, and perfectly incapable of doing stud duty. In the same paper is an account of some Baron puppies. If this is the same Baron, American exhibitors will

want substantial evidence of the stated service before purchasing any that might be for sale.

The Collie Club constitution and by-laws is adorned with an excellent likeness of Mr. Geo. R. Krehl's Eclipse. A well merited compliment to such a typical dog. His owner is a typical gentleman and a typical fancier and his name would grace the list of honorary members of the Collie Club of America.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the April number of the *American Kennel Register:*

BEAGLES.

6105. B., V. D. Brown.
6106. Little Duchess, F. Hallett.
6107. Rob, F. D. Hallett.
6108. Rover, Evans & Lowery.

CHESAPEAKE BAY DOGS.

6109. Bow, U. S. Kennel Club.
6110. Sis, F. C. McLean.

COLLIES.

6111. Duke III., J. A. Grindall.
6112. Royal Vico, Geo. Fries.
6113. Shep III., A. Fairweather.

GREAT DANES.

6114. Chimo, J. Wills.

GREYHOUNDS.

6115. Wabun, C. B. Mitchell.

ITALIAN GREYHOUNDS.

6116. Peach, L. Hansen.

MASTIFFS.

6117. Beatrix, F. L. Calkins.
6118. Benjamin Franklin, T. C. Gram.
6119. Cleopatra II., A. Heighway
6120. Greenwood Nero, J. E. Denniston.
6121. Kenneth II., W. Thurston.
6122. Leo IV., W. K. Warwick.
6123. Nero II., C. S. Bryan.
6124. Phiona, J. M. Dolan.
6125. Queen of Ashmont, E. F. Woodcock.
6126. Sir Edward, A. N. Rea.
6127. Wacouta Alolia, Wacouta Kennels.
6128. Wacouta Donna, Wacouta Kennels.
6129. Wacouta Mona, Wacouta Kennels.
6130. Wacouta Pearl, Wacouta Kennels.
6131. Wyoming Duke, F. Pierce.
6132. Wyoming Duchess, D. M. Pierce.

POINTERS.

6133. Bang's Van, C. F. Jordan.
6134. Don Francis, C. H. McKinney.
6135. Hannah J., Warner & Hamilton.
6136. Johnny, R. E. Terwilleger.

PUGS.

6137. Boycott, Al. G. Eberhart.
6138. Dandy Dot, J. O. Brewster.
6139. Snap II., Jas. M. Whitney.
6140. Tricksy, A. E. Adams.
6141. Yuma-Yuma, C. Wheatleigh.

ST. BERNARDS.

ROUGH-COATED.

6142. Bernie Pierce, W. H. Pierce.
6143. Chequasset Argus, L. H. Buhrman.
6144. Chequasset Narcissus, J. A. Nismith.
6145. Gordon W. B., A. W. Smith.
6146. Jess, A. E. Lincoln.
6147. Leo Pierce, W. H. Pierce.
6148. Mora, Essex Kennels.
6149. Neumann, A. V. Asire.
6150. Nona, D. W. Spooner.
6151. Nord, L. Tichenor.
6152. Roma, W. C. Newell.
6153. Spot II., J. M. Kiernan.
6154. Tristan, O. M. Volger.

SMOOTH-COATED.

6155. Capitola, F. T. Cray.
6156. Chequasset Abbess, Chequasset Kennels.
6157. Chequasset Norman, Chequasset Kennels.
6158. Duchess of Montrose, E. J. Roderick.
6159. Duke of Brunswick, T. Sanders.
6160. Duke of Longwood, H. S. Howe.
6161. Juna, G. V. Schenk.
6162. Lola, G. W. Schenk.
6163. Lyra, C. Wills.
6164. Monk of Rathlin, G. L. Bodley.
6165. Pluto, G. W. Schenk.
6166. Rex II., J. B. Ropes.

SETTERS.—ENGLISH SETTERS.

6167. Rover II., T. Higgs.
6168. Royal Flush, J. C. Shuler.

GORDON SETTERS.

6169. Queen, T. F. Sigler.

IRISH SETTERS.

6170. Damon, M. J. Hickox.
6171. Gliona, C. L. Pine.
6172. Glyndon, W. H. Emory.
6173. Kino, J. E. Vickery.
6174. Lady Rose, Onota Kennels.
6175. Lassie II., F. H. Foote.
6176. Mike IV., C. L. Pine.
6177. Ned Elcho II., E. F. Starkey
6178. Patrick, M. Gifford.
6179. Ross, C. H. Willis.
6180. Ruby Royal, S. S. Nicholas.
6181. The Bard, C. G. Brooks.
6182. Wanda, R. A. Spalding.

SPANIELS.—FIELD AND COCKER SPANIELS.

6183. Calumet Jet, U. S. Whisler.
6184. Captain Obo, G. Krause.
6185. Frank Obo II., F. A. Schmidt
6186. Milton, W. S. Whisler.

IRISH WATER SPANIELS.

6187. Oneida Belle, Utica Kennels.

TERRIERS.—BULL-TERRIERS.

6188. Mustard, Rockdale Kennels.
6189. Nell II., Wm. M. Sibley.

FOX-TERRIERS.

6190. Nell, H. A. Harris.
6191. Nora, E. F. Stupplebeen.
6192. Pond Lily, F. K. Chaffee.
6193. Pudds, R. S. Washburn.

IRISH TERRIERS.

6194. Kathleen III., L. A. Shaw.
6195. Shan Dhu, L. A. Shaw.

SCOTCH TERRIERS.

NIGHTS WITH THE COONS.

III.—BY DAYLIGHT.

THE coon story I am going to try and interest the readers of FOREST AND STREAM with happened ten or twelve years ago back in Ohio, in a section of that State where coons and coon hunters were pretty well represented, especially the latter.

Early one winter morning four of us, brothers, were agreeably surpised to find the ground covered with about four inches of snow, and it was unanimously decided while getting into our pautaloons that we should take a grand hunt that day.

It was about the first snow of the season, and as we had not been on a rampage for some little time, it did not take us long to get ourselves in fighting trim.

After a hasty breakfast we proceeded to arm and equip ourselves for the day's adventures; which, in brief, consisted of Tom pocketing a miniature howitzer, Eben shouldering his double-barrel breechloader and stuffing his pockets full of shells, while Hen merely changed his shoes for rubber boots and I supplied myself with the necessary bottles of powder and shot to feed my old muzzleloader.

Then with Toby, the dog, in the lead, we filed out of town on our errand of destruction amid the plaudits of the population. We were all hunters from way back—or thought we were, Tom being the oldest was recognized always as general-in chief, and Eben, or Eb for short, who was next in age and experience, was to furnish the brainwork and woodcraft for the party, while I and my shotgun were to form a sort of reserve fighting force.

Hen, although somewhat older than myself, made no such pretentions as I and was therefore awarded the position of general utility man with implicit instructions to keep one eye on the dog.

This dog being an important factor in my story will bear description. He was too big to be a pup and not old enough to be a dog, and when about 50yds. distant it took fine figuring to tell which end was head and which wasn't on account of the super-abundance of dark sorrel curly hair. We had invested two dollars in him as a poodle and expected him to develop into a beautful spaniel, but he didn't develop that way for a cent and the worst of it is we have never as yet made up our minds what he did develop into, and he still lives, or did a week ago.

This was his initial trip and we all were very anxious to see some evidence that our two dollars had not gone for nothing. Hen and myself were also to some extent undeveloped, and knowing this to be the case, Tom and Eb were firmly decided to test us as well as Toby, and in return we expected great things of our older brothers, as they were constantly reminding us of the fact that they were enabled to teach us all that was necessary in the art of hunting. You can see, that although this hunting trip was hastily arranged, it had great responsibility resting upon it.

We meandered about over portions of the country considered the best for our purpose until the greater part of the day had gone, and although we managed to run across an occasional rabbit, pheasant or bevy of quail, nothing had as yet been done which could be taken as a sample of the capabilities of the three separate and distinct classes of hunters represented in our party.

We finally turned our footsteps in the homeward direction, all hands thoroughly disgusted with the day's results. Hen and I being particularly so, and our exalted opinions of our brothers had taken a terrible tumble after banking so much on their ability to supply us with plenty of sport. In this frame of mind we arrived at the edge of a large woods, and knowing this to be our last hope, as the way beyond was over public roads not overly supplied with game, we decided to give this woods a thorough search. After about a half hour's rest and council of war held on the top rail of the boundary fence, it was decided to divide the army in two divisions, and in short order Eb and Hen were gliding off to the right, while Tom and I sneaked off to the left with the customary "peeled eyes, open ears and cat-like tread." Toby was allowed to exercise his own sweet will in running from one party to the other, hoping he would make a ten strike while so doing. Tom and I had been going it Indian fashion for perhaps half an hour, when a succession of short, shrill whistles were heard in the direction the right wing of our army was supposed to be, and with a hurried "That's meat," Tom set off in that direction with me following as best I could. After about fifteen minutes of hard work dodging low limbs, shying at half hidden logs and picking ourselves up occasionally, we arrived upon the scene of battle—which was to be.

Some distance off I had noticed Eb and Toby cavorting about a large tree of some kind, while every few seconds the former would take aim with his gun at some object up in the tree, which would cause Hen, who was taking it easy on an adjacent log, to say "Now hold on a minute till the other fellows get here or you'll spoil all the fun."

"What is it?" panted Tom, as we came up.

"Dunno; coons I guess."

"Where?"

"Up there," taking protracted aim at the cause of all this uneasiness.

There, sure enough, at the top of the old dead oak—which, by the way, was about thirty-five or forty feet high, without a limb or knot of any kind, and about as big around as a flour barrel—was a little tuft of grayish brown hair just visible to the naked eye. And after Tom and I had taken several trips around the tree to take in the sight from all points, nearly dislocating our necks by so doing, we induced Eben to join us with Hen on the log to hold another council of war. Toby took the responsibility upon himself to watch the quarry, and he very complacently seated himself on his hindlegs, keeping one eye on the top of the tree and the other on us, while we laid our heads together to devise ways innumerable of dislodging that tuft of hair.

Climbing that tree was out of the question, and none of us were in favor of turning loose one of the shotguns in that direction; and after using our lungs pretty freely, also our arms and clubs, with no avail, we retired to the log again for another debate.

Our only hope seemed to be a small sapling which grew alongside the old oak. Of about the robustness of a fishing pole was its constitution, and the limbs and branches were in proportion. Tom was the first to volunteer to do the climb act, and, for that matter, the last, too, as he had no opposition whatever in his desire; for beyond a doubt the one who was to climb that tree and start the game, would surely "be up a tree" when the fun came off.

Shedding his coat and spitting on his hands, Tom embraced the sapling affectionately and proceeded to slowly ascend heavenward, while the rest of us encouraged him now and then by advising him that he was getting there in great shape, it ain't much further, and all that sort of truck. Amid much grunting, "shinning" and hunching, Tom slowly meandered upward.

Finally he managed to get on a level with that still motionless tuft of hair, and breathlessly ejaculated, "Coons!"

"How many?" in three breaths from below.

"Three. Look out now, I'm going to stir them up," and after waiting for us to get good and ready he began to shoo and wave one arm wildly, Eb breathlessly waiting with gun cocked, while Hen and I gripped our clubs tightly, I having laid aside my gun for the time being. Toby still silently sat in the snow and eyed the top of the tree. After exhausting himself shooing and gesticulating Tom called out, "Guess I'll have to give 'em a load," and he proceeded to do so, whereupon the ball opened. With the crack of the revolver a slapping big coon hastily poked her head and shoulders over the edge of the nest, and before she had time to bat her eyes twice Eb's gun cracked and with a convulsive leap she was down among us. She came down something like a huge flying squirrel, and not just exactly expecting such an abrupt introduction we three boys retreated a little at first.

She had scarcely touched the ground ere Toby, of whom so much was expected and so little known, brought a blush to our cheeks and admiration to our minds by immediately pouncing upon her and proceeding to chew her ears and all the other parts of her anatomy.

After the first few seconds we three recovered ourselves and advanced in full force to aid our dog, but he needed nothing of that sort, as by the time we got everything favorably arranged so as to deliver a knock out blow with one of our clubs we suddenly became aware of the fact that nothing of that sort was required, as the coon was dead as a herring.

Upon examination we found that Tom had aimed for vital parts, and Eben's shotgun had done no small amount of damage, having pretty well shattered the whole front end of said coon. This, in addition to the gentle resistance given by the ground when it and the coon came together, was sufficient to incapacitate any coon from affording a good test of a young dog's fighting proclivities. So putting Toby back to his previous standing in our minds, we began to prepare for No. 2. After abolishing Eb's shotgun and allowing him to skirmish around for a cudgel, we threw ourselves in position and called next. We had also requested Tom to excuse his howitzer and do a little more shooing, which he did, but with no avail, and to hasten matters he again turned his revolver loose in the top of the old tree, and in response out popped another coon. This one sailed down among us just like its predecessor, only to be set upon and done up in much quicker order. This time we actually managed to get in a lick or two with our clubs before we made up our minds that he was no more, and I guess the only reason that we did so was because we struck first and held the inquest afterward.

While engaged in this latter business we all came to the conclusion that this was stale fun, and it seemed as if we were to be doomed to disappointment in our various intentions. I really felt more sorry for Toby than any of the rest for he had shown his willingness so far not to shirk and in return had received only common every-day praise from us.

While discussing this subject and minutely examining the dead coons, I suppose Tom got tired clinging so fondly to the little sapling. At any rate we were startled by the crack of his revolver and before we had time to look up coon No. 3 was with us, and the circus was opened again in full blast, and the elephant was surely exhibited to the audience.

To all appearances that coon had come to stay, and for a second or so he had everything to himself, while we were scrambling about trying to lay hands on weapons of any kind, having loosened our grip on everything upon the sudden arrival of Mr. Coon.

Toby, full of conceit on account of his previous victories, as soon as he could extricate himself from Eb's legs in which he had become entangled in the excitement, made a dash at the coon which by this time had prepared to repel boarders, and in short order he and his adversary came together.

Now our much doted on dog, being young and foolish and flushed with success, did not wait for a good opening but bit on to the first part he came to, and the result was that Toby, in about the middle of the first round, gave tongue pretty freely and said "nuff," "nuff" about as plainly as any of us could have said it.

By this time we had mustered enough small arms and ourage to rush to the rescue of our beloved dog, and succeeded in allowing him to get the opportunity to escape and run away a few yards to rub his head vigorously in the snow as if something hot was in one of his ears.

Then the coon made a rush and after receiving a few wild and scattering blows from our clubs, as we were all very anxious to keep a certain distance between us and said coon, he managed to break our ranks and strike out for a neighboring tree. But Toby again appeared on deck and after a couple of dodges and passes, they once more fondly embraced. We were not long in coming to his assistance this time, and as Eb began to use his boots at every favorable opportunity, having used up his rotten limb, Hen and I distributed telling blows equally upon dog and coon, with the result that Toby soon decided he would like to retire for a few moments again, and I am forced to say that we were as much to blame for this as the coon.

While our dog was busily engaged in rubbing his head in the snow for the second time, the coon once more essayed to break ranks and reach the coveted tree.

Hen happened to be between the enemy and the tree, and as a matter of course received most of the attention of him. The coon's onslaught was so fierce, and Hen's retreat—with his face to the foe, though—so rapid, that Eb and I could scarcely keep up, let alone deliver a knock-out blow. Hen fought with desperation in his eye, and when his club broke off short, after hurling the piece at his foe, he began to use his feet in a remarkably active manner. But this didn't amount to much on account of his having on rubber boots. Finally, mustering what little strength he had left, Hen aimed a terrible kick at the coon, which, had it taken the intended effect, would have ended the affair right there, but instead, he scored a clean miss, and as his leg swept by the coon made a quick snap and fastened to his boot top. This caused Hen to lose his balance, and he went over backward with an unearthly yell. I'll never forget that moment as long as I live (nor will Hen), and the expression on his face just then is simply indescribable, so I won't try to do it. It looked to me as if Hen was of the opinion that he was a goner, and in fact it did look that way for an instant, as that coon was evidently on his mettle and had no repugnance to hitting a fellow when he was down. Indeed, things were getting to such a fine point as to cause Tom to dry up his haw-hawing up in the sapling and allow his eyes to bung out, so to speak.

We were just about thinking that Hen would have to have it out all by himself, but he soon clearly showed us that all our fears were for nothing, as his head had hardly touched the snow, when his legs flew up like catapults, and the coon was forced to lose his grip and tumble in a heap in the snow beyond Hen's head and right at the foot of the tree, which he had evidently been trying to reach. He lost no time in righting himself, and proceeded to shin up the tree rather lively.

But by this time Toby had decided to try his luck again, and he just managed to get there in time to seize the coon by the tail ere he got beyond his reach.

Then there was a tug of war. The coon didn't want to come down again and Toby was determined he should, and while the coon held on to the tree with a death grip the dog just shook himself in his endeavors to induce him to let go. In addition Eb and I arrived about this time, and as neither of us had our clubs, we began pounding the coon with our fists. Still the animal clung to the tree, and there is no telling how long he would have stayed there had not Hen picked himself up hastily and come for that coon with blood in his eye and a huge club in his hand. With one fell sweep the circus closed, almost dislocating Toby's neck, for Hen swept that coon off the tree with such force that the dog was carried a little distance with the flying corpse before he could extricate his teeth from their hold.

Leaving Toby to see that no life nor whole bones remained we three retired to our council log to recuperate, while Tom seeing the fun was over just slackened his grip on the sapling and he was with us.

We built a good fire, for we felt chilly after our violent exercise and proceeded to hold an inquest and a skinning bee with the following recapitulation.

No. 1 was the old mother coon herself, and in addition to the injuries she received at the hands of our ground forces, we discovered a capacious hole in her abdomen, the result of Tom's howitzer.

No. 2 was a young, yet full grown one of the masculine gender, and as far as we were able to investigate had died of natural causes.

No. 3 was also of this class, and we were considerably taken down upon discovering that one of his hindlegs had been broken close up to his backbone by the terrible howitzer. But nevertheless if he was pretty well done up when he came among us he had given us the best he had, and we proceeded on our way home well satisfied.

Eb had upheld his reputation as a skillful hunter by sighting the little bunch of hair which many a renowned woodsman would have never noticed. Tom had demonstrated his woodcraft to the rest of us by his manner of starting the game, while Hen, Toby and I had shown to our preceptors that there was undoubtedly good material in each of us, only needing experience to develop it.

By the way, for fear that some of the readers may think that this incident does not properly belong in this department, as it transpired in broad daylight instead of the only authorized time for coon contortions—night, I will say that this story has a just claim in this respect, as this is the third night I have spent in compiling it. Judge for yourselves now of its legitimacy. I might as well add while I am at it, that we are, all of us, mighty glad that it happened when it did, and not in the traditional inky blackness or silvery moonlight in which most coon tragedies are enacted.

It makes me shudder even now when I think what the result might have been had that coon fastened on Hen about 12 o'clock P. M.

I am afraid Hen would have departed this earthly sphere and taken up his abode in some other clime where coon hunting is not practiced.

I will be honest and truthful, and being so, I must say I

cannot see what would have hindered that crippled kitten coon from cleaning out our whole pack, if what he did do can be taken as a sample of his staying powers, and everything in our favor at that.

In conclusion, I will say that Toby, as well as the other two amateurs, in after years fully upheld the good impression they made that day; and I would be pleased to at some future date try to relate some of our other interviews with coons. Toby has about retired from active life now, but although nearly fifteen years of age he would tackle a coon as readily as ever, and the boys in Kansas often take him out just to keep his hand in. SIPPO.

PINE BLUFF, Ark.

THE POINTER CLUB.—At the meeting called by Mr. C. J. Peshall, May 8, for the purpose of forming a pointer club, about a dozen were present. The meeting was organized with Mr. Peshall as chairman and Mr. J. H. Winslow secretary. Messrs. A. C. Collins, F. R. Hitchcock and J. L. Anthony were appointed a committee to draft constitution and by-laws to be acted upon at a meeting to be held July 1. Some 40 to 50 have already joined, and it is to be hoped that all lovers of the breed will come forward and enroll their names as members and lend their influence to place the club upon a firm foundation and to assist in making it worthy its name.

THE AMERICAN KENNEL CLUB.—At a meeting of the A. K. C., May 8, Mr. August Belmont, Jr., was elected president in place of Mr. W. H. Child, resigned. The Hornell Kennel Club was suspended, and the St. Bernard Club, Essex County Kennel Club, Fort Schuyler Kennel Club and Maryland Kennel Club were admitted as members. The action of the Westminster Kennel Club in disqualifying Messrs. T. J. Farley and P. H. Foster was sustained, as was the action of the Philadelphia Kennel Club in refusing the entry of James Watson at their recent show. Those present were Messrs. Belmont, Vredenburgh, Terry, Ohl, Hitchcock, Schellhass, Peshall, Elliott Smith, Collins and Winslow.

THE MARYLAND KENNEL CLUB.—On May 1 a number of gentlemen interested in dogs met at Baltimore, Md., and formed the Maryland Kennel Club, electing the following list of officers: President, Sherlock Swann; Vice-President, H. Malcolm; Treasurer, G. N. Appold; Secretary, W. S. Diffenderffer. The club intends to hold field trials and bench shows and will probably inaugurate both the coming fall.

"DOG POINTS."—A new and enlarged edition of the FOREST AND STREAM'S compendium of standards has just come from the press. It has all the Stonehenge standards and all the specialty club standards, and is complete. A fuller notice will be given in a later issue.

LONDON DOG SHOW.—London, Ont., May 5.—*Editor Forest and Stream:* The London international bench show of dogs will be held at London on Sept. 24, 25, 26 and 27, during the Western Fair, and we beg to claim the above dates in your paper.—C. A. STONE, Sec'y.

POINTER LOST.—A liver and white pointer dog with fine white mark on top of head has strayed or been stolen. One ear has been torn. Any information regarding him will be thankfully received by his owner, A. C. Vose, 4 Hancock street, Malden, Mass.

MASTIFF LOST.—Prof. J. C. Schuyler, Berryville, Va., has lost a large mastiff dog. He is a fawn with black head. $10 will be paid for information leading to his recovery.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Fairy Belle. By Rosecroft Kennels, Birmingham Coun., for blue belton English setter bitch, whelped June 30, 1886, by Fairy King (Foreman—Jessie) out of Countess Floy (Count Noble—Floy).

Saucy. By L. T. Trotter, Montreal, Can., for lemon and white Clumber spaniel dog, whelped Jan. 22, 1888, by Johnny II. (Johnny, A.K.R. 5561—Nell III.) out of Joan II. (Johnny, A.K.R. 5561—Jill).

Johnny V. By F. Paquete, Montreal, Can., for lemon and white Clumber spaniel dog, whelped Jan. 22, 1888, by Johnny II. (Johnny, A.K.R. 5561—Nell III.) out of Joan II. (Johnny, A.K.R. 5561—Jill).

Dashing Lady. By W. H. Colquitt, Richmond, Va., for black, white and tan English setter bitch, whelped July 24, 1884, by Dashing Rover (Dash II.—Norna) out of Trinket (Crack—Diana).

Barrington, Belladonna and Bonna Dea. By Richland Kennels, Wahpeton, Dak., for brindle, black points, dog and bitch, and fawn, black points, bitch, whelped April 20, 1888, by Major II. (A. K.R. 3742) out of Richland Sylvia.

Bishop, Buckingham and Bronze. By Richland Kennels, Wahpeton, Dak., for mastiffs, two brindle, black points, and one fawn, black points, dogs, whelped April 20, 1888, by Major II. (A.K.R. 3742) out of Richland Sylvia.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Molly—Iron Duke. C. F. Mulliken's (Boston, Mass.) English setter bitch Molly (Coin—Nina) to W. H. Beede's Iron Duke (Proctor—Vita), April 7.

Lulu III.—Tim. J. J. Scanlan's (Fall River, Mass.) Irish setter bitch Lulu III. (Glencho—Lulu II.) to Max Wenzel's Tim (Biz—Hazel), April 21.

Joan—Drake. F. H. D. Vieth's (Ottawa, Can.) Clumber spaniel bitch Joan (A.K.R. 5861) to Clumber Kennels' Drake (A.K.R. 5560), April 10.

Brunette—Nick of Naso. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Brunette (Graphic—Zitta) to C. J. Peshall's Nick of Naso (Naso II.—Pettigo), March 10.

Golden Rod—Donald. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Golden Rod (Beaufort—Zuba) to John R. Daniel's Donald (Bob—Sappho), March 2.

Flossie la Muguet—Vero Venture. J. H. Winslow's (Philadelphia, Pa.) wire-haired fox-terrier bitch Flossie la Muguet (Newboy—Peddie Broad) to his Vero Venture (Victor—Beryl Broad), March 4.

Lill—Prince Foreman. E. B. Clark's (Orange, Conn.) English setter bitch Lill (Ranger II.—Maud) to Rosecroft Kennels' Prince Foreman (Foreman—Jolly Nell), April 21.

Countess Peg—Prince Foreman. Rosecroft Kennels' (Birmingham, Coun.) English setter bitch Countess Peg (Fairy King—Countess Floy) to their Prince Foreman (Foreman—Jolly Nell), March 30.

Woodstock Ruby—Master Shina. J. Spracklin's (Woodstock, Ont.) cocker spaniel bitch Woodstock Ruby (Brahmin—Sims's Bessie) to A. Laidlaw's Master Shina (Young Obo—Shina), April 20.

Norah O'Brien—Tim. F. W. Hall's (New York) Irish setter bitch Norah O'Brien (Chief—Rose Bradwardine) to Max Wenzel's Tim (Biz—Hazel), March 16.

Peggy O'More—Chief. G. G. Davis and F. G. Taylor's (Philadelphia, Pa.) Irish setter bitch Peggy O'More (Rory O'More—Quail III.) to Max Wenzel's Chief (Berkley—Duck), March 23.

Midlothian Lassie—Scot's Guard. Lothian Kennels' (Stepney, Conn.) collie bitch Midlothian Lassie (Ernest—Tibbie) to H. S. Barnes's Scot's Guard (Dublin Scot—Spoiled Miss), April 7.

Zoroya—Gath's Mark. Dr. R. I. Hampton's (Athens, Ga.) English setter bitch Zoroya (Count Noble—Belle Boyd) to Dr. J. N. Maclin's Gath's Mark, March 2.

Belle Boyd—Fred W. Dr. R. I. Hampton's (Athens, Ga.) English setter bitch Belle Boyd (Gladstone—Kate Claxton) to B. F. Wilson's Fred W., March 3.

Belle—Master Shina. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Belle (Hornell Silk—Woodstock Flirt) to A. Laidlaw's Master Shina (Young Obo—Shina), April 29.

Princess Claud—Grouse II. H. T. Payne's (Los Angeles, Cal.) English setter bitch Princess Claud (Bergundthal's Rake—Iowa Queen) to J. J. Mellus's Grouse II. (Dan—Sybil), April 24.

Bonnie C.—Little Prince. Benezet Kennels' (Philadelphia, Pa.) beagle bitch Bonnie C. (Kino—Gip) to Associated Fanciers' Little Prince (Rattler III.—Belle), March 16.

Fanny—The Baron. Wm. Cullen's (Philadelphia, Pa.) bull-terrier bitch Fanny to Associated Fanciers' The Baron (Dutch—White Rose), March 16.

Fly—Drive. A. M. Gerry's (South Paris, Me.) foxhound bitch Fly (Colman's dog— ——) to his Drive (Roderick—Nellie), April 30.

Belle—Drive. David Plummer's (Cape Elizabeth, Me.) foxhound bitch Belle to A. M. Gerry's Drive (Roderick—Nellie), April 9.

Daphne II.—Chequasset Max. Essex Kennels' (Andover, Mass.) St. Bernard bitch Daphne II. (A.K.R. 489) to Chequasset Kennels' Chequasset Max (Hermit—Nun), March 11.

Saddlebags—Rockingham. E. W. Durkee's (New York) English setter bitch Saddlebags (Foreman—Belle of Allandale) to F. Windholz's Rockingham (A.K.R. 3867), April 3.

American Girl—Rockingham. W. Meggart's (Wethersfield, Conn.) English setter bitch American Girl (Blue Dan—Maud) to F. Windholz's Rockingham (A.K.R. 3867), April 11.

Donna—Rockingham. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Donna (Yale Belton—Forest Dora) to F. Windholz's Rockingham (A.K.R. 3867), March 5.

Cora of Wetheral—Rockingham. F. Windholz's (New York) English setter bitch Cora of Wetheral (A.K.R. 3862) to his Rockingham (A.K.R. 3867), May 2.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Richland Sylvia. Richland Kennels' (Wahpeton, Dak.) mastiff bitch Richmond Sylvia, April 20, six (four dogs), by E. C. Eddy's Major II. (A.K.R. 3742).

Vandalia. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Vandalia (Bang Bang—Zanetta), March 12, eight (three dogs), by his Bang (Price's Bang—Salter's Luna); a dog and bitch since dead.

Lucy II. H. B. D. Bruce's (Ottawa, Can.) Clumber spaniel bitch Lucy II., April 9, seven (four dogs), by his Shell (Ben—Joan).

Youbc. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Yoube (Elcho—Rose), March 17, eight (two dogs), by his Tim (Biz—Hazel).

Gipsey Queen. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Gipsey Queen (Vortigern—Fortune), April 24, five (two dogs), by his King (Lord George—Safety).

Chief's Queen. Taylor & Davis's (Philadelphia, Pa.) English setter bitch Chief's Queen (Laverack Chief—Gipsey), April 29, eight (five dogs), by L. R. Taylor's MacD. (Count Noble—Spark).

Nell Gwynn. Taylor & Davis's (Philadelphia, Pa.) English setter bitch Nell Gwynn (Racket—Moxie), April 24, ten (six dogs), by their San Roy, Jr. (San Roy—Cora).

Hazel Obo. Barnes Bros.' (Philadelphia, Pa.) cocker spaniel bitch Hazel Obo (Obo II.—Althea), April 10, five (three dogs), by American Cocker Kennels' Doc (A.K.R. 3795); three red, three solid black; three since dead.

Midnight II. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Midnight II. (A.K.R. 4471), March 21, five (four dogs), by their Doc (A.K.R. 3795); all black; all since dead.

Queen Obo. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Queen Obo (A.K.R. 5982), March 27, three (two dogs), by their Doc (A.K.R. 3795); all black; since dead.

Miss Topsy. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Miss Topsy (A.K.R. 5968), March 24, six (four dogs), by J. P. Willey's Baby Obo (Obo II.—Phonsie); three black, three black and white; all since dead.

Lucy. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Lucy (A.K.R. 4470), March 27, three (one dog), by their Doc (A.K.R. 3795); all black; all since dead.

Silver. A. F. Nash's (Detroit, Mich.) foxhound bitch Silver (Roderick—Nell II.), April 14, ten (six dogs), by H. E. Cook's Roderick (Jack—Fanny).

Lilly IV. Rockdale Kennels' (New Bedford, Mass.) fox-terrier bitch Lilly IV. (Jake—Nettie II.), April 22, two bitches, by H. G. Vinal's imported Rattler.

Mustard. Rockdale Kennels' (New Bedford, Mass.) bull-terrier bitch Mustard (A.K.R. 6188), April 7, six (four dogs), by their Banjo (A.K.R. 4217).

Fan Tan. Rockdale Kennels' (New Bedford, Mass.) imported fox-terrier bitch Fan Tan, April 20, six (two dogs), by C. A. Case's imported Foxie.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Joan II. Lemon and white Clumber spaniel bitch, whelped March 18, 1886 (A.K.R. 5824), by J. S. Wallace, Toronto, Ont., to C. H. Wallace, Montreal, Can.

Johnny V. Lemon and white Clumber spaniel dog, whelped Jan. 22, 1888, by Johnny II. out of Joan II., by C. H. Wallace, Montreal, Can., to F. Paquete, same place.

Saucy. Lemon and white Clumber spaniel bitch, whelped Jan. 22, 1888, by Johnny II. out of Joan II., by C. H. Wallace, Montreal, Can., to L. T. Trotter, same place.

Carrie. White and liver pointer bitch, whelped Aug. 14, 1884, by Lort out of Lady Croxteth, by D. H. Moore, Athens, O., to F. C. Rochester, Logan, O.

Genota. Tan and white fox-terrier bitch, age not given, by Venator out of Dudley Rage, by F. C. Wheeler, London, Ont., to A. Shore, White Oak, Ont.

Lady Nellie. Red Irish setter bitch, whelped May, 1886, by Smuggler II. out of Peggy III., by F. P. Kirby, Philadelphia, Pa., to Associated Fanciers, same place.

Elf and Fay (formerly Marion B. and Miss Mame). Black, white and tan beagle bitches, whelped July 5, 1887, by Little Ned out of Spangle, by E. R. Coleman, Lebanon, Pa., to Associated Fanciers, Philadelphia, Pa.

Floss I. Fawn mastiff bitch, whelped Oct. 17, 1887, by Dread out of Diamond, by Robt. J. Irwin, Rockville, Conn., to Associated Fanciers, Philadelphia, Pa.

Mauprat. Black, white and tan Basset hound dog, whelped Nov. 6, 1887, by Nemours (A.K.R. 870) out of Fleur de Lis (A.K.R. 2387), by Morris Burnham, Tarrytown, N. Y., to Associated Fanciers, Philadelphia, Pa.

Victor. Orange and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to Capital City Kennels, Washington, D. C.

Rex. Tawny and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to Frank Gilman, New Bedford, Mass.

Chief. Brindle and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to Miss Ida F. Warren, Leicester, Mass.

Othello. Brindle and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to E. A. March, West Newton, Mass.

Ione. White and orange St. Bernard bitch, whelped Feb. 23, 1887, by Merchant Prince out of Daphne II., by Essex Kennels, Andover, Mass., to Geo. Spofford, Bradford, Mass.

Apollona. Light brindle and white St. Bernard bitch, whelped July 16, 1886, by Apollo out of Brunhild, by Essex Kennels, Andover, Mass., to John Keevan, Brooklyn, N. Y.

Monte Carlo. Brindle and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to E. S. Hooley, New York.

Duke of Hampden. Brindle and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to Rev. S. H. Pratt, Springfield, Mass.

Kleine. Brindle and white St. Bernard bitch (A.K.R. 2644), by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Hamlet. Brindle and white St. Bernard dog, whelped Aug. 30, 1887, by Duke of Lancaster out of Kleine, by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Bruce (A.K.R. 84)—Daisy whelps. Two red Irish setter bitches, whelped Dec. 8, 1887, by Wm. H. Child, Philadelphia, Pa., to Associated Fanciers, same place.

Master Shina—Woodstock Ada whelp. Black cocker spaniel dog, whelped April 1, 1888, by A. Laidlaw, Woodstock, Ont., to W. V. Dawson, Montreal, Can.

Master Shina—Woodstock Ruby whelp. Black cocker spaniel bitch, whelped October, 1887, by A. Laidlaw, Woodstock, Ont., to A. W. Pancoast, Nashville, Tenn.

Master Shina—Muggins whelps. Cocker spaniels, whelped Dec. 24, 1887, by A. Laidlaw, Woodstock, Ont., a black bitch to J. A. Spracklin, same place, and a liver dog to E. A. Stone, Montreal, Can.

Bruce (A.K.R. 84)—Little Nell whelps. Red Irish setters, one dog and one bitch, whelped Oct. 18, 1887, by Wm. H. Child, Philadelphia, Pa., to Associated Fanciers, same place.

Bruce (A.K.R. 84)—Little Nell whelp. Red Irish setter dog, whelped Oct. 18, 1887, by Associated Fanciers, Philadelphia, Pa., to E. S. Twining, New York.

Drake—Madge whelps. Lemon and white Clumber spaniels, whelped March, 1888, by F. H. D. Vieth, Ottawa, Can., four dogs to Col. Hutchison, Chestnut Hill, Mass., and one dog to W. McMahon, Ottawa, Can.

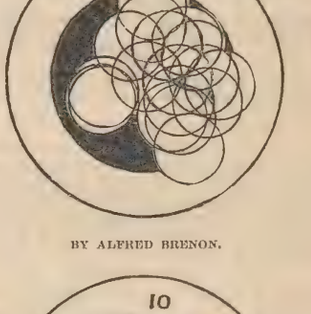
Berkshire—Floss I. whelps. Fawn mastiffs, two dogs and three bitches, whelped Nov. 17, 1887, by Robt. J. Irwin, Rockville, Conn., to Associated Fanciers, Philadelphia, Pa.

PRESENTATIONS.

Troy. Liver and white pointer dog, whelped Sept. 1, 1887, by Ino (A.K.R. 2775) out of Muggs (A.K.R. 4056), by W. M. Keenan, Troy, N. Y., to W. H. Murphy, Ogdensburgh, N. Y.

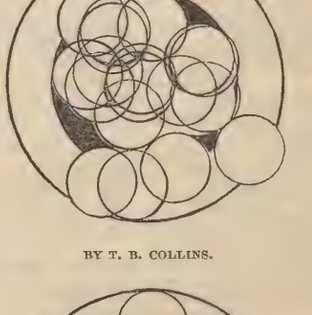
DEATHS.

Tipperary. Black, orange and white collie dog, age and pedigree not given, owned by F. H. F. Mercer, Ottawa, Can.



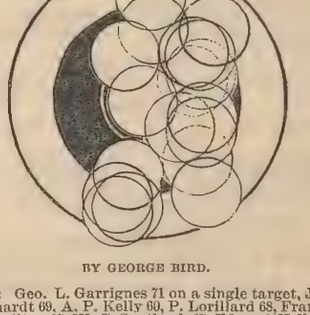
Dash. Lemon and white pointer dog, whelped April 17, 1887 Dash—Jennie), owned by A. M. Tufts, Lynn, Mass., April 29.

Rifle and Trap Shooting.



RANGE AND GALLERY.

GALLERY PISTOL SHOOTING.



A REVOLVER match of much interest was closed at Conlin's gallery in this city last week. It was interesting because of the excellent work done. The target was that of the Massachusetts Rifle Association, 200yds., reduced for 100ft. The rings are 3-16in. apart. The possible is 72, or 216 on the three targets used; and Mr. Alfred Brennon, an artist connected with the Harper's establishment, made a possible 213, by putting in his 18 shots as shown in the exact size cut accompanying. T. B. Collins won second with a total of 211, and George Bird third with 210. Other

BY ALFRED BRENON.

BY T. B. COLLINS.

BY GEORGE BIRD.

scores were: Geo. L. Garrignes 71 on a single target, J. A. Davis 69, F. Schachardt 69, A. P. Kelly 69, P. Lorillard 68, Frank H. Lord 69, A. M. Hamilton 67, W. C. Southack 67, Edward Kelly 66, Chas. F. Jones 66, and M. Bixby 64. The shooting was with a .44 Smith & Wesson revolver. The portions of the targets here shown are of same size as the originals.

A new target introduced at Conlin's gallery is the "American silver coin target." It has five divisions, composed within circles of $1, 50 cent, 25 cent, 10 cent and 5 cent silver pieces, and counting from 1 for the $1 size up to 5 for the 5 cent size. A match at this target will begin May 12 and continue for thirty days, badges of marksmanship being awarded to those who make full scores.

NEWARK, N. J., April 30.—The final match of the Rutgers Rifle and Glee Club in the Essex Amateur Rifle Association tournament, was shot this evening and resulted in an easy victory for the Rutgers. This makes the eighth match they have won and entitles them to first place and title of Champion Amateur Rifle Club in Essex county. After the match Fred Dietz was presented with a gold medal for making the highest everage in the Essex County Tournament. Mr. Dietz is ready to shoot with any man who shoots in the Essex County Amateur Association. The following is the team that represented the Rutgers Rifle Club in the tournament and the averages in a possible,120:

F C Dietz	110½	M J McArdle	102½
G H Meisel	107¼	J Hillenbrand	102 2-3
H Snyder	106⅜	J Spielman	98 1 6
W Clark	105	F Schaefer	93¾
J J Farrell	103 3-7	J Dalton	93 2-3
E McGraith	102⅜	H Allan	91 1-5

OWENSVILLE, Ind., May 1.—The Owensville Ballard Rifle Team, 5 members made, the following scores to-day, poor light with 8 o'clock wind; standard target, 200yds., off-hand:

J Montgomery	5	8	10	6	7	10	5	8	9	8—76
C Summers	7	4	4	10	7	10	5	5	8	10—70
Jas Daugherty	6	8	7	5	4	10	8	5	9	6—68
McG Daugherty	7	8	5	7	6	6	5	6	7	10—67
W Roberts	10	7	7	5	4	4	8	8	7	2—62

HAVERHILL, Mass., Rifle Club, May 5.—200yds. off-hand, standard target, weather conditions fairly good. Tuck followed his clean score of last week by one this week:

H E Tuck	8	8	8	10	10	9	10	8	8	9—88
A Edgerly	7	7	8	10	6	9	7	9	7	7—77
G Smith	7	6	9	7	9	7	8	7	10	6—76
J F Brown	6	6	10	8	10	5	8	8	5	9—75
F R Merrill	6	8	8	7	6	6	7	7	4	8—67
C H Poor	7	7	7	4	3	9	5	9	8	8—67

BOSTON, May 5.—The attendance at Walnut Hill range to-day was quite large, and fair records were made.

SUFFOLK, Va., riflemen are organizing a club for practice at the butts and in gallery.

PETMECKY.—Fred Petmecky, a sixteen-year old son of J. C. Petmecky, the gun cleaner inventor, has been attracting attention by his rifle shooting in Austin, Texas. A correspondent writes that the young man will by and by give Carver a hard push for his laurels, and inquiries begin to reach us from Texas asking if there is any American championship medal for rifle shooting at flying objects.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

A SHOOTING GROUND FOR NEW YORK.

Editor Forest and Stream:

In connection with "Bedford's" communication in your issue of March 29, at the request of a number of parties who have taken an interest in the matter, a meeting will be held at the office of the Atlantic Ammunition Co., Limited, 291 Broadway, on Friday, May 11, at 1:30 P. M., with the view of effecting an organization such as proposed in "Bedford's" communication, *i. e.*, to furnish a well equipped shooting ground easily accessible to New York at all times; where any one may have practice, and where shooting matches and public exhibitions may be held, and the public accommodated and made comfortable.

Any one feeling an interest in this matter, and the advancement of such an enterprise, is invited to attend this meeting.

NEW YORK, May 2. CHARLES RICHARDS.

Editor Forest and Stream:

It seems to me that the ideas advanced by "Bedford," in your issue of March 22, are deserving of serious and favorable consideration at the hands of every good, bad or indifferent shooter in the immediate vicinity of New York city. I take it for granted that the new grounds will not seriously conflict with the true interests of any club having grounds of their own. Why should it? Are not most of the members of our clubs very indifferent shooters, and is not the reason because they do not practice, and is not the reason because they do not practice because the grounds, etc., are not accessible, and if they are, then generally no one is near to lend a hand or engage in friendly competition and thus make it interesting? Now, I take it if there were more good average shooters then there would be more interest shown in matches and more entries in the ordinary matches of the various clubs. I think the reason that many clubs are languishing is that the members are tired of being unable to make a respectable score and have given up shooting altogether. Now, will not this proposed shooting ground be a help instead of a hindrance to the neighboring clubs? I belong to a club now, and practice occasionally, but would welcome a nearer-by practice ground, and might then become expert enough to go up and clean out the whole club. I don't care about the tournaments, except as a means to an end, viz., making the grounds self-supporting, but I think it very strange if a great metropolis like New York is unable to support two or more properly conducted tournaments, on holidays, even at the same time. At any rate, let us have one place for practicing, even if we do not turn out to be Bogarduses or Carvers; two hundred 70 or 80 record men are better for the cause than ten Erbs or Stices.

I am in the banking business, and of slight frame, and unable to stand very exhausting physical labor such as many sports call for, and I find the excitement and invigorating outdoor life of the shooter just the thing for me, and wish I had begun years ago. Let our clerks and sedentary persons learn to shoot. C. M.

CENTRAL ILLINOIS SPORTSMAN'S ASSOCIATION will hold its tenth annual tournament, open to the State, at Sportsman's Park, Jerseyville, Ill., July 24, 25, 26 and 27.—CAM R. HUTCHINSON, Sec'y, Jerseyville, Ill.

CANADIAN TRAP NOTES.

TORONTO, April 25.—Mr. "Alexander" Wyness, in the presence of a large number of trigger experts at McDowall's grounds, Kingston road, Scarboro, undertook to break 90 out of 100 Peoria blackbirds at 18yds. rise, for a wager of $50 against Mr. Chas. Casey. The feat had never been attempted before, and very few expected that Mr. Wyness would accomplish what he had backed himself to do, but he proved himself to be one of the best, if not the best, artificial bird shots in America. Not only were the birds broken, but 90 of them were blown to smoke, while the other 10 were well hit. The score stood 100 straight. The wind blew rather fresh across the traps at the outset, but gradually went down until almost a calm prevailed. Mr. Wyness might have left the grounds a rich man had he taken all the money that was offered even against his breaking nine-tenths of the century. Mr. Wyness, it might be mentioned, has been in the habit of shooting under the name of "Alexander," and it is his scores that have been so often of late at the head of the lists, both of the Toronto and Owl Gun Club shoots. He is a marvel, and there is talk of getting up a syndicate to back him against any man in the world, if Mr. Wyness can be induced to consent.

OTTAWA, May 3.—The Ottawa Gun Club shot to-day in beautiful weather a sweepstake at fifteen birds which resulted as follows: H. Street 13, J. Stewart 13, J. Manuel 11, A. Cameron 11, E. Smith 9, W. H. Tracy 8, and the sweepstake at five birds A. Throop, of Huberts. J. Stewart and E. Smith broke their five straight, but Throop won in the shoot off.

TORONTO May 3.—Mr. McDowall's shooting tournament opened at his grounds on the Kingston road this morning. Two clay pigeon shots were shot off, also a large number of sweepstakes matches, Messrs. Wayper, Smith and George coming well to the front. On account of the high wind that prevailed the scores were rather low.

Shoot No. 1, at 10 clay pigeons, 3 traps; 18yds. rise; six prizes: Wayper 10, Quarry 8, Smith 7, Scott 7, Heatherington 7, Gloar 6, Kay 6, Blea 6, Charles 5, Wakefield 4, Paul 4. Harnett 4, Parsons 5, George 4, McDowall 4.

Shoot No. 2, at 10 clay pigeons, 3 traps; 18yds. rise: Wayper 10, Smith 7, Wakefield 6, George 7, Gloar 7, Blea 6, Quarrie 6, Heatherington 6, Harnett 5, Paul 5, Scott 5, Townley 5, McDowall 5, Sandys 5, Moffatt 5, Parsons 5, Moore 5, Bayles 4. On shooting off the ties at six Heatherington took the sixth prize.

May 4.—The second day's shooting in McDowalls tournament took place to-day. The attendance was large, notwithstanding the unfavorable weather, the wind blowing a gale all the afternoon. Shoot at 21 Peoria birds, 18yds. rise, for $100, divided into seven prizes:

Wayper	111111111111111111111	W Paul	111111001110111101111
Smith	101111111111111111110	M'Dowall	110101111111101110111
Gloar	111111101101111111111	Alexand'r	011011111101101101101
D Blea	011111111111111111001	George	111111010101100001
Scott	111101111011111101111	Heather'	100111111101010101101
Kay	111100111111111111111	Moffatt	111001010010011111100

Six others retired. The prizes were won by the first seven in the order named.

First sweep, at 9 Peoria blackbirds: Gloar 9 Casey 8, Paul 8, Smith 7, Scott 4, Wayper 7, Quarrie 7, Blea 7, George 5.

Second sweep, at 9 Peoria blackbirds: Paul 9, George 8, Casey 8, Gloar 8, Smith 7, Wayper 7, Blea 7.

Third sweep, at 10 Peoria blackbirds: George 10, Blea 10 Wayper 9, Smith 9, Alexander 9, Gloar 7, Casey 4.

Fourth sweep, at 10 Peoria blackbirds: Smith 10, Wayper 10, Blea 9, Alexander 9, Gloar 9, George 8, Casey 8, Paul 7.

Fifth sweep, 10 Peoria blackbirds: Wayper 19, Alexander 10, Gloar 10, Smith 10, Paul 8, Wakefield 8, George 6, Casey 6. In the shoot off Wayper killed 15 straight, Alexander 11 birds, Gloar 11 and Smith 2.

MONTREAL, May 5.—The Dominion Gun Club grounds were well patronized this afternoon by a large number of gentlemen to witness the competition in the telegraphic match, between 5 members of the Dominion Club and 5 members of the Owl Gun Club of Toronto. The shooting, on the whole, was of the best. Mr. Lumsden, after attending at the Montreal Gun Club shoot, where he secured second prize, immediately started on foot across country to the Dominion grounds, where, on his arrival, he immediately took up his position and shot his 20 birds off the reel, killing 14 of them, a first-class performance under the circumstances. The grand total was 79. Dr. Barnes officiated as referee for the Toronto Club. After the shoot a rush was made for the Balmoral Hotel, where a telegram was despatched to Toronto giving the result of the Dominion Club shoot. The reply was anxiously awaited, it being generally expected that the Owl Club would be the victors. Great was the rejoicing when the telegram was read out, giving the Toronto team's total as 68, or a majority of 11 birds for the home club. A return match will be shot in the near future. The following are the names and scores:

Dominion Club.	
C H Horseley	1001111111111111111—18
L T Trotter	1111111111101101110—17

T W Lesage	1101110010101011111—14
W L Lumsden	1111110110001010111—14—79
Owl Club, Toronto:	Caruthers 17, Cockburn 14, Riggs 13, Persar 11, Smith 13, total 68.

MONTREAL, May 5.—A very large number of gentlemen from the sister gun clubs were present to-day at the Montreal Gun Club Grounds, at Cote St. Antoine to witness the most enjoyable shoot of the season. The weather was not of the best and a strong, cold, easterly wind blew all the afternoon. Count Maze, of Paris, gradually forged ahead by some fine shooting, and landed the winner by two birds, being heartily cheered by the spectators. Messrs. Lumsden and Masse tied for second honors, and on the shoot-off Lumsden won by one bird, Mr. Masse taking third prize. Mr. W. F. Robertson, who won fourth honors, began in grand style, killing seven straight. Four of the competitors tied for the fifth prize, and on the shoot off again tied, necessitating a third shoot, when Mr. E. Octave secured it by killing three straight. After the open match had been decided, sweepstakes were the order of the day. The onerous duties of scorer and referee were carried out to the satisfaction of all by Messrs. Geo. Taylor and W. W. Austin. The following is the detailed score at 15 Peoria blackbirds, 18yds. rise:

W. Lumsden	111101011011001—10	F. Williams	011111010010000— 8
J. Brown	011011101001000— 7	Mr. Masse	110110011101011—10
F. Dowd	000011111110010— 8	R. Redmond	101001110001100— 7
W. Robertson	111111001010000— 9	P. Taylor	011110008111000— 7
E. A. Cowley	101000111011100— 8	Count Maze	101111110111110—12
E. Octave	101111000010010— 8		

BOSTON, May 5.—The Jamaica Plain Gun Club to-day shot five events at the Clarendon Hill range, and defeated the Harvard College team by a score of 134 birds to 112. First event, 6 blackbirds—Palmer first. Second event, 5 blue rocks—Ingersoll and Holden first. The third event was the team shoot, each man having a possible score of 12 blackbirds and 13 clay-pigeons. Here is the score:

	Jamaica Plain.	
Slocum	101111111111—11	111101001111—10—21
Ingersoll	111111111111—12	101111001010— 8—20
Chapin	111101110110— 9	111111101011—11—20
Brown	101101110111— 9	10011 1011011— 9—18
Charles	101011111111—10	111111110111—12—22
Baxter	111111111010—10	010111110111—10—20
Boothby	000001101010— 4	011111010110— 9—13—134
	Harvards.	
Klyde	011110111111—10	111111110101—10—20
Coyle	101011111001— 8	101001111001— 7—15
Austin	1001000111101— 6	100001110111— 8—14
Palmer	0 0011111110— 8	110010101 1110— 8—16
Holder	011011111101— 9	010101001010— 6—15
Greene	101011110011— 8	001110111101— 9—17
Frye	111010111011— 9	001010110100— 6—15—112

Fourth event, 6 clay-pigeons—Ingersoll, Slocum, Palmer and Charles first. Fifth event, 6 blue rocks—Baxter, Ingersoll and Chapin first.

BRIGHTON, Mass., April 27.—The Brighton Gun Club held its third shoot at Faneuil to-day for their new series of merchandise prizes. The events were as follows: 1st—Five clays, J. Coyle, first. 2nd—Five clays, Breivogel and J. Coyle first. 3rd—Five bats, Breivogel and Hill first. 4th—Five bluerocks, Breivogel first. 5th—Five bluerocks, Breivogel and Hill first. 6th—Five bats, Hanson first. 7th—Five clays, Chase first. Medal scores—10 clays, 10 bluerocks, 5 bats:

Breivogel	1101101110	0111001111	10 11—18
J Coyle	1011001111	0101011111	10110—17
Hansen	1011010111	1101000111	10110—15
Hill	1011010000	0110011 00	01111—12
Chase	1010100001	1000001100	01110—10

THE WORCESTER SPORTSMEN'S CLUB will give a tournament May 29 and 30, open to New England. There are cash and valuable merchandise prizes, no handicapping. For full particulars address E. F. Swan, Sec'y, Worcester, Mass.

NORWALK, Conn., April 28.—Fountain Gun Club; the names marked * are visitors from the Bethel Club. First match at 5 clay-pigeons, 4 traps, 18yds. rise, National rules:

*C B Manley	10101—3	*W B Judd	01111—4
*C Ridge	11011—4	*E Stone	11111—5
*Bennett	11011—4	Ferris	11111—5
*Patterson	01101—3	Lockwood	11110—4

First divided, Lockwood second and Patterson third on shoot-off. Match at 7 clay-pigeons, 18yds.:

Manley	1110111—6	Ferris	1110111—6
E Stone	1011111—6	Lockwood	1111111—7
Bennett	1011010—4	Smith	0111110—5
Patterson	1001001—3	Capron	1011011—5
Ridge	1111101—6	Irland	1101101—5
Judd	0010001—2	Davis	1111111—7

First divided, Ferris second, Smith third. Match at 7 blue rocks, 18yds.:

C B Manley	0111101—5	E Stone	1111010—5
C Ridge	1111111—7	Ferris	1111111—7
Bennett	1011101—5	Smith	1100101—4
Patterson	1101000—3	Lockwood	0101111—5
W B Judd	0010010—2		

First divided, Lockwood second.

Same conditions: E. Stone 5, C. Ridge 4, C. Manley 7, Bennett 5, Judd 2, Patterson 4, Ferris 6, Irland 4, Capron 6, Davis 5, Lockwood 7, Smith 6. First divided on shoot-off, Ferris won second, Bennett third.

Match at 7 clay-pigeons: Manley 6, Stone 3, Bennett 6, Ridge 5, Patterson 5, Ferris 3, Smith 5, Davis 7, Richards 4, Capron 7, Lockwood 7. First and second divided, Smith won third on shoot-off.

Match at 7 blue rocks, ties divided: Stone 4, Manley 6, Bennett 4, Judd 2, Ridge 5, Patterson 3, Smith 5, Capron 6, Richards 5, Lockwood 6.

HAMBURGH, N. J.—The last monthly meeting of the Hamburgh Gun Club was the most exciting one of the season. The majority of the members were out and made the shooting very interesting. The first match was won by Mr. Couplin, second by Kemble, third by Mr. Linn, each receiving a turkey for a prize. The fourth match was won by Messrs. Edsall and Drew and will be shot off at the next meeting.

First Match.

Frank Kemble	1110100001—4	R Drew	1110110001—6
W J Williams	0001010100—3	R L Edsall	1010100001—4
W W Pierce	1100000111—5	Smith Simpson	0000 0100—1
H W Couplin	1001111101—7	John R Walling	1000110110—5

Second Match.

Frank Kemble	1101111101—8	R Drew	1001000101—4
W J Williams	1000011001—4	R S Edsell	0110011001—4
W W Pierce	1001010010—4	Smith Simsson	1001011110—6
H W Couplin	0110110010—5	John R Walling	0011000110—4

Third Match.

Frank Kemble	1101110101— 7	R Drew	1111010111—8
W J Williams	0111101111— 8	R L Edsall	1001010010—4
W H Edsall	0000001100— 2	Smith Simpson	0111110111—8
John Linn	1111111111—10	John R Walling	1001011101—6

Fourth Match.

Frank Kenble	00011—2	R Drew	01110—3
W J Williams	00013—2	R L Edsall	10100—2
W H Edsall	11100—3	Smith Simpson	01100—2
John Linn	10001—2		

SOLOMON CITY, Kansas, April 24.—Regular shoot. Inanimate target, 18yds. rise:

J Kraenchi	0010001010000010—4	B Johnson	1010010010010000—4
C F Dewar	0010000000100100—3	A J Collins	0000101100100000—4
C H Smith	0111110101000110—9	T J Edworthy	1110110000101100—8
E E Crooks	0100000110100000—4	M Robacker	0000010010000000—2

Tie shot off at 5 each. Kraenchi won. Five live birds each:

T J Edworthy	01011—3	B Johnson	00110—1
C F Dewar	10100—2	J Kraenchi	01111—4
C H Smith	10101—3	M Robacker	11001—3

Tie, miss and out. Smith won.

May 1.—Friendly shoot between Union Pacific Gun Club and Solomon Independents, losers to pay for birds:

Union Pacific.		Independents.	
C H Smith	0111101010110—9	T J Edworthy	0310111111110100— 9

T. J. EDWORTHY, Sec. and Treas.

JERSEYVILLE, Ill., May 1.—The following scores were made at the weekly club shoot at the Park to-day, 20 Ligowsky clays:

Chappell	1111101111101111100001—15	Smith	0001100011100111101—11
Hansell	1101110111010101110—14	Skelly	1111101000111100101—13
Hutchins' 0	1111101111101111101—16	Beatty	1100011001111010000111
Tack	0101011010111111111—15	Warren	0111101001111111111—16
Burleigh	0001110101000001010— 8	Stoeckel	0010010101010111001— 9

Hutchinson and Warren divided, and Warren wins medal in shoot-off. Live pigeon badge at 3 birds:

Hutchinson	111—3	Skelly	111—3
Chappell	001—1	Smith	011—2
Beatty	011—2	Hansell	101—2
Tack	000—0	Burleigh	010—1
Warren	111—3	Stoeckel	000—0

Skelly won shoot off. Sweep at 5 clays, 2 moneys:

Hansell	10011—3	Chappell	10111—4
Hutchinson	00101—2	Beatty	00111—3
Skelly	01111—3		

Skelly and Hansell divided second. Sweep at 7 clays, 3 moneys:

Smith	1030010—2	Beatty	1111111—7
Tack	0101111—5	Dunsdon	0111111—6
Kirby	0101100—3	Hutchinson	1111111—7
Hansell	1010110—4	Warren	0111111—6
Skelly	0101010—3	Stoeckel	1010110—4
Chappell	1110110—5		

Hutchinson and Beatty first, Warren and Dunsdon second, Chappell and Tack third. Sweep at 5 clays, 3 moneys:

Smith	11111—5	Beatty	11101—4
Tack	11010—3	Dunsdon	11101—4
Hansell	00110—2	Hutchinson	01111—4
Chappell	10110—3	Warren	00011—2

Smith first, Hutchinson second in shoot-off, Chappell and Tack third. Sweep at 5 clays:

Chappell	10111—4	Tack	10111—4
Hansell	01001—2	Smith	10111—4
Hutchinson	01100—2	Wedding	00001—1
Dunsdon	01001—2	Warren	01001—2
Beatty	11011—4		

SAN FRANCISCO, April 29.—One of the largest gatherings of the season assembled to-day on the San Bruno Pigeon Grounds, to wind up the clay and live bird pigeon tournament. At noon the wind came howling with all its might from the ocean, and swept over the grounds with hurricane speed. Out of the 26 entries for the live bird shoot not a man came out with a clean score. Frank Bassford of Vacaville, Al. Donaldson of Suisun and Fanning of this city, each scored 11 kills, and they decided to divide equally the first 3 prizes. The fourth prize was shot off between the men who scored 10. The birds were a miserable lot and the cry for "another bird" was quite frequently heard. The judge, Mr. Eyre, had a most arduous task. It was late in the evening when the last shot sounded and the last bird retrieved by one of a promiscuous lot of dogs that were allowed the liberty of the grounds. The first shoot of the day was at 6 live birds, $2.50 entrance, divided into 60 and 40 per cent. Score:

Delmas	111211—6	Dunshee	211220—5
Coykendall	111111—6		

The principal shoot of the day now came with 26 entries. It was at 12 live birds, entrance $5, Hurlingham rules, 80yds. boundary. Score:

F Bassford	122112101221—11	Shaff	001011001101— 6
Coykendall	201121211011— 9	Donaldson	112110112211—11
Ed Fay	021110110211— 9	Duffy	210100121210— 8
Melly	211211110011—10	Fanning	222110212211—11
Kellogg	121011101012— 9	Fleming	101120121211—10
Stackpool	232121000220— 7	Rise	102022010202— 6
Eddy	112112002201—10	Parks	211011011110— 9
Golcher	212120101001— 8	Cate	010111002000— 5
Ford	002100202111— 7		

The 3 elevens divided first, second and third moneys.

ST. LOUIS, May 4.—The match between the 4 members of the St. Louis Gun Club, Messrs. Gates, Parrish, Dozier and Edgar, held at Compton Avenue Park this morning, resulted in defeat for Parrish and Edgar, who paid for the birds and the breakfast. The match was for 50 live birds, 26yds., plunge traps, every man for himself, the last 2 to pay: Gates 39, Dozier 37, Parrish 33, Edgar 32.

CINCINNATI, May 5.—The Carthage Gun Club recently arranged for a series of 12 shoots, and as a means to have the members exert themselves to make good scores, a gold medal to the one breaking the greatest number of birds out of 20. The first shoot was held this afternoon, and Chas. Strong captured the medal, breaking 16 out of 20. Those ranging next best were Ed. Haines 14, W. E. Bowen 13, and Chas. Koehler 12.

BROOKLYN, May 2.—The unfavorable weather to-day tended in a great measure to prevent the prominent wing shots from shooting at Woodlawn. Only eight were present at the trap, but they did some good shooting.

First Sweepstakes.

H McLaughlin (25)	1011110—5	H Buckley (21)	0000010—1
Dr Porter (24)	1110111—6	H Blattmacher (30)	1011060—3
A Schwartz (29)	1110011—5	G Jones (25)	0110111—5
P Leib (21)	1001100—3	W E Allan (27)	1000111—4

Ties for second prize won by H. McLaughlin.

Second Sweepstakes.

H McLaughlin (20)	0111101—5	Dr Porter (30)	1111111—7
W E Allan (30)	1110110—5	H Blattmacher (30)	0000111—3
A Schwartz (30)	1001111—5	P Leib (25)	1011100—4
G. Jones (30)	1100111—5	H Buckley (21)	0001000—1

Allen and Jones divided second. Referee, Mr. H. McLaughlin.

THE ENGLISH CUP.—The championship of England pigeon shooting challenge cup, originally held by Dr. Carver, will again be submitted for public competition, on May 30, at the Welsh Harp, Hendon. The cup, which is a beautiful specimen of the silversmith's art, is of the value of $500, and the holder will be entitled to the designation of champion pigeon shot of England. An entrance fee of $25 will be charged. John L. Brewer, the American trap-shot, has entered for the event and will be one of the contestants. He is shooting better than ever, and will be backed to win.

NEW YORK STATE SHOOT.—Auburn, N. Y., May 6.—The final preparations are nearly completed for the thirtieth annual tournament of the N. Y. S. Association. This tournament promises to be by far the most satisfactory and successful ever given in this State. I am confident that the success of this shoot under our auspices is beyond question, and I can safely say that there will be more new clubs join the Association at its convention here, May 28, than ever before joined the Association at any one time since it was organized. All this I attribute to the large number of prizes and the mode of classifying which is to be practiced. Our estimated entries in each one of our six regular contests will average over 100.—CHAS. E. KERR, Secretary.

NEWARK, N. J., May 3.—C. M. Hedden and Gustave Freche shot a fifty-bird match at Erb's to-day under Hurlington rules, Hedden standing at thirty yards from the trap and Freche at twenty-five. The latter used Schultze powder, in Kynoch shells, and Hedden used Schultze powder, in U. M. C. first quality shells. The birds were excellent fliers. The result was as follows:

Hedden.....1220111212211022122122111100201111121102011211212121—43.
Freche.....1122211601112112122020101211011211112112011210212—42.

Hedden used second barrel seventeen times, Freche fifteen.

ERB VS. GRAHAM.—The third and concluding bird match between Erb and Graham, to have been shot May 3, at Connesville, Ind., was postponed, owing to rain and wind. It will occur at St. Louis at some date not yet named. A twenty-five bird match was won by Erb, who killed 23 to Graham's 22.

WELLINGTON, Mass., May 5.—The weekly shoot at the Wellington range to-day was attended by a goodly number, and the four traps vied with each other to send the largest number of birds in midair. In the Grimes match Melcher captured the prize. In the merchandise match points were scored as follows: Perry 19, Stanton, Chase and Bert 18, Swift, Phelps, Scott and Nichols 17, Melcher, Bond and DeRochmont 16, Sanborn, Schaefer, Tyler and Grimes 15, Snow 14, Stone and Shumway 13, Bowker, French and Bowker 11.

THE PETERS CARTRIDGE CO., Cincinnati, O.—*Gentlemen:* I have used several hundred of your cartridges, and I find they are in every respect precisely what you claim for them. The slight recoil, excellent penetration and unequal ed uniformity make them in my opinion the best cartridges I ever used. WM. WAGNER. (Washington, D. C., April 11, 1888). —*Adv.*

Canoeing.

THE ATLANTIC DIVISION MEET.

THE Committee on Camp Site has handed in the following report:

Henry Stanton, Esq., Vice-Com. Atlantic Division, A. C. A:

DEAR SIR—The committee appointed by you to select a date and place for the first meet of the new Atlantic Division respectfully submit the following report:

First, in regard to date, we recommend that the rendezvous be called for Saturday, July 14, and that the following week be devoted to the camp, the races being held on the first three days of the second week, as in the Association meets.

We have investigated a number of proposed locations and visited the most promising, but as yet have found none possessing all the requirements for a camp of upward of one hundred for ten days or more; which requirements, in the estimation of your committee, are as follows: Good water for sailing, short cruises and racing; dry and wooded ground for main and ladies' camp; beaching facilities; fresh water supply; food supply; accessibility; freedom from intrusion.

All of these must be had in order to make the meet a success, but among the many locations suggested none has yet been found that is not open to some grave objection. The great difference between camping a large body for some days and a brief bivouac on a cruise, does not seem to have been appreciated by most of those who have offered suggestions, hence many places have been dismissed after a brief inquiry, without wasting time on a visit of inspection. Among the places suggested were the Delaware, Potomac, Hudson and Shrewsbury rivers, Raritan Bay, Cow Bay, Huntington Bay and Oyster Bay. In regard to the first two, your committee did not consider themselves at liberty to recommend any site so far from the center of canoeing population, so to speak, of the Division; as though some new members might be enlisted, the first aim of the new Division, to meet the wants of present members about the Lower Hudson, would of necessity be sacrificed. A site on the Hudson was not considered, as it has been understood from the first that the meet was to be on salt water.

Realizing fully the difficulties which attend the transportation of canoes through New York city, and also the advantages of a point west of New York for canoeists on the Delaware, your committee have given special attention to Raritan and Sandy Hook bays and the Shrewsbury, especially as some pressure has been brought to bear on them in favor of these localities. A number of indefinite suggestions have been received, but a slight examination of each has shown that the proposer had in mind rather a brief bivouac than a large camp with the requirements mentioned above. The committee being long familiar with the entire shore of Staten Island, were unable to suggest any site there; the South Beach, where alone open water can be had, being entirely too exposed, with a surf at times in summer. The Shrewsbury, the Highlands and Sandy Hook are likewise well known to the committee, but the very swift tide in the former river would make it impossible to sail or race there, while higher up, about Pleasure Bay, the water is shoal, with mud at low tide, and the shores are low, marshy, and infested with mosquitoes. The Navesink River has also been suggested, but no suitable location is known there. One place suggested, the small island in the Shrewsbury near its mouth, is in the midst of a strong tide for a part of the day and surrounded by sand flats at extreme low water. The adjoining shores, beneath the Highlands, have also been suggested, but besides the swift tide there is no space for a camp at the foot of the high and steep bluffs.

The shores of Raritan Bay have been recommended by a number, but only two, Dr. F. W. Kitchell of Perth Amboy, and "Seneca," have gone into details or pointed out any particular spot. These two gentlemen recommended the mouth of Cheesequake Creek, and your committee have consequently inspected it most carefully. The time of low tide was chosen, and the committee walked from South Amboy along the beach to a point well beyond both mentioned by "Seneca." The first point was entirely too small, a beautiful spot to camp for a day when cruising, but too limited in area to afford any variety during a longer stay. It is part of a small hill cut off by the railroad, high enough to overlook the water, with a fine view, but lying near other high sand hills it would be very hot in summer. The chief objection to this and in fact all the shore from Amboy to the Highlands, is that at low tide the sand flats are bare for a distance of one-quarter to one-half mile from the shore.

Proceeding to the second location, just east of Cheesequake Creek, a gravel bluff some 40ft. high was found, rising sharply from a beach of sand and coarse pebbles, over which a canoe could not be dragged, but with room for canoes at the foot of the bluff. Along the west face the slope is more moderate and covered with scrub cedars and pines, the only shade within a long distance. At the top of the bluff is a plowed field, and though the view is fine, with a good sailing course at high water, the sand is bare for a quarter of a mile at low tide, the area of shade is very limited, and there is no place for a ladies' camp. Fresh water can be had from a well about one-eighth mile distant; meat, eggs, milk and other stores can be had easily; the station is near at hand, with trains to New York and Philadelphia, boats run to Perth Amboy and Keyport, two miles distant, and finally permission can be had to use the grounds without charge; but looking at the two serious difficulties, the shoal water and lack of shade, your committee cannot recommend the selection of the place. No other site in the locality is at present known to them, but they will gladly investigate any that may be brought to their notice, provided some definite information be given.

Going now to Long Island Sound, there is nothing nearer than Cow Bay, which locality your committee have examined thoroughly, going over the entire beach on foot from Sand's Point to the village of Manhanset. The best location is near Barker's Point, within 1½ miles of Sand's Point Dock by land or water, and about 1 mile by water from Great Neck Dock. It is accessible practically by boat only to one of these points, the nearest railroad station, 1 hour from New York, being about 7 miles from the proposed site by land. In summer five boats each way call at Sand's Point Dock, from East River piers in New York, fare 35 cents each way. The distance is but 21 miles from the Battery, so that many would prefer to cruise, but with one or two boats in the morning and others later in the day, there would be no trouble in reaching camp; while the trip would not be one that would attract a large crowd of outsiders. Along the beach for over ¼ mile is a bluff from 5 to 20ft. high, dry, sandy soil, rising to a hill at the back, all meadow land with a belt of shade trees about 30ft. wide along the water, in which the camp could be spread out, with ample space for a ladies' camp at one end. The beach faces S.W., with a fine view of the Sound and the mouth of Manhanset Bay on which it is situated; while opposite are New Rochelle and Glen Island, with many pleasant places near by for short cruises.

Good racing courses could be laid out, but in the bay oyster stakes are planted at intervals, a serious nuisance in sailing. Fresh water can be had by driving a well near the beach at small expense, and the village of Port Washington, within two miles by land or water, will furnish all supplies. There is also a good harbor for yachts that might visit the camp. The great difficulty is the beach; the rise and fall of the tide from 7 to 8ft., leaving about 80 to 100ft. of beach exposed, and this is of rough stones as large as the fist, with many large boulders in places. Spaces of 100ft. can be found along the beach that are free from the latter, and these might easily be cleared of the worst of the stones; but still it would be impossible to drag a canoe up or down over the remaining stones. Something might be done in the way of a wide plank walk down to low-water mark, anchored down with stones, up and down which canoes might be hauled; but no system of float seems practicable without a very heavy expense.

This difficulty is one that must be met almost anywhere on salt water about New York, where the rise and fall of the tide is from 5 to 8ft.; and though increased in the present case by the absence of sandy beach, it must be present in a degree everywhere. Of course at high water and even half tide the trouble will be much lessened, but it so happens that the time of full moon, when it is most desirable to hold the meet, is also that of the spring tides, rising higher and falling lower than at other times in the month. Material for the construction of ways of some kind might possibly be hired for a couple of weeks at Port Washington, where a number of old war vessels are being torn apart, leaving plenty of spars and planks. Another disadvantage is the presence of a picnic grove, Idlewild, frequented by excursions from New York, about ½ mile from the proposed site, but as these excursions are landed directly at the grove and find their amusements within its limits, they might prove no objection; in any case, wherever the camp may be located within some miles of New York or any large city, a watchman will probably be necessary.

The property in question is owned by Mrs. J. H. Cornwall, who resides about ½ mile distant, and who will allow the Division to camp free of charge provided no damage be done to the trees and that proper precautions against fire be taken. Wood for fuel can readily be obtained near by. Your committee are still ready to search further if any better localities can be suggested, but this site would seem practicable, and sets at rest all doubts as to obtaining a fairly good camp ground; while at the same time there are some weeks yet in which a further search can be made.

W. P. STEPHENS, Chairman,
WM. WHITLOCK,
H. M. CARPENTER, } Committee.

A CRUISE ON THE EAST COAST OF ENGLAND.

HOW to begin a log is always a puzzle. Commence it how one will it doesn't look right. We will try this time by first of all introducing ourselves, follow on with a description of our boats, and that done up anchor and forge ahead with an account of our daily doings. With quarterdeck manners we now doff our caps and say we are men with a strong aquatic taste, that our boating names are Sabrina, Muriel and Gipsy, and that we fly the Mersey C. C. burgee. We have hitherto been firm believers in the ordinary Mersey paddling canoe, and have enjoyed many a joyous time in such craft, but in the autumn of 1886, while cruising on the open waters of the Sound of Jura we became convinced that more pleasure could be had in a boat possessing more beam and freeboard, that would take care of herself a bit in a blow. This being rank heresy was debated in great secrecy, so as not to reach the ears of the older members, but needs must when a certain gentleman has the ribbands.

In recent cruises we had been sadly bothered with dunnage—dunnage largely increased by photographic cameras, air beds, the luxury of a more recherché cuisine and so on until our little boats were sadly hampered in a seaway. Such things should not be. Besides, cruises of late had partaken of a more ambitious character than the short trips of days gone by. A new and more powerful canoe therefore seemed desirable, but what was the craft of the future to be?

How easily are some questions asked, how hard it is to answer them. To one who loves canoeing and is thinking of a new boat there can be no more absorbing question than the one the friends proposed to be.

Sabrina in the northwest of England, Muriel in the east and Gipsy in the Midlands were night after night stolidly working out the problem, each in his old arm chair blinking at the fire and pulling at the briar, while canoe after canoe pictured itself to the mind's eye only to be wrecked by the thought that one would not turn to windward, while another would be wet in a lop, and so on.

In the midst of their deliberation came the Liverpool Exhibition where Bond showed the "David Ratcliffe," a canoe 14ft. by 2ft. 10½in. fitted with a 40lb centerboard (arranged to lift out for portages) rigged with main and mizen and propelled (when not sailed) by sculls instead of the paddle. In this craft we saw the solution of our difficulty and forwith visions of glorious trips in more open waters floated before our minds, while on many a long winter's evening jolly sails were conjured up in which the new craft with the old skippers at the helm were the central figures, and out of the failures of the past were fashioned the fancied triumphs of the future in a way which, while it is impossible to the tyro (be his bump of imagination ever so developed), is happily open to that experienced dreamer

whose heart has tried
And danced in triumph o'er the waters wide.

So passed in bright anticipation the dreary winter on till at last welcome spring "breathed promise of merry sunshine."

A long confab with Bond, the Mersey Canoe Club builder who carries on business at Birkenhead, and the Sabrina 14ft. by 3ft. 2in. was put on the stocks, followed by the Muriel 15ft. 6in. by 3ft 6in., and afterward by the Gipsy 14ft. 10in by 3ft 6in.

A short experience on home waters in a trial trip proved that the deck position was not only the most comfortable but gave the greater feeling of security, and that sleeping on board was preferable to camping on terra firma. This was a new departure in canoeing with a vengeance to men who had in days gone by firmly believed in the narrow craft of 26in. with its primitive rig—aye and prepared to maintain their belief with arguments then deemed unanswerable. What is Darwin's theory of evolution to this? Well leaving things no fellow is expected to understand, let us turn to the time when brief experience shall be followed by lengthened practice. The time for this soon came. The Royal Canoe Club having issued invitations for a great meet of English canoeists on the Norfolk Broads, to those Broads and to that meeting we decided to go with the avowed intention of subsequently sailing our ships round to the London River.

Gipsy, held a prisoner by business engagements, was a late arrival, and his old messmates returning from the main body to meet him, the trio were unfortunately out of a good deal of the fun; still they managed to enjoy themselves where

"Broad water lilies lay tremulously."

But we spare our readers a lengthy description, inasmuch as the London *Field* had full accounts, suffice it to say we had opportunity of ascertaining that the new boats were quicker in stays, and altogether handier in every way than we had anticipated.

All too soon the official cruise was over, and bidding farewell to their jovial companions, Sabrina and Muriel early in the morning of the 14th of August loosed out at Oulton "on ocean's foam to sail." Oulton Dyke was so snug an anchorage that the two had no idea what a game of romp the weather had been having outside while they slept, but the sight of the big rollers dashing against Lowestoft Pier head quickly enlightened them. The wind (N. by W.) was light, however, and the general appearance of the day seemed to promise fair weather. The breeze might with advantage have had more weight in it, for the ebb being strong against them slow progress was made until they carried the flood past Covehithe Ness, but at this point, whistle as they might, the fickle wind died away altogether. Steadily were the new oars plied over the rolling swell under a burning sun—opportunity being thus afforded to contrast this with the old paddle mode of progress—until Southwold was placed astern, and then a sudden but welcome puff came from the N.E., which, freshening, enabled them to bowl merrily along till Orfordness was on their lee. But who can depend on the wind? Talk of the fickleness of women—why, such fickleness is constancy itself to the ever-changing moods of that god or goddess (we know not which) who presides over the stables in which Boreas and Company (query, Limited?) like certain sublunary steeds, are apparently kept ready harnessed to go anywhere and do anything at a moment's notice.

Suddenly the breeze took a turn round from N. E. to S. E., but with the change all its power had departed as if it was too blown in crossing over to get up a bigger head of steam. However, it's an ill wind that blows nobody any good, and the friends found that with the heavy swell gone down the passage to Orford Haven which they ran into for a night's berth was all the pleasanter. Father Neptune, as if loth to say Goodbye, did not let them out of his clutches without a parting salute on the bar just as a reminder, you know!

Next morning, when Sabrina and Muriel stood out to sea, there was hardly a cloud in the sky, while the wind was S. W. and chilly. After a few puffs it gradually dropped away; but just as the skippers decided upon hoisting "wooden topsails" it altered its mind and came from the S. E., making it a long and short leg to Harwich. The mouth of the Woodbridge river was given a wide berth because of huge beds of shingle which obstructed it and because of a strong ebb-tide race to cross if an inshore passage was taken.

At Harwich they were joined by Gipsy who had trained; and, once more united, the little fleet romped along together. There was a fair wind and a glorious afternoon to explore the river Orwell, that "sweetly pretty" stream, as the fair sex would say, and with every stitch of canvas set we enjoyed our sail immensely—three jollier fellows it would have been difficult to find. The village of Pin Mill came abeam sooner than expected and hearing that off here was a good anchorage for small craft we dropped our mud hooks overboard. Tents up, the three boats were temporarily fast side by side and the appetizing sound of a beefsteak trying in the pan, with the fragrant smell of coffee, showed that the steward was doing his duty.

A calm night succeeded a peaceful evening and when darkness shut the land from our view the riding lights of the different craft at anchor gave a feeling of companionship, while the shore sounds rendered musical by their passage over the water with the rhythmical lap of the tide against our boats, made a pleasant lullaby—who could not sleep under such circumstances?

'Tis an old maxim in the schools
That flattery's the food of fools,

but for all that we felt bigger men when the Coast Guard made their round to see it riding lights were duly carried and to inquire where we hailed from, even though we were awakened from our "beauty sleep" to answer.

Tuesday, Aug. 16.—A cold N.E. wind made up while breakfast was being discussed, and, the holding being bad, kedges dragged until the best bower was hove overboard. A council of war, whether with a foul wind and probably a rough sea we should go outside, or whether a further exploration of the Orwell would not be better, decided upon the latter course. A very enjoyable run to Ipswich and a beat back to Harwich was our morning's work. By the way, opportunities offer themselves during cruises such as the one we are recounting, to notice not only the peculiarity of the landscape and the manners of the natives, but also to read the past history of a district by the names or rather endings of the names of its villages. In Ipswich and Harwich we have the Anglo-Saxon *wic* and the Norse *vik*, which meant a village in the former and a bay or creek in the latter tongue.

But to proceed, the sharp little waves which swabbed the decks, and the fresh air gave us something else to think about than etymological derivations, and that was when lunch would be ready, for the appetites built up when cruising are something wonderful. Some boatmen at Harwich sententiously gave us the bearings of "a secluded spot" for the night's berth, which turned out to be Holbrook Creek, some distance up the Stour, and quickly the brisk breeze and flood tide bore us there; Sabrina, aided by a spinaker, leaving his friends astern. Mention has been made of late relative to the speed of a sailing canoe, and this alone induces us to quote from our log book that the seven miles, from Harwich Pier to Holbrook Creek, with a steady following wind (we could easily have done with more) and on the flood tide, was covered in three-quarters of an hour.

Holbrook Creek boasts of a hard, an oasis amid wide stretching mud flats, and ashore we went for a ramble, only too delighted to stretch our limbs after their confined quarters for the past forty-eight hours.

It was a grand evening and what with a glorious sunset and "the beauty born of murmuring sound" which came from the tide, doubly restless with its phosphorescent lights, our little creek proved a most enjoyable spot indeed, and "secluded" to boot.

The east wind in the morning being light and the weather looking more settled, the idea of going further up the Stour was abandoned and we beat back to Harwich instead and then out to sea on the ebb, once more bound south.

We can hardly leave Harwich without recommending it and its two rivers as a first-class canoeing center, indeed, we think it would be hard to find a more suitable one, for the rivers make grand sailing water in rough weather, while outside the coast is indented with numerous rivers and creeks all worth exploring.

A reference to the chart will show that with a S.E. wind we were just able to lay a course for the Naze, but when there a few short boards were needed to round it; which done, it was close-hauled work down the coast, until as the land trended away to the west'ard we freed our wind and made good way for Colne Point. The wind fell lighter and lighter, but still we crept on with a draught of air that would not have moved our old boats a single yard, and while passing Clacton the steward served out afternoon tea which, to quote a very well worn sentence, "cheered but inebriated not."

Heavy clouds now massed themselves to the south'ard, heralding a storm and hastening the hours of darkness. Suddenly a breeze from the N.W. piped up as we rounded the Point, so sheets had to be hauled in for St. Osyth's Creek, our destined anchorage. Here in due course we arrived, our approach having been for some time heralded by a salute of Heaven's artillery, the big guns being manned for the occasion, fortunately we escaped with but little wind and no rain.

When the rain comes before the wind,
Topsail halliards you must mind;
But when the wind before the rain,
Soon you may make sail again.

With what light left we examined our creek which seemed snug and, tents being erected, a good square meal was enjoyed while many a joke went round (the boats lashed together meanwhile). By the bye, the passing of the different viands from "the cuddy" afforded grand fun; then each boat swung to its own cable and her skipper rolled himself in his blankets—but we were not to sleep just yet. Sabrina (cautious man), taking one farewell look around, was horrified to see Gipsy's riding light drifting away into the impenetrable darkness, the apparently unknown, then there was great excitement until the wanderer was brought back and his further vagaries restrained by a pig of lead being added to his anchor.
